Professor Jansky, you seem extremely sorry for this company because it paid 11 percent of its gross revenues in taxes. You know the consumers actually paid the tax in their rate and that the company merely, in effect, acted as a tax collector. For this same year the Tacoma utility paid 11.55 percent (see schedule D), about one-half of 1 percent more, in taxes. The 11-percent tax they paid in St. Louis just does not justify a 50-percent overcharge for the same electric energy. The calculation on schedule E will show how the 50-percent overcharge is calculated.

TACOMA'S RATE STRUCTURE

"Furthermore, the charges for specific consumption given in the Federal Power Commission report for Tacoma are a first step of 40 kilowatt-hours per month. Tacoma has no uniform rate structure. Its rates are based on the number of square feet, less certain deductions, lighted. (Jansky.)"

The simplicity of the Tacoma rate structure was highly complimented by utility experts at a recent power conference at Olympia, Wash., which was attended by Government experts and public and private utility officials.

"The Madison Gas & Electric Co., on a valuation of less than $11,000,000, last year paid approximately $400,000 in taxes. The Tacoma utility in 1933, on a valuation of $22,760,886.05, paid only $145,574.55" (Jansky).

I do not have a report of the Madison Gas & Electric Co. and because of the limited time I will not be able to get any. However, I do have a copy of a report of the Wisconsin Power & Light Co., which is about the nearest I can get (schedule F).

In regard to taxes paid by the Tacoma utility, I am again referring you to schedules A and B.

"If we deduct the percentage of the gross income paid in taxes by the Madison Gas & Electric Co. and also by the Tacoma utility from the cost of specific consumption, the rates for small consumers in Madison are lower than in Tacoma; for example, the cost of all consumptions between 20 and 54 kilowatt-hours per month in Tacoma to domestic consumers whose first step is 48 kilowatt-hours is higher than in Madison, taxes included" (Jansky).

You are sadly behind the times on his information. Our rate ordinance, No. 11314. This ordinance, on page A–1, reads:

"The minimum number of kilowatt-hours per month in the first block shall be 20. The maximum for single-family residences shall be 40 kilowatt-hours per month."

There is no need for you, Professor Jansky, to invent an exaggerated first step in the rate structure of the Tacoma Light Division. We do excellently there on the very much lower first step.

TACOMA COMPARED TO OTHER CITIES

"For a consumption of 200 kilowatt-hours per month the consumer in Madison pays $4.35 and in Tacoma the consumer whose first step is 48 kilowatt-hours pays $3.68, which appears to indicate that the consumers in Tacoma pays 67 cents less for the same consumption than the Madison consumer. But 87 cents of the Madison consumer's bill is taxes. The net bills are therefore $3.48 and $3.40, respectively, but 48 kilowatt-hours is a low first step" (Jansky).

As explained above, Professor Jansky, you are using an exaggerated first step. The corrected figures are as follows:

Madison, Wis.: 200 kilowatt-hours	$4.35
Tacoma, Wash.:	
First step, 20 at 4½ cents	.90
Second step, 180 at 1 cent	1.80
	2.70
First step, 30 at 4½ cents	1.35
Second step, 170 at 1 cent	1.70
	3.05
First step, 40 at 4½ cents	1.80
Second step, 160 at 1 cent	1.60
	3.40

The average residence in Tacoma comes under the 30-kilowatt-hour first step, which would make the average bill $3.05, or $1.30 less than Madison, instead of 67 cents mentioned by you, Professor Jansky.

The largest homes in Tacoma would pay $3.40 for this energy, or 95 cents less than Madison—while the smaller homes in Tacoma would pay $2.70, or $1.65 lower than Madison.

For a comparison of the Wisconsin Power & Light Co. see schedule G. This schedule gives an interesting picture of taxes paid and charges to consumers for electric energy.

AGAIN, TAXES

"In addition, the Madison Gas & Electric Co. pays interest on its bonds held by an insurance company, and thus helps the insurance company in meeting its obligations to its policyholders; it also pays a 3-percent tax to the Federal Government on certain gross receipts; it pays a certain percentage on its pay roll to the so-called Social Security Board in Washington, and dividends to its stockholders. The Tacoma utility pays none of these costs" (Jansky).

An 8-year-old child understands that there is an obligation attached to using the property of another person. Everyone pays for the use of money. Tacoma also pays its interest.

Tacoma does not pay the 3-percent Federal tax mentioned, but pays an equal or larger amount in other forms of taxation. As

mentioned before, Tacoma pays dollar for dollar its share of the tax obligation alongside of any private utility. The Tacoma light division has had little to do with just which taxing unit was to receive its taxes. The point is—Tacoma pays taxes!

In regard to social security—Tacoma was denied the privilege of participating through a ruling at Washington which bars city employees. Every effort is being used to have the Tacoma utility included in this program. Tacoma utility employees are subject to income tax and should also be included in the social-security program.

Dividends? Yes; the Tacoma utility pays millions in dividends—not to a few fortunate stock and bondholders—but to every one of the 34,000 consumers of electric energy—through materially reduced rates. How well the poor stockholders of many private electric utilities have been treated in the matter of dividends, or even in the protection of their investments in these utilities, is a sad page in American history.

In my own case, I have seen the investment of my mother in such a private plant shrink from $3,500 to about $50 while the officers of the company continued to draw their heavy salaries and bonus. This money meant a lot to her in her old age but evidently did not bother the conscience of those who obtained it.

It is instances like the above, magnified into thousands of cases, which is of itself giving great stimulus to the growth of public ownership. Sarcasm directed against men who are trying to correct past abuses will not stem the tide. A thorough housecleaning of private utilities and a new program of honest dealing with investor and consumer alike is the only thing that will save these private utilities. When times get hard occasionally with the rank and file of our people, the officials and others who administer these utilities should not insist on getting their "pound of flesh."

Your sarcasm, Professor Jansky, in the last part of your letter is the result of a very feverish state—hardly worth recognizing. Rantings such as yours are just that much more stimulation for those, who wish to see the greatest good done for the greatest number, to battle on.

Sincerely,

JOHN M. COFFEE,
Member of Congress.

SCHEDULE A.—*Direct and indirect taxes, Tacoma light division, 1933*

Gross-earnings tax (State)	[1] $24,925.14
Gross-earning tax (city)	145,582.91
Street-lighting loss	41,785.15
Gratuitous work	562.51
Hydro gas and miscellaneous taxes	5,711.52
School expense	[2] 5,624.30
	224,191.53
Gross revenues, 1933	1,940,994.03
Taxes	224,191.53
Taxes to gross revenues (percent)	11.55

[1] This tax was assessed in 1933 and not paid until 1934, when it was charged to prior year adjustments and not to taxes.

[2] Items covering school tax as follows:

Mason County	$3,636.99
Pierce County	1,987.31
Total	5,624.30

SCHEDULE B.—*Direct and indirect taxes, Tacoma light division, 1937*

Federal: Gas tax	$702.77
State of Washington:	
Motor-vehicle licenses	83.75
Gasoline and oil taxes	3,513.85
Hydro licenses	1,952.92
Gross-earnings tax	71,313.87
Sales tax	6,674.14
Compensating tax	1,682.71
Mason County: School expense	2,954.56
Pierce County: School expense	3,500.00
City of Tacoma:	
Gross-earnings tax	185,519.67
Gratuitous work	1,667.58
Total	[1] 279,565.82
ADDITIONAL ITEMS	
Electrical inspection fees assumed by the Tacoma light division for which other companies generally make charges	9,500.00
30 percent of all general office salaries in the following city offices: City treasurer, city comptroller, city clerk, board of contracts and awards, and civil service	19,665.01
Loss in operation and maintenance of street-lighting system (on which we are trying to collect). This item is based on city charter, which requires a charge of 1 cent per kilowatt-hour on energy plus cost of operation and maintenance and 15 percent overhead. This item has not been paid by the general fund	42,383.57
Grand total	[2] 351,114.40

[1] 10.98 percent of revenues.

[2] 13.79 percent of gross revenues.

SCHEDULE C.—*Tacoma light division*

Net annual income for the last 3 years:

1935	$557,908.65
1936	620,433.22
1937	895,954.74

Bond redemption for the last 3 years:

1935	$647,000
1936	678,000
1937	713,000

The financial progress of the Tacoma light division for the last three 10-year periods is shown in the following tabulation:

	1917	1927	1937
Plant investment	$4,305,113.87	$11,365,181.79	$23,896,330.84
Bonds issued	$2,610,342.79	$6,810,342.79	$13,160,342.79
Outstanding bonds	$1,886,000.00	$3,996,000.00	$5,307,000.00
Equity in plant	$2,419,113.87	$7,369,181.79	$18,589,330.84
Percent of equity	56	65	78

Flag Day

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 14, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, this is Flag Day and it is proper that the Congress of the United States pay its respects to the flag of the Nation—our Star-Spangled Banner—the flag which this year is celebrating its one hundred and sixty-second birthday.

Our flag means much to the people of this great Nation. It is the symbol of liberty, courage, and infinite possibilities. It typifies the spirit of tolerance and its magic fills us with emotion.

All true-loving and God-fearing Americans who so firmly believe in their representative constitutional form of democracy hail today to the Stars and Stripes, may they ever wave, and you who are assembled here, may you always have true faith in our democracy and in our American institutions so nobly portrayed by Old Glory.

Mr. Speaker and Members of the House of Representatives, I wish to close my remarks on the flag by reading an excellent editorial which appeared in today's Paterson Evening News, Paterson, N. J., entitled "The Greatest Flag in All the World—Our Flag—Long May It Wave."

[From the Paterson (N. J.) Evening News of June 14, 1939]

THE GREATEST FLAG IN ALL THE WORLD—OUR FLAG—LONG MAY IT WAVE

This is Flag Day, and this year the observance of paying tribute to the Nation's emblem takes on particular significance.

The American flag is no fetish. Men understand its function and know the values it symbolizes. Only a few yards of silk and a little thread, only a flash of color against the sky, it is but a token, a sign, a symbol of quantities and qualities which defy adequate representation. No single design ever could be conceived to portray the whole Nation, the whole people, the whole body of ideals about which American civilization revolves, and the flag is admittedly only a gesture toward the impossible. It is as such that the people comprehend and appreciate it.

Flag Day in America is designated specially as a day on which we honor the flag. Some of us will observe the day as a rite and some will forget it. We believe all Americans should pay tribute to our national emblem and remember what it means to us. We do not hold with that cynicism which feels that honoring the flag is only a gesture. These same cynics who feel there has been overmuch "flag waving" are not lacking in respect for the flag, they think only that outward respect for the flag does not mean much. They would be among the first to resent any disrespect but they themselves seldom display the emblem or think about it in times of peace.

Yet they know, as we all know, that the flag stands for everything we are, everything we have been or hope to be. They know that when the men of old beheld that first flag made by Betsy Ross they felt they had an emblem, a symbol. No nation could be without a flag. Every land must have an emblem and in our hearts we feel a real fervor as we see the Stars and Stripes floating in the breeze. Francis Scott Key saw the Star Spangled Banner still waving in the morning's first beams after a night of doubt and was inspired to write our national anthem. We know what it would have meant to him if it had not still waved. We know how welcome is the sight of it when we have been far away and have seen only the flags of other lands.

We have only to recall what this flag meant at Bennington, at Saratoga, at Yorktown, at Gettysburg, at Santiago, at Chateau Thierry. The flag is our own, our emblem, bought with the blood of our forefathers and kept with the blood of our sons. Let us have no cynicism about waving the flag.

Scenes change, men come and go, parties rise and fall, issues wax and wane, but there is continuity in American history, and the flag bespeaks the bond that links man to man. So it is that when a citizen salutes the flag he pays tribute not to the symbol itself but to the unity, harmony, and fellowship which it denotes and exemplifies.

Citizenship implies responsibility, and the flag deserves respect. Flag Day is intended to remind the people of these facts. This year to a particular degree the significance of the occasion is worthy of special thought. Crime rides rampant; radicalism is rife; economic disorder prevails. American institutions are being tested. But none of these evils can constitute any real danger if the people of the Nation stand firm. The plight of other lands is far more disturbing. The United States has already weathered much of the storm. The future is bright and secure if American men and women will practice the faith which is in them, the faith which their heroes personified and which their flag, free flung to the winds of heaven, typifies.

So let us all today display the flag, be proud and glad of its history and have faith in its future. Let us salute as it passes and honor it always and keep it unstained, "not a star erased nor a stripe polluted."

T. V. A.

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks, I wish to say that the reaction to the passage of the bill restricting the activities of the T. V. A. is most favorable. This should take the starch out of those who have been arrogantly riding over the law and the Constitution. The governing board of the T. V. A. has overextended the activities of this agency beyond what was first intended for it. They have been brought up with a sudden jerk that will do them good and will save the country from the evil results of this action.

The New York Times of June 15 prints the following editorial:

RESTRICTING T. V. A.

Nothing that the House has done so far this session ought to bring more reassurance to business than the bill it has passed to control the Tennessee Valley Authority. In several important directions the bill limits the Authority's present powers and discretion. It restricts its future activities to 16 Alabama counties, northern Mississippi and the area in which it is now operating. It requires that its accounts and disbursements be subject to the same procedure in relation to the General Accounting Office as other governmental agencies. It requires the Authority to set up a sinking fund for amortization of all expenditures, past, present, and future. It removes the Government's guaranty of any bonds issued by the Authority under the act.

These changes, if the Senate can be got to agree to them, will go far toward restoring public confidence in the future of the electric utility industry. They will give assurance that Government competition is to be geographically restricted. They will do much to make certain that T. V. A. charges rates sufficient to pay

for its investment. They will not abolish Government ownership and operation of power-generating plants, or destroy an interesting and a valuable experiment; but they will more nearly compel this experiment to stand comparison with private ownership and operation on its merits.

The New York Herald Tribune, in its editorial column of its June 15 issue, says:

A BILL THAT SHOULD BE PASSED

In passing the so-called May bill on Tuesday, drastically curtailing the activity of the Tennessee Valley Authority, the House struck one of the most vigorous blows delivered on behalf of private property in the last 6 years. The May bill is the House version of the Norris bill, which was passed by the Senate to authorize the T. V. A. to issue $100,000,000 in Government-guaranteed obligations. The House measure reduces the authorization from $100,000,000 to $61,500,000; provides that the bonds be non-Treasury guaranteed; and restricts the activities of the Authority insofar as they are concerned with the generation, transmission, and distribution of electric power to the area in which those activities are now being carried out or are under contract to be carried out, and to certain areas in northern Alabama and northern Mississippi.

In addition to these restrictions on the activities of the Authority, the May bill requires that the United States be reimbursed for the amounts which it has expended for the electric power properties of the T. V. A. properly allocable to the generation, transmission, and distribution of power. To this end the Authority would be required to issue bonds to the Secretary of the Treasury to cover the cost, and to pay off the bonds over a period of not more than 50 years. The measure provides, further, that accounts and disbursements of the T. V. A. be brought under the jurisdiction of the General Accounting Office in the same manner as are all other agencies of the Government, except that the Comptroller General would be authorized to allow credit when it is shown to be reasonably necessary to the accomplishment of the work authorized to be done. Finally the T. V. A. would be forbidden to make any payments, other than those already being made, to compensate States and municipalities for losses in taxes resulting from the fact that a Government project has superseded a private project in that region. If the T. V. A. wishes to compensate the States and municipalities for such tax losses in the future, this bill proposes it shall do so "by providing that power consumers pay enough for their electricity to offset such loss."

When it was learned on Tuesday that the May bill had passed the House by a vote of 192 to 167, James Pope, Chairman of the Board of Directors of the T. V. A., issued a statement to the effect that this action meant the "death" of the agreement between the T. V. A. and Commonwealth & Southern, under which the Authority was to purchase $45,000,000 of the latter's properties. This was a rather unfortunate statement. If Mr. Pope meant that the T. V. A. and the administration were going to fight the May bill and insist on the Norris bill, with its huge grant of funds and "no questions asked," to the point of producing a stalemate, then he may have been correct. But if he meant to create the impression that the enactment of the May bill was inconsistent with the conclusion of the agreement between T. V. A. and Commonwealth & Southern, he was wrong. The T. V. A.'s share of the pending deal with Commonwealth & Southern is only $45,000,000, and that is well within the $61,500,000 sum provided by the House measure. There is, indeed, nothing whatsoever in the May bill which would obstruct this proposed arrangement in any way. Moreover, in order to give Congress plenty of time for threshing this legislation out, Wendell L. Willkie, president of Commonwealth & Southern, has offered to extend the time for closing the contract by as much as 90 days.

The May bill should be passed as it stands. It does not hamstring the Tennessee Valley Authority unduly in its present activities—though it puts them on a more realistic basis—nor from undertaking activities now under contemplation. On the other hand, as the House Military Affairs Committee noted in reporting it out, "It should go a long way in restoring public confidence in the future of the electric power industry."

A Good Appointment

EXTENSION OF REMARKS

OF

HON. J. JOSEPH SMITH

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

EDITORIAL FROM THE WATERBURY (CONN.) REPUBLICAN OF JUNE 9, 1939

Mr. SMITH of Connecticut. Mr. Speaker, under leave to extend my remarks I wish to include an able editorial from the Waterbury Republican, of Waterbury, Conn., of June 9, which presents a fine appraisal of the high qualities of Mr. Archibald MacLeish, who is the President's selection for the office of Librarian of Congress. The editorial follows:

[From the Waterbury (Conn.) Republican of June 9, 1939]

A GOOD APPOINTMENT

President Roosevelt's nomination of Archibald MacLeish to be Librarian of Congress has run into two special criticisms. Librarians are heard lamenting that he has had no experience in their specialty. And alarmists are denouncing him as a "red."

The first plaint springs from the disposition of library administrators to regard their profession as a closed art and mystery. But with all due recognition of the value of special training, it is to be doubted if lack of it will seriously handicap a man of Mr. MacLeish's undoubted appreciation of cultural values in the work set before him.

As for the second class of objection, it springs straight from the mood of hysteria revealed in much of the testimony before the Dies committee. MacLeish is no revolutionist. In his poems and other writings he has revealed a quick sensitiveness to social injustice, but an enemy of democratic institutions? Arrant nonsense!

And having said what he is not, let's put his positive character in the scales. The President declared, in announcing the appointment, that he had sought for the office "a scholar and a gentleman," and had found him in MacLeish. That says it, in brief. He is also one of the foremost of contemporary American men of letters and a successful lawyer.

The appointment is a good one and in it MacLeish's fellow Connecticut citizens take special satisfaction.

Why Fit a Set of Golden Hobbles on a Good, Fast Trotter Who Has Been Getting Us Out of the Economic Woods? Limitations Upon P. W. A. Are Designed to Destroy Its Usefulness and Should Be Cast Aside as Poor Economy

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. LYNDON B. JOHNSON. Mr. Speaker, I believe in economy. I believe in it especially while we are considering what sort of relief program the United States is going to have during the coming year. We have no money to waste.

Yet I must say frankly that I believe a lot of the economy talk going the rounds the last few days is unadulterated smoke screen. It is political economy talk. If analyzed, it would be found to be the kind of economy talk a narrow-minded town board would indulge in as an excuse to cut off a water purification system and return to wells and hand buckets, to save money. We need economy, but we need sensible economy.

This discussion about the Public Works Administration is a case in point. There hasn't been much criticism of it directly. It has been caught in the welter of attack on other agencies. Even our Republican friends, bitter as they have imagined themselves to be on everything, have soft-pedaled their comments on the P. W. A.

The Interior Department, with the many jobs it has done under the direction of the Honorable Harold L. Ickes—the P. W. A. included—hasn't exposed much surface subject to attack. All the jobs have been done well, honestly, thoroughly. Speaking of the administration of the Interior Department, our Republican friends have only to look back to their administration of the same Department a few years ago and recall that their party has a lot to remember and a lot to forget.

This false-economy talk has focused itself in a proposal to limit both individual P. W. A. projects and the total volume of P. W. A. projects. It is just this fallacy I want to call to your attention.

If such limitations are placed on the P. W. A. under the guise of being "economical" they will operate to defeat the whole original purpose of the program. Of course, that may

be the intention. If so, its destructive intention should be killed in the bud.

The purpose of the Public Works Administration is to construct useful, permanent, heavy public works, and at the same time relieve unemployment and stimulate business to a degree which will really make some impression on our national economy.

If these limitations are imposed upon the P. W. A. they will demolish the hopes of many cities, States, and counties which have developed great and necessary projects and are willing to invest their own funds to get them.

I am informed that there are now pending before P. W. A. almost 500 projects in 41 States designed to cost more than the $500,000-limit provided in the bill as now drawn. The sponsors of all these projects stand ready to put in more than half of their own money the day P. W. A. says, "Go ahead." The sponsors do not think any such regulation and limitation are necessary.

These cities, counties, and States—these prospective sponsors—know that even without such limitations as are being talked here now, the P. W. A.'s own limitations will protect them. There is an automatic limitation in P. W. A. proceedings. It will not approve a project unless the sponsor puts up in cash or arranges for a loan of 55 percent of the cost. That is an effective curb. But if you legislate so far as to say how far a public sponsor like a city, State, or county can go, then you are legislating to say that American cities, States, and counties are too inefficient and incapable to know their own business and manage it.

Why the limitation to $125,000,000 for such a program as this?

P. W. A. today has in its files almost 6,000 applications from cities, counties, and States in every section of the country. They are for projects these sponsors have themselves determined are necessary and useful. They offer to put up their own funds to go through with them. And $125,000,000 will make possible of that 6,000 but a small percent. What we need for this, if we must set a figure, is $500,000,000. That would be economy; for when it was invested we would have many permanent improvements to show for it. And in the acquisition of these improvements business, labor, industry, the farmer—everybody—would benefit, on the job and afterward.

The average cost of 34,400 P. W. A. projects built in the last 6 years has been $142,440. The average size of the community-building project has been but $10,000. All this without the limitations we hear talked about now. Projects have run all the way from a few hundred dollars to a few million dollars, but there has been no complaint among sensible people. No one has been able to convince anybody that one dollar has been wasted by the administration of P. W. A.

Suppose we do put on the $500,000 individual-project limitation and cut the appropriation back to $125,000,000 for permanent public works.

In Texas, where we have one of the finest growing highway systems in America, the work the highway department has planned under the pending application simply cannot be done. We have a highway department which is not excelled anywhere. It has made every Government dollar spent show itself in permanent and practical improvements. No one has ever lifted a cry against our highway department and the size and amount of its undertakings, although it has projected plans reaching into millions of dollars instead of mere thousands. The reason is that it has made those millions count. Under a $500,000,000 limitation its pending project would be dead.

The folks who live on central Texas rivers, like the Blanco and Guadalupe, can go on forever getting their farms, homes, and families washed away every time there are rains up the river. For $500,000 is going to get the folks on the Blanco and Guadalupe Rivers no flood control, no reclamation, no navigation, and no cheap power.

Without the P. W. A., the Colorado River could never have been harnessed, nor could it have been conquered under a $500,000 limitation. Dallas cannot get the sewers it says it needs, Corpus Christi cannot get the harbor improvements it wants, the University of Texas cannot get the buildings it needs so desperately for its rapidly growing student population if we are going to get penny-wise, pound-foolish, smug, and silly all at once in the middle of a 6-year program notable for its economical accomplishments.

Mr. Speaker, no one amenable to reason has produced any argument to show that the P. W. A. has wasted anything in 6 years, or has run away with itself and got reckless in its judgment about the projects it would approve now.

During all that 6 years it has built and built well. Now we propose to put crippling limitations upon it. We want to make it impossible for it to do great works. We want to limit it to a ceiling of $500,000, and give it the insufficient amount of $125,000,000 to do the job with. It seems to me that we are trying to take a good and faithful trotter which has been getting us out of our economic woods during the last 6 years and fit him with a nice new pair of solid-gold hobbles for the rest of the trip.

The administration has every right to be proud of the work the P. W. A. has done. The Congress has every right to feel the trust it has placed in the P. W. A. has been thoroughly and fully justified. The American people overwhelmingly approve and are proud of the work which has been done by every employee of the P. W. A. They recognize and applaud the spirit which has prompted every step of every project and carried it through to final success. It has been the combined work of every member of the P. W. A. organization. From the boy who opens the mail and stamps the applications "received" through the clerks, department heads, inspectors, consultants, engineers, lawyers, bankers, and on up to the Administrator himself, the spirit has been "This is my job and I'm proud of it. It is my best effort."

Common sense demands that in our legislative acts here today we say to this P. W. A. organization which has done such a notable job for us in the past: "You have done a fine job, a splendid job of building America. You have our confidence. We are giving you the means to go on. Continue with the good judgment which has in the past distinguished you."

I hope that every Member of Congress will study the table of pending P. W. A. projects, appended hereto. Look at your own State, study your figures, and consider your country as a whole before you chuck all pending projects in your State out the window.

Summary of list of applications for projects pending before the Public Works Administration for which the amount of grant requested exceeds $225,000, as of June 14, 1939

State	Number of projects	Loan	Grant	Total	Estimated cost
Alabama	1		$893,520	$893,520	$1,985,600
Arizona	5	$2,816,000	4,626,267	7,442,267	10,281,039
California	43	8,057,000	64,253,889	72,310,889	180,685,529
Colorado	2	5,500,000	5,304,273	10,804,273	11,787,273
Connecticut	8		7,284,243	7,284,243	16,187,209
Florida	17	11,728,000	14,134,340	25,862,340	31,419,335
Georgia	10	1,096,953	7,453,046	8,549,999	16,316,125

Congressman Celler Asks for Enlightenment on Radio Censorship

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 15, 1939

LETTER TO HON. FRANK R. McNINCH

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I have this day sent to the Honorable Frank R. McNinch, Chairman of the Federal Communications Commission:

JUNE 15, 1939.

The Honorable FRANK R. McNINCH,
Chairman, Federal Communications Commission,
Washington, D. C.

DEAR MR. McNINCH: This letter is written to you as Chairman of the Federal Communications Commission in all kindliness and good will.

I am disturbed with one of the regulations recently promulgated by your Commission, which provides as follows: "A licensee of an international broadcast station shall render only an international broadcast service which will reflect the culture of this country and which will promote international good will, understanding, and cooperation." What is "international good will" to one may be international ill will to another. Furthermore, what is meant by "understanding"; and what is meant by "cooperation"? There is no common definition of these words, and therefore the language used is somewhat vague.

If I were scheduled to speak on one of the four international broadcasting stations and were suddenly stopped on the score that I was not promoting "international good will, understanding, and cooperation," I would be deeply resentful against the broadcasting company that sought thus to interrupt or scotch my efforts.

Whether or no there is involved in this regulation a degree of censorship, I will not state at this juncture. But if there is censorship, then the regulation would be without force and effect, because the Federal Communications Act of 1934 (sec. 326), denies the Commission the right to exercise power of censorship over radio communication. That section, likewise, denies the Commission any right to interfere with freedom of speech.

Frankly, I do not think the Commission is on firm ground. I do hope, therefore, that earnest reconsideration will be given the regulation in question.

Let me also point out another significant fact. The Judiciary Committee, of which I am acting chairman, is now considering a bill which provides that no rule or regulation can be promulgated by any department or agency of the Government unless or until public hearings can be held; that any one aggrieved by such rule or order shall have the right to appeal to the courts; and that such regulation must be supported by substantial evidence in its consideration by the courts.

This bill puts into a common mold practically all of the agencies of the Government, with but few exceptions. Most of the departments and agencies have voiced protest on the score that their activities are so different from each other that they cannot be placed in a common pattern. However, public opinion as reflected in the Congress is growing impatient with some of the departments and commissions which make rules and regulations that at times go far beyond, as it is alleged, their basic statutes. It is thus charged in many quarters that the agencies are legislating.

You would indeed be giving great comfort to the proponents of this bill—you would be giving them great ammunition for argument—if your regulation concerning international broadcasting were not properly founded upon, or could not be deemed justified by the basic Communications Act of 1934. It may be that you have information not known to the public or to the Members of Congress which would clear up the situation. I repeat, in all kindliness, I ask for enlightenment.

Cordially yours,

EMANUEL CELLER, M. C.

REMARKS OF THOMAS W. LAMONT AT THE MID-CAMPAIGN DINNER OF THE GREATER NEW YORK FUND MAY 8, 1939

Mr. DICKSTEIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following remarks of Thomas W. Lamont at the mid-campaign dinner of the Greater New York Fund, at the Hotel Waldorf Astoria, New York City, May 8, 1939:

Let me thank you again, Mr. Chairman Parkinson, for giving me the chance to meet with you and hear my testimony as to the value of this fine effort in human relations. Especially let me express to you the gratitude of our community for the notable spirit of sacrifice which you, barely recovered from a serious emergency operation, have been showing to us.

This campaign is, I hardly have to point out, another outstanding example of the superb cooperative spirit of New York City and of its citizens. Throughout the worst years of the depression our community made it clear that it would spare nothing in the way of generosity and sacrifice for those in need. For several weeks you here have been engaged in this New York campaign of war on poverty and suffering. Now tonight we find ourselves midway in this effort and are met to compare notes and go forward with renewed energy.

UNITY OF PRESENT CAMPAIGN

At the initial dinner of the campaign on April 19, James G. Blaine, who has been so largely responsible for the inception of this work, spoke in eloquent phrases of the implications of this task of ours, its beneficial effect in preventing needless duplication of effort, in correlation of activities. And at these gatherings every speaker properly emphasizes the unity that marks this campaign, this fine, joint effort by all religious sects and creeds, Catholic, Protestant, Jew; this extraordinary gathering together of leaders from all the five boroughs of this great city. This unity that we have is perhaps the greatest single factor in this particular effort. It reaches far beyond the amount of the fund that we raise.

RACIAL AND RELIGIOUS TOLERANCE

Today, as we are well aware, we are all working in the midst of great perplexities, both domestic and foreign. But in this campaign of ours we have a strong, practical demonstration of neighborliness and tolerance. How vastly different, by way of contrast, is our situation from that in certain countries overseas, where we have been witnessing a racial and religious persecution so cruel as to render life almost intolerable. Is there danger of such racial or religious antipathies crossing the ocean and finding foothold here? I cannot believe it. Yet from time to time even in this country we hear vague, intolerant mutterings.

Yet I know that at bottom the real feeling of our community is that we detest any suggestion of class war in America; we resent the idea of racial intolerance; we loathe religious discrimination. How could this be a land of freedom for one kind of religion and not for another? Surely any racial or religious cleavage is completely alien to our American scheme of things. We Americans have been brought up in all the radiant light of liberty which we are trying to preserve; and 3,000 miles of ocean can neither insulate our human sympathies nor moderate the indignation which we all feel because of the suffering and cruelties inflicted upon special groups in more than one of the European countries.

CASE OF THE REFUGEE CHILDREN

Take further, if I may be so bold, the case of the 20,000 poor refugee children whose entry amongst us our present laws forbid. A considerable outcry has been raised against their admission over the next 2 years, even though it is clear that provision has been

made so that they would not become a charge upon the state. There is perhaps no great issue involved here, and the advocates on both sides of the question are no doubt equally sincere. But I cannot help asking myself what harm such a pitiful group can wreak upon us. We Americans cannot well forget that we, or our forefathers, came over to this land 300 years ago, and thereafter in constant streams for many generations, chiefly in order to escape religious or social or economic handicaps in Europe. We, or our ancestors, found here a land of opportunity and of liberty. How can we, removed from all the oppression and agony overseas; unregimented, untrammelled, free from the tenseness that is torturing so many thousands over there—how can we reconcile it with our generous instincts and practices to hold back from giving entry to these wretched children?

The plight of young children is always the one most appealing to our sympathies; and incidentally I know not which is the more tragic picture from overseas—that of the infants and children being fitted for gas masks in England and France and Holland, all beginning dimly to realize that war is a thing of horror; or that of the children in Germany and Italy, outfitted with miniature rifles and bayonets, being taught that war is a virtue.

WHAT STANDARD OF LIVING MEANS

We all know that America for generations has prided itself upon its increasingly high standards of living. But we know, too, that the standard of living has a significance more profound than any mere material term would imply. The standard of living, in a deeper sense, is moral in its values. Man cannot live by bread alone. And a standard of living, based on a high level because of its spiritual as well as its material well-being, can never exist in a nation oppressed with fear, prejudice, racial superstition, or religious persecution. And just as America demands freedom of speech, tolerance in race and in religion, so also it demands the highest standards in every field of conduct and endeavor—in law, medicine, business, big and little, and in politics.

THE REAL SPIRIT OF NEW YORK CITY

Perhaps you will think I have wandered far from my theme. No; I am applauding and acclaiming the ideal of high endeavor and of the unity that mark this campaign as the greatest factors leading to its success. I am expressing the admiration that I feel for each one of you workers before me here tonight; for all the men and women whose aid is helping us in this fine, this challenging work. New York City, with all its glamor and rush of life, is sometimes pictured as more enterprising and workaday than human. But this common effort for good to which you are giving your days of devotion is showing to our whole American community the real heart of New York, the best that is in us. And, in like manner, I believe this campaign to be only typical of the spirit that characterizes our whole country.

AMERICA—A NATION OF HUMAN BEINGS

What are the qualities that have made America great? Enterprise, hard work, courage, tolerance, generosity, fair play. These are "the invisible things of the spirit which are the essence of a community and a civilization." They are the qualities that have marked the real leaders of America for generations past. They are the qualities displayed by the leaders of this campaign. And as we advance along the years we realize that the power and glory come to one man and not to another; we know not why, but that is what makes this America of ours a nation not of robots but of human beings. And when I hear some misanthropic individuals declaring that America is spiritually dead, that only the totalitarian states have the power to consecrate their youth to a concrete ideal, then it is a great lift to come to a gathering of many hundreds like this, made up of men and women devoted and glad to spend their days and weeks to the fulfillment of a high and worthy purpose. And it is I that have to thank you, not you me, for letting me join you in this intimate and inspiring gathering.

Finally, then, as to this campaign, I will, unlike the preachers, quote my text from the Bible at the end of my discourse. Mine is from Isaiah, who must have been a prophet of our own day and generation when he said, "They helped everyone his neighbor; and everyone said to his brother: Be of good courage."

Peace and Safety

EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

ADDRESS BY HON. WILLIAM L. NELSON, OF MISSOURI, BEFORE WOMEN'S DEMOCRATIC CLUBS OF CALIFORNIA, MO., JUNE 7, 1939

Mr. NELSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my address to the Women's Democratic Clubs at California, Mo., June 7, 1939, as follows:

We meet in the midst of great days—Mothers' Day and Memorial Day in May, Flag Day in June, and the Fourth of July soon to follow. We meet in the best of all States—Missouri—and never was Missouri more beautiful than now. We meet in America—our United States, yours and mine—loveliest of all lands and best place to live. Never could I with more sincerity have said this of our homeland, never more than now, when, of all nations, ours is the most favored.

While in our National Capital, the key city of the world, those of us in national life must to some extent sense the surge of restlessness beyond the seas, we are happy in the thought that peace is our portion.

While there is war talk in Washington, the hope, the aim, the prayer, is for peace. Happy am I to be able to say to you that I feel that with President Roosevelt and Secretary of State Hull at the helm—and how fortunate we are to have them—a world conflict, if it comes, will not directly involve us.

Our position of vantage is ours not by accident, but because of brave and wise action. When the history of this tragic era, these tense times, is written, when the records have been read by another generation, it will be conceded that, as far-reaching good goes, President Roosevelt's message to the war-mad dictators of Europe will deserve to rank with Washington's Farewell Address and Lincoln's immortal message at Gettysburg. Today this may seem an exaggerated statement. Who, though, can measure the worth of a state paper which prevented the world from being plunged immediately into a terrible conflict, and which message may yet help bring about an era of lasting peace?

The special days to which I have referred have singular significance. Only mothers know the real meaning of war. Theirs is the grieving, not the glory. Memorial Day, a Boone County woman's thought put into action by her soldier husband, was primarily to honor the memory of those who died in war, but today it is for all. Flag Day reminds us that our flag, most beautiful in all the world, is more than a mere bit of bunting, that it stands for principles worth dying for—yes, and more, principles worth living for. The Fourth of July is no longer merely a day of spread-eagle speeches, but is becoming a day of rededication in Americanism.

It means nothing to be told that America has a "rendezvous with destiny," means nothing, unless we are willing to do our duty. "We, the people"—these words mark the beginning of the preamble to the "greatest document ever struck off at a given time by the brain and purpose of man," and there power must ever rest, rest not with the Congress or courts, not with the President, but with the people.

The Fourth of July patriot represents no worth-while ideal. He does not meet the challenge of citizenship. Our country's need is for 365-day Americans, not fractional folks. We need such citizens now, when our Nation is in greater danger from within than from without, when false doctrines are, to America's shame, being presented from public forums, on printed pages, and actually aided in mass meetings and in camps where disloyal foreign-born citizens drill under a flag that is not our own. For the disloyal alien, whose heart is not here, there is no room. Lest what I say be misunderstood, I would make it plain that no reflection is meant on the right kind of foreign-born citizens, of whom there are millions in America. Do not distrust or look with suspicion upon every German in America and count him a Hitler sympathizer. The probability is that he is as far from it as you are. Do not find fault with every Italian and measure him by the standard of a Mussolini. Some of the worst "aliens" in the United States were born here, and deserve no defense.

This is a time for calmness and reason, for tolerance within reason, rather than for the arousing of race antagonism. Civil and religious liberty is the right of all. Fortunately here in the heart of Missouri we know little of race and religious hatreds.

Truly we are a fortunate people. We meet today under the most happy circumstances. You, women of Missouri, help to make good homes. Good homes are the hope, not only of America but of the world. They make for happiness.

Of course, there is some complaint. This comes largely from those who do not take time to contrast conditions here and abroad. For instance, news dispatches tell of how in Italy the people must do without many things, including coffee. In Germany the order is for limited quantities of butter and other foods in order that money may be available for munitions of war. Over there even the children are taught to adjust gas masks. Over there the boys, instead of enjoying their vacations as Boy Scouts or having employment in C. C. C. camps, are, under enforced orders, taught the arts of war.

Still, favored as we are, it is possible to find fault, if it is fault we are looking for. Shouldn't we, though, here in the heart of Missouri on this June day, look for the things that are right, rather than give all our attention to the wrong? Just as the usual isn't news, just as we forget all about 31 good teeth and think only of the one tooth that aches, so too often the inclination is to see only the unpleasant. You and I have seen many a flock of sheep, but I dare say that none of us ever saw a flock with more black ones than white ones. There is more right than wrong in the world, and this applies to America as to no other country.

In Europe the nights are broken by the march of armed men. How different here at home, where yesterday the click of the corn planter made merry music, while from harvest fields, rich in golden grain, soon will come the busy whir of the binder.

Where, I ask you, are conditions to equal ours? What flag is more beautiful or means more than the Stars and Stripes? In what other country would you prefer to have your home? Finally, in what soil would you rather sleep life's last long sleep?

We hear of a lot of spending, mostly of Government spending, and I am frank to say that I hope that early curtailment may come. I would remind you, though, that there is unprecedented individual spending, especially in the big cities. Doubt it? Then go to the big cities, to the crowded movies, no longer referred to as "The Nickelodeons," but where the admission is many times more, and witness the crowds. Go early if you want a seat. Sports events of all kinds bring together vast crowds, 50 special Pullman trains for the Kentucky Derby, for instance. In Washington, where the "greatest show on earth" recently gave six exhibitions, the "tent full" sign went up early, with the overflow crowd seated on straw. To cap it all, for the first time in the history of the United States, we have a two-ring circus, or rather, two world's fairs going on at one and the same time.

True, there are hardships. The Biblical statement that the poor are with us always is still true. In no other administration, though, and at no other time, has the Government done so much in a helpful and humanitarian way. For the first time old people are receiving monthly checks, and no longer need fear the poorhouse. Needy mothers and children are cared for. Youth was never so generously treated or afforded equal advantages. I shall not take the time more than to make mention of the physical improvements that have come in the way of thousands of miles of road, rural electrification, with enough wires already erected to span the world four times (and in this the counties which we represent are today sharing or will share), parks, playgrounds, water works, sewer systems, school buildings, and additional facilities for safeguarding health.

No, we have not reached perfection. There can be no complete leveling-up in human affairs, but it is good to know that there is today a better distribution of opportunities and wealth. Always there will be differences. Were there no precipitous peaks, there would be fewer verdant valleys; no broken bits of marble, no mosaics; no plowing and planting, no harvest.

If the sun does not always shine, it may be that God leads us down into the depths so that, looking up through the shadows, we may see the stars.

As your Representative in Congress, I have voted for big appropriations for national defense, for bills carrying larger sums of money than under any other circumstances I could have brought myself to support. Preparedness costs aplenty. Compared, though, with the cost of war, it represents a mere minimum. In fact, no mathematical expert could truly calculate the full cost of carnage. Use the talent of mathematicians to figure the cost in money, and the heart-understanding of mothers to calculate the cost of misery; combine these costs and the true total war bill will be much more. Hence, as I see it, the money which the present Congress has voted for national defense actually represents both insurance and a saving. Proper preparedness does not mean war. The word pacifist ends in f-i-s-t, and Uncle Sam's good, strong fist may mean that America does not have to fight.

Let me make plain what I hold should be our country's position: While in every proper way exercising our influence for world peace, I want us to keep our tongues as well as our troops out of Europe.

Two months ago, speaking before the Young Democratic Clubs of our district, I said, "Honesty is not only the best policy but it is also the best politics." Today I reiterate and emphasize and add that this applies alike to political parties, organizations, and individuals.

Mention has been made of special days and events. My homecoming at this time—and I would rather be here than any other place in the world—means that I am missing a memorable event in Washington, where this week King George and Queen Elizabeth, the former the first English King to visit the western continent, come to our National Capital. There they are being welcomed with pomp, perhaps too much pomp, if you please, with much of the world ceremony-mad. While all of us admire these two pleasant young people—the King is 44 and the Queen 39—as individuals, it does not mean that we for one moment think their form of government equal to ours. Here our Chief Executive is, by vote of the people, elected to the most exalted position, a position so big that no man can inherit it or be born to it. I thank God that this is so.

A short time ago I was at Jamestown, site of the earliest English settlement in America, and sat during exercises in the old church, which still symbolizes a faith in the great Common Father and a religious devotion which, if our country is to live, must not be lost.

I have spoken of military armament. With this must come moral rearmament. More important today than ever before is the understanding of the brotherhood of man and the fatherhood of God. America must prove to the world not only that it is great but that it is good.

Leaving Jamestown, I visited Williamsburg, reconstructed city and historic shrine. Then on to Yorktown, with the old Nelson House, before which I had the privilege of having my picture taken. Next we drove through the battlefield where Cornwallis surrendered the British Army and thus ended the Revolutionary War. This marked our eternal independence from British rule.

While recognizing the truth of the statement that there is no greater tie than a common language, and while grateful for the friendly feeling which for a century and a half has existed between England and the United States, a feeling which I would encourage in every right way, yet I am reminded of Washington's warning against "entangling alliances" with any nation, even the best loved.

It has been a great privilege to speak to you today. In doing so I have not singled you out and addressed you as women. Rather have I preferred to think of you as patriotic and devoted Americans, capable leaders in a great cause, as you are. Yet I would not forget that yours is also a more exalted sphere; that you do represent womankind. And how different, yet not more different than deserved, the lot of the woman in America as compared with some on another continent.

For instance, a recent Berlin dispatch told of how the Reich mothers symbolically presented their children to Hitler. Speaking in the name of all mothers, one mother was quoted as saying, "We bring the fruits of our motherhood to the Fuehrer and say to him, 'It is the best that we have, therefore it belongs to you.'"

Yes, America is different! You, as you return to your homes, the best homes in the world, will help to keep it different. This means that there is work to be done.

In other days we have had great domestic problems, at other times great foreign problems, but never before have we had to deal with such far-reaching problems, both domestic and foreign, at the same time. Fortunately, we have at the head of our Government a man whom, I believe, God gave to us to meet this emergency, a man with a great heart and mind, a heart and mind so superior that they more than compensate for a crippled body. This man may have made mistakes. I know he has, but I do not believe that in all the world there is another man who could have taken us thus far with greater assurance and safety than has Franklin D. Roosevelt.

Model Milk Bill for District of Columbia

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. SHAFER of Michigan. Mr. Speaker, I have today introduced legislation designed to control the milk supply of the District of Columbia which I believe will solve the many problems disclosed by the hearings of the subcommittee of the District of Columbia Committee, and which will encourage the widest possible consumption of milk products. I respectfully request all Members of Congress to interest themselves in this legislation which is predicated upon the findings of a 6-year study made by Dr. Frederic C. Howe, distinguished expert of the Department of Agriculture.

The suggested bill avoids private monopolistic control on the one hand and the creation of a new milk authority on the other. It protects the farmer against arbitrary price fixing by the distributor as it protects the consumer by the creation of free competitive conditions of distribution.

The bill provides for the following:

(1) It directs the Secretary of Agriculture, with his intimate Nation-wide information and administrative agencies, to lay down and recommend to the Commissioners of the District of Columbia rules and regulations which protect the producing farmer not only as to the price he receives but as to the many abuses, if not gyppings and dishonesties, connected with his complete dependence on the big distributors.

(2) In collaboration with the United States Public Health Service, it establishes health and sanitary regulations according to the standards now provided by the United States Health Service.

(3) In cooperation with farmers and farm organizations, the Secretary declares prices the farmer should receive, and, having made these findings, the Secretary reports them to the proper authority for action, which is the Commissioners of the District of Columbia.

(4) Producers, distributors, and the public are protected by public hearings on proposed rules and regulations. They are then made effective by the Commissioners for a 6-month period.

(5) Control is maintained by licenses similar to those now issued to producers and distributors directed not only to the

observance of health conditions but as to all other conditions of an economic sort as related to both the producer and consumer.

(6) Provision is made for different kinds of distribution at a price determined, first, by the price paid the farmer; second, by a reasonable charge for processing and pasteurization; and, third, by free competition in the agencies of distribution, whether by wagon, through stores, or by relief and public agencies. In effect, the bill shifts the control of the farmer on the one hand and the consumer on the other from a combination of big distributors, a limited number of privileged farmers and truck drivers, to responsible authorities, possessed of public confidence and interested only in the protection of all classes affected in the dairy industry. It is not a shift from the competitive system to Government regulation, it is a shift from one of the most complete and most highly organized financial combinations in the country to three Government agencies subject to public criticism and free from any private interest in the subject matter.

No additional expense is involved. No new officials are created, and no new bureaucracy is established. The bill merely uses existing agencies to perform the functions for which they are now created.

By this simple procedure, the following abuses and evils will be corrected or will tend to be corrected, to wit:

(1) The farmer would receive a proper price for his milk, free from monopoly price fixing, price being fixed by the Secretary of Agriculture in cooperation with the Commissioners and producing dairymen.

(2) The gyppings and dishonest practices disclosed by the Federal Trade Commission through the use of the base surplus plan, the control of bookkeeping, the misuse of milk, the homogenizing, excessive transportation, icing, and terminal charges would be ended. The Federal Trade Commission disclosed that these dishonesties in Philadelphia alone amount to $500,000 a year.

(3) The testing of milk for the butterfat content would be subject to regulation by other agencies than the buyer.

(4) The local market would be supplied from such area as the Secretary of Agriculture suggested with the approval of the District Commissioners.

(5) The farmer might be assured of the same price for milk, for cream and ice cream, as is now paid for milk for fluid consumption.

(6) The purifying of milk would be subject to a fixed charge based on the cost of the service rendered, similar to the proper charge for the purification of water, which is an exact parallel.

(7) A wholesale price of milk would be established made up of the price paid the farmer and a reasonable price for purification.

(8) Relief agencies and public institutions would be able to buy and use freely under conditions provided by regulations.

(9) Distribution would be open and free to house-to-house vendors, through stores, dairy shops, or otherwise, milk being purchasable by them at its production cost from the processing plant.

(10) Truck drivers and bottle exchange would be stripped of their power to create and protect a monopoly in distribution in the hands of few pasteurization plants, as they would be deprived of their power to prevent, by strikes or otherwise, distribution through stores.

(11) The licensing system subject to revocation of a license would more effectively prevent abuses and monopolistic practices than court proceedings.

(12) There would be an end of the controversies over the supply of milk, as well as the alleged illegal and criminal practices which have been disclosed by the hearings of the subcommittee of the District of Columbia House Committee.

(13) We would have a pilot plan as to the supply of milk, the best methods of paying the farmer, a proper price to the farmer, and approved methods of distribution, under congressional inspection, which would automatically tend to correct similar conditions in other communities, of which hundreds, and possibly thousands, are under the domination of the so-called Milk Trust.

(14) Most important of all, under these conditions there may easily be a great increase in the consumption of fluid milk, at a higher price to the farmer, which would absorb the so-called milk surplus which depresses the price for surplus milk to less than 2 cents a quart in most of the dairy areas of the country. The present consumption is approximately one-half of what it should be for proper dietary needs, and with the price reduced to a price within the reach of lower-income groups, there might be an approximation to a quart of milk a day for children and a pint of milk a day for adults, which is the approved dietary standard for dairy products.

Such an increase in consumption might absorb anywhere from 8,000,000,000 to ultimately 12,000,000,000 quarts of milk more than are now consumed. It would greatly increase the health of children and of adults and would bring our consumption of milk in line with a proper consumption for a country possessed of the wealth and buying power of the United States.

The Federal Theater

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

ARTICLE FROM THE NEW YORK TIMES

Mrs. O'DAY. Mr. Speaker, under permission to extend my remarks in the RECORD I am inserting herein an article from the New York Times of Sunday, May 28, on the merits of the Federal Theater.

The aim of Federal Theater is to give employment to needy theater professionals in socially useful projects which will rehabilitate them, conserve their skills, and, at the same time, bring to thousands of American citizens not hitherto able to afford theatergoing a planned theatrical program, national in scope, regional in emphasis, and American in democratic attitude.

Federal Theater employs as of January 15, 1939, 7,900 people, 95 percent of whom are from relief rolls. The peak employment, 12,960 in June 1936, has been reduced by cuts in appropriations and also by the return of over 2,000 Federal Theater employees to private employment.

[From the New York Times of May 28, 1939]

F. D. R.'S W. P. A. F. T. P.—AT MODERATE BOX-OFFICE PRICES, THE THEATER-GOING PUBLIC IS INEXHAUSTIBLE

(By Brooks Atkinson)

Neither Life and Death of an American nor Sing for Your Supper is first-rate work in the theater. But that does not keep thousands of people from going to see them at the prices the Federal theater charges. Sing for Your Supper, which is the Federal theater revue, has been selling out very consistently since it opened at the end of April. It is attracting about 1,500 people into the theater every night; more than 32,000 people have already seen it, and it has an advance sale of $15,000. George Sklar's dramatic biography of an American born in 1900 has also been crowding Maxine Elliott's theater since it opened on May 19 and has an advance sale of $12,000, which already assures a run through next month and probably much longer.

When the Federal Theater's Swing Mikado opened at $1.10 top in the enormous New Yorker Theater it was sold out for 3 weeks in advance and became an enormous hit. More than 76,000 people saw the Swing Mikado during the 62 performances under Federal-theater management, and most people believe that it could have run forever. When "private enterprise" succeeded in taking it over as the result of a burst of moral indignation from Congress, and promptly raised the box office tariff to $2.20, it failed after 24 performances.

Many thing about the Federal Theater are hard to defend. Being the most conspicuous of the W. P. A. art projects, it is the one Congress enjoys worrying most. Art seems like boondoggling to

a Congressman who is looking for a club with which to belabor the Administration, and there is always something in the Federal theater that can be blown up into a scandal. But for socially useful achievement it would be hard among the relief projects to beat the Federal theater, which has brought art and ideas within the range of millions of people all over the country and proved that the potential theater audience is inexhaustible.

For a good many years now the theater has been the private diversion of comparatively affluent people, who make up a small part of the country's population and whose group taste is capricious and exacting. But the Federal theater has proved that people in general like the theater and that plays with some sort of merit can run on indefinitely at $1.10. For half that price the Federal theater gave them last season one of the best performances of a play by George Bernard Shaw that this town has ever witnessed. Box-office tariffs have become the most crucial problem that faces the theater today. Under certain circumstances in the commercial theater they can be reduced to $1.65 and possibly to $1.10; several enterprising people are working on that problem now. It is not public spirit, however, but the experience of the Federal theater that has brought the pressure to bear.

Meanwhile, F. T. P. has believed sincerely in the doctrine of "the more abundant life"; and under Hallie Flanagan's valiant leadership it has been putting that doctrine into active practice for the benefit of the millions of Americans who need it most. Two million six hundred thousand people are employed on W. P. A. projects throughout the country. Only 8,040 of them are employed in the Federal theater—between one-third and one-quarter of 1 percent. Among the 2,600,000 it would be hard to find another group of 8,040 that has accomplished so much and given so rich a social return on the money.

Even people who, like this correspondent, believe in the Federal theater cannot shut their eyes to its many faults and limitations. Most of the faults go back to the basic fact that it is a relief project. That fundamental fact has made it necessary for F. T. P. to give employment to many people who are not of much progressive use to the project and to people with labor-union and political pressure behind them. It has also prevented F. T. P. from hiring many able theater people who would be useful. This is the essential paradox of an organization that is trying to accomplish something permanent for the good of the country.

Furthermore, as a relief project the Federal theater has to be administered according to rules that make producing almost impossible. A system designed to safeguard the spending of the Government's money and to protect the claims of labor unions is next door to being fatal in the theater. When a play gets to the producing stage things are always accomplished in the theater under forced pressure; when rehearsals finally get under way every one works his fool head off against the crisis of the opening. But, according to the psychology that prevails in all relief projects, the Federal theater keeps regular working hours and punches the time clock to prevent overwork as much as to assure work enough. The time-clock sketch in Sing for Your Supper is no great exaggeration; when the employees of the Federal theater have done their daily stint they have to quit on the dot.

And the labor unions have from the beginning regarded the Federal theater as either a menace to their established standards or territory ripe for anschluss. Instead of welcoming F. T. P. as a godsend to the unemployed and instead of working together willingly for a social achievement, they have battled it as separate, warring units. They, too, have succeeded in tying it up with restrictions that make sensible operation almost impossible. The separate departments will not even work the same number of hours. Over the 4 weeks' fiscal period, which entitles employees to a security wage of $91.10, actors work 96 hours, stage hands 68, and musicians 45.

In order to produce a play a producer has somehow to bring all the departments of the theater harmoniously together toward an integrated achievement. But the task of reconciling the different working hours in F. T. P. is nothing short of prestidigitation. It also stretches out rehearsal periods and raises costs of production. There has been plenty of incompetent management in the Federal theater; no one can shut his eyes to that. But the inflexible relief-project regulations and the dogmatic working schedules of the labor unions are largely responsible for the chaotic working conditions that scandalize Congressmen who happen to be looking for something to scandalize them.

Yet the fact remains that over a period of 4 years the Federal theater has contrived to establish a broad service that is socially useful to the country and stimulating to the theater. Most theatergoers hear about nothing except the productions that spasmodically reach the stage at box-office prices. But 60 percent of the F. T. P. productions are free; they include in New York City a troupe that acts classical and cultural plays on spot bookings throughout the boroughs, puppet shows for children, and vaudeville units.

The National Service Bureau, established by the Federal theater, is the most valuable clearing house for theatrical information in the country; it is equipped to supply technical data about plays to all kinds of people and organizations. One of the most vital services the New York project performs is the training and assigning of directors for theater work in social settlements and community groups. Thousands of people off the beaten trails in New York depend on that service for cultural development, and the final competition of their plays is one of the exciting events of the season. That is the project developed and administered by Madalyn O'Shea according to social principles that should underlie all work in the W. P. A. arts.

Although the Federal theater is far from perfect, it has kept an average of 10,000 people employed on work that has helped to lift the dead weight from the lives of millions of Americans. It has been the best friend the theater as an institution has ever had in this country. It has brought the theater and people together realistically. In short, it deserves to be rescued from partisan politics which, on the one hand, are creeping into its administration, and, on the other, are threatenng to put it out of business.

Beautiful Work Done by Shovel Leaners

EXTENSION OF REMARKS
OF
HON. ABE MURDOCK
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 15, 1939

RADIO TALK BY PETER SPRAYNOZZLE

Mr. MURDOCK of Utah. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief radio talk from station KSL on February 4, 1939:

Saturday evening, February 4, and here we are, Harry Clarke, Joe Bush, and me, Peter Spraynozzle, of the sheepfold where big gates swing on little hinges bringing you our four hundred and ninth editorial column from all of us to all of you. Good evening.

Just now we read and hear much of the W. P. A. That is, from the politically appointed W. P. A. workers, of civic bodies who cry about high taxes, unbalanced budgets, who find fault with the President and the Congress, civic bodies who dry their eyes and catch the next plane for Washington with the plans of a W. P. A. project in their pocket and take their place in the line-up with a Congressman as their sponsor and greet the President with that un-American slogan, "Mister, can you spare a dime?" Of them we hear much—much too much.

Then there is the other W. P. A. worker, the outdoor worker, working in the heat of the summer, the near zero weather of winter. Not because he is politically preferred, not for fame and glory, or to be interviewed and have his picture on the front page of the paper, but working at the only job he can get to keep the home fires burning and the children in school—of them we hear little, and that little seldom complimentary.

Joe Bush and me move about in many States. Community leaders have taken us out, shown us W. P. A. projects, a one thousand dollar price tax on one, a million dollar price tag on another. We have seen work so beautifully done that we wanted to stop and talk to the workers on the job only to be told that they were just "shovel leaners" and "working stiffs" from the relief rolls, that we would meet the big shot at the commercial luncheon; and so it was.

In one State Joe Bush got a car, and we drove out to talk to the men on the job. One was a railroad fireman too far down on the board to earn enough to keep his family. Another was a young man with a high-school education plus a year in the university of his State; another was there to earn enough to complete a course in transportation in the Chicago University; one was a stone mason working at his trade. Why were they there? Because for them the gate of opportunity into the field of industry was closed for the moment.

Joe Bush says the tragedy of the depression is not in high taxes or an unbalanced Budget but in the inverted lives of the young and middle-aged workers of America. Budgets can be balanced any time, but the days, the weeks, the months, and years of idleness the workers of America are forced to submit to because of an upset in the industrial system are passing, and no Budget balanced and bulging with gold can buy back for them one split second of the time they spend in enforced idleness. That is time forever lost to the individual and wealth lost to the Nation because of labor unemployed. That, ladies and gentlemen, is the tragedy of the depression.

President Roosevelt, who sees the United States as a whole, who senses the needs of the people, who, to help the people to help themselves, has set up the W. P. A. and the C. C. C. camps as stepping stones for the workers. State and community politics that would make of those stepping stones stumbling blocks because of an unbalanced Budget interfere with the plans of an administration, block American progress, block the road to recovery, jeopardize the security of the American people and the future of the American Republic, and in their ego refer to themselves as patriots and to Benedict Arnold as a traitor.

This month of February the American people again commemorated the birth of Washington and of Lincoln for the part they

played in the building of a nation. Was Washington's budget always balanced? I wouldn't know about that. But I do know that he left a nation to the people of the world dedicated to the principle that under God all men have a right to life, liberty, and the pursuit of happiness and for that we cherish his memory, and claim him the Father of his Country.

Did Lincoln leave the Presidency with a balanced Budget? I wouldn't know about that either. I have never inquired. But I do know that he held together the States of the Union, preserved the fabric of a nation, and for that (not the state of the Budget he left) the American people commemorate the birth of Abraham Lincoln as they do the birth of George Washington.

Joe Bush and I are not of President Roosevelt's political party, but we are, thank God, fellow citizens with him in these United States of America, and if we would be true to the country that gave us birth, we must be as true and as loyal to the President of our day as the soldier in the ranks was true to the leadership of Washington and of Lincoln.

To do less than the best, even if less than the best would do, is not enough. We, the people of this United States of America, are proud of our history, proud of the rights man has in this, our country, proud of our Washington, our Lincoln, proud of the men who have preserved those rights. We cherish their memories, but our loyalty should, it must be, to the man in the Presidency now.

To commemorate the memory of our Nation's dead is a futile, un-American gesture, if we break faith and withhold our loyalty from the living. It is far more important that we love and serve our country and help our fellow man than to balance a budget and love and serve its golden contents.

W. P. A. Musicians Projects

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. COCHRAN. Mr. Speaker, no group has suffered more in recent years than the musicians of the country. There was a time when their services were very much in demand. With the passing of the legitimate playhouses followed later by a policy to discontinue the orchestras in the moving-picture theaters the musicians found themselves without means of making a living for themselves and families.

We find in the pending bill paragraph (b) of section 25 the following language:

After August 31, 1939, for the operation of any project sponsored solely by the Works Progress Administration.

That language means that, after that date, unless a State or a subdivision of a State sponsors the music project, these worthy citizens will find themselves deprived of an opportunity of following their vocation as they have in the past on W. P. A. projects. It must be admitted that the great majority of the trained musicians will be unable to secure employment.

I received this afternoon a telegram from Mr. Samuel P. Meyers, president of the American Federation of Musicians, of my city. I quote that telegram:

ST. LOUIS, MO., *June 15, 1939.*

Hon. JOHN J. COCHRAN,
House Office Building, Washington, D. C.:

The Musicians Mutual Benefit Association, an organization of 1,100 citizens and taxpayers of the city of St. Louis and St. Louis County, request that you oppose the bill in Congress known as House Joint Resolution 326 and urge the Congress of the United States to continue the white-collar and Federal music project as it has been handled during the past several years.

Passage of 326 referred to above will eliminate the white-collar project in metropolitan St. Louis because most if not all State and municipal governments are not interested in projects which do not produce material production, though the white-collar workers and musicians are entitled to the same consideration as any other worthy projects.

SAMUEL P. MEYERS,
President, Local 2, A. F. of M.

As I cannot conceive of my city or the State sponsoring such projects I want to express the hope the committee in charge of the bill will accept an amendment that will permit this class of projects to continue.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. J. HAROLD FLANNERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

LETTER FROM THE HAZLETON FLYING CLUB, OF HAZLETON, PA.

Mr. FLANNERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message from the Hazleton Flying Club, of Hazleton, Pa., with reference to the N. Y. A.:

HAZLETON FLYING CLUB,
Hazleton, Pa., June 12, 1939.

MY DEAR CONGRESSMAN: "When a man thinks, he smokes; and when a man smokes, he thinks."

When steam was discovered to have great driving power, there were possibilities of many industrial developments. Men who realized this knew it would require millions to develop them, and so banks were organized in different parts of the country and the wage earner urged to save. "A dollar saved is a dollar earned." "Save for old age, so that when you are old and your earning capacity is gone, instead of going to the poorhouse, you will have a nice nest egg to fall back on." So the wage earner from his meager earnings made a deposit each month in the bank.

There were insurance companies formed that sent agents out to the wage earner who painted a horrible picture of dying and leaving his wife and children in want, and they urged him to take out a life-insurance policy, and so each year he paid the insurance company the premium on a life-insurance policy.

There was another group in little old New York who sold stock to the wage earner in many of the industrial developments that were taking place, and while the bankers, insurance companies, and Wall Street were more interested in their own welfares than they were in the wage earners, the money they collected was put and kept in circulation, and so the wheels of industry started.

Steam engines were built and rapidly took the place of sails on ships and boats, railways were opened up, mines of all kinds were rapidly being developed. It wasn't a question of where the wage earner would find employment; it was a question of where they would get enough men for the developments that were so rapidly taking place. Agents were sent to Europe and they brought men over here by the thousands, mostly for the development of anthracite and bituminous coal industries. The West was rapidly opened up, electricity was developed in its many different uses, oil was discovered to have driving power, gasoline engines and Diesel engines were developed. The automobile, phonograph, and moving-picture industries were developed, also the radio and airplane. There was a great boom in structural buildings of all kinds after the war.

Finally, one morning in the fall of 1929, the wage earner woke up and found practically every industry fully developed, the West had been opened up, all kinds of power had been developed to its highest peak, ample factories, business houses, and office buildings, every warehouse and storage shed in the country packed to its capacity with the necessities and luxuries of life, and he without a job and his purchasing power gone. He went to the bank to draw on his saving account, only to find that the dollar saved was a dollar lost or a dollar invested in frozen assets for the banker. The nest egg he hoped for in his old age had long before been hatched out and had grown to a chicken that had laid many other nest eggs, but not for the wage earner—for the banker.

The premium on the wage earner's policy came due with no money to pay it. The insurance agent (wise philosopher) made the wage earner believe that prosperity was just around the corner and persuaded him to borrow enough on his policy to pay the premium. The insurance company sent him a check which he endorsed and returned to the company, thereby reducing the value of his policy and increasing his obligation to the company for the following year.

In the fall of 1930, prosperity was still hiding behind the corner and he was compelled to borrow again. The fall of 1931 showed no improvement and his policy would not warrant borrowing any more on it so it lapsed and the protection for his wife and children in case of death, that he pinched and scraped so hard for, was wiped out.

In the fall of 1931, a new President, a whole lot of new Congressmen and Senators were elected. When they took office in the spring of 1932, they started a New Deal, and like the act of some fairy godmother, the banks were refinanced and the Government started to borrow from them to help the wage earner and his family from want and starvation. Many laws have been enacted in the past 6 years to help industry with the exception of one or two, when harrowed and ironed out will positively pave the way to prosperity and happiness.

The greatest act passed since before the first steam engine was built was the N. Y. A. Two years ago the State authorities of the N. Y. A. leased the second floor of a business block in the heart of the city of Hazleton and opened a youth center. It has grown in 2 years until the present time it has an enrollment of over 1,200, and an attendance each month of 5,000 or more. All these attending the youth center have had a grade-school education, some a high-school education, practically all had a religious training. Before being interested in the youth center some of them might just as well have been made victims of different "isms," or have been highwaymen or bank robbers instead of democratic God-fearing American youths.

A report recently released by James O'Brien, county supervisor for the National Youth Administration, on the activities of the youth in Luzerne County makes the following comment concerning the Hazleton Youth Center:

"One of the foremost N. Y. A. undertakings in Luzerne County was the establishment of the Hazleton Youth Center. Through the cooperation of the N. Y. A. and private groups and individuals of Hazleton, this community center offers recreational and constructive free-time pursuits for both young and old. A monument to the enterprise and creative ability of American youth, this center has an average monthly attendance of 5,000. The youth center offers facilities for enjoyment of leisure time through a broad program including guidance training, athletics, musical events, dramatics, workshops of all types, arts and crafts classes, vocational and academic studies, and special community events.

"This center has numerous game rooms, a theater, a library, music studies, sewing rooms, classrooms, dressing rooms, kitchen, lounge, and dining rooms, and various other facilities. Virtually all the equipment has been made by youth who had no previous work experience before being employed by N. Y. A. In cooperation with the Works Progress Administration, education division classes in elementary and advanced subjects in a wide range of study are carried on for Hazleton residents. This is one of the largest and most complete youth centers in the State and the extensive work being done in bringing a new and broader concept of the appreciation of life to the people of Hazleton.

"One of the first projects operated in Luzerne County by the N. Y. A. was the remodeling and distribution of toys to needy children at Christmas. On a county-wide basis 150 N. Y. A. boys and girls collected old toys and repaired and distributed them to children in Sugar Notch, Hanover, Nanticoke, Pittston, and Hazleton. Also Hazleton had a crew of 19 boys erect several street signposts for the city engineers."

Recently a group of young men from the city of Hazleton made a survey of the economic conditions of Hazleton and surroundings and they found the following:

The city of Hazleton has a population of 40,000 with an immediate surrounding of 20,000. There are 10 banks in the city of Hazleton and vicinity with deposits amounting to approximately $35,000,000, most of which was placed there by people living in shacks in the surrounding towns not fit to live in, depriving themselves and their children of the necessities of life because they were taught to fear old age and "Over the hill to the poorhouse."

The city is paying out approximately $375,000 per year for fire insurance and is not getting back more than $20,000 in fire losses. This is due to the fact that the city of Hazleton has placed five firehouses in the most convenient places to cover the city. They are equipped with the most modern fire-fighting apparatus, and manned with experienced firemen. Since the taxpayers of the city of Hazleton have spent so much money and are paying now approximately $40,000 a year to bring fire hazards down to a minimum, they should collect the insurance. Imagine any businessman paying $375,000 for merchandise and selling it for $20,000.

The different life and accident insurance companies collect approximately $1,500,000 from Hazleton and surroundings each year, and as near as can be determined, not 10 percent of industrial insurance comes back and only 18 to 20 percent of ordinary and accidental.

What is true of Hazleton is true of every town, borough, and city throughout the United States.

Science and industry have made rapid progress the last 100 years. In fact, so rapid that man today is 42 horsepower, industrially speaking, and horsepower is about 7 man power—in other words, we are producing 294 times faster than we did before steam was discovered to have great driving power. We don't till the soil with a spade and a hoe any more. A young lady working in a mill takes care of from 12 to 15 looms running at lightning speed instead of the old hand-weaving machine. Massive power shovels have taken the place of the pick and shovel in excavating the earth. Powerful engines drawing 100 cars, each car loaded with from 50,000 to 100,000 pounds, traveling in all directions of the United States at the speed of about 50 miles an hour, instead of the old method of transportation with horse and wagon. We don't travel from coast to coast in the old covered wagon any more, neither do we send messages as Paul Revere carried them, but we do allow currency to go on in the same old slow and improper method of distribution by a lot of fear mongers. Currency was made for the convenient exchange of the necessities of life, not to be sidetracked and hoarded away in depositories, insurance and bank companies' massive vaults for promises that seldom materialize.

Before we can hope to have real prosperity, currency must travel as fast as we produce. The past 6 years has proven, without the shadow of a doubt, that the Government is the only one capable of doing it. The machinery is all set but it must be improved upon. The W. P. A., P. W. A., and the C. C. C., the National Housing Act, the Social Security, and the National Youth Administrations all can be made to run with the same economy and efficiency the Postal Department and the Printing Department of the Government are run. Where is there a private industry that is run more smoothly than the Postal Department or the Printing Department of the Government? With the brains of the country at the head of our Government, it is the height of folly to say that the new laws enacted cannot be run smoothly and successfully. Every new enterprise takes time to work out successfully.

Building construction is the hub of all industry. There is not a school district in the United States that does not need new or better schools. There is much need for new hospitals instead of many of the barns now used for hospitals. The most crying need, however, for buildings are youth centers throughout the United States. Build youth centers with the youth, and when they are about complete, the youth will be proficient mechanics, able to carry on in their particular lines. The cost of production of building material at the present time is at a minimum, and the cost of consumption is at a maximum.

This is due not so much to the high salaries mechanics get as it is to the lack of efficiency from growing old and no youth to take their places. After youth centers are built all over the United States, teach the youth salesmanship, send them out to sell Government bonds, especially baby bonds. It is the best investment the wage earner can hope to make today. Surely the Government can pay the wage earner more than 1½ percent on his saving account and loan it back to him for home construction and small enterprises at less than 6 percent. If Social Security functions properly, what does the wage earner want with insurance? When the wage earner spends his earnings for the necessities of life, what he has left he may invest in baby bonds instead of savings accounts in the banks and buying insurance policies on himself, his wife, and all his children; money will travel as fast as we produce and distribution will soon catch up with production.

The Government spent many billions to put the youth in a lot of mudholes in Europe where many died like rats during the World War. Surely you don't begrudge a few billion now to put them in youth centers where they truly can make at least the United States safe for democracy. The more you spend on youth centers, the less you will have to spend on jails and insane asylums, and the more teachers you employ for the youth centers the less keepers for jails and insane asylums and G-men you will have to employ.

When we look back to the time a lot of young peasants, from different parts of the old country, with no protection of life or property, came to our shores and with nothing to carry them but their two feet and nothing to work with but their two hands, they went into the wilderness and through the effort of themselves and their offsprings they gave us the finest and richest corner of the globe. Now, at this enlightened age, to see the condition it is in is amusing.

Now that I have delivered my message, take me out of my coop, fill out the blank attached, place it in the receptacle on my leg, and let me go. I don't know of any place I would rather be than home with my young mate. The youth of Hazleton and vicinity, in fact, of the Nation, are anxious to know the results of my mission here.

Respectfully yours,

ROLLED BACK.

P. S.—There is a nice mild cigar concealed in the ceiling of my coop; take it out, light up, and smoke.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks, I desire to place in the RECORD, quotations and excerpts from certain letters and telegrams received from outstanding people in the State of Louisiana who favor the great program being done by the National Youth Administration and who want to see it carried on in accordance with the recommendations of the President of the United States.

The excerpts quoted will indicate that these people believe in the United States of America every young boy and girl is entitled to an equal opportunity to get an education and that the only requirement which should be placed upon this opportunity is ability to take the education and worthiness of effort of the young person.

Hon. Richard W. Leche, Governor of the State of Louisiana, writes from Baton Rouge:

I am passing on to you a letter from the Reverend Harold A. Gaudin, S. J., president of Loyola University in New Orleans, relative to the provision in the administration's appropriation bill for the continuation of the N. Y. A. I am heartily in accord with his recommendation and hope that you will give this your support.

Rev. Harold A. Gaudin, S. J., writes from New Orleans, La.:

You are probably acquainted with the National Youth Administration by the help of which many boys and girls are able to go to college who would otherwise be forced out into the lines of the unemployed. Moreover, the aid provided is essential toward developing a trained intelligent leadership.

For Loyola University and for the other colleges and universities in Louisiana, it would be disastrous if anything was done to harm the N. Y. A.

The Police Jury Association of Louisiana at its annual convention passed a moving resolution commending the N. Y. A., and stating that—

Therefore be it resolved that the annual convention of the Louisiana Police Jury Association does hereby express its approval of both phases of this valuable and far-reaching program and urges the Congress of the United States to provide adequate and increased funds for this program: Be it further

Resolved, That the convention go on record as opposing any change in the present activities or set-up of the National Youth Administration, it having been clearly seen that the present set-up has worked out efficiently for the good of the youth of this State and Nation.

The Board of Governors of the Louisiana Public Welfare Association, taking into consideration the outstanding work of the National Youth Administration, has adopted a resolution giving this work favorable commendation and urging its continuance in increased proportions and intensified activity. This resolution reads, in part:

Therefore be it

Resolved, That the Louisiana Public Welfare Association in convention assembled at Alexandria, La., this 1st day of April 1939 do respectfully petition and urge that the National Youth Administration be made a separate, permanent department of the proposed Federal Security Agency of the United States Government; be it further

Resolved, That funds be provided for the part-time employment of needy young people between 18 and 25 years of age who are unemployed and out of school; be it further

Resolved, That funds be provided for the part-time employment of needy school, college, and graduate students between 16 and 25 years of age, so that they can continue their education.

Hon. Ovid B. Hunter, of the police jury of Red River Parish, La., wires:

The people of Red River Parish would appreciate your leading a fight to see that N. Y. A. gets funds recommended by the President rather than amount proposed by subcommittee of Finance Committee.

Hon. A. A. Fredericks, superintendent of Louisiana State Normal, at Natchitoches, La., wires:

It is my opinion that the President's recommendation that $123,000,000 appropriated for N. Y. A. is not too much.

Hon. S. M. Shows, superintendent of education of De Soto Parish, who is familiar with the educational needs and qualifications of a great and enterprising parish of the State of Louisiana, wires:

Please support President Roosevelt's recommendation in regard to funds for N. Y. A. * * * The President's recommendation highly important that this amount be restored in Finance Committee.

Commander C. P. Derveloy, of the eighth Louisiana district of the American Legion, appreciating the outstanding work of the N. Y. A., wires:

Request that you lead fight on floor to prevent N. Y. A. cut, and urge Congress to provide full appropriation asked by the President.

Hon. J. M. Pearce, president of the policy jury of Webster Parish, La., from the enterprising city of Minden, realizing the immense amount of benefit to our young people in the Nation from the National Youth program, wires:

Please favor N. Y. A. appropriation as originally asked, $123,000,000.

Hon. D. L. Glasscock, member of the police jury of Rapides Parish, wires:

Please use influence in debate on floor today to prevent cut in N. Y. A. appropriation. If possible, insist on President's entire allotment.

These and many other letters, telegrams, and personal calls have come to me during the past few days, emphasizing the outstanding work which has been done by N. Y. A. without criticism in the State of Louisiana. These appeals ask only that the proposition of an equal opportunity for an education be extended to every boy and girl throughout the United States regardless of his financial position.

Next—A Penny Arcade in the White House?

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. CRAWFORD. Mr. Speaker, I rise at this time to voice my protest against the recent action of the Secretary of the Interior which has virtually amounted to making a side show out of several of the sacred shrines of American history located in and near Washington.

Reference is made to the Secretary's recent order invoking an admission fee to the Lincoln Museum, also known as Ford's Theater; to the Peterson House, where the Great Emancipator died; to Fort McHenry, which overlooks the birthplace of The Star-Spangled Banner; and to the famous Lee Mansion in Arlington.

I am advised that during the last calendar year upward of 700,000 persons visited Lee Mansion, 116,924 visited the Lincoln Museum, and 85,000 visited the Petersen house. Please bear in mind that a very great percentage of these visitors were school children who made a pilgrimage to visit the Nation's Capital and its points of historic interest. Children, if you please, who long visualized a trek to these national shrines and for many of them it constituted the only visit to the Nation's Capital in their lives.

Today we find ticket offices stuck in the doorways of these famous places and the youth of the Nation—future patriots and statesmen as well as the rank and file of all American citizens—may enter only by paying a premium at the rate of 10 cents a head.

Shall we envision further action on the part of the Secretary in placing a carnival spieler in front of these sacred institutions to shout to passersby, "Looky, looky; hey! See where Lincoln died; one dime, 10 cents, admission."

Or shall we next expect to hear that a penny arcade has been set up in the foyer of the White House to eke for the unbalanced National Budget the hard earned dimes of the school children of the Nation and of our citizenry while the administration plays Santa Claus to the international gold brokers?

I am reliably informed this morning that there has already been a falling off in the attendance at these national shrines since Secretary Ickes' dime-a-head admission went into effect a few weeks ago. This means that fewer of our youth are seeing these spots referred to in the pages of their history books and fewer adults are passing over the threshold of these shrines—all because the Secretary of the Interior has become a tourist's dime grabber.

People of the Nation, I am convinced, are not in sympathy with this action. The sentiment of many people of my own State is well expressed in an editorial appearing in the current issue of Motor News, the official publication of the Automobile Club of Michigan, of which I am proud to be a member and which is constantly rendering invaluable service to motorists of our State.

Under the unanimous consent request granted me I submit for consideration of this House that editorial.

[From Motor News]

SNATCHING TOURISTS' DIMES

By executive fiat, Harold L. Ickes, Secretary of the Interior and Public Works Administrator, has instituted a schedule of fees throughout America's system of national parks, national monuments, and national shrines. By this action, Secretary Ickes has erected ticket windows in front of these great national travel objectives. For a dime you can see the place where Lincoln died; for another dime you can visit Fort McHenry, that inspired the Star-Spangled Banner; for a dollar you can climb the majestic peaks of Mount Rainier National Park.

Elsewhere in this issue there is a description of the wonders of the Sky Line Drive and the Shenandoah; to visit this area will set you back 25 cents—but there is a special bargain rate of $1 per season for repeat customers. The original understanding on the part of land donators that Shenandoah would be kept forever free makes this charge particularly outrageous, but the whole principle of making commercial enterprises out of the public playgrounds is indefensible.

This system of charges is an unjustifiable and unnecessary tax on the health and recreation of the American people. It places our hallowed historical shrines on a level with side-show attractions; it closes our scenic wonderlands to those who cannot afford to pay the tariff.

Certainly, the question as to whether fees should be charged and to what extent should be a matter for Congressional action. It should not be left to the capricious whim of a blow-hard bureaucrat.

Conditions Require More Adequate Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. LARRABEE. Mr. Speaker, several years ago, during my service as a member of the House of Representatives of the State of Indiana, I became interested in proposed legislation to provide pensions for the aged people, and, as cosponsor, introduced the first old-age pension bill ever introduced in the legislature of my State and one of the first bills of its kind ever introduced in any legislative body in this Nation.

Since that time I have maintained a serious and sympathetic interest in legislation to provide monthly annuities to our aged citizens, both for their own benefit and as a means of removing old people from employment rolls in a humanitarian manner.

As a Member of the National House of Representatives I have continued to express my interest in legislation of this nature, both with my support of all bills that I felt were reasonable and just and with my votes for such legislation.

At no time, however, have I permitted myself to be coerced or drawn into voting for bills framed under the guise of legislation for the benefit of aged people which I did not believe to be for the best interests of the people and the Nation as a whole.

This administration has endeavored, through the Social Security Act, which I supported, and through proposed amendments, recently passed by the House, and for which I voted, to provide such benefits.

While I have approved and supported this legislation, I do not believe that it will, and I am sure it does not now, provide adequate relief for persons beyond the age of earning a decent living for themselves. The benefits now provided, under the Federal-State cooperative plan cannot exceed $30 per month, and in most cases are less than half that sum, due to necessary limitations on the amount of money that may be raised locally as the State's and county's share. Even if and when the amendments enacted by the House recently become law, extending the maximum benefit to $40 per month, I do not believe that the aged people will, due to strained financial conditions in many States and many counties, receive anything near the proposed $40 benefit for some time to come.

In my State today the average benefit is slightly more than $17 monthly, and it will be more than a year, and then will require a special session of the State legislature to amend the present State law, before annuitants could possibly hope for benefits of $40 monthly.

Many other States are less fortunate than Indiana, and in those, the hope of benefits of more than $10 or $15 monthly, even under provisions of pending Federal amendments, is quite remote.

Because of these conditions, it has been and is my belief that old-age annuities should be paid direct from the Federal Treasury in an amount that will at least provide the aged citizens a decent existence.

Such a plan is embodied in the bill (H. R. 5620) known as the General Welfare Act, and now pending in the House of Representatives.

While I very much dislike to resort to the use of the petition method of forcing action on pending legislation, I feel so strongly in favor of the general provisions of the bill (H. R. 5620) and so certain of the need for legislation of this type that I have signed the petition, now on the Speaker's desk, for the purpose of forcing early action on this bill.

I believe that in no other way, than through enactment of legislation of this type, will it be possible to obtain payment of standardized pensions to old people throughout the Nation.

In signing the petition to bring this bill to the floor for a vote, I have done so with the firm intention of voting for the bill and doing all within my power to encourage my colleagues to do likewise.

The bill provides a monthly benefit of not less than $30 per month to each person, 60 years of age or over, who is a citizen of the United States and who has resided in the United States 20 years or more and refrains from any gainful activity.

As the general welfare fund, created by the bill, accumulates additional reserves, these reserves, above operating and administration expenses, would be prorated among all applicants, increasing the monthly benefit to an ultimate maximum of $60 per month for each person.

Both husbands and wives, even though living together, would be eligible for the same benefit, if both were otherwise qualified.

The benefits would be paid direct from the Treasury of the United States, out of special fund, to be known as the General Welfare Fund and would not be subject to State laws, regulations, or existing local financial conditions.

A burial fund is created by a provision of the bill requiring that the monthly benefit be continued for a period of 4 months after the death of the annuitant, for that purpose. The burial fund could be increased by contributions from relatives or friends if a more elaborate ceremony was desired by them.

No pauper's oath is required under provisions of the bill which intends to encourage elderly people to maintain ownership of their homes.

No benefit, under the terms of the bill, would be payable to any applicant not living within the United States or its Territories, and no part of the benefit may be spent outside, nor sent outside the United States or its Territories. The bill proposes to prevent or discourage purchase of any commodity not manufactured or produced in the United States.

It would be a punishable misdemeanor for an annuitant to so spend his benefit, or any part of it, or to unreasonably or unnecessarily maintain any abled-bodied male person between the ages of 20 and 60 in idleness or any person in drunkenness or gambling.

It would also be a misdemeanor to refuse to pay any just obligation incurred while an annuitant, or to refuse to pay at least 10 percent of any month's annuity on any other just obligation, or to willfully fail or refuse to observe rules and regulations under which the proposed act would be administered.

For the first conviction of a charge of such misdemeanor the annuitant would lose one-fourth of his monthly benefit for life. Another fourth of his or her benefit would be lost through a second conviction, and if four times convicted the annuitant would forfeit the entire benefit for life.

Under provisions of the act the Secretary of the Treasury shall have general supervision over payment of annuities and shall mail checks at regular monthly intervals to all qualified applicants.

Application forms would be made available through local post offices, and applications must be sworn to and shall be filed with the local post office. Postmasters and assistants would be empowered to administer oaths concerning the applications. A charge of 25 cents would be made for such services and the funds so raised would go to the Post Office Department to defray the extra expense incurred in this work.

The provision of the proposed act, creating the general-welfare fund in the Treasury, would empower the Secretary of the Treasury to accept any gifts or bequests that might be made for the benefit of the fund. Money accruing in the general-welfare fund can be used only for payment of benefits to aged persons and for administration of the act.

To provide the necessary revenue the act provides a gross income tax of 2 percent on all gross income accruing in the United States or received in the United States from any sources outside.

Certain exemptions to equalize the burden on the taxpayers and to prevent discrimination or hardship that might otherwise result are provided in the tax provisions of the proposed law.

This tax would replace, not supplement, taxes now collected by the Federal, State, and county governments for payment of benefits and administration of existing old-age assistance (pension) benefits under title I of the Social Security Act.

The new law would eliminate duplication of effort and expense now resulting under terms of the Federal-State-county cooperative old-age pension plan, and the proposed method of direct Federal administration should result in considerable savings over the cost of the present joint Federal-State-county system.

Even though local, State, and Federal officials charged with administration of the present plan have, in nearly every instance, worked diligently to maintain efficient and economic administration, the necessary duplication of effort and activity has proven exceedingly expensive.

Sponsors of this bill point out that there is nothing that would prevent amendment of this bill, or resulting act, later, for the purpose of permitting payment of annuities greater than the $60 monthly maximum benefit established by the act, if experience proves that sufficient revenue will accrue from the tax to make such a benefit possible.

However, it is not anticipated that revenues will accrue in sufficient amount within the next few years to make an increase over the $60 maximum possible, and the sponsors of the bill do not wish to create false hope among the aged people by establishing a maximum figure that they do not believe can be attained within the next few years.

The bill seeks to state definitely its aims and purposes as clearly and concisely as possible and to leave no possibility of any false hopes arising therefrom.

The bill is avowedly an effort to pay as liberal a pension benefit as possible and to permit retirement of elderly people, who are entitled to retirement, from the field of gainful employment and take care of the group of aged persons until such time as benefits accrue in the Federal old-age-benefit fund from employer and employee contributions, under title II of the Social Security Act, to provide those retiring from industry or gainful activity with the old-age benefit they have earned and saved during the years of employment.

Sponsors of the bill, basing their calculations on available census figures, assume that there are approximately 9,000,000 persons in the United States who would be eligible for benefits, if they would all agree to refrain from gainful activity. Many, naturally, who are in a position to earn sizable incomes would not accept pensions, but it is certain that there would be about eight and one-half million, perhaps more, applicants, and on this basis it is the opinion of tax experts that the tax feature of this bill would soon raise sufficient revenue to pay more than a $30 monthly benefit. It would not, however, for years to come, provide a benefit of $200 a month, and the bill does not seek to encourage belief that a $200 benefit would be available.

Both the author of the bill, and its sponsors, frankly admit that it is entirely possible that additional amendments and improvements may be made in the bill, as now written, to further insure a just and equitable levy of the tax. The author and the sponsors have given assurance that they welcome all constructive criticism.

While at the time this statement is made it does not appear that much hope exists for enactment of this bill during the present session of Congress, there is a fast crystallizing sentiment in Congress in favor of legislation of this type and the list of supporters of the measure is growing constantly.

It appears that definite action will be taken concerning this bill not later than the next session of the Congress. Personally I remain hopeful of its early enactment.

Dedication of Post Office at Amarillo, Tex.

EXTENSION OF REMARKS

OF

HON. MARVIN JONES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

ADDRESS BY HON. JAMES A. FARLEY

Mr. JONES of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, Postmaster General of the United States, at the dedication of the new Post Office and Federal Building, Amarillo, Tex., Wednesday, May 17, 1939.

Today we are assembled to officially dedicate this modern post-office and Federal-office building. With the completion of this unit there is added another major link in the chain of public buildings which have been provided by this administration for the comfort and convenience of the people of the State of Texas.

This project was authorized under the act of June 22, 1936, and the total limit of cost for site, building, and administrative expense was fixed at $595,000. The building was designed by the office of the Supervising Architect of the Treasury Department. After advertisement and investigation the site was selected on November 25, 1936. The cost of the property was $100,000, and title was vested with the Government on April 16, 1937. You will note that within less than a year after the authorization was made by act of Congress, the site was purchased. On December 14, 1937, the Treasury Department awarded construction contract to Mr. Algernon Blair, of Montgomery, Ala., in the amount of $369,400. As you know, the building was completed on time for you have been making use of it since January of this year.

The first floor and the major portion of the basement is used primarily for postal purposes. The upper floors provide quarters for the United States court, the Bureau of Internal Revenue, the Department of Agriculture, Home Owners' Loan Corporation, and the Social Security Board. Space on the lower floors is also arranged for the Agricultural Extension Service and the Federal Housing Administration. Many of these new activities were located in Amarillo during this administration and I am quite sure their establishment at this point has meant much to the community. To all those who had any part in promoting the building project, or in its construction, I offer my warmest congratulations on a job well done.

The erection of buildings of this character throughout the country indicates progress and gives evidence of the Government's interest in business and in the welfare of its people. Projects like this give employment directly and indirectly to thousands of workers and have a heartening effect on business generally. They also indicate that the Federal Government, under this administration, is conscious of the needs in all sections of the

Nation, and that it is providing facilities which are adequate for the public service.

The post office at Amarillo has been in existence for a little more than 50 years, but it has shown rapid development in that half-century span. By 1910 the receipts were approximately $49,000 a year. In 1920 the receipts were about $123,000. By 1930 they were $370,000, and during the last fiscal year of 1938 the receipts were in excess of $380,000. According to the 1920 census the population was approximately 15,000, but the 1930 census showed an increase to 43,000, and it is obvious that you have continued your growth both as to population and business activity since 1930. So, I also want to offer my heartiest congratulations to you, the people of Amarillo, on your progressive spirit and industry which has developed this beautiful new city in the Texas Empire.

In the early days, when your first postmaster, Robert McKenzie Moore, started to handle the postal affairs here he probably had no idea that your town and your postal facilities would be enlarged so rapidly. He did not require much help to dispose of the task before him, and his responsibilities were not as great as those of your present efficient postmaster, my good friend, Winnette D. DeGrasse. I know that Mr. DeGrasse appreciates the improved facilities offered in the new building, not only from the standpoint of better working conditions for the employees but also the greater comfort and convenience provided for the patrons.

The growth of your post office here in Amarillo has been phenomenal. In that respect it parallels the growth of the entire United States Postal Service. In 1887 the gross revenues of the Department amounted to $48,800,000; but in some respects the Service had even at that time arrived in the billion class, for the records show that in that year more than 1,700,000,000 postage stamps were issued, and approximately 3,500,000,000 pieces of mail matter of all kinds were handled. However, in comparison with the present-day situation that revenue and volume was small indeed, for in the fiscal year 1938 the ordinary postal revenues exceeded $728,000,000; more than 15,000,000,000 stamps were issued; and approximately 26,000,000,000 pieces of mail matter of all kinds were handled. So you can see the Nation has been growing and its postal establishment has multiplied many times while you were making such rapid progress here in Amarillo.

Fifty years ago you had reasonably rapid mail transportation facilities, the best that could be obtained at that time. Today there is a vastly different situation. Mail is being transported in and out of Amarillo by airplane, railroad, and automobile, and the task to be performed by your post-office staff is far more complex and intricate, yet it is accomplished with such ease and efficiency that the average citizen considers it quite commonplace. There is no other agency of the Government, and certainly no private agency that renders service to the people that in any way compares with that rendered by the post office. During the 6 years I have been privileged to serve as Postmaster General I have been impressed with the fine spirit and loyalty and the unusual efficiency of the postal workers. We in the Department fully appreciate that our efforts to maintain a businesslike administration would not be successful but for the fine support we receive from those who are actually at work in the post office at Amarillo, and in the other post offices throughout the land.

This administration has availed itself of the most up-to-date methods and the most modern means of transportation in its effort to improve and give more efficient service to the public. An outstanding example of this will be found in the Air Mail Service. Through the years the Army, the Navy, and the Department of Commerce have contributed greatly to the success of aviation. The development of the radio has been an important factor. In fact, almost all of our major industries have contributed something, for aviation depends quite as much on its ground organization for its successful flights as it does on the pilots in the air. The system now is operated entirely as a private enterprise.

I am sure, however, that no organization has done more to foster the aviation industry than has the Post Office Department. The efforts of this service to expedite the handling of the mails across this country of magnificent distances was responsible for the first scheduled regular airplane trips. Just a little more than 21 years ago, on May 15, 1918, there was established the first regularly scheduled air-mail service between New York, Philadelphia, and Washington. Prior to that time there were experimental flights for the carrying of mail and messages, in many parts of this country and throughout the world, by balloon and airplane. We all know that airplanes were used effectively during the World War, but it is nevertheless a fact that the first scheduled air flights were made in connection with the establishment of air-mail service between the Nation's Capital and New York on May 15, 1918.

The first mail was flown by Army pilots in Army planes, the personnel and equipment being assigned by the War Department. The Army continued to fly the mail until August 1918, when this Department took over the service on its own account. The air lines were operated by the Post Office Department exclusively for the transportation of mail until 1926, by which time the success attained was sufficient to attract the attention of private capital. When this was accomplished the Department withdrew from the actual operation and since that time has been paying the operators of the air lines for the transportation of the mails in a manner somewhat similar to the method followed with railroad companies and other transportation agencies. The courageous Army fliers and the heroic fellows who sailed the planes as pioneers under postal operations laid the foundation for the existing aviation industry in America. The present-day pilots who fly the big ships day and night, with a record for performance and regularity that is amazing, are also to be commended for the part they are playing in this development.

The Air Mail Service was reorganized under this administration commencing in 1934. A number of new routes were established and other routes were extended. All of the old-time equipment has been retired from service. Every plane now operated in both the domestic and foreign air-mail systems is of the multimotor type. In some instances these ships have a speed upward of 200 miles an hour, and even with the heavy passenger load their flying speed is about double that of the planes of 20 years ago. These planes are heated and soundproof, and provide for the convenience of passenger travel. The people of Amarillo are familiar with the large ships that arrive and depart regularly from your airport.

The Air Mail Service has been expanded so that now the total mileage in the foreign and domestic service is more than 62,000 route-miles. Mail planes fly more than 70,000,000 miles a year, and by June 4, when the State of Delaware will be included in an experimental service, every State in the Union will have direct air-mail connection. Commencing early this month, and with completion of the schedules expected by July, we will experiment with a new pick-up service which will touch 59 cities and towns in Pennsylvania, West Virginia, and Ohio. The planes will not stop at these points but will fly over the airports, deliver the mail by dropping the pouches at a designated point, and pick up the outgoing mail from a catcher device. We will soon establish for an experimental period autogiro service on a regular schedule between the Camden Airport and the roof of the Philadelphia post office. Under this administration we have added the trans-Pacific service. Experimental flights have been completed across the Atlantic. The rates of postage have been established for European air-mail service, and I am quite sure this trans-Atlantic operation will be successfully maintained.

I am proud to be able to say to you that in the United States we have the greatest system of air lines in the world. They fly more miles, transport more mail, and carry more passengers than any other system in existence. We will continue to develop our air-mail system. We will take advantage of every opportunity to experiment with the more modern facilities, and when it is deemed proper to do so we will advocate further extensions of this very important service.

In the fiscal year 1932 when the 5-cent air-mail rate was in effect approximately 8,900,000 pounds of air mail was transported in the domestic system. In the fiscal year 1938, with the higher rate of 6 cents in effect, the air mail exceeded 21,000,000 pounds, an increase of 137 percent. During the same period the air lines have also increased their passenger traffic and the volume of air express.

You may be assured that this administration of the Postal Service will continue its efforts in your behalf. Likewise all other agencies of the Federal Government under the administration of President Franklin Delano Roosevelt will be operated for the benefit of all of the people.

I am grateful to you for the opportunity to share with you the pleasure and pride you must feel in the dedication of this fine new Government building, which not only gives you a better place in which to transact your business with the Government departments, but adds to the beauty of your fair city. Thank you very much.

Tolerance in America

EXTENSION OF REMARKS

OF

HON. JOSEPH A. GAVAGAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

ARTICLE FROM THE POSTER

Mr. GAVAGAN. Mr. Speaker, ladies and gentlemen of the House, there exists in this country today a small minority either hostile to, or unmindful of, the great American principle of tolerance to all. No true American may remain quiescent in regard to this challenge to one of our fundamental principles; no Christian may hope to walk humbly with Christ and practice or connive at intolerance, either racial or religious. Therefore, it is most fortunate that there appears in the Flag Day edition of The Poster, published monthly by Division 3 of the Ancient Order of Hibernians, New York County (of which division I am privileged to be a member), the following article by one of The Poster's

editorial staff, verily a scholar and gentleman. The article is as follows:

[From the Poster]

"LOVE THY NEIGHBOR"

By Niall Oran Meagher

"Who is Thy neighbor?" asked someone of Christ. "All mankind," He answered. It is well for every child of God to ask at this time what is meant by all mankind. It means every person alive in the world. There are no exceptions. It includes Protestants and Catholics, Jews and gentiles, blacks and whites. It means exactly what Christ said and intended—all mankind. And whatsoever any man does unto the humblest and lowliest of mankind, he does also unto his God.

From the above paragraph one might think that this writer is a Bible reader or a crackpot. Possibly. But look around the world today, no, look around the corner, and see if the doctrine of Christ has not been repudiated here in our own country. Christians are condemning Jews; Jews are hurling epithets at Christians. Catholics are criticizing Protestants, and vice versa. The blacks complain of unjust exploitation by the whites; the whites protest against the progressive development of the blacks. In short, a doctrine of hatred, prejudice, and greed has replaced the former American theme of "live and let live." There is still a ray of hope, however, as the hue and cry described really emanates from the mouths of a few. They are, admittedly, raucous and vituperative, enough to constitute a problem. Their drivel may fall on intellects too weak to comprehend and discern the meaninglessness of their pratings. For this reason it is necessary to keep them in mind.

No one will deny that this condition is European. It is not American. Its birthplace was Russia; its higher education is Germany. Russia was the flame that set the cinders of class hatred in motion. After predicating the reason for its existence on the materialistic philosophy of Marx, it necessarily not only denied the existence of God and the soul, but went a step further by taking steps to uproot all religion and deny its practice within the confines of the Soviet. To accomplish this, it was necessary to set one religion against the other, class against class. With religion abolished from the world, Russia knows that then only will her dream of revolution and international bolshevism be possible.

On the other hand, Germany, in order to combat the inroads of communism, set up an equally sinister and hideous governmental monster, nazi-ism. It is obvious that the leaders of Germany and the Nazi Party concerned themselves very little with the teachings of Christ. They chose to defeat an acknowledged atheism with avowed paganism. They glorified and deified race superiority. This shallow and illogical doctrine is neither stronger nor more desirable than communism and hence ceases to be a challenge to the latter. Because they built their house on godlessness and upon un-Christian doctrines, they sought to eliminate the Jew, and eventually, to throttle and subdue the Christian Church. It is most certain that they will be successful in neither. When a man strikes at another solely for racial or religious reasons it is evident that his contempt is for all mankind. As soon as mankind catches up with him, he brings about his own destruction. Such is the fate of Germany.

No one in America wishes or hopes for the same ending that Russia and Germany are both heading for. Americans, generally, merely wish to be left alone at peace with themselves and with their God. It is best, therefore, that prejudices and passions be discouraged now, at their inception. This does not mean that freedom of speech should be denied to any one individual or that the press should be controlled. It means that for every hair-brained, poppycocked, nitwitted scheme of un-Americanism that is started, a thousand and one schemes of countermovements should replace them. The latter should be based on education and enlightenment concerning the truths involved. It means that newcomers to our shores should be encouraged to leave their hatreds behind them and greet the American people with nothing but love in their hearts for the New World and forgiveness for the stupidity of the old. It means that newcomers, instead of immediately trying to change the American way, should first try to adapt themselves to present methods and learn the American concept of the right to life, liberty, and the pursuit of happiness. Not until then will a neighborly instinct be universally manifest.

Americans of Irish descent should be the last to subscribe to racial or religious intolerance. The Irish know better than any other the suffering and torture following the wake of persecution. They endured it for several hundred years at the hands of a merciless oppressor, imperialistic England. They still have not completely shaken off the yoke of their aggressor. But through the sands of time the Irish never surrendered their spirit and are still alive, breathing deeper than ever, and growing stronger each day. They should be an example to all Americans that the spirit and moral strength of a people can never be killed. It is they who should furnish ample proof to the "crackpots" of our day, that long after Stalin, the mass murderer of Christians, and Hitler, the wholesale persecutor of Jews, have gone to the last judgment before the same God they sought to drive out of the world, mankind—regardless of religion, race, or color—will survive, because the majority of God's children adhere to His admonition to "love thy neighbor as thyself."

Flood Control of Cherry Creek for Protection of Denver, Colo.

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 12, 1939

STATEMENT BY HON. LAWRENCE LEWIS, OF COLORADO, BEFORE WAR DEPARTMENT SUBCOMMITTEE OF COMMITTEE ON APPROPRIATIONS OF HOUSE OF REPRESENTATIVES

Mr. LEWIS of Colorado. Mr. Speaker, when reference is made to a flood which threatens the safety of a city, doubtless there comes to the minds of most Members of Congress a picture of the comparatively slowly rising waters of a great river swollen by melting snows or by heavy rains at the headwaters. Of the approach of such a flood there is usually a day or two or several days—sometimes as much as 10 days or 2 weeks—within which the menaced city can make preparations to safeguard life and property before the arrival of the crest of the flood. During such interval, emergency dikes or levees can be erected to supplement permanent flood-control works and inhabitants can be warned to get out of the lowlands.

In Colorado and elsewhere in the so-called semiarid regions of the West, cities are menaced by floods with entirely different characteristics—by floods from insignificant-looking flash streams—floods which come almost with the suddenness and lack of warning of a stroke of lightning and which, after wreaking terrible damage, quickly subside. Although such floods rarely last more than 24 hours, nevertheless, because of their sudden incidence and the lack of time to make emergency preparations against their attack, they are more disastrous to the city so inundated than are floods in the great rivers. The only sure safeguard for a city so menaced is the provision of permanent works adequate to control any flood which is likely to occur.

Such is the type of flood which, every year from the last of April until the 1st of October, is an hourly menace to Denver, Colo., from the usually insignificant appearing and seemingly harmless stream known as Cherry Creek.

CHERRY CREEK IS "DENVER'S SLEEPING TIGER"

During the 80 years since Denver was first settled, floods from this stream have in the aggregate caused the loss of millions of dollars of property and nearly 100 lives. So treacherous is Cherry Creek and so dangerous when aroused, that I have often referred to it as Denver's "sleeping tiger."

For some 19 months three departments of the Federal Government have been investigating different phases of the problem of flood control of Cherry Creek for the protection of Denver, viz: The War Department, acting through the Corps of Engineers of the Army, to determine what, if any, additional physical structures are necessary to protect Denver from these sudden floods; the Department of the Interior, acting through its Bureau of Reclamation, to determine what, if any, of the dams which may be necessary for flood-control purposes may serve the double purpose not only of flood control but also of irrigation; and the Department of Agriculture, acting through its Soil Conservation Service, to devise plans for better land use, for run-off and water-flow retardation, and for soil-erosion prevention to the end that the height of floods which may come in the future will be lessened.

On March 27, 1939, during the hearings by the War Department Subcommittee of the Appropriations Committee of the House of Representatives on the War Department civil functions appropriation bill for the fiscal year ending June 30, 1940, I made the following statement concerning flood-control protection for Denver from floods in Cherry Creek:

FLOOD-CONTROL PROTECTION FOR DENVER, COLO.

Mr. SNYDER. We have with us this morning our colleague from Colorado, Mr. LEWIS. We will be glad to have such statement as you may desire to make, Mr. LEWIS.

Mr. LEWIS. Mr. Chairman and gentlemen, I wish to speak very briefly about a flood-control project for the protection of the city of Denver from floods in Cherry Creek.

Mr. KERR. Has that been authorized?

Mr. LEWIS. There has been no authorization as yet for construction. Preliminary examinations and surveys for flood control by the War Department and preliminary examinations and surveys for run-off and water-flow retardation and soil-erosion prevention by the Department of Agriculture were authorized under the act of August 28, 1937. Hearings were had in Denver November 15, 1937. Preliminary confidential reports by both the Army engineers and the Soil Conservation Service of the Department of Agriculture were completed and submitted to Washington in the summer of 1938 and the respective recommendations that further detailed surveys be made were approved by the Chief of Engineers and by the Secretary of Agriculture. These more intensive studies have been pursued diligently. The final reports by the Army engineers are expected to be received by the Chief of Engineers here in Washington about the 15th of April of this year.

But it occurred to me this committee might bear with me and might be interested to have me sketch briefly the situation that exists out there.

Mr. SNYDER. What is the name of the river?

Mr. LEWIS. The stream is called Cherry Creek.

Mr. SNYDER. How long is it?

Mr. LEWIS. It rises 55 miles south of Denver and flows in a northerly direction, emptying into the South Platte River in the center of the Denver business district.

Although entirely irrelevant to this discussion it may be interesting to recall that it was at the confluence of Cherry Creek with the South Platte River, in a place now in the heart of the city of Denver, that small discoveries of placer gold were made in 1858 by the Russell brothers, leading a party of Georgians. The news of these and subsequent discoveries led to a great influx of gold seekers in what is known as the Pike's Peak gold rush of 1859–60, which resulted in the permanent settlement of Denver and of Colorado.

The entire drainage area of Cherry Creek is only about 55 miles long and 13 miles wide at its broadest place, comprising a total area of approximately 421 square miles or 269,440 acres, including the 9 square miles or 5,760 acres within the corporate limits of Denver. It is shaped like a long, narrow funnel, with the narrower end passing between two boulevards, through one of the finest residence districts of the city of Denver, and thence through the warehouse and wholesale district and the railroad yards to the South Platte River.

The greater portion of this drainage area lies in parts of the counties of Arapahoe, Douglas, and Elbert, in the congressional district of my colleague, the Honorable FRED CUMMINGS, with a small portion in the extreme south in El Paso County, in the congressional district of my colleague, the Honorable JOHN A. MARTIN. The elevation at the source of Cherry Creek is approximately 7,600 feet, the elevation at its confluence with the South Platte is 5,170 feet—a fall in its course of 55 miles of 2,430 feet, or an average drop of 44.18 feet per mile.

CHERRY CREEK A TYPICAL WESTERN "FLASH STREAM"

Cherry Creek is a typical western "flash stream." Under ordinary circumstances there is on the surface of the channel only a trickle of water. It looks as if perhaps three or four fire hydrants had been turned into it. But, at any time between the last of April and the first of October, after heavy rains or cloudbursts up the valley to the south, this thread of water may suddenly and without warning change into a raging torrent for a few hours and then return soon to its normal, quiescent state. These floods have caused millions of dollars of property damage in Denver, and although the records are not entirely complete, the loss of nearly 100 lives. Like all western "flash streams," Cherry Creek is treacherous. Its floods come without warning. I have often referred to it as Denver's "sleeping tiger."

Mr. SNYDER. May I make one observation? You are perhaps the eighth or tenth Member of Congress who has come before this committee within the last week and made a statement similar to yours concerning certain streams in their congressional districts, to the effect that they are these so-called "flash streams" which are very quiet and very small today, but a storm may come up tonight and tomorrow morning you have this tremendous rush of water.

You have lived out there in the section from which you come all your life, I presume, so I want to ask you this question. Is it worse now, is there a greater volume of water now rushing through this district you speak of, at different times of the year, than there was 20 years ago?

FOURTEEN FLOODS SINCE 1859

Mr. LEWIS. Floods in Cherry Creek do not occur every year. Several years have frequently gone by without any floods or dangerously high water in Cherry Creek. The dates of the 14 floods in Cherry Creek which have been recorded since Denver was settled in 1859 are as follows: May 19 and 20, 1864; July 20, 1875; May 22, 1876; May 22, 1878; July 20, 1885, and July 26, 1885 (two in 1 month); August 17, 1888; August 4, 1897, and August 6, 1897 (again two in 1 month); April 29, 1900; August 11, 1911; June 9, 1912, and July 14, 1912 (two in 1 year); and August 3, 1933.

Of all these floods, perhaps the greatest was that of 1864, the first experienced after Denver was settled; but records of that flood are meager and opinions differ as to its relative size. My personal guess is, based on the topography of the valley and on studies of engineers and meteorological experts and on the performance of similar "flash streams" in our part of the country, that probably there has never been a flood since 1859 as great as those which may have frequently occurred within the last few centuries and which may occur again any year now during the late spring or summer. Such major flood may come this year or next; it may be deferred for several years. But my guess is that it will surely come with little warning and bring about a major disaster to Denver unless protective measures are taken. I shall go more into detail on this presently.

INDIANS WARNED FIRST WHITE SETTLERS, "BIG FLOOD COME AGAIN SOMETIME"

That region has only been settled for 80 years. When the white men first came in there they were told by the Indians, "Don't build your tepees in bed of that stream, or in valley. Big flood come again sometime."

It is certainly true that the run-off now from a certain amount of precipitation is more rapid than it was from an equal amount of precipitation before the land was overgrazed and improperly cultivated. Originally all but a very small part of the Cherry Creek Valley was devoted to stock raising. Then, especially during the World War years, much land that should never have been cultivated was brought under tillage—and much of it was tilled in such manner as to promote rapid run-off and soil erosion. The lands still devoted to stock raising were overgrazed. The result has been that the run-off, not only from rains but from melting snow, has been accelerated, and serious erosion has been taking place. Such is the report of the Department of Agriculture and such is my own personal observation. I understand the Department of Agriculture recommends that from one-fourth to one-third of the total acreage now under cultivation in the Cherry Creek Valley should be returned to native vegetation because of serious erosion conditions existing under present land usage.

Mr. SNYDER. Do you have forests and timber there?

Mr. LEWIS. Yes; in the foothills and mountains to the west but practically no timber in the Cherry Creek watershed except a little at the headwaters.

Mr. TERRY. I want to ask whether there has been any material change in connection with forestation.

Mr. LEWIS. There is very little forestation in the Cherry Creek watershed. At the very headwaters to the south, on the divide between the drainage basins of the Arkansas River and the South Platte—and Cherry Creek is a tributary of the South Platte—there is what is known as the Black Forest. Part of that has been denuded to a certain extent, but not seriously, I believe.

The opinion of experts of the Department of Agriculture is that rapid run-off and soil erosion in the Cherry Creek watershed has been accelerated of late years and has gone far, but not so far that it cannot be checked. They say further, and I agree with them, that the floods now from a given rainfall are more intense and damaging than they were in the early days.

Mr. SNYDER. But apparently the rain in that particular watershed will produce a greater height of water down where the business district is than it did before.

Mr. LEWIS. Yes; undoubtedly.

Mr. TERRY. But evidently the Indians experienced the same thing before the white man came, if they were warning the white man against settling in that valley because of the sudden floods which would become very damaging.

PLANS OF SOIL CONSERVATION SERVICE FOR WATER-FLOW RETARDATION AND SOIL-EROSION PREVENTION

Mr. LEWIS. Under the act of August 28, 1937, the Department of Agriculture, through its Soil Conservation Service, has been making examinations and surveys for water-flow retardation and soil-erosion prevention. This examination and survey by the Soil Conservation Service is progressing concurrently with and, so far as practicable, in cooperation with the work of the Army engineers. Several years ago the Soil Conservation Service began work on some 43,000 acres at the upper end of the Cherry Creek Valley as a demonstrational area to show what could be accomplished toward checking run-off and soil erosion and increasing crop yields. The numerous shallow reservoirs and check dams constructed, and the beneficial results of terracing and contour tilling, have aroused considerable interest among the farmers and ranchmen in the Cherry Creek Valley. It is expected that sufficient local cooperation may be secured and that the final report of the Soil Conservation Service may be sufficiently favorable to warrant the undertaking, by the Department of Agriculture in cooperation with local landowners, of treatment of the entire comparatively limited Cherry Creek drainage area as a demonstration of what can be accomplished by following the practices recommended by the Soil Conservation Service.

However, the determination as to what if any additional physical works are necessary to safeguard Denver against a major flood would appear to be the first question to be decided.

FLOODS IN "FLASH STREAMS," COMING WITHOUT WARNING, AFFORD NO OPPORTUNITY TO MAKE EMERGENCY PREPARATIONS FOR PROTECTION

First. When floods are threatened on the Ohio, the Mississippi, or the Missouri Rivers the towns and cities menaced have several days and, on the lower Mississippi, at Memphis or Vicksburg or New Orleans, they have many days—sometimes 2 weeks or even longer—to prepare against the coming flood. Furthermore, these cities on the lower part of the big rivers have fairly reliable advance estimates of approximately how great a flood to expect. But we of the West, who are menaced by sudden floods in "flash streams" like Cherry Creek, have no warning—unless someone up the valley telephones that a cloudburst is in progress and that high water is coming. There is no time to make any emergency preparations against a flood and, even if there were time, no possibility of estimating how great the flood will be. Our only safeguard lies in building in advance permanent works, which the best engineering investigations determine will be sufficiently extensive to protect our city against any flood resulting from any storm which meteorological investigations determine is likely to occur.

NO CITY ON MISSISSIPPI RIVER BETWEEN ST. LOUIS AND NEW ORLEANS IS AS LARGE AND AS VULNERABLE TO FLOOD DAMAGE AS IS DENVER FROM CHERRY CREEK

Second. Including the contiguous suburbs not in the corporate limits, Denver's population is now about 350,000. It is the commercial and financial center of the entire Rocky Mountain region. A glance at the map shows that, on the main stem of the Ohio River from Louisville, Ky., down to Cairo, and on the main stem of the Mississippi from St. Louis to New Orleans, there is no city as great in population or in wealth as Denver and no city which is as vulnerable to floods from those great rivers as Denver is vulnerable to attack by floods from the comparatively insignificant Cherry Creek.

A GREATER FLOOD THAN EVER EXPERIENCED SINCE DENVER'S SETTLEMENT LIKELY TO COME ANY YEAR

Third. Denver is only 80 years old, which is but a moment in the life of a stream—a mere cat nap for this "sleeping tiger," as I believe Cherry Creek may well be called.

Cherry Creek water system is shaped like a herringbone—a main stream with almost innumerable short tributaries and steep gulches, usually dry, leading into the main stream from both the east and the west. The average slopes from the sides of the drainage area to the main channel are comparatively steep—100 feet to the mile. In the eight decades since the white men came to Denver, there have been 14 floods in Cherry Creek and each of them has been caused by heavy rains or cloudbursts which have occurred over the area drained by only a few of these numerous tributaries. There has never been a heavy rain or a cloudburst affecting the entire comparatively limited area of 269,440 acres which constitutes the Cherry Creek drainage area, of which 5,760 acres are within the corporate limits of Denver.

Just to the east of the Cherry Creek drainage area, and separated from it by a very low divide, is the drainage area of Kiowa Creek. May 30, 1935, there were heavy rains and a series of cloudbursts which covered practically the entire drainage area of Kiowa Creek with disastrous results to life and property in this Kiowa Creek drainage area. These heavy rains and cloudbursts, like most of our western rainstorms, were limited in extent. They did not extend with equal intensity over the Cherry Creek drainage area. Engineers and meteorologists have estimated that if this storm in 1935, instead of covering all the Kiowa Creek drainage area, had occurred only 15 miles to the west, just across the low divide, and had covered the entire Cherry Creek drainage area, we would have had in Cherry Creek a flood such as has never been experienced since Denver was settled, resulting in a ghastly tragedy involving property damage measured in multiples of millions of dollars and a loss of life measured perhaps in hundreds of people in Denver.

There is still another circumstance that adds to the seriousness of the situation. Cherry Creek is so located with respect to the South Platte drainage above Denver that it is quite possible for high-crest floods in Cherry Creek to dam off the South Platte in Denver, causing heavy damage from high water in the South Platte above Denver. This is precisely what happened in the flood of May 19–20, 1864, according to meager contemporary newspaper accounts. In this flood the lower part of the city was 1 to 5 feet under water and 19 people were known to have been drowned. This damming effect upon the South Platte by a flood in Cherry Creek is very apparent from airplane pictures taken during the Cherry Creek flood of August 3, 1933, at which time, fortunately, the South Platte above the confluence of Cherry Creek was not unusually high.

Still further, several smaller tributaries, all with "flash stream" characteristics, flow into the South Platte above Denver. It is unpleasant to contemplate the cataclysmic flood which would result in Denver if heavy rains and cloudbursts should at the same time fall upon the watersheds of all these streams as well as throughout the entire Cherry Creek watershed. But it would seem that flood control of Cherry Creek is the key to the problem. If Cherry Creek can be controlled, the other streams are no great menace to Denver.

Citizens and officials of Denver have not been unmindful of the menace of a major flood in Cherry Creek and have not failed to undertake measures for the protection of the city. The flood of August 3, 1933, was heightened by the failure of the so-called Castlewood Dam on one of the tributaries of Cherry Creek about 25 miles south of the city. Thereafter, in 1935 and 1936, Denver, with the assistance of a Public Works Administration grant from the Federal Government, constructed across the main stem of Cherry Creek, at a cost of approximately $840,000, a retarding dam solely for flood-control purposes. This so-called Kenwood Dam is near the hamlet of Sullivan 4 or 5 miles south of the corporate limits of the city. This Kenwood Dam, although well planned and constructed, is not, in the opinion of some engineers, sufficient in itself to safeguard Denver against such a major flood as, under circumstances which I have detailed, will probably occur. Accordingly officials and citizens of Denver have been most gratified to be able to secure the expert judgment of the Army engineers as to whether or not the Kenwood Dam and other flood-control works on Cherry Creek are sufficient; and if not, what additional works should be constructed.

I surmise that the report of the Army engineers will demonstrate that the present works are not sufficient to safeguard against a major flood which probably will come some day—maybe next year or maybe this year, or maybe 10 or 20 years from now—and that construction of additional permanent works should be undertaken to avert a tragedy.

Mr. KERR. What percentage of the acreage is used for agricultural purposes?

Mr. LEWIS. For agricultural purposes and grazing?

Mr. KERR. What percentage of it is used for agricultural purposes and grazing?

Mr. LEWIS. Croplands constitute 25.5 percent and grazing lands constitute 74.5 percent of the total of 412 square miles in the Cherry Creek watershed, exclusive of the 9 square miles within the corporate limits of Denver.

One of the causes which heightened the flood of August 3, 1933, was the failure of the Castlewood Dam. This was built in 1890 for the storage of water for the irrigation of several thousand acres in and adjacent to the Cherry Creek watershed and very near to Denver. One of the causes for the failure of that dam was the enormous amount of silt that had accumulated during 43 years behind this dam—all from rich lands up the stream. This siltation very greatly reduced the capacity of the reservoir. It is also alleged that the Castlewood Dam was not properly constructed in the first place and that the spillway as originally constructed was later reduced in size so that when a very heavy storm came the reduced capacity of the reservoir, due to siltation and the improvident reduction in size of the spillway, caused the dam to be overtopped—and it went out.

Mr. KERR. Is this a flood-control dam or an irrigation dam?

Mr. LEWIS. This Castlewood Dam was for irrigation. It was built in 1890, with private capital. It was not a Federal project. Some say that the foundations were not properly constructed. When the dam failed the water in Castlewood Reservoir behind the dam was released and heightened the flood in Denver of August 3, 1933.

I appreciate the courtesy of this subcommittee in hearing me at this time in regard to the Cherry Creek project, although it has not yet been authorized by law and the final reports on it have not yet been submitted, but will be soon.

Politics in Relief

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. KUNKEL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following short editorial from the Saturday Evening Post:

HERE'S THE ANSWER

Is there politics in relief? The congressional investigation has offered a great deal of eloquent testimony in the affirmative. But we believe that a few figures from Pennsylvania give the clearest answer to date. Here are the official figures on check payments from the Division of Unemployment Compensation and Employment Service of the State of Pennsylvania for 3 weeks of 1938:

Checks issued

	Number	Amount
Oct. 28	109,804	$1,197,563
Nov. 4	162,764	1,759,442
Nov. 11	51,887	559,264

The 1938 Pennsylvania elections were held on November 8.

The N. Y. A. in Arizona

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 15, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, several times during the debate on this bill I have indicated my stand on the N. Y. A. appropriation, and I proposed to be further insistent on replacing the cut in the Budget estimate that was made by the committee in reporting out this bill. I have an amendment which I propose to offer tomorrow in connection with the section dealing with the National Youth Administration. At this point I have asked to extend my remarks by including a telegram which I have received today from President Grady Gammage, of the Arizona State Teachers College at Tempe, with whom I was for many years associated before becoming a Member of Congress. The telegram is as follows:

JOHN R. MURDOCK,
House of Representatives, Washington, D. C.:
Reports indicate a severe reduction by House committee of N. Y. A. appropriation. Because of splendid results and low cost, I am surprised at this move. Am familiar with whole program in Arizona, and believe N. Y. A. is last place touch should be made. Would appreciate information as to probable outcome.
GRADY GAMMAGE.

President Gammage has been a leading schoolman in the State of Arizona for a quarter of a century. He is thoroughly familiar with the educational needs and the whole educational program within the State. This timely message from him urging a better treatment for the National Youth Administration simply reinforces my own knowledge and conviction in regard to this wonderfully fruitful work of benefiting the young men and young women of the Nation. I feel that I am personally able to speak concerning educational matters in the State of Arizona, and I am very positive that the president of this outstanding teachers college is particularly able to speak for schoolmen concerning this matter.

In September 1935, while I was dean of the Teachers College at Tempe, I accompanied President Grady Gammage one Tuesday to a rotary club meeting in our college town, and was delighted to see at that meeting the State W. P. A. director, W. J. Jamieson, present at the luncheon. This happened to be one of the days of registration of students at our college. For several days I had worked with a committee of the faculty in assigning jobs in student employment for about 300 worthy and needy students seeking help through N. Y. A. Unfortunately, that very morning I had had to say to a very promising young man, "You have applied too late. Our funds are exhausted and we cannot furnish you any student aid." And he had turned away from the campus.

Just before going to the service-club luncheon, I had met a mother and her daughter, the daughter having graduated from the Chandler, Ariz., High School that spring as an honor student, and both had told me that this very worthwhile high-school graduate could not enter college without some student employment. Her fine record was further vouched for by a letter from Superintendent Austin and a telephone conversation with the superintendent regarding her case. It was a painful duty for me to explain that no further applications for student employment could be handled, and the mother and daughter left my office without the young lady's registration at our college.

At this Rotary luncheon a gentleman from a neighboring State was a guest speaker and took the allotted time to tell us regarding juvenile delinquency in a great State on the Pacific coast, and explained to these businessmen that his State could not build reform schools fast enough to take care of delinquents who were entering upon a career of crime. He explained that it cost his State about $1,600 annually to support an inmate in these penal institutions.

With the president of the teachers college there, a majority of the board of education of the college present, and the State W. P. A. director with us, and the unpleasant recollection of the turning away of two or more fine prospective students, I took occasion that day to explain to the service club members that $400 of work provided by the Government would enable even a destitute student to attend college for a school year. I do hope that the two talks made that day helped to convince businessmen that it is better to send four young people to college for further preparation for a useful life than it is to incarcerate one youth after the beginning of a criminal career.

Mr. Speaker, it may be recalled that I supported the $75,000,000 N. Y. A. appropriation in the first session of the Seventy-fifth Congress. It is a matter of record that I strenuously opposed Congressman TABER'S amendment in 1938 to reduce the N. Y. A. appropriation to the extent of many millions of dollars. It is unnecessary to recount now all the benefits which I have myself seen flow from this governmental expenditure. Much as I appreciate the work done through the C. C. C., I do believe that the National Youth Administration has done a far greater work, not so much in salvaging human values but in enhancing those human values at a time when wasted years could never be regained. As one who thinks more in terms of life and social benefits than in terms of profit and business dividends, I feel that no appropriations have been made in these depression years yielding a greater return to our Nation than have those made to the N. Y. A.

EXTENSION OF REMARKS
OF
HON. VINCENT F. HARRINGTON
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 15, 1939

RESOLUTION OF THE GRAND LODGE, BROTHERHOOD OF RAILROAD TRAINMEN

Mr. HARRINGTON. Mr. Speaker, under leave to revise and extend my remarks I include a resolution adopted by the Grand Lodge of the Brotherhood of Railroad Trainmen expressing opposition to certain provisions of the Lea bill, H. R. 4862, and the Wheeler bill, S. 2009, which will soon come before this House for a vote.

[A. F. Whitney, president; S. R. Harvey, assistant president; G. W. Anderson, general secretary and treasurer]
GRAND LODGE, BROTHERHOOD OF RAILROAD TRAINMEN,
Cleveland, Ohio.

RESOLUTION—COMMITTEE OF SIX AND CONSOLIDATION LEGISLATION

Whereas the committee appointed by the President on September 20, 1938, composed of three railroad presidents and three representatives of railroad labor organizations, and subsequently known as the Committee of Six, with authority to consider the transportation problem and recommend legislation, made its report on December 23, 1938; and

Whereas the report of the Committee of Six was largely a rehash of the program of the Association of American Railroads and did not go to the heart of the problem, namely, banker control and manipulation of railroad finances primarily in the interests of Wall Street financiers; and

Whereas railroad consolidation is inimical to the best interests of the public, as it would create ghost communities, destroy tens of thousands of job opportunities, and result in millions of dollars of loss to business interests in communities throughout the Nation; and

Whereas railroad consolidation is neither socially desirable nor economically necessary, as the present railroad industry would be economically strong in the service of a national population that is larger now than when the original need was felt for our present railroad mileage, if the million-dollar-per-day waste in the railroad industry were eliminated; and

Whereas President A. F. Whitney has courageously exposed the inadequacies of the report of the Committee of Six, and the dangers inherent in the consolidation provisions of the Lea bill (H. R. 4862) and the Wheeler bill (S. 2099): Now, therefore, be it

Resolved, That the Brotherhood of Railroad Trainmen, in convention assembled, wholeheartedly endorses the stand taken by President Whitney in opposition to all "official reports" which temporize with the real problems of the railroad industry; and be it further

Resolved, That we continue to oppose all legislation designed to facilitate railroad consolidation and mergers, and, to that end, be it further

Resolved, That we seek and encourage the support of all labor, civic, fraternal, and business groups, in our program of opposition to railroad consolidation; and be it finally

Resolved, That copies of this resolution be forwarded to the President of the United States, to the Members of Congress, and to the press.

Charles J. Colden

MEMORIAL ADDRESS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. VOORHIS of California. Mr. Speaker, few men in American public life have continued through a distinguished career and maintained a more genuine modesty and simplicity than did the late CHARLES J. COLDEN, Representative for many years from the Seventeenth District of California. No one was more faithful in attendance upon his duties or more devoted to the interest of the people of the United States than he. Concern over injustice where he found it was no superficial matter with him. It was part of the very soul of the man. The problems of labor, of the common people of America, were his problems.

Perhaps it was the long struggle of his own earlier life that made him so very ready to give of his time, his counsel, and his guidance to younger men. But whatever the reason, there was no congressional office to which a first-term Congressman could go with greater assurance of a sympathetic hearing than to that of CHARLES J. COLDEN.

It is said that until the illness which finally culminated in his untimely death overtook him he had never missed a roll call in the House. Other men may have been more brilliant, made more speeches, gotten more bills of their authorship enacted into law. But for sheer, solid manhood and depth of sympathetic understanding, the annals of the House of Representatives will record few names, indeed, that deserve to rank with that of CHARLES J. COLDEN.

John J. Boylan

MEMORIAL ADDRESS
OF
HON. THOMAS H. CULLEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN J. BOYLAN, late a Representative from the State of New York

Mr. CULLEN. Mr. Speaker, I wish to pay tribute to the memory of my late colleague and dear friend, JOHN J. BOYLAN, who represented the Fifteenth Congressional District of New York.

JOHN J. BOYLAN was a member of the New York Assembly, 1910–12, and the New York Senate, 1913–22. He was first elected to the Sixty-eighth Congress and was reelected to the Sixty-ninth, Seventieth, Seventy-first, Seventy-second, Seventy-third, Seventy-fourth, and Seventy-fifth Congresses. At the time of his untimely death he was a member of the Appropriations Committee and Chairman of the Thomas Jefferson Memorial Commission.

I served with JOHN BOYLAN in the New York Senate as well as the House of Representatives and it was my great privilege to know him as a real friend. I shall always retain the pleasant memory of his wonderful character, his human and sympathetic understanding of his fellow man, and his genuine devotion to those who were near and dear to him.

He was zealously devoted to the interest of the people in his district. He was a prodigious worker and devoted much of his time to measures before Congress that directly affected the welfare and development of his district and State. He was also profoundly interested in the preservation of his country and as a Member of the House of Representatives he set a standard for those who follow him, and the memory of our service with him will be an inspiration. His distinguished record here is an honor to himself and to his family and many friends.

John Joseph Boylan

MEMORIAL ADDRESS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN JOSEPH BOYLAN, late a Representative from the State of New York

Mr. BULWINKLE. Mr. Speaker, I am submitting for inclusion in the RECORD the following resolution of the Thomas Jefferson Memorial Commission and an address of Hon. Joseph P. Tumulty:

RESOLUTION OF THOMAS JEFFERSON MEMORIAL COMMISSION ON THE DEATH OF JOHN JOSEPH BOYLAN

The Thomas Jefferson Memorial Commission desires to record its deep sense of loss at the passing of its chairman, the late JOHN J. BOYLAN, of New York. The fine concept which brought this Commission into being came from Mr. BOYLAN, a true lover of Thomas Jefferson and of the principles he espoused in life.

JOHN J. BOYLAN brought to the deliberations of this Commission not only the knowledge and ripe experience acquired in many years of public service, but also those qualities of integrity and sound judgment so necessary to the faithful discharge of his duties as a member of the Commission.

While a member of this Commission he did what was characteristic of the man. He gave to its noble work the rare gift of life, love, and affection, and though ill and suffering he carried on in splendid fashion the important work committed to his care, with fine poise and patience and with never a boast upon his lips.

The Commission orders that a copy of this resolution be transmitted to the widow and family of the late JOHN J. BOYLAN with the expression of the very sincere sympathy of the members of the Commission.

REMARKS OF HON. JOSEPH P. TUMULTY

This plain man, born in an unpretentious part of the city of New York, wearing upon his good face the smudge of honest poverty, dreamed a beautiful dream of a memorial in Washington to Thomas Jefferson. Quietly, unostentatiously, he went about his work, scorning vulgar display, happy in the thought that after he had departed there would be left behind those who would not mock the thing that his vision built to an unmeasured monument.

Somehow, there was about JOHN BOYLAN a sort of loneliness, that kind of sadness that always makes its indelible imprint upon the face of a man, who, making a tryst with the future, dreams great dreams.

It was a pleasure to work with him, to sit by his side as I was accustomed to do, while quietly, humbly he expressed his views regarding every phase of our Commission's activities. Always he gained his fine objective by openness and honorable action, his fine nature making it impossible for him ever to use unworthy arguments to accomplish his humane objectives.

When the Jefferson Memorial is completed, there will be one name, like that of Abou ben Adhem, which will lead the list and that name will be our altogether lovely friend, JOHN BOYLAN. As

we behold that name, the words of John Drinkwater will flash into our minds:

"Shall a man understand,
He shall know bitterness because his kind,
Being perplexed of mind,
Hold issues even that are nothing mated.
And he shall give
Counsel out of his wisdom that none shall hear,
And steadfast in vain persuasion must he live,
And unabated
Shall his temptation be."

As a personality, he had about him the grandeur of the old-fashioned man, with a noble vision directed into the far reaches of the future.

John Galsworthy must have had this type of man in mind when he drew a portrait of an old friend in the story, A Portrait, an excerpt from which is as follows:

"I know how big and sane and sweet he was. His breed is dying now, it has nearly gone. But as I remember him with that great quiet forehead, with his tenderness and his glance which traveled to the heart of what it rested on, I despair of seeing his like again. For, with him there seems to me to have passed away a principle, a golden rule of life, nay, more, a spirit—the soul of balance. It has stolen away, as in the early morning the stars steal out of the sky. He knew its tranquil secret, and where he is, there must it still be hovering."

To him, God was more than a nodding star atop a windy hill. Dear JOHN BOYLAN, the tired heart, beloved friend in all seasons, turned home and thus the end of his brooding came.

Voluntary Unionism

EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

RADIO ADDRESS BY FRANK T. BOW, JUNE 9, 1939

Mr. SECCOMBE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address by Frank T. Bow, June 9, 1939:

Not long ago a man who is known everywhere as a true friend of workingmen said that the majority of unions could not exist today without coercion; that is, without getting and holding their members by coercive tactics, by force.

Such a statement from the lips of a man whose life is a record of service to workingmen and their unions was shocking, to put it mildly.

However, that was not all he said. He said that the majority of unions, as organized and led at present, could not endure without the closed shop and the check-off of dues and the compulsion inherent in the encouragement of coercive tactics by Federal law, particularly the National Labor Relations Act. He said that an honest vote of union members at any given time with the issues honestly presented and with the Government standing by as a referee and not taking part as a partisan, would result in the repudiation of many unions with the biggest membership rosters, the most powerful leaders, and the wealthiest treasuries.

Reflecting upon these statements I had to admit that this gentleman was coming too close to the truth for comfort. However, in his generalization he had overlooked or had failed to name one type of union which is wholly free from the vices and weaknesses he referred to. The type of union I mean is the independent union, the local union, the union not affiliated with the big international organizations and not dominated by interests foreign to the interests of the members.

Independent unions are entirely voluntary in character. They are the highest expression of true self-organization. Their purpose is the real economic betterment of their members and the community, and their government is as democratic in fact as the old-fashioned town meeting. Their local government and their local interests are in the normal, democratic, American tradition of local self-government and local cooperation for mutual self-help. Independent unions are the kind that men form for themselves when they are not bedeviled by meddlers, official or unofficial, in the management of their own affairs.

Independent unions have not suffered from the blight that has fallen upon many of the huge international unions since their leaders turned to the Government to fatten their membership lists and their treasuries. When these leaders took the get-rich-quick and easy way of compulsion and strife, abetted by Government zealots, they lost touch with their members, they lost the support that only voluntary members will give, and they lost public sympathy. Worse yet from the standpoint of their members, they tended to become soft and corrupt; they lost the ability to form and to conduct unions which could live on their own merits, on the real benefits, not just the flashily promised benefits, but the real, substantial, enduring benefits secured and held for their members. They became politicians' unions and not workingmen's unions.

Much of the Government-abetted growth of the fat internationals has been parasitical. It has been at the expense of the independent unions. These democratic institutions have been in disfavor with officials of the Government. Many such officials, as shown by the records of the Senate Labor Committee in the current hearings on proposed Labor Act amendments, have openly admitted their intention to destroy independent unions. With the opposition of government and the opposition of the advanced thinkers, inexperienced but advanced, from the so-called liberal colleges, the independents have had tough going. The result has been exactly what anyone who knew the American character would have anticipated. The independent American workingman allowed that he wouldn't be pushed around by anyone and that he would have the kind of union he wanted or else. The more the union politicians and Government officials picked on him, the tougher and harder and more tenacious became his determination to manage his own affairs in a democratic, voluntary union.

Thus, while the blight of too much and too easy power has fallen upon the international unions and has softened and fattened and corrupted them, the independent unions have the heritage of toughness and enduring determination that comes to the oppressed. Voluntary, democratic, economic unions will be serving the American workingman long after the political labor autocracies which now presume to speak for him are only shameful memories in our histories which we would prefer to forget.

The great, wealthy, politically powerful organizations cannot live and compete with the free independent unions. That is why they and their political friends set out to smear and to destroy the latter. Under the national labor relations law they have developed a standard technique. The C. I. O. and the American Federation of Labor enlist the Labor Board to help them discourage membership by workers in unions of their own choosing and to force them into the international unions. They complain to the Labor Board that the independent union is dominated by the employer. Now that may mean almost anything. It may mean nothing more than an attitude of friendship and understanding and cooperation between the union and the employer; that condition of industrial peace that the Labor Board and the international unions talk so much about and do so little about. The Labor Board shows every favor to the complaining union and every evidence of disapproval of the independent group. And the Board finally orders the employer not to deal with the independent. Thus, through no fault of their own and for nothing that they have done or are charged with having done, but purely because of a charge, often fictitious, against the employer, the independent employees are deprived of their rights, are deprived of the union of their own choosing, and it is made clear to them that they cannot have a union with the approval of the Labor Board unless it is affiliated with the C. I. O. or American Federation of Labor. Thus does the Government serve the international union leaders.

It serves them in other and more subtle ways. It is almost impossible for an independent to get an election from the Labor Board. The Board holds elections at the convenience of the opposing union, or frequently not at all. The Board certifies independents grudgingly or belatedly, and sometimes not at all.

Thus in self-defense voluntary, independent unions are supporting those sections of the pending amendments to the Labor Act which lay emphasis upon the voluntary character of labor organizations; prohibit coercion from any source in the choice of representatives; set up unfair labor practices for union organizers and their agents; make it possible for employers and employees to enjoy normal, friendly intercourse without violating the law; make mandatory Board action on representation matters and set up a time limit for such action, with court review of representation decisions, positive or negative; set up standards of union responsibility to its membership; require notice of action as a matter of right; and overhaul the procedure of the Board to make it fair to all concerned. Independent unions believe that these proposals meet with the approval of all reasonable people, and particularly with the approval of the members of independent unions, who have suffered most through their absence in the present law.

These proposals will help fulfill the purposes of voluntary independent unions and their associations. In closing I might say that these purposes are the following:

To protect free workmen.

To give a medium for the expression of the views of independent workers.

To curb lawless, violent, and destructive forces which seek to prey upon free workers.

To prevent the destruction by law or administrative bureaus of independent workers and their organizations.

To work for legislation to protect free workers in the exercise of their rights as workers and as citizens.

To work for legislation to curb irresponsible and predatory labor leadership.

To preserve and to extend full freedom of association among employees for their mutual protection and advancement.

To promote democracy, freedom, and honesty in the management of labor organizations and in labor relations.

To advise employees of their rights under the law and to protect employees in their rights.

To study and to encourage mutual understanding and better relations between employers and employees, to restore and maintain peace, prosperity, reemployment, and better working conditions for the workers in industry.

I thank you.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. HERRON PEARSON
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 16, 1939

PETITION OF CONSTITUENTS

Mr. PEARSON. Mr. Speaker, I am just in receipt of a petition from many of the finest citizens who reside in one of the most enlightened sections of my home county in Tennessee which, I think, expresses in apt language the attitude of many people in the South on the question of our foreign policy and their views with reference to what we should do in order to protect our Nation and preserve peace with the powers of the world. The petition is as follows:

To the Congress of the United States:

Earnestly desiring to save this Nation and its people from being drawn unnecessarily into foreign wars in which we ought not to be embroiled, we, the undersigned members of the Women's Missionary of Brown's Church, petition your honorable body to—

Strengthen, not weaken, the Neutrality Act;

Mind our own business and keep out of foreign wars; follow the sound foreign policy laid down by Washington of avoiding foreign entanglements and alliances;

Stop all loans or credit advances to foreign governments at war;

Enact effective legislation to take the profits out of war, as provided for in bill introduced by Senator BONE, Senator CAPPER, and 48 other Senators;

Keep our battleships and our soldiers out of foreign war zones;

Stop all shipments of war supplies to Japan or any other nation engaged in war;

Submit to the people for early ratification the war referendum amendment introduced by Senator CAPPER and 11 other Senators, which would return to the people the sole power to declare or engage in wars, except when an attack or threatened attack is made upon the United States, or any of its Territories, or upon any nation in the Western Hemisphere by a nation or nations outside the Western Hemisphere.

Mrs. Robert Henderson, leader, Route 5, Jackson, Tenn.; Mrs. B. J. Hopper; Mrs. C. O. Hopper; Mrs. E. T. Blackman; Stella Cox; Mrs. T. M. Crosnoe; Mrs. Annie Clark; Mrs. W. I. Gunter; Mrs. Wm. M. O'Donnell; Mrs. R. E. McLeary; Mrs. Ellis Cox; Mrs. Claude Lewis; Mrs. Charles Hopper; Mrs. J. D. Hopper; Mrs. W. M. Spain; Mrs. Dennis Hopper; Mrs. Walter Gunter; Mrs. W. A. Gunter; Mrs. H. E. Myers; Mrs. Charles Boone; Mrs. F. A. Tomlinson; Mrs. Fred Clark; Mrs. Chas. E. Cobb; Mrs. F. C. Anderson; Mrs. J. C. Cocks; Grace Cobb; Mrs. Chas. Tomlinson; Mrs. Grady Boun; Mrs. Robert Raiford; Mrs. Willard Goodrich.

Sound Doctrine Advocated by Representative Randolph

EXTENSION OF REMARKS
OF
HON. ALONZO D. FOLGER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 16, 1939

EDITORIAL FROM THE WINSTON-SALEM JOURNAL OF JUNE 15, 1939

Mr. FOLGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Winston-Salem Journal of June 15, 1939:

[From the Winston-Salem Journal of June 15, 1939]

SOUND DOCTRINE

Such a man is badly needed in Congress, we know, but it is unfortunate that Representative JENNINGS RANDOLPH can't devote his entire time to making the sort of speeches he made to the State convention of Lions in Winston-Salem.

It would be worth more to the country than some whole sessions of Congress have been, if Mr. RANDOLPH could deliver an address on the responsibilities of American citizenship in every community in the United States.

For one thing, we are sure that if the type of address he made here Tuesday night could be heard everywhere in America it would no longer be said that 25 out of every 100 people eligible to vote in this country fail to exercise their privilege and thereby neglect a duty upon the performance of which the life of democracy depends.

In some States the percentage of nonvoters runs a great deal higher than 25. In one Commonwealth only 14 out of every 100 citizens voted in the 1936 election, according to the record presented by Mr. RANDOLPH.

The West Virginia Congressman made a practical suggestion that might be acted upon with profit in every community: "Set aside a citizenship day," he said, "and on that day have all young men and young women who have become 21 during the year stand together and repeat the oath of allegiance to the Constitution and pledge themselves to live up to their responsibilities as citizens."

In this connection we suggest that new citizens also study what President Marsh, of Boston University, referred to in an address to the graduates of that institution the other day as the seven American documents that express the essence of American democracy. He likened these seven documents to the Bible.

The Boston educator spoke of the Mayflower Compact and the Declaration of Independence as an American Genesis and Exodus, the Bill of Rights as the United States' Ten Commandments, Washington's Farewell Address as a major prophecy, the national anthem as a psalm, Lincoln's second inaugural address as "the gospel of true Americanism," and Woodrow Wilson's last article as a great American epistle.

A study of these great documents would make better citizens of all of us. If Americans appreciated the principles enunciated therein as they should, they would lose no time in building a fire under Congress so hot that there would be no delay in favorable action on Representative RANDOLPH'S bill dealing with aliens.

If this bill is passed, aliens in this country will have 1 year in which to declare their intention of becoming citizens. If within that time they failed to act, then the Government would take them into custody and deport them to the country from which they came.

The most effective way to deal with the problem presented by four or five million aliens now living in the United States is to pass that bill and then enforce the law without fear or favor.

The War Debts

EXTENSION OF REMARKS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 16, 1939

RADIO ADDRESS BY HON. MARTIN L. SWEENEY, OF OHIO, JUNE 15, 1939

Mr. SWEENEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me over WOL and the intercity network on June 15, 1939:

Ladies and gentlemen, I have chosen for my subject this evening Remember the War Debts, because today, June 15, 1939, is the day payments are due from our international debtors. A debt, be it private or public, is equally sacred. It becomes increasingly more so when facts demonstrate that the debtor is not only able to pay but arrogantly shirks the obligation incurred.

On December 18, 1931, Congress by vote of 318 to 100 passed the so-called Hoover foreign-debt moratorium. As a new Member of the House of Representatives I was influenced in voting against the moratorium because of the information furnished in committee and in debate on the floor of the House of Representatives that the real purpose of the moratorium was not to assist the suffering Government of Germany, as had been proclaimed by the advocates of this legislation, but its intent was to permit the international bankers to collect their private loans, which exceeded by several billion dollars the obligations due our National Government.

At that time it was admitted by the committee sponsoring war-debt moratorium and highly publicized in the American press that Great Britain, France, and Italy, and several other debtor nations

had their funds on deposit with their fiscal agents in this country with instructions to pay their current obligations due December 15, 1931.

The $250,000,000 payment due December 15, 1931, from our former allies was not paid, nor has any payment been made by them on war debts for the past 6 years, except a small token payment made by the Government of Hungary, and the current payments to date by the gallant little nation of Finland. People of the United States will ever acclaim the integrity of the Government of Finland in playing the game fair and square, as it should be played between debtor and creditor if amicable relations are to be retained.

Before the passage of the Hoover moratorium, December 18, 1931, this Government had already canceled approximately $7,000,000,000 of war debts. I personally believe that the sentiment of the American public at that time and now was very vividly expressed in an article which appeared in the Washington News of December 12, 1931. I quote:

"As a matter of fact we have already canceled the debts from 25 to 80 cents on the dollar, a total cancelation of about $7,000,000,000. That $7,000,000,000 does not grow on trees; it has to be paid by the hard-pressed American taxpayers, by the mortgage-ridden farmer and the wage-cut worker, and the near-bankrupt businessman.

"When the American taxpayer consented to take that $7,000,000,000 load off the European taxpayer, he assumed that the European taxpayer was too poor to pay for luxuries in the form of giant navies and armies. But since that debt cancelation, Europe has gone on spending more on armaments. Those European armaments in effect are being paid for by the American taxpayer. And in the case of Great Britain, the American taxpayer is not only paying for a large British Navy but in turn is paying more for an American Navy to compete with that large British Navy."

I also quote a short excerpt from an article entitled "America, Pack Horse for World War Debts," which appeared in the Washington Times during the month of December 1931 by the distinguished Honorable Claude G. Bowers, our former Ambassador to Spain. Mr. Bowers said:

"We do not know to what extent, or if, indeed, at all, the President, in his secret conversation with the representatives of England, France, and Italy, has compromised the American position on the debts. The position of France and all other nations owing us billions is that they will reduce the reparations in proportion as we reduce our debts. That does not take a penny out of the pockets of those nations; it takes all the money out of the pocket of the American people."

Again I quote from Mr. Bowers, making comment in 1931 on the President's message for war-debt moratorium:

"Anyone reading the message and unfamiliar with the purpose of these Presidential communications would imagine that he was reporting 'not on the state of the Union' so much as on the conditions of Europe. This disposition to stand in the midst of the wreckage wrought by economic stupidity and the deceptive inflations of the market, to which this and a previous administration consciously and deliberately contributed mightily, and look across the sea has come to be an obsession of the administration. Why this harping about depression elsewhere? Hasn't the administration yet discovered any desperate depression here at home?"

While our present Executive has not recently revealed his ideas on war debts, if the agitation to cancel war debts again presents itself to the present administration, then the statement of Mr. Bowers will be truly applicable, in my opinion, as an expression of the American people on this important subject.

There is still due this Government from foreign governments as of March 1, 1939, $13,119,304,199.38. I read to you a few of the obligations and the respective countries owing them:

Austria (now Germany's debt)	$26,011,672.09
Belgium paid to Mar. 1, 1939, $18,543,642.87, still owes	449,080,212.01
Czechoslovakia paid to Mar. 1, 1939, $304,178.09, still owes	165,729,490.80
Finland paid to Mar. 1, 1939, $309,315.27, and today, June 15, 1939, $160,693, still owes	8,248,799.24
France paid to Mar. 1, 1939, $221,386,302.82, still owes	4,160,824,820.69
Great Britain paid to Mar. 1, 1939, $357,896,657.11, still owes	5,418,388,374.72
Hungary paid to Mar. 1, 1939, $10,581.20, and on June 12, 1939, $9,828.16, still owes	2,364,620.70
Italy paid to Mar. 1, 1939, $57,598,852.62, still owes	2,022,745,422.62
Poland paid to Mar. 1, 1939, $2,048,224.28, still owes	259,502,346.55
Rumania paid to Mar. 1, 1939, $263,313.74, still owes	63,860,560.43
Russia still owes	385,372,179.65

Grand total due, $13,119,304,199.38.

There is a dangerous school of thought that seeks to bring about a cancelation of all war debts. I do not believe that the American public are so naive as to approve such a proposition. To do so would virtually make an Uncle Sap out of our Uncle Sam. The late President Calvin Coolidge, with his typical Yankee philosophy, said, "They hired the money, and they ought to pay." I believe that is the true sentiment of every good American.

The question arises, Can some of these nations pay their obligations to the United States? I answer the question in the affirmative. Despite the fact that we have not received a red cent from Great Britain in the past 6 years, this great world power has been able to loan to the Soviet Government since July 1, 1936, $50,000,000; to the Turkish Government, $50,000,000, and an additional $30,000,000 loaned by the British Government to the Turkish Government for military purchases in Great Britain; to Czechoslovakia, in 1939, $40,000,000. They loaned to China in 1939, $25,000,000, and to Rumania in 1937, $25,000,000.

Every student of the war-debt question recognizes that Britain could very easily pay in commodities like rubber, tin, or in tea, none of which are produced in this country. Since the moratorium Great Britain has spent several billion dollars in armaments. She has subsidized the construction of supersteamships like the *Queen Mary* and the *Queen Elizabeth*, and others.

This indictment also applies to France, Italy, and many more of the Nations now in default of war-debt obligations. During the history-making visit of the King and Queen of Great Britain last week some of us were pertinent enough to suspect and make inquiry concerning the visit of the rulers of Great Britain to this country. In many quarters it was tantamount to treason for an American to speak out, or even suspect the purpose of this unprecedented official visit.

As an American, may I plead with you to stamp out any agitation for cancelation of the war debts and vigorously oppose any effort by the so-called synthetic democracies of Europe to involve us in another World War catastrophe.

The National Committee to Keep America Out of Foreign Wars, under whose auspices I am speaking this evening, are determined to disclose every species of propaganda that is intended to stir the emotions of the American people in an effort to involve us in foreign conflict.

It is my firm conviction that the present Congress of the United States is overwhelmingly isolationist—a term that does not go so well with those who have the international-minded complex, and who would have Uncle Sam become the policeman for the entire world. On that subject I quote from the sensational book, England Expects Every American To Do His Duty, by Quincy Howe:

"An isolationist foreign policy serves not only the interests of the American people but the interests of civilization, democracy, and progress throughout the world. It will deliver the very goods that the British network only promises.

"A self-sufficient America promoted western civilization by preserving it in the one country where it has not gone into a decline. Furthermore, an isolated America will not uphold England's dead hand over one-quarter of the earth's surface. Other nations will have a chance to find their places in the sun. Nor will the British people stand to gain the least from a collapse of the British Empire.

"A self-sufficient America promotes democracy by preserving it in its country of origin. The moment the United States fights the war of aggression into which the British network is now forcing it—in the name of peace and democracy—it will establish a dictatorship on its own soil."

You can best assist in the move to keep America out of the foreign wars by constant contact with those who represent you in the Congress of the United States and vigorously insist that, so far as you are concerned, never again will American citizens be sacrificed on the bloody battlefields of any foreign land.

Where Are We Going?

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 10, 1939

Mr. LEMKE. Mr. Speaker, nothing in this world is permanent but change. Everywhere we are going from the old to the new. We do not know where we are going, but our civilization is in transition. Whether we wish it or not, we are going from the old to a new civilization. We are discarding our old clothes, the clothes of yesterday, and putting on new clothes, the clothes of tomorrow—the new clothes of 130,000,000 men, women, and children. How well these new clothes—this new civilization—will fit us depends upon our vision, courage, and intelligence. Whether the change will be for better or worse depends upon us, the American people. This new civilization will be ours, it will not be under the control of the international bankers. Our sails are set, we are sailing unknown seas.

On March 4, 1933, our President delivered the greatest inaugural address ever given to the American people. He told us on that day that we were going to drive the money changers out of the temple. Do not get excited, because 2,000 years ago the Nazarene also drove the money changers out of the temple; but they all got back in; and so on March 9, within a few minutes after the special session of Congress

convened, the lower House of Congress, under the lash of the administration, passed a bill authorizing the issuing of $2,000,000,000 of paper money for the money changers. This bill was not even printed, and less than 5 percent of the Members of Congress knew its contents.

This unseeming haste on the part of Congress is nothing new. For years Congress has always promptly passed, with the approval of the Executive, any legislation desired by Wall Street and the international bankers. But when the farmers, the laboring people, or the veterans ask for legislation which would be for the welfare and benefit of all the people, then there are years of endless debate and delay—then Congress seems to be deaf, dumb, and blind. This is as true of Congress under this administration as it was of Congress under previous administrations.

After 4 years of this administration, which was going to drive the money changers out of the temple, we find that our Uncle Sam still prints the Federal Reserve notes and gives them to Wall Street and the international bankers, through the Federal Reserve Banking System, for seven-tenths of 1 cent per bill—the cost of printing. It makes no difference whether that bill is a $1 bill or a thousand dollar bill, or whether they keep it for 1 year or 20 years, all they ever pay Uncle Sam for it is seven-tenths of 1 cent per bill, the cost of printing. There were on June 30, 1937, $4,495,210,935 of Federal Reserve notes outstanding.

Who is this Uncle Sam that is so generous to these large bankers? Why, that is the tall gentleman with the high hat and striped trousers. It is you, the American people—it is the Government of the United States. Our Government prints the money and gives it to Wall Street and the international bankers, through the Federal Reserve System, for nothing save the cost of printing. This is done in violation of the constitutional provision which provides that Congress shall have power to "coin the money and regulate the value thereof."

This constitutional provision clearly means that the Government of the United States should control the money and credit of the country, but instead the money and credit business of the Nation has been turned over and farmed out by our Government to the Federal Reserve Banking System—a private institution.

Neither the special session nor subsequent sessions of Congress, under this administration, gave the relief to the people that they had expected or were entitled to. Many of the laws passed in the special session and subsequent sessions of Congress are not real relief. We passed a lot of Alice in Wonderland legislation, but this legislation lacks substance. This Nation is still in agony—it is hungry. Millions are still in want in the midst of plenty—in the midst of the so-called surplus of food—and yet for some strange reason the hungry cannot get any of this surplus. Unthinking people and the Department of Agriculture call it overproduction; reasoning and intelligent people know that the trouble is underconsumption. They know that the law of supply and demand still exists; they know that the supply is here and that the demand is here, but that for some strange reason the law of supply and demand does not function; that the demand somehow is kept away from the supply.

There seems to be a sort of national lunacy which makes intelligent people talk of overproduction and surplus, when in fact the so-called surplus is due to underconsumption because of the failure of proper distribution. It was that kind of national craziness which impelled the Secretary of Agriculture to have his picture taken with a one-handled plow and a mule in the doubtful occupation of destroying property—of plowing under cotton—when those who planted this cotton were still barefoot and in rags—when there was hardly a man, woman, or child in the United States who did not need some new clothes that could have been made out of this cotton and when there were still millions of men and women unemployed who would eagerly have taken this cotton and made it into finished products—into clothing.

It is against international law, even in wartime, to destroy property wantonly. To the credit of the mule be it said that he refused to become a party to this transaction. He declined to step on the cotton that his hoof had been trained to spare; he refused to become a vandal. History will record who, in this particular transaction, was the greater economist, the mule or the Secretary of Agriculture.

Then there is the lunacy which would have us believe that all our troubles are due to the machine age. This seems to me to be the reasoning of intellectual pygmies. What we need is more labor-saving machines—not less. When I was a youngster on my father's farm and had to put up hay and help harvest and thresh grain, I used to pray that someone would come along with sufficient inventive genius to invent a machine to do this work. My prayers have since largely been granted.

I hope the day is not distant when every farm and home in this land will have electric light and power and that when the wife and mother presses a button, electricity will do her washing. In fact, I hope that in the near future we will have machines that will do the thinking for some of the men we have in responsible positions—for the bureaucracy in Washington. We need more machines—not less; but the benefits of such machines must be distributed to all. To that extent I am a technocrat.

What then was the cause of the depression—the catastrophe of 1929? It was caused by the monopolization—not of the wealth of the country, but of the medium of exchange—the monopolization, in the hands of a few financial monarchs, of the money of the country—the unit of exchange. This was brought about by skillful manipulation of the currency, by gambling in stocks and bonds and the necessities of life. It was brought about, first, by virtually doubling the money in circulation through the Federal Reserve Banking System during the war, and then by a cruel, brutal, and inhuman deflation, by virtually cutting the money in circulation in two. By money I mean both actual and credit money.

Suppose you bought a home in 1928 and paid $10,000 for it out of your savings. Then by 1932, through the manipulation of money and credit, the value of this home was reduced to $4,000. You lost $6,000 of your savings in property value reduction. There is hardly a man or woman, who possessed property during the above-mentioned years, who did not suffer a similar loss caused by manipulation of our money and credit.

When we entered the World War our financiers had already bet on the losing horse over in Europe to the extent of billions of dollars—they had given the Allied Governments credit for war materials, food, and clothing to that extent. President Wilson realized that in order to win the war the Government—in other words the people of this Nation—would have to assume that indebtedness for which our financiers had given credit in the way of war materials, food, and clothing to the Allied Governments. That is how our foreign indebtedness arose.

Our Government never loaned a dollar directly to the Allied Governments. It merely gave them credit, and the international financiers manipulated that credit in such a way that they got billions of dollars out of the $22,000,000,000 of Liberty bonds we bought, and the United States Government, which means us, was substituted as the creditor of the Allied Governments in place of the bankers who had bet on the wrong horse. If these international gamblers had not bet on the wrong horse to that extent, we would never have gotten into the war. It would have been over before we got started.

President Wilson knew that in order to win the war the Government would have to sell billions of dollars of bonds. He knew that there was not enough money in circulation among the people to enable them to buy these bonds, so he suggested to the heads of the Federal Reserve Banking System that they increase the money by issuing Federal Reserve

notes and putting them into circulation among the people. Thereupon the local banks throughout this Nation took your note and my note and Tom, Dick, and Harry's note, stamped on the back of them "Payment guaranteed," put them in a nice bundle, sent them to a Federal Reserve bank, and received Federal Reserve notes, dollar for dollar, in exchange.

At the beginning of the World War there was in circulation in the United States approximately $3,460,000,000. It is estimated that about $1,000,000,000 of this was in foreign nations and that another $500,000,000 had been lost since the Government began to make money some 150 years ago, leaving about $2,000,000,000 in actual circulation. This was increased during the war to approximately $5,700,000,000. In round numbers, the increase or inflation was over $2,240,000,000. The circulating medium—money actually in the United States—was more than doubled by the issuing of Federal Reserve notes.

With this additional money—with this extra $2,240,000,000 as a revolving fund—we bought $22,000,000,000 of Liberty bonds, bought new farms, new homes, and made countless improvements. There was plenty of money with which to measure the muscular and brain energy of our people. Prosperity was almost universal in this land of ours, and we had the highest standard of living of any nation.

But disaster was awaiting us. In 1920, while Woodrow Wilson was a sick man, the Federal Reserve Board began its deflation policy. It suddenly and without warning called upon your local bank, my local bank, and Tom, Dick, and Harry's local bank throughout this Nation to pay the notes that they had guaranteed. It was at that time that your local bank was compelled to call upon Tom, Dick, and Harry to pay their notes that it had guaranteed and had rediscounted. It was at that time that the prosperity of this Nation was wrecked and the depression started.

By the end of 1921 the Federal Reserve Board had called in approximately $800,000,000 of Federal Reserve notes that it had issued in exchange for your note, my note, and Tom, Dick, and Harry's note. The first industry to feel the effect of this deflation was American agriculture. The farmer, being unorganized, was first to fall victim to the deflation. He was fairly slaughtered. He was made the shock absorber of the deflation, and had he been able to carry the burden, the entire cost of the World War would have been thrown upon his shoulders. But, as usual, greed knew no limit. The load it placed upon the farmer became intolerable and he broke down under it.

Such a condition affects not only the farmer but the Nation as a whole. It is a national calamity. It is a disgrace to the twentieth century and can only be explained by a complete break-down—no, by a complete bankruptcy—of political and economic leadership. We have heard of short selling, but one thing is sure—as a nation we are long on short thinking.

While conditions have temporarily improved on the surface, yet the public and private debt burden has increased. There is still unemployment and millions are still on relief. The great American engine of industry is still stalling. The trouble still is that we have not enough real money in actual circulation to measure the muscular and brain energy of our people—to do the Nation's business. We still have the demand and still have the supply, but the great mass still lacks purchasing power—a sufficient medium of exchange.

Down We Went and Up We Come

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. SNYDER. Mr. Speaker, ever since November 1929, when the stock market and financial structure of the Nation collapsed, we have been faced with the problem of unemployment.

In 1929 the Federal income was $31,000,000,000. From 1929 to 1933 the Nation took a nose dive straight toward the valley of poverty and desert of economic destruction. Fortunate for the people of the Nation, the Democrats elected Franklin D. Roosevelt President of the United States in 1932, and the fast-diving plane of destruction was halted on the forty billion Federal income level. In other words, in 4 years of Hoover piloting the Federal Government's income had dropped from eighty-one billions a year to forty billions a year and brought down with it and spilled out at the bottom of the dive before the upturn came 45,000,000 men, women, and children looking for food, shelter, and clothing.

Yes, Mr. Speaker, in March 1933 the Nation found itself standing in the mire of mismanagement and misadministration up to its chin wondering what it would do to help these 45,000,000 human beings. Something had to be done quickly. President Roosevelt, with a Democratic majority Congress, decided that agencies had to be set up immediately that would save the Nation not only from economic ruin but from revolution. Many agencies were set up, such as the C. C. C. camps, Home Owners' Loan Corporation, the Federal Banking Act, various farm acts, and many other constructive and rehabilitating agencies, with the result that within a space of a few years we had put back to work many millions of these men and women and raised our Federal income from its low depression level in 1933 of forty billions to sixty-eight billions in 1937.

Yes, my friends, in years to come history will point to this period of 1933 to 1939 as being the most constructive Nation-saving period in the history of the Nation. They will point out that at the close of 7 fat years (money years), 1922 to 1929, the financial and the economic structure of the Nation collapsed and we nose-dived from eighty-one billions Federal income to forty billions in 4 short years and left 45,000,000 men, women, and children looking for food, shelter, and clothing, and worst of all, left the Nation twenty-one billions in debt.

They will further point out that the marvelous achievement of the Roosevelt administration was that it not only took care of the 45,000,000 men, women, and children, but in 4 years, by spending twenty-one billion dollars additional, it pulled the Federal income from that bottomless pit of forty billion up to sixty-eight billion dollars of income.

When things were on the upgo in 1937 the administration and Congress decided that the thing to do was to give private industry and business the opportunity they asked for, that is, absorb some of the unemployed and some of those who were employed but on Federal projects such as W. P. A., and thus cut down the appropriation so that by February 1938 the Federal agencies such as P. W. A., C. C. C., and other agencies would release at least two millions of men so as industry could have them. But what happened?

In February 1938 we found that we not only had the 2,000,000 of unemployed on our hands that we had laid off because of reducing the appropriations for Federal agencies but we also found that industry had also laid off 2,000,000 more, so we had 4,000,000 more unemployed in April 1938 than we had 6 months before in September 1937.

Again something had to be done. Congress was calling an extra session; $250,000,000 was voted for W. P. A. to tide them over, and then for the fiscal year 1939 more substantial W. P. A. appropriations were made, with the result that we came slowly out of the recession.

And again the significant thing to note here is that we had reached $68,000,000,000 of Federal income in 1937, and dropped back to $58,000,000,000 in 1938, all because we failed to make adequate appropriations for the agencies that would put men to work in 1938, and the curve shows that as soon as we made appropriations to take care of the latter part of 1938 and the first part of 1939, the curve of Federal income started up again, and we find ourselves now at the level of about a $68,000,000,000 yearly income. Thus proving beyond a shadow of doubt that if we appropriate wisely and manage wisely the avenues of putting men back to work that we will

within a space of a few years be able to bring our Federal income up to $90,000,000,000, and when we reach that level we will be able to put all our unemployed back to work with the exception of a possible 3,000,000 that never did work, even in the "fat" years of 1922 to 1929.

I could find many other reasons why I am supporting the $1,477,000,000 for W. P. A. for the fiscal year 1940 that is before us for consideration today, but sufficient to say that the basic reasons that I have just cited are adequate.

Mr. Speaker, I take pleasure in voting for the $123,000,000 for farm security. I know this agency has done much to save thousands of farms for their owners. It has done much to keep thousands and tens of thousands from losing their homes, from going on relief, and from going to the poorhouse.

It is also a real pleasure for me to support the $100,000,000 embodied in the bill today for the National Youth Administration. This agency has done much for the youth of the Nation. Oh, yes; I know there are certain adjustments that should be made, and I believe they will be made in the management and application of this agency, but fundamentally it is sound because it serves the youth of the Nation. And may I say that if we serve the youth of today—that is, keep them busy at worth-while work—they will preserve our democracy tomorrow. If we neglect the youth of today and let them loiter about in highways and byways, in our gambling dens, barrooms and saloons, they will lose that ambition, that spirit, that something that our forefathers handed down to us, and some "ism" form of government will follow.

Yes, my fellow colleagues, it costs the Nation money to perpetuate the institutions that build for a better and more secure future. It costs the Nation money to make it possible to have good homes, good schools, and good churches; it costs the Nation money to have good roads, good health facilities, and good conveniences of all kinds.

However, my friends, when we observe that last year we spent less than $4,000,000,000 for the education of our youth and our people in the United States, and in the same year we spent more than twelve billions to look after crime in all of its ramifications, we will at once realize that it is economy to spend money, to keep our men and boys at work, and our educational institutions at a high degree of efficiency.

I am convinced that if we spend several billions of dollars more a year on education and put our additional men and boys back to work that we would cut the same number of billions of dollars off of our crime bill per year. Therefore, I am happy to support this Federal work-relief measure for the fiscal year 1940 as was recommended by the Bureau of the Budget, by the President, and by the other progressive agencies.

Before closing I wish to pay my respects to Colonel Harrington, Administrator of W. P. A. for the last several months. He has the most difficult job in the Federal Government. We think of the heads of other departments of the Government, but none of them has the difficult task of the Administrator of W. P. A. I know there are irregularities in W. P. A. You could not have an agency that employs four or five millions of people a year and not have irregularities. I know we have chiselers in W. P. A., and always will have them, just the same as we have in all the Government agencies, but I also know that the percent of deliberate chiselers in W. P. A. is not as great as the percent of chiselers that were employed in our banking institutions in this country from 1922 to 1932. If we will look up the records of all that were employed in the Federal and State banks and trust companies, and other money agencies of the Government during those years, you will find that the percent of chiselers, or in other words, the percent of those that did not do the right thing as the law or society sees it was greater than the percent of deliberate chiselers in W. P. A. This is no specific reflection on the money institutions, because human beings are human beings today the same as they were back in the days when they drove the tax gatherers from the temple.

The National Youth Administration Program

EXTENSION OF REMARKS

OF

HON. JOACHIM O. FERNANDEZ

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

STATEMENT BY NATIONAL YOUTH ADMINISTRATION

Mr. FERNANDEZ. Mr. Speaker, I wish to support the President's recommendation of $123,000,000 for N. Y. A.; it is my understanding that 200,000 youths could be added to the program if the full appropriation recommended is allowed.

The estimated number of unemployed youth out of school is placed at four and a half million by the Biggers unemployment survey. The full appropriation requested would permit employment of about 1,000,000 youth during the next fiscal year. This means that there is an approximate load on the program at all times of about 800,000, and the turn-over makes it possible to take on 200,000 more. There are approximately 450,000 youth every year available and who become eligible for this program. These out-of-school youth are unemployed and consequently are a drag on the labor market. The average annual cost for the entire program is approximately $125 per youth. This included student aid and work projects. The large turn-over which results in putting youth in private employment and making other social adjustments makes it possible to carry on this program at this low cost.

I give some pertinent facts secured from the National Youth Administration concerning this situation from a national point of view:

NATIONAL YOUTH ADMINISTRATION BUDGET

YOUTH—16 TO 24 YEARS OF AGE IN THE UNTED STATES

Total population in this age group is 21,000,000; 5,000,000 are in schools and colleges; 7,000,000 are employed; 3,000,000 are in the home or not available for gainful work; 1,700,000 are partially employed; 4,300,000 are totally unemployed. Thus, 6,000,000 young people are totally unemployed or partially employed.

Each year 200,000 more rural youth are coming of age than there are farm jobs available, and another 250,000 more urban youth are coming of age than there are jobs available—a net increase of 450,000 youth each year are adding pressure on the labor market.

The N. Y. A. by employing youth on public projects and extending educational opportunities to the underprivileged has materially helped to reduce pressure on the labor market and competition for adult jobs.

REASONS FOR REQUEST FOR INCREASE IN APPROPRIATION FROM $75,000,000 TO $123,000,000

The current need for work and training among young people has not decreased, but remains dangerously acute. This vast "lost generation" which fluctuates between four and six million young people needs work experience, guidance, and education. They are practically disowned by industry, by our educational system, and by society. Idleness, ignorance, and the wasted energy of young people constitute a menace to our society and to our democratic institutions. The morale of young people has been adversely affected during the past 8 years. By providing youth with an articulate agency for the expression of their needs and a focal point of direct action, the Youth Administration has helped in part to meet this problem. There is no criticism of the National Youth Administration as to inadequacy of function so much as there is criticism of limitations of application. In other words, the types of programs which N. Y. A. operates are approved of specifically and in general, but there is criticism that N. Y. A. cannot assist more young people because of limited funds. The N. Y. A. has provided youth with facilities for education, work experience, practical guidance, and placement in private employment effectively and economically.

An increase in the N. Y. A. appropriation to $123,000,000 would give another 200,000 young people an education, work experience, and training; and in the next year 800,000 would be kept busy and their capacity to do constructive work would not be allowed to degenerate. Unemployment tends to produce unemployability, and youth are eager and capable for work. In addition, the N. Y. A. can reasonably place 200,000 youth in private jobs next year. Thus at least 1,000,000 young people will be kept conditioned by the more normal experience of work and education rather than the experience of idleness and hopelessness.

PLANS FOR THE N. Y. A. PROGRAM NEXT YEAR

1. To provide part-time work and educational opportunities to 460,000 needy young people to assist them in continuing in schools, colleges, and universities, an increase of 83,000 over this year.

2. To provide work experience and training on public projects to 350,000 out-of-school unemployed young people, an increase of 120,000 over this year's average employment.

3. A sane and moderate program of youth services to provide the young people on N. Y. A. projects with guidance and counseling services and occupational information; related training which will give the elementary essentials necessary to intelligent job performances; medical examinations and, wherever possible, to arrange, through cooperative means, medical treatment; and recreational opportunities to N. Y. A. youth on resident projects.

4. Independent assumption of administrative functions previously performed by the W. P. A. due to the legal separation of the N. Y. A. from the W. P. A. by the reorganization plan No. I, which places the N. Y. A. in the Security Agency and the W. P. A. in the Federal Works Agency. The functions which the N. Y. A. must assume are finance, statistics, and employment. The latter function pertains to the maintenance of relations with public-welfare agencies, placement interviews, assignment to projects, and the maintenance of records pertaining to these operations throughout the country. These three functions will require as a minimum 1,474 employees and will as a consequence increase general administrative costs.

THE NATIONAL YOUTH ADMINISTRATION PROGRAM

1. Currently, 378,000 are employed on the student-aid program; 235,000 on the works program, or a total of 613,000.

2. The payment to young people is on the basis of actual work performed and averages $6.45 a month in the student-aid program, and $18.89 a month on the works program.

3. The annual cost per youth to the N. Y. A. is extremely low. It averages $58.50 on the student-aid program to keep a young person in school or college for a year. On the works program the average annual cost is $233 per youth to bring him through actual work and training to the possession of a background of work experience and subsequent skills which enable him to obtain employment. For the annual cost of approximately $123, over 600,000 young people have been given educational and work experience which otherwise would have been in large part denied them.

4. The N. Y. A. project program does not encourage Government paternalism but urges young people to try for other avenues of experience. Thus about 10 percent of its project youth leave each month for private jobs, or to some other form of self-support, or to go back to school. This project turn-over demonstrates a healthy reaction on the part of both the supervisors and the youth.

5. The student-aid program reaches into all but 17 of the 3,071 counties in the United States; the works program operates projects in 2,777 counties, a complete integration into the urban and rural life of the Nation.

6. The N. Y. A. reaches young people from the low-income families as is shown by the fact that N. Y. A. students come from families with a median income of $667. N. Y. A. project workers came from relief families. More than half have never had jobs before and only one-fourth of them have had the opportunity to finish high school.

7. In the student-aid program N. Y. A. students have demonstrated that they can work for an education and at the same time maintain satisfactory scholarship. They are on the whole equal to, if not superior, to the average student in scholastic achievement. Therefore, the N. Y. A. has not only extended educational opportunities but has uncovered a reservoir of competent youth.

8. Local sponsorship of N. Y. A. work projects has resulted in $18,000,000 of contributions, or 13 percent of all funds expended on work projects for youth.

9. The N. Y. A. and its 3,000 advisory committees have shown the advantage of united effort. Concerted action has convinced many local communities that it is possible to employ, train, and direct their youth.

ADMINISTRATIVE POLICY

A system of decentralized control has resulted in the successful cooperation of a Federal agency with private as well as public agencies.

This decentralized plan has had a significant bearing in educational matters. By assisting the individual rather than the institutions or agencies, the implications of interference with the authority of local units have been avoided.

There has been practically no public criticism of the N. Y. A., its purpose, its operations, or its administrative policies.

One Out of Sixty!

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. MUNDT. Mr. Speaker, this extension of my remarks is written at 1:15 a. m., as the House sits in session for the fifteenth consecutive hour yesterday and today in discussion of the important relief appropriations bill, which we have just adopted.

Inasmuch as the one item of appropriations for the Farm Security Administration was the sole section of this bill destined to provide special assistance and necessary aid in the business of rehabilitating distressed farmers in America, it is interesting to review the history of today's activities in order that the farmers of America may know just how their needs were considered today by the majority which is in control of this House.

It almost makes an item for Believe-it-or-not Ripley, but it is none the less as true as the rotation of the seasons that out of all this 15-hour period of debate yesterday and today precisely and exactly 15 minutes were allotted to those of us trying to provide more generous treatment to distressed farmers by amendment in this bill. The gag rule was invoked; debate limited to 15 minutes; and the farmers once again designated for a place in the rear ranks of this country's regularly "forgotten men."

Think of it, ladies and gentlemen, the farmers who comprise one-third of our population were granted 1 minute out of every 60 in today's debate in which to present their views and urge their program through their representatives in Congress. One minute out of 60 for the specific needs of the distressed families of 40,000,000 out of 130,000,000 people in this country. Why, it is actually true that in two speeches two of our New Deal colleagues spent more of the time of this House in strictly political tirades than was permitted the entire group of Congressman who clamored futilely for time enough to present a fair picture of the farmer's needs.

Much as I regret the fact that in this 15-minute lightning-flash of time grudgingly conceded to those of us desiring to amend this bill to grant more substantial aid through rehabilitative loans to the courageous farm families of America who need this help in their brave fight for self-sufficiency, there was no adequate opportunity to tell the true story of this situation, my protest here and now is against the gag-rule tactics of the majority party which controls this House in preventing the Representatives from farm States from even presenting their case before this body.

It is this violation of the privilege of full and fair debate which substitutes might for right in government. While it is not possible to undo the injustice done to America's farmers today, I sincerely hope that never again in this House will parliamentary tactics and crushing majorities stifle and stop honest discussion and intelligent consideration of the vital problems confronting the Government of the United States.

Would War Mean an American Dictatorship?

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK, JUNE 15, 1939

Mr. FISH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me over the radio on June 15, 1939:

If America participates in another world war we will have a dictatorship in 24 hours and will probably lose our free institutions and emerge from the war a Fascist or a Communist nation. The road to war is toward dictatorship and destruction and away from American liberties and representative and constitutional government.

America faces a crisis, and the Congress must decide whether, through the Bloom bill, to give additional power to President Roosevelt to plunge us into the horrors of another world war or to maintain our traditional American policies of neutrality and peace, the New York Times and Herald Tribune to the contrary notwithstanding.

In the last war we increased our national debt from one billion to twenty-six billions, and if President Roosevelt and his fellow internationalists and interventionists drag us into another one of the eternal wars of Europe or Asia our national debt will skyrocket from forty-five billions to seventy billions within a year.

In modern wars even the victor loses. Win or lose, we would come out an insolvent and bankrupt Nation, with interest payments of $2,000,000,000 a year, or twice the running expenditures of the entire Federal Government 25 years ago, when we were a far richer nation with practically no national debt.

I know of no reason for the United States to go to war, unless we are attacked or the Monroe Doctrine is violated by the invasion of South or Central America by the armed forces of some European or Asiatic power. It is inconceivable that we should go to war over Danzig, a German city, over the control of the Mediterranean, over British or French colonies or empires, over power politics, encirclement, or balance of power in Europe, over forms of government, or, lastly but not least, to defend communism and Soviet Russia.

We went to war once to make the world safe for democracy and to end all wars; and what a mockery and tragedy that turned out to be. Such a tragedy must not happen to us again, or we may lose our democracy and even our civilization. We helped to oust the German Kaiser and our Allies, through the exactions of the Versailles Treaty and oppressive policies, caused the overthrow of democratic government in Germany and set the stage for Hitler and nazi-ism.

If we went to war again against Germany and won, we would probably succeed in ousting Hitler and national socialism, but would open the way for communism in Germany and Italy and perhaps all over Europe.

Let us determine to keep out of the rotten mess and perpetual quarrels of the Old World, and not prepare new blood baths for our youth or hunt for new markets of blood and slaughter.

The Anglophiles are clamoring that we must preserve the British Empire—Hong Kong, India, Egypt, and Africa—all of which were won by invasion, bloodshed, and force of arms. Great Britain owns and controls one-fourth of the world's surface and population. Are we to guarantee the status quo of the British Empire, in addition to Canada and her possessions in the Carribbean Sea? Are we to police and quarantine the world with American blood and treasure, as President Roosevelt urges us to do?

If so, we will be involved in foreign entanglements and wars all over the world. Today England is threatening war against Japan, a few months ago against Germany, a year ago against Italy. Next it will be the Arabs, or maybe India or Egypt. Nevertheless, our internationalists and interventionists, ably led by President Roosevelt, would throw overboard our traditional foreign policies of neutrality, nonintervention, no entangling alliances, and peace, and, through collective security, economic sanctions, and the League of Nations drag us into all the hatreds, passions, and wars of Europe and the world.

The war propaganda, emotionalism, and hysteria fed from the White House increases daily. The American people are beginning to see through this attempt to cover up the economic failures of the New Deal, and are determined more than ever to keep out of foreign wars.

I had the honor and pleasure of meeting the King and Queen during their recent visit to Washington. They are charming, gracious, kindly, democratic people. I hope their visit will promote good will and continued peaceful relations between our two great countries. However, I do not believe that one single vote in Congress as to keeping out of war or for the settling of the war debts on a satisfactory basis was changed by their visit.

Interest payments on the $5,000,000,000 British war debt to us came due today, June 15. In spite of the fact that Great Britain is spending billions on armaments and has loaned $250,000,000 to European nations in recent years, she still refuses to pay us a single penny on her war debts. And we still continue to hold the bag and stagger along under these huge unpaid debts.

I would not raise the ghost of the war-debt issue if Great Britain was insolvent and unable to pay, or without suggesting a feasible and practical method of payment. Great Britain could easily pay us out of her monopolies in rubber, tin, and tea, which we do not produce in America. Payments in these products would in no way affect our American economy, wage scale, or employment of labor. She could also pay us in gold, as the British Empire produces two-thirds of all the gold in the world. The joke, or I should say the tragedy, of it is that we have bought $5,000,000,000 of gold from her at $35 an ounce, or twice the cost of production during the last 5 years, by which she has profited by several billions of dollars, and we have buried the gold in a vault in Kentucky where it draws no interest, feeds nobody, clothes nobody, houses nobody, and seriously impedes world trade. It is just another of the New Deal follies and costly experiments.

I now turn to discuss the so-called Bloom neutrality bill, reported by the House Foreign Affairs Committee a few days ago. The Bloom bill is a fake neutrality and actually an interventionist bill. It is a camouflaged aggressor-nation bill, which will drag us into every world conflict. Section 3, empowering the President to establish combat areas, practically gives the President the war-making powers of the Congress. Under the Constitution the Congress has sole power to declare war. If the Bloom bill is enacted into law, the President will be given the widest discretionary power ever given any American to put us into foreign wars. The Bloom bill in the hands of President Roosevelt is an unneutrality act and a snare and a delusion to involve us in war.

President Roosevelt has repeatedly said that if war breaks out in Europe it is virtually certain that we will participate. President Roosevelt is already unneutral and determined to put us in war. A vote for the Bloom bill, with the known views of the President, is empowering him to take us into war on the side of Great Britain in any war that might occur in the future. He may set up combat areas against Italy and Germany and permit unhampered trade with England, France, and Russia.

A vote for the Bloom bill is not merely the surrender of the war-making powers of the Congress but would virtually give the President the power to declare war himself.

In addition, the ban on the sale and shipment of arms, ammunition, and implements of war in the present Neutrality Act is wiped out, which means we will become the slaughterhouse and arsenal for warring nations for sake of blood money and war profits to kill people with whom we are at peace. And we still call ourselves a Christian Nation.

I predict when the American people, who want to keep out of war, find out what the Bloom bill does, public reaction will be such that it will have no chance of going through the Congress.

The Methodists, Baptists, and other peace-loving elements opposed to selling arms and ammunition to belligerent nations are against the Bloom bill. All internationalists, interventionists, and Communists, who want us to fight Germany and Japan for the benefit of Soviet Russia, are clamoring for the Bloom bill. On the other hand, all Americans who believe in our traditional policy of neutrality will oppose it every inch of the way. The loyal German element in the United States, amounting to one-fifth of our population, will naturally oppose it, as will the loyal Italian element.

I offer the following 10-point program to insure peace for America:

Enter into arbitration treaties with all nations, not to go to war except in self-defense or in defense of the Monroe Doctrine.

Reaffirm the right of Congress as the sole authority to make war and not permit Ambassadors, like William C. Bullitt, Ambassador to France, sitting around tea tables to make war commitments for us, and, above all, let us defeat the unneutral Bloom bill.

Stop all efforts by the internationalists and interventionists in the administration to force America to join in policing and quarantining the world, to enter into collective alliances, to determine the aggressor nation—all of which lead directly to war.

Adopt my proposed constitutional amendment to give the American people the right to vote whether our youth shall be drafted to fight in foreign lands outside of the American Continent—not the Ludlow resolution to declare war.

Reaffirm our traditional policy of neutrality, nonintervention, peace, and no entangling alliances.

Urge a conference to limit naval and military armaments and to promote peace by arbitration and cooperation.

Stop the shipment of arms, ammunition, and implements of war both in time of peace and of war. Enact legislation to take the profit out of war.

Urge adequate national defense to protect our own shores, and to maintain the Monroe Doctrine.

Deport all alien agitators—Nazi, Fascist, and Communist—who seek to destroy our free institutions and give their jobs to loyal American citizens now walking the streets.

Save America first, preserve the American system, and promote the welfare, happiness, and security of our people by keeping out of war, putting our own house in order, and providing employment for our people.

Let no one think that I shall try to block the consideration of the neutrality issue in the Congress. As a member of the Rules Committee, I shall vote to report the Bloom bill under an open rule, for amendments, with extended debtate of 10 or 12 hours. The American people have a right to know where we are headed. They have a right to know whether our traditional foreign policies are to be scrapped and the war-making powers of Congress surrendered to President Roosevelt, who, from his own statements, is determined to take this Nation into war if one breaks out in foreign lands.

I propose to exert every influence at my command to strip the vicious, dangerous, and war-making Bloom bill of its sham and pretense of neutrality, and at the same time present the unneutral and interventionist record of President Roosevelt for the past year and a half, and to judge him by his own words.

I welcome, as I believe practically all Republican Members of Congress do, such a debate, which involves our traditional foreign policies. The outcome of this momentous debate may mean the life or death of one or more million Americans, and the preservation or destruction of our free institutions.

I doubt if even the New Deal leadership is willing to bring the Bloom bill up for a vote and certain defeat. I estimate that 50 Democrats will oppose it and that not more than a half a dozen Republicans, if any, will support it. The existing neutrality bill with minor amendments would be entirely satisfactory.

The time has come for Congress not to give President Roosevelt greater powers, but to take back some of the powers already surrendered by the Congress and restore representative government in the United States.

I give the radio audience the Macedonian cry to come over and help keep us out of war by writing or wiring your Representatives in Congress to vote against the fake Bloom neutrality bill, giving huge discretionary power to the President to involve us in war. The Bloom bill must not pass.

I also give you of the radio audience another Macedonian cry of help to sustain the efforts and activities of the National Com-

mittee to Keep America Out of Foreign Wars by sending a contribution to Walter L. Reynolds, treasurer, House Office Building, Washington, D. C. Funds are urgently needed to extend our activities in every section of the country and to combat the war hysteria, hatred, emotionalism, and poisonous propaganda that seeks to involve America in war.

With the threat of the Bloom bill, and the increased New Deal war propaganda which will immediately follow the adjournment of the Congress, it is essential that the national committee continue its program to offset this propaganda and keep America out of foreign war.

Yesterday was flag day, and I propose to conclude on a more peaceful note, with some observations on the freedom of speech and the American flag.

The American flag is the flag of tolerance, not bigotry; of freedom, not oppression; of liberty, not dictatorship; of a free ballot under free institutions and by a free people, and not a government by the bullet, force, and violence and the bread ticket. Our flag is the symbol of freedom, justice, democracy, and peace, and we must keep it so.

The foundation and rock upon which our free institutions and American liberties are based is that of freedom of speech, whether in the press, forum, or over the radio. Any attempt to restrict the right of freedom of speech is a menace to popular government and to democratic institutions. Censorship of the press or control over the radio would establish a precedent that would endanger American liberties, promote intolerance, and, ultimately, set up an American dictatorship.

I subscribe to the sentiment expressed by Voltaire when he said, "I disapprove of what you say, but I shall defend with my life your right to say it." The attempt to censor or restrict the right of Father Coughlin to speak over the radio, regardless of the merits or demerits of his views, is, in my opinion, an act of intolerance and an utterly un-American procedure. If the administration or any opposition groups can keep critics off the radio then we have reached the end of government by the people and of free institutions in America. Dictatorships of the left, such as communism, and of the right, like fascism and nazi-ism, have already done away with freedom of speech. Let us not follow this example in the United States. The constitutional right of freedom of speech on both national and international issues must be upheld or otherwise we will have a dictatorship and the right of minority groups and legislative and party minorities will be destroyed.

Observance of Father's Day—A Plea for Congressional Recognition of a Tradition Already Observed by Common Consent

EXTENSION OF REMARKS
OF
HON. CHARLES H. LEAVY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 16, 1939

Mr. LEAVY. Mr. Speaker, through national acclaim of an idea which originated in my congressional district in the year 1910, our country will observe Father's Day on June 18, just 2 days hence.

On that day, Mrs. John Bruce Dodd, of Spokane, Wash., will be in New York as an honored guest of the Evening Sun to participate in a Father's Day program from the Court of Peace of the New York World's Fair. This is, indeed, a fitting tribute to a woman of high character and noble purpose, who has given so unselfishly of her time and energy in an effort to have officially designated by our duly constituted authorities a day in each year when America will pause to pay just homage to the millions of fathers throughout the land; a day upon which fathers might reflect upon their cherished responsibilities to their loved ones, that family ties might thus be more closely knit and the stability of our social order thus increased.

Mrs. Dodd's ardent desire to perpetuate observance of Father's Day springs from a poignant experience of 41 years ago, when, as one of her friends wrote:

In the Big Bend hills of the State of Washington, the day had its nativity in a lonely farm dwelling. There sorrow ministered amid the moaning of the March winds.

A father sat with bowed head in his aloneness. About him clung his weeping children. The winds outside threw great scarves of powdered snow against the windowpanes, when suddenly the last-born tore himself from the group and rushed out into the storm, calling for his mother. Yet even his baby voice could not penetrate the great silence that held his mother.

Hurriedly the father gathered him back to his protection, and for more than two decades William Jackson Smart, alone, kept paternal vigilance over his motherless children.

Later in her life, when she could better appreciate and evaluate her father's devotion to his children, Mrs. Dodd persuaded the City Council of Spokane to adopt a resolution designating the third Sunday in June as Father's Day.

Hoping to contribute toward the preservation of this worthy tradition, and bring to my constituent the recognition which she so justly deserves, I introduced House Joint Resolution 634 in the Seventy-fifth Congress. Although precedent had been set by adoption of a similar resolution in the Sixty-third Congress, according official recognition of Mother's Day, my bill was not reported out of committee, and I wish now to express before you, my colleagues, the sincere hope that Congress will one day soon act to formally call upon the President for the issuance of a proclamation designating the third Sunday in June as Father's Day.

Educational Radio Project, Bureau of Education

EXTENSION OF REMARKS
OF
HON. J. BUELL SNYDER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 16, 1939

PARTIAL REPORT OF UNITED STATES COMMISSIONER OF EDUCATION ON THE EDUCATIONAL RADIO PROJECT

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a partial report of the United States Commissioner of Education, Dr. J. W. Studebaker, on the subject of the Educational Radio Project, as follows:

REPORT BY COMMISSIONER OF EDUCATION J. W. STUDEBAKER AND STAFF MEMBERS ON THE EDUCATIONAL RADIO PROJECT

Following is a brief statement presenting: (1) Purposes of the educational radio project; (2) chief accomplishments; (3) divisions of activities; (4) objectives of project programs; (5) funds allocated and costs; (6) summary; and (7) descriptive materials.

(NOTE.—Congress, in the Communications Act of July 31, 1934, instructed the Federal Communications Commission to give attention to the problem of facilities for nonprofit radio programs. As a result the Commission formed the Federal Radio Education Committee and appointed Commissioner of Education J. W. Studebaker chairman. This committee was assigned the task of bringing about more satisfactory relations between broadcasters and educators. Much of the work reported herein has been organized to work out practical solutions to the issue presented by Congress.)

1. PURPOSES OF THE EDUCATIONAL RADIO PROJECT

To carry forward the aims of the Government to give work to men and women in need of employment; to restore them to normal employment; and to experiment and demonstrate in education by radio, the educational radio project was established by President Roosevelt, December 19, 1935.

Working under the rules and regulations of the Works Progress Administration covering wage scales, 19-to-1 ratio on administration, sponsor contributions, etc., the educational radio project has attained objectives set for it.

Employment: The project has given employment to those in need of jobs in 17 States.

Worker rehabilitation: It has trained and provided valuable experience which has aided a large number of workers to restore themselves to normal employment.

Use of radio: It has improved the relations between private broadcasters and educators, and broadened and advanced the use of radio in the service of education and to government, Federal, State, and local.

2. CHIEF ACCOMPLISHMENTS OF THE EDUCATIONAL RADIO PROJECT

Employment: In 17 States and the District of Columbia the project has given employment to an average of 245 W. P. A. workers per month.

Training and placement: Training and experience secured on the project have enabled more than 75 W. P. A. workers in Washington and New York alone to move into regular jobs.

Low per listener cost: Through quality great audiences have been won reducing our costs to less than $10 per 16,000 listeners per half hour.

Sponsor contributions very heavy: Few W. P. A. projects can show as favorable project-sponsor ratio for expenditures as this: One dollar from the Government to $4 from private industry.

Largest network: By stressing quality, the radio project has secured the largest voluntary network ever assembled for sustained educational programs, 107 stations on the Columbia Broadcasting System. This is far larger than most leading commercial program networks.

Every United States region served: Because of the wide acceptance of project programs by stations and wide local use of scripts, every section of the United States has been able to receive the benefits of this activity.

Highest radio honors for 1939: Our project is the first Government agency ever to receive the award for presenting the "outstanding program of the year." This was voted to Americans All—Immigrants All—by the Women's National Radio Committee, representing twoscore national women's organizations.

Eight hundred thousand fan letters: Our series are reported to have received a larger response from listeners than any other sustaining programs presented by either the National Broadcasting Co. or the Columbia Broadcasting System. For 3½ years listener mail totals more than 800,000 letters.

First to preserve network series for schools: This is the first agency to preserve network educational programs for future use through recordings.

Criticism almost nil: Letters of criticism have been far lower than the network average. Network critical letters run 1 to 2 percent; project critical letters, one-tenth of 1 percent.

Promoted local productions: We have stipulated the development of local school and college radio producing groups to study broadcasting and to cooperate with local stations. These groups have grown from fewer than 300 in 1936 to more than 800 at present.

Careful preparation for every program: We have probably given more care to the creation of educational programs than any other agency, commercial or noncommercial.

Check and review thorough: We check all scripts with advisory and review committees composed of distinguished educators and scientists.

Competed against best on air: The Project has successfully competed for listener attention with commercial programs costing five to ten times as much to produce.

3. DIVISIONS OF ACTIVITIES

Following are major divisions of national and local activities carried on by the educational radio project:

National educational radio programs presented in cooperation with national chains, local radio stations, Government agencies like the Smithsonian Institution, and national associations like the National Congress of Parents and Teachers.

Educational radio script exchange, which provides practical assistance to local schools, colleges, and radio stations. The exchange lends scripts, supplies suggestions on producing programs, sound effects, and reports other available sources of helps.

Educational transcription exchange is pioneering in the introduction of these new scientific aids for American education.

Cooperative research projects are developed in problems of education by radio carried on in cooperation with colleges and school systems.

Cooperative radio demonstration centers for experimentation in use of radio for education have been sponsored at colleges, universities, and in local school systems.

Information service on education by radio has been established. This service supplies data on opportunities for training, bibliographies, research programs, new developments, etc.

4. OBJECTIVES OF RADIO PROGRAMS

Officials of our national radio chains invited the Office of Education to present educational programs of high quality over their facilities. To meet these requests, to conduct experiments and demonstrations in the art of radio applied to education, and to serve national social aims, the Educational Radio Project has presented 11 network radio series. Most notable are:

(1) Americans All—Immigrants All, a series of 26 half hour programs to increase tolerance and promote unity among our people by broadening the understanding of the contributions of men and women from many nations to our national life. This was the first Government program to receive the award as "the outstanding radio program" of the year.

(2) The World Is Yours (now in its third year), a series for the Smithsonian Institution, bringing knowledge of the treasures of that Institution to millions of taxpayers who may never have the opportunity to visit it.

(3) Let Freedom Ring, a series of 13 programs showing the origin and development of the human rights which have been set forth in the Bill of Rights of our Constitution.

(4) Wings for the Martins, a series of 26 programs showing modern developments in education as they aid parents in bringing up children. Presented in cooperation with the National Congress of Parents and Teachers and the National Broadcasting Co.

(5) Brave New World, a series of 26 programs promoting good will with our Latin American neighbors by helping Americans to know more about Latin American history, culture, and progress.

(6) Democracy in Action, a series of 26 programs now being presented to show government at work and the details of the democratic process by which Congress translates the demands of the people into action.

(7) Local Government at Work, a series of programs created in cooperation with national police, fire, and municipal officer associations. This series will be presented locally to help people understand the work of their local government.

Flag Day

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. ANGELL. Mr. Speaker, it is well that we set aside one day during the year as Flag Day so that we may for a little while draw away from the turmoil and demands of the momentous and troublous times through which we are passing to permit our thoughts to linger upon the American flag and what it means to us as American citizens.

The flag symbolizes all that we hold dear in America. As we look about the world and see so many of the treasured liberties of the peoples of the earth trampled under foot, we can only thank the founding fathers and those who have protected through the years our American Government.

More and more as we ponder the momentous problems which confront us as a nation today and endeavor to find a solution, that prosperity and contentment may again be ours, we are forced to the conclusion that the solution may lie in a return to the simple faith and virtues of our forbears. It is well to read again and ponder upon the simplicity and virtues of the Mayflower Compact entered into in 1620 by those God-fearing men and women who initiated civil government in America. It reads as follows:

In ye name of God, Amen. We whose names are underwritten, the loyal subjects of our dread soveraigne Lord, King James, by ye grace of God, of Great Britaine, Franc, & Ireland king, defender of ye faith, &c:

Haveing undertaken, for ye glorie of God, and advancemente of ye Christian faith, and honor of our king & countrie, a voyage to plant ye first colonie in ye Northerne parts of Virginia, doe by these presents solemly & mutually in ye presence of God, and one of another, covenant & combine our selves togeather into a civil body politick, for our better ordering & preservation & furtherance of ye ends aforesaid: and by vertue hearof to enacte, constitute, and frame such just & equal lawes, ordinances, actes, constitutions, & offices, from time to time, as shall be thought most meete & convenient for ye generall good of ye Colonie: unto which we promise all due submission, and obedience. In witness whereof we have hereunder subscribed our names at Cape Cod ye 11 of November, in ye year of ye raigne of our sovereigne lord, King James, of England, France, & Ireland ye eigteenth, and of Scottland ye fiftie fourth. ANO. DOM. 1620. (From the original manuscript written by Gov. William Bradford of New Plymouth.)

On such occasions it is well to dwell again upon the words of inspiration contained in the American Creed, written by our esteemed friend and former Clerk of the House of Representatives, Mr. William Tyler Page, and accepted by this House on April 3, 1918:

I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it, to support its constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

The American flag speaks to us as the spirit of America. It should arouse within us the deepest regard for the country which it represents, our country, the country which preserves for us freedom of speech, freedom of worship, the right to own and control private property, and all the cherished provisions the Bill of Rights guarantees to us. It should arouse within us a desire and determination to do our part in the preservation of these sacred rights to the end that they may be enjoyed by us and passed on to those who shall

follow us and take our places. As was recently said of our flag:

I am the American Flag, and this is my birthday. As the Nation has grown in size, my stars have increased in number. My colors are red, white, and blue; and there is no yellow in my make-up. The courage of generations of American manhood and the love of generations of American womanhood have been woven into my fabric.

I epitomize civil liberty, religious tolerance, and individual opportunity. I symbolize the Declaration of Independence and the Constitution of the United States of America. I typify the law, with malice toward none and with justice for all. So long as I shall fly, government of, by, and for the people shall never perish from this land.

Eternal vigilance has ever been the price of such self-government. On the altar of the unalienable individual rights which I symbolize, past generations of American fighting men have laid down their lives that those principles might live for posterity. That such noble sacrifices may not have been in vain, I expect each citizen under my protection at least to strive daily to live for me. No American can do less and be worthy of his citizenship.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS
OF
HON. HARRY SANDAGER
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. SANDAGER. Mr. Speaker, I desire to add to the continual mounting evidence as to the havoc to American industry caused by the reciprocal-trade agreements. The latest proof I have received is from Mr. John H. Lacouture, president of the Guerin Mills, Inc., Woonsocket, R. I., whose letter is as follows:

WOONSOCKET, R. I., *June 2, 1939.*

Hon. HARRY SANDAGER,
Washington, D. C.

DEAR SIR: Below is a copy of a letter recently addressed to this mill by an importer of worsted yarns, which reads as follows:

"We had a conversation at your New York office with regard to worsted yarns we are importing and have been referred to your good selves.

"As we have been doing quite some extensive business with worsted mills in New England as well as in Pennsylvania we believe that also you could be interested in our offer.

"We are selling all counts, French spun worsted yarns, stock guaranteed 64 Australian, on cops, skeins and 1 pound cheeses.

"As an indication we might mention that our 2/40 are sold for $1.22 and 2/50 are sold for $1.27½ per pound on cylindrical cheeses, landed New York, duty paid, 30 days net.

"We would be glad to quote you other counts you may require and to have one of our salesmen call on you at your convenience.

"We await your kind reply."

(Signed) ———— ————.

The following is a comparison of the quoted price of this yarn and our rock-bottom cost of producing equivalent yarns:

2/40s worsted yarn:	
Quoted price of imported goods, per pound	$1.22
Our cost, per pound	1.37
2/50s worsted yarn:	
Quoted price of imported goods, per pound	1.27½
Our cost, per pound	1.47

Our costs consist, in the case of the 2/40s yarn, or raw material (wool tops), of approximately 97 cents per pound, labor of approximately 31 cents per pound, and overhead of approximately 9 cents per pound.

We, as the employers of a thousand or more workers in practically every year since the beginning of this century, would like to have the advocates of the policy of reciprocal-trade agreements, which recently resulted in lowered tariffs on wool and wool products, tell us how we can hope to remain in existence in the face of such competition. You will see from the preceding paragraph that, even if the item of overhead were completely eliminated, which is, of course, an impossibility, our costs of raw materials, over which we have no control, plus the wages paid, are so far in excess of the price at which foreign producers can land competitive products, duty paid, in New York City, that we and other companies in the industry will be driven out of business.

Any of the Washington Representatives of the industrial State of Rhode Island who sincerely want to continue to provide the opportunity for gainful employment and to maintain the American standard of living and who are unwilling to sacrifice the firmly established woolen industry of this country, should do all in their power to correct the situation created by the recent trade agreements.

We and our employees hope that we can depend on your protection against this destructive competition from those foreign countries whose labor and living conditions are so far below those of our country.

Very truly yours,

GUERIN MILLS, INC.,
JOHN H. LACOUTURE, *President.*

Mr. Lacouture's complaint may thus be added to the long line of similar evidence of the senseless policy of the trade agreements, which throws American workers on relief and gives employment to foreigners. Besides woolens and worsteds let me cite another example. This is the instance of French lace imports. For a number of years manufacture of lace was a flourishing industry in Rhode Island and other parts of New England but since 1938 the Franco-American trade agreement has demoralized American production. But in France the exact opposite is true. The glowing picture of the lace industry from the French point of view is published in the New York Journal of Commerce. American Consul James G. Carter reports from Calais that "the strong and continued American demand for French lace has materially assisted the lace manufacturing industry of Calais." Also, "the Calais lace industry credits its current favorable position largely to American demand occasioned by benefits arising from the Franco-American trade agreement, the relatively low value of the franc compared with the dollar, and a distinct fashion trend in favor of lace," the consul reported.

An ironical fact is that while in this country we are endeavoring to establish a 44-hour week, the Calais lace plants are now working 48 hours instead of the previous French legal 40-hour week in that country. Furthermore, there is a shortage of labor in Calais and the manufacturers there are complaining that it is very difficult to get twisthands and tullists.

All imports—duty reduced—show the first 4 months of 1939 importation equivalent to 63.2 percent of the total 1938 and 85.5 percent of the total 1937 importation.

A short time ago La Phare de Calais, a newspaper published in the lace-manufacturing city, credited the United States with purchasing nine-tenths of the exports of Calais lace and points jubilantly to the improvement in French employment. La Phare says:

One can assert that the revival in our industry was brought about by the Franco-American Treaty which became effective on May 6, 1936. At that time the stoppage (unemployment) situation in lace was as follows:

	Male	Female	Total
May 4, 1936	2,228	812	3,040
Dec. 31, 1937	1,302	515	1,817
Dec. 31, 1938	776	395	1,171
Jan. 21, 1939	748	385	1,133

These figures are the result of the diminished stoppage from the 1st of January 1938 to the 21st of January 1939 of 684 units.

WAGES PAID

As to wages paid from 1934 to 1938, inclusive, they were as follows:

	Francs
1934	21,555,670
1935	19,744,781
1936	22,476,203
1937	37,800,000
1938	45,000,000

Of these figures the last is estimated.

What logic can there be in a policy which closes American lace, woolen, or worsted mills, forces their workers into the street or into the W. P. A., and actually transports flourishing industries across the seas to France, England, or other countries? And how long are we going to permit such a policy to continue? The answer rests here—right here in Congress.

Acquisition of Forest Lands

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. ANGELL. Mr. Speaker, I have introduced H. R. 6853 to authorize the acquisition of forest lands adajcent to or over which highway trails are to be constructed wholly or partly with Federal funds in order to preserve or restore their natural beauty. This is a companion bill to S. 231, introduced by Senator MCNARY, which I understand passed the Senate unanimously.

The purposes of this bill are apparent. Many of the highways in the Federal highway system throughout the several States of the Union pass through virgin forests. The scenic attractions bordering these highways add to their charm and at the same time preserve the natural beauty of the wooded areas through which they pass. The tourist travel of the United States is one of its greatest industries and one that contributes materially not only to the economic welfare of our entire country but also to the welfare, convenience, and pleasure of our citizens who avail themselves of the opportunity to see America.

Many State highway commissions and organizations interested in maintaining the natural beauty of the areas adjacent to our highways are interested in this legislation, and the Department of Agriculture is particularly interested therein. The bill merely provides that of the money allocated to the States, 5 percent may be used for the acquisition of forest lands and other areas along the highways, which amount must be matched by the States. The matter lies entirely within the discretion of the highway department of the State. If it wishes, it may preserve 5 percent for the beautification and preservation of the areas along the roads. The bill will not require any additional outlays in money from the Federal Treasury, but will give the highway commissions of the several States a broader discretion in the use of highway funds.

I hope all of us who are interested in maintaining the wonderfully fine scenic attractions of our American highways will urge the early consideration and approval of this legislation so that it may receive the favorable consideration of the House before our adjournment.

The bill is short and reads as follows:

Be it enacted, etc., That for the purpose of preserving, restoring, improving, and protecting the natural beauty along highways, roads, and trails constructed or to be constructed wholly or partially with Federal funds the Secretary of Agriculture is hereby authorized to expend annually not to exceed 5 percent of the moneys appropriated by Congress for carrying out the provisions of law relating to the Federal-aid highway system, in acquiring forest lands, or interest therein, by purchase, gift, devise, or condemnation, adjacent to said highways, roads, and trails now constructed or over which they are hereafter to be constructed: *Provided*, That no land which extends more than one-quarter mile from the exterior boundary of the right-of-way shall be acquired under the provisions of this act except by gift or devise. Lands or interests therein, acquired pursuant to this act which are situated within or near the exterior boundary of any Federal reservation, withdrawal, or land-utilization project, shall become a part of such reservation, withdrawal, or land-utilization project and be subject to all laws and regulations relating thereto and be administered by the agency having jurisdiction thereof. All other lands, or interests therein, acquired under authority of this act shall be conveyed by the Secretary of Agriculture to the State in which the lands are situated subject to such covenants as he deems necessary in effectuating the purposes of this act: *Provided further*, That each deed of conveyance shall provide that title to the land, or interest therein, shall revert to the the United States if during the period fixed therein the State fails to comply with said covenants, or if the land or interest is later included within the boundary of a Federal reservation, withdrawal, or land-utilization project. Lands, or interests therein, which revert to the United States shall thereafter be administered as the Secretary of Agriculture shall direct. The Secretary of Agriculture is further authorized to pay out of said 5 percent all costs incident to the acquisition of said lands including the cost of recording deeds and the examination and acceptance of title to lands, or interests therein, acquired hereunder, and, with respect to lands acquired by gift or devise, to pay all or an equitable proportion of any accrued taxes.

SEC. 2. It shall be optional with the highway department of each State as to whether, and the extent to which, this act shall be in force and effect therein, and any expenditures by the Secretary of Agriculture for the purposes of this act in any State in any fiscal year shall not exceed 5 percent of the Federal-aid road funds apportioned to such State for such fiscal year and shall be matched by State funds on the same pro rata basis as is required by the Federal Highway Act, as amended and supplemented, for Federal-aid road projects.

W. P. A. and N. Y. A. Should Not Be Cut

EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. TENEROWICZ. Mr. Speaker, under leave to extend my remarks, I desire to place in the RECORD my own reactions and those of some of the leading public officials and educators of America's fourth city, Detroit, toward the proposal now before this House to curtail the works program and the invaluable activities of the National Youth Administration.

First, let me say that the First Congressional District of Michigan, which I have the honor to represent, is composed almost entirely of working men and women. To thousands of them—my friends and neighbors—the proposal to earmark $125,000,000 of the $1,477,000,000 requested by the President to carry W. P. A. through the 1940 fiscal year, would be a tragedy. The fact is that this earmarking is for all purposes a further reduction of W. P. A.

Like several of my colleagues in the House, I am ready to vote for P. W. A. funds because I believe P. W. A. is necessary. But I believe we should vote sufficient funds both for W. P. A. and P. W. A. to carry out the New Deal principle of providing work on Government projects for our able-bodied unemployed until private industry provides private employment for them.

In fact, I feel that instead of voting enough W. P. A. funds to provide W. P. A. jobs for 2,000,000 unemployed for the coming fiscal year—as President Roosevelt requested—this Congress should go further and raise the W. P. A. appropriation to $2,250,000,000 and provide for 3,000,000 unemployed workers. I know that when it comes to suffering and distress, and it already is and has been on hand in my district because of unemployment and recent W. P. A. curtailment, I shall always regard the man more important than the Budget, even if it must remain unbalanced.

Another phase of House Joint Resolution 326 to which I object is section 12, which limits all building construction projects to $25,000. Anyone who has had any experience with construction work knows that no socially useful building project can be built in any of the cities of America under this limitation. Colonel Harrington, W. P. A. Administrator, has pointed out specifically that this limitation on building construction would mean that no more of these worth-while public buildings which W. P. A. has built all over America, could be constructed.

It would mean that the skilled workers who would otherwise be employed on them would be forced on direct relief or forced to take unskilled jobs and thus lose their skill.

In a statement today Colonel Harrington is quoted as saying that earmarking $125,000,000 of W. P. A. funds for the P. W. A. would force the W. P. A. to cut its average number of employees for the coming year by 170,000. He also voiced strong disapproval of the provision in this bill forcing workers to take a payless "vacation" after 18 months on the rolls, terming this provision "very rigid" and declaring that "it will cause real hardship."

Before quoting from telegrams which have reached me within the last few days from my district, I desire to urge the support of all liberal-thinking Members of the House in seeking to replace the $123,000,000 originally requested by President Roosevelt for the N. Y. A. in the bill. The bill, as you know, calls for an annual appropriation of only $81,000,000 for the N. Y. A., and this is not enough.

It has been estimated that there are from three to five million young Americans eligible for N. Y. A. help, and under the present program the N. Y. A. is able to give school aid to only 500,000 of them. If the full request of the President is voted by Congress, an additional 400,000 youths could be aided through school and college by the N. Y. A.

It is surprising to me that in a body such as this, opposition should arise to such a program as is conducted by the N. Y. A. To me it is one of the finest works of the New Deal. Many of you and I myself were able to gain our education by working our way through college. The important factor in this accomplishment was that we were able to find work.

Today the youth of this Nation is willing and anxious to gain an education, but the private jobs we found as young men are no longer available to the university students. They are held by men who are supporting families.

That is why the Federal Government undertook to aid serious-minded young people who wanted to gain an education and who did not have the funds to do so. And that is why I intend to vote for the full N. Y. A. appropriation as asked by the President. I am one of those who believe that in the United States every young boy and girl is entitled to an equal opportunity to gain an education. The only provision should be his or her ability to absorb this education.

There follow several telegrams which I have received in regard to the bill under consideration. They include messages from the mayors of Detroit and Hamtramck, Mich., from the Detroit superintendent of public schools, and from the president of the University of Detroit. I feel that they are worthy of your consideration.

Mayor Richard W. Reading, of Detroit, wired me June 15:

Strongly urge your vigorous opposition to House Appropriations Subcommittee's recommendation outlawing W. P. A. building projects costing over $25,000. Also protesting reduction of Federal nonlabor relief contribution from $7 to $6 monthly as well as $125,000,000 appropriation slash. If these proposals approved, Detroit's W. P. A. program collapses.

Mayor Walter Kanar, of Hamtramck, wired me June 15:

Understand W. P. A. appropriation bill being debated in House at present. I object to provision outlawing all building projects costing over $125,000, reducing Federal nonlabor contribution from $7 to $6 per worker per month, reducing amount requested by President $125,000,000. Use all possible effort to repeal these provisions from appropriation bill.

A. E. Poetker, president, University of Detroit, wired me June 15:

National Youth Administration student-aid program has unique record in accomplishing solid good and in economy of administration. Please use influence to continue this program without reduction.

G. R. Harris, administrator, Wayne County Welfare Relief Commission, wired me June 15:

Any efforts you can put forth in support of original appropriation of $123,000,000 for National Youth Administration will benefit your district.

Frank Cody, superintendent of schools, Detroit, wrote me June 12:

DEAR SIR: The Congress is now considering appropriations to the National Youth Administration. I should like to register with you my hearty endorsement of the work done through this governmental agency. A large number of youths, both in Detroit high schools and in Wayne University, have been able to continue their education because of the financial assistance given through National Youth Administration. Those who are closest to this activity in the schools tell me that even the small amount of money that high school and college students are allowed to earn each month on National Youth Administration does an unbelievably large amount of good for these very needy youths.

Furthermore, I am impressed with the value of the work projects for those young people who are out of school. In a metropolitan area like Detroit, we recognize how difficult it is for young people to get started on employment. The N. Y. A. work projects give some contact with actual work and enable young people to acquire the experience that is so generally required when they seek private employment.

The Polish Aid Society, Detroit, wired me June 15:

We are depending on your vote for N. Y. A. appropriations.

And Henry D. Jones, director, Dodge Community House, Hamtramck, wired me June 15:

Please support N. Y. A. project, beneficial to all youth in need. We need your help.

These are only a few expressions of opinions held by responsible citizens who feel, as I do, that this Congress must not yield to pressure to curtail W. P. A. and N. Y. A. appropriations at a time when private business still is not meeting demand for jobs and when local relief agencies cannot possibly meet the present needs of the community.

The Proposed Neutrality Joint Resolution

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

MINORITY VIEWS OF THE COMMITTEE ON FOREIGN AFFAIRS

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the minority views of the Committee on Foreign Affairs on the neutrality bill:

Mr. FISH, from the Committee on Foreign Affairs, submitted the following views of the minority (to accompany H. J. Res. 306):

No neutrality law at all would be better than this resolution which in the name of neutrality, and under the guise of preventing provocative acts of American citizens, gives the President additional powers to be unneutral.

Under this resolution as it comes from committee the President, after making a neutrality proclamation, can authorize the sale of arms on "ordinary commercial" credit to one side and deny such sales to the other side; he can permit our vessels to enter the ports of one belligerent loaded with needed supplies, while barring our vessels from the ports of another belligerent; he can prevent a foreign vessel carrying arms from leaving our ports by requiring a prohibitive bond whenever he suspects that the shipment will be transferred to a tender belonging to a belligerent but "the evidence is not deemed sufficient to justify forbidding the departure of the vessel" while permitting exactly the same sort of a shipment to proceed to another belligerent.

No President ever had such power before. The President has no such power under our Constitution or under international law. Congress alone can give him this power. To urge that the President would not misuse this power is not to state a reason for granting it.

WHAT THIS RESOLUTION PROVIDES

This is a long resolution, but all but two sections are substantially reenactments of our present law with minor changes. Many of the provisions are sound and promote peace, but the combination of the reenactments with the new sections give the President the powers we have just described.

Section 1 provides for a proclamation but is not mandatory and omits the arms embargo contained in the present law. In spite of the mandatory requirements of existing law, the President has failed to "find" the existence of the gigantic war in China. We therefore believe that any neutrality law should provide for the finding of a state of war between foreign states by the Congress as well as by the President.

Section 2 forbids travel by citizens on the vessels of belligerent states. It is essentially the same as the present law, although the limitations upon the President's power to regulate such travel have not been retained.

Section 3 gives the President power to forbid American citizens or American ships from going any place on this planet outside an "American republic" during a war, by proclaiming the place "an area of combat." Under this authority the President may also prescribe any limitations or exceptions he may desire upon the travel of American citizens or vessels any place in the world, outside an American republic. This power is without precedent in American history. With this power the President can effectively quarantine an aggressor from American ships and citizens by simply naming the aggressor as a "combat area."

Section 4 contains, without change, the provisions on loans and credits of the existing law, but provides for neither "cash" nor "carry." In both the existing law and the pending resolution, the President is given power "in his discretion, and to such extent and under such regulations as he may prescribe" to make exceptions for "ordinary commercial credits," in aid of "normal peacetime commercial transactions." Unquestionably, sales of arms and munitions are "normal peacetime commercial transactions," and therefore, the President could authorize the sale of arms in time of war on credit.

The provision for transfer of title of all articles or materials sold to a belligerent is essentially the same as in the present law. This provision would not apply to Canada or Mexico, and, therefore, we may expect a brisk increase in the arms traffic over our northern and southern borders in case of war.

Section 5 prohibits the solicitation of contributions of money for belligerents except for relief. Essentially the same provision is contained in the present law.

Section 6 provides that the foregoing provisions shall not apply to any American republic, without limitation. Would this exempt the United States from all of these provisions?

Section 7 is the same as the corresponding section of the existing law and gives the President power to stop shipment of arms by requiring bond of the shipper, when he has suspicions but insufficient evidence, that the arms are for a belligerent ship. This section is justified if we are not selling arms to belligerents, but permits a thoroughly unneutral control of the sale of arms under the present bill, which is supposed to permit the impartial sale of arms to belligerents.

Sections 8 to 16 are reenactments of provisions of our present neutrality law, with certain minor changes.

THE RESPONSIBILITY OF CONGRESS

We all want to keep out of war. We cannot do this by passing laws. Congress alone has power to declare war, but modern wars are no longer declared. The execution of our foreign policy, the conduct of our foreign affairs, is the responsibility of the President under our Constitution.

With all of his great power, however, the President has no power to keep our citizens from doing many things which experience teaches us may be provocative of war. Congress alone has this power. For years we have forbidden many such provocative acts—things which may provoke other nations to war with us, things which may provoke us to war. In 1909, 1917, 1922, and 1937, Congress defined such acts in laws which are still in force. What we must now determine is what laws, in our present situation, will be most helpful in removing causes of war which can be cured by law. No act which we pass will have any binding effect on foreign nations but solely on our citizens, to keep them from doing things they would have a right to do if it were not for our law. No neutrality law can prevent our becoming involved in war if our foreign policy is unneutral. Congress cannot limit the President's constitutional power. We should not evade our responsibility by granting the President additional power and conferring upon him additional responsibilities.

THE TWO THEORIES

While some of the provisions of the present law which are retained in the pending bill are meritorious and helpful and were worked out harmoniously, other provisions are extremely dangerous. Our objection to the administration's bill arises primarily from a fundamental difference as to the way to peace. We are opposed to the President's policy of using the threat of our power to preserve a balance of power in Europe. We do not believe that the President is deliberately provoking war, but we believe that the way to peace is for us to be neutral, not biased; friendly, not threatening. We feel that this Nation is determined to stay out of the next war. We cannot dictate what other nations shall do. We should not attempt to influence their decisions by attempting to conceal our firm purpose as a nation to stay neutral.

THE PACIFIC SITUATION

We have attempted, without success, to secure consideration and action by our committee on the situation in the Orient. We feel that it is a mistake to try to determine our possible conduct as to future wars in Europe before we determine our conduct as to an existing war. We have let our excitement about what may happen to our remote interests in Europe blind us to what is now happening to our immediate interests in the Pacific, where our treaty rights are being violated and our national interests threatened every day. We feel certain that if we had solved this immediate far-eastern problem first it would have gone far toward solving the rest of our international problems.

TRAFFIC IN ARMS

This resolution omits any provisions for an arms embargo. When representatives of the State Department were asked whether there was any change in the international situation which should cause Congress to repeal the provision for an arms embargo at this time, our committee was told that Hitler's taking over of 27 munition plants in Austria and the Skoda works and 11 other plants in Czechoslovakia justified the change. Are we to replace these factories in the arming of Europe? Are we to become the arsenal of the world?

Ours is no partisan position. We cannot state it more strongly than in the words of our President at Chatauqua in 1936, when he said:

"If war should break out again in another continent, let us not blink the fact that we would find in this country thousands of Americans who, seeking immediate riches—fool's gold—would attempt to break down or evade our neutrality.

"* * * To resist the clamor of that greed, if war should come, would require the unswerving support of all Americans who love peace. If we face the choice of profits or peace, the Nation will answer—must answer—'We choose peace.'"

Respectfully submitted.

Hamilton Fish, Charles A. Eaton, George Holden Tinkham, Edith Nourse Rogers, Robert B. Chiperfield, Robert J. Corbett, John M. Vorys, Foster Stearns, Andrew C. Schiffler.

Relief and W. P. A.

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. ALEXANDER. Mr. Speaker, Fortune Magazine's Round Table Discussions in March brought out the following:

Government should invest its money so as to increase productive opportunity rather than merely spend to create purchasing power.

The fiscal policy of the administration has brought with it a failure in business confidence.

W. P. A. and P. W. A. have constructed a number of useful public works, but public opinion has been overlooked in regard to how the people's money has been expended.

The form of Government spending should be reorganized. Congress, assisted by expert advice, should draw up a public-works and national-development plan. The construction of given projects under this plan should be entrusted in large degree to private contractors amply equipped with modern machinery who would be free to employ workers, whether on relief or not. Such a system would make sure that the construction of the project and the efficiency of labor would meet the standards of private enterprise. Thus the odium that now attaches to W. P. A. employment would disappear. Gradually, W. P. A. would be reduced until it would merely support or rehabilitate those regarded as unemployable. The reorganization of spending along these lines would do much to convince the country that public projects are of real value, that the workers employed are not being demoralized, and that spending is not an instrument of politics.

In other words these round-table experts agreed that there are two things which warrant just criticism of our relief program and spending: First, the money has not been spent wisely, and second, confidence of both business and the general public has been destroyed. Of course any dissertation on this subject must consider the part business must play in absorbing the unemployed.

A good exposition on the part which we may expect business to play in this process is contained in the letter which I have inserted below, touching as it does on the lack of confidence and the need for revision or repeal of the many restrictive laws which we now have on the statute books to throttle, destroy, and coerce business. Read this letter carefully:

MINNEAPOLIS, MINN., *May 24, 1939.*

Hon. JOHN G. ALEXANDER,
House of Representatives, Washington, D. C.

DEAR JOHN: The other day when the President suggested that a study be made to find out why capital was lying idle, etc., I heard several men remark laughingly that the President was apparently the only man in the United States who did not know what the trouble was. Of course, the remark was made by the President for political purposes, but seriously there is some difference of opinion as to just what to do to get capital working.

You know, and I know, that the way to put capital to work is to give it the opportunity of making a profit without adding artificial hazards to the natural hazards which always exist. At the present time capital not only takes all the natural hazards, but if it does bring in a profit, the profit is largely taken away by the Government.

Take the example of a wealthy individual with an income of several hundred thousand to a million dollars a year. Now, I do not feel sorry for this individual because he has to pay out most of this income in taxes, because after he gets all through with it he still has a lot more left to spend than most of us. But suppose we put ourselves in his position when it comes to

investing his money. Suppose he has two choices. One is a very good opportunity in real estate which promises to bring in a profit of from 8 percent to 10 percent per annum with some speculative risk, but with a fair degree of safety for this type of investment. Twenty years ago such an opportunity would naturally have been grabbed, but how about now when the Government (Federal and State) is taking from 50 percent to 80 percent of this income in the form of taxes? After he gets through with his operation, even if he is successful and none of the possible bad things happen to his investment, he only has a return of from 2 percent to 3½ percent or 4 percent.

His alternate choice of what to do with his money, we'll say, is to put it in high-grade municipal bonds which will yield him anywhere from 2 percent to 2½ percent without any taxes of any kind and with a very minimum of risk.

If you were this fat boy, which chance would you take with your money? You would, of course, do just what he is doing and play safe and still get as much net income as you would by taking a risk.

On the other hand, suppose you were an officer of a corporation in which the stockholders were people of ordinary means but of sufficient number to pile up quite a wad of capital. Would you be willing to risk your stockholders' money on a venture which might take a loss for several years before profits started coming in, if you knew these losses could not be deducted for tax purposes from the expected subsequent income? Would you be looking around for new items to manufacture or merchandise which required additional plant facilities or additional investment in stock if the only way you could get the money necessary for this was to go out and borrow it and put your company out on a limb? Wouldn't you be far more likely to expand and use additional capital if you were allowed to accumulate this capital largely from earnings?

My suggestion for eliminating some of the restraints on the movement of capital is that a provision be made to carry over losses for periods of several years; that the $2,000 limit on the deduction of capital net losses by corporations be repealed; that the capital-stock tax and excess-profits tax be repealed; that the undistributed-profits tax on corporations be repealed or allowed to expire according to its terms; that we go back to allowing the exemption of dividend income from normal individual taxes; and that the maximum bracket of income taxation be around 40 or 50 percent. This latter makes no difference to me or any of my family, as none of us has incomes which go up that high. I do not believe that revenge and spite taxes are ever justified. It is quite obvious that the tax on income of 30 or 35 percent is more in the nature of trying to get even with someone than it is in trying to collect revenue, as the Treasury Department will tell you that more revenue would be collected if taxes were on a fairer basis. After all, what we are after is to get things moving in this country rather than fostering jealousy of the very rich.

Of course, one reason why things are slow is that anyone with capital feels confident that the New Deal is laying in wait to hit anyone on the head that they can catch outdoors without a suit of armor on. That is something which cannot be changed until there is a change of administration, as nothing that any of the New Dealers would say or do could inspire confidence at this stage of the game. Any improvement must come through the hands of Congress.

Yours sincerely,

G. V. T.

GOVERNMENT SPENDING AND THE PUBLIC DEBT

A Government may spend money directly on the unemployed or on battleships, but such expenditures do not build up the earning capacity of the country as does, for instance, the opening of a highway that assists farmers more easily to reach their markets. The debt capacity of the Government depends upon the extent to which government spending has contributed to the building up of the productivity of the national economy. The test of a debt is not its size, but its consequences.

The United States has not reached its maximum debt limit. The Federal debt can be still further enlarged if the increases are clearly subordinated to a program for the restoration of our economy upon the basis of private enterprise in the area or realm where private enterprise can best function. This is an essential condition of Government policy for the future.

The American people lack a sufficiency of good things. While a few of us have too much, most of us have far too little of the things that make a good life—proper food, warm clothes, decent houses. Too much for some, and too little for many, does not make for the happiness either of few or many, nor stability of society as a whole. It is our duty to put our faith in the direct approach to this problem, the removal of the bad results, by the removal of the bad causes. The problem of W. P. A. and relief must be handled in that selfsame manner.

In the President's message to Congress on April 27, 1939, the President admitted the truth of my theory when he said:

Six years ago this Nation was confronted with a situation calling for rapid and decisive action. Millions of workers were already jobless; their number was increasing, and the economic structure was threatened with collapse. * * * Since that time we have moved along a broad front to make permanent provision to meet various phases of the problem of unemployment and need.

Now, listen to this from the President:

But there has been, and still is, a vast number of unemployed workers for whom some other protection must be provided. * * * In the good year of 1937 there were still about 8,000,000 unemployed. * * * In any consideration of the problem of unemployment relief it must be borne in mind that the program adopted to meet it must be envisioned to extend over a considerable period of time. * * * The system which we have favored in the United States during the past 6 years is by no means perfect.

In the city of New York, which has been perhaps the most favored of any community or locality in the United States insofar as this works program is concerned, 44 percent of the people on W. P. A. today have been there for more than 3 years.

The city of Minneapolis utilities engineer in a talk on May 15, 1939, cited this past year's over-all cost for all relief in Minneapolis as $25,000,000, of which $8,750,000 is the Minneapolis share of the burden, the balance being borne by county, State, and Federal Governments. This $8,750,000 includes $2,300,000 interest and principal on relief bonds already issued. The present resource used in financing relief, namely, issuance of bonds, will be exhausted by the end of this year, or if some State aid is afforded, then within a few months thereafter.

This same situation exists in many other large cities. In other words, we are about at the end of our local money raising for relief, which means either riots and destruction of orderly Government or complete support and control of the unemployed from Washington; that is, dictatorship.

So we find ourselves after all these years and after all these billions of dollars of expenditures in a worse situation than in 1929 when the depression started. Less business, industry, and trade; lower farm prices; more unemployment; higher taxes; billions in debts, and here we are going into another year with nothing new or constructive to offer either business or the general public, nothing except more hand-to-mouth spending and worse conditions than before. Let us get a program giving a solution. If the administration will not give it to us, then let us invent one ourselves. The people expect it, demand it, and the exigencies of the situation require it.

Herald Tribune and Neutrality

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

LETTER FROM A. T. MOREAUX

Mr. FISH. Mr. Speaker, under permission to extend my remarks, I include the following letter from Mr. A. T. Moreaux, which is self-explanatory:

Re the willy-nilly grandmother of all men and all philosophies, including the confusion of fusion with all angles of the devil—The New York Herald Tribune.

Hon. HAMILTON FISH,
Washington, D. C.

DEAR CONGRESSMAN FISH: Running true to form the New York Herald Tribune flounders all over the lot editorially in its Tuesday morning issue, this time on the subject of such gigantic immediate importance to every real American as is the pending action on neutrality by Congress.

It might be funny if it were not so tragic to the future well-being of every man, woman, and child within the confines of our borders, to try and reconcile the assinine and flimsy arguments set forth by the H. & T. in what purports to be a second-hand support of the arguments it pretends to advocate.

The grand old, long since out-moded, self-imposed dishrag of the Republican Party in New York is highly indignant that anyone should question the integrity or doubt the Americanism of one Franklin D. Roosevelt and denounces a fearless Congressman for daring to publicly expose the menacing and constant threat to this Nation which is so hourly present so long as this man Roosevelt remains in any public place of authority or public trust!

The Herald Tribune gallantly defends the undoubted loyal responsibility, acts, and objectives, visible and hidden beneath the covers of its man Roosevelt, condemning all who would refuse to make him our sole master and dictator without further ado. Therefore, you are allegedly guilty of heinous mischief because you object to turning over to the irresponsible elements that direct every thought, word, and deed of the ailing Roosevelt, the lives and well-being of the Christian citizenry of the Nation.

That the crackpot, nit-wit absolute control that manipulates this man Roosevelt should desire to throw us into a war is unthinkable in the mind of the paid writer who turned out its editorial. It is a preposterous thought; out of the window with such an idea, such an unholy suggestion. Especially since it "makes this aggregation (Roosevelt's) seem like the craftiest and most devilish disciple of Mars that has ever sat in the White House—waiting and watching and scheming to get the United States into war." Terrible thought.

For shame, Congressman FISH. How could you be so heartless and cause your poor old grandmother to weep and shed such anguished tears?

Don't you know that you are making it harder and tougher and ever more difficult for this old party to continue to stand up and eat three squares a day right here in the midst of Stalinized America by your deliberate tossing of monkey wrenches into the schemes and rackets of those who control the mortgage-containers that serve to influence so effectively so many of the publications serving to aid in formulating American public opinion these strange and ungodly days?

* * * * * * * *

So keep right on driving straight ahead, and do not divert from the course you are pursuing—and all real Americans will continue to get behind you; and to hell with alien-minded, disloyal elements, whatever their mask or excuse!

Cordially,

A. T. MOREAUX.

John Joseph Boylan

MEMORIAL ADDRESS
OF
HON. FRANCIS D. CULKIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN JOSEPH BOYLAN, late a Representative from the State of New York

Mr. CULKIN. Mr. Speaker, for more than 3 years I was associated with our departed colleague, JOHN J. BOYLAN, on the Jefferson Memorial Commission. Through that association I came to know Mr. BOYLAN intimately and to regard him with great respect and affection.

The outstanding trait of our late colleague was a deep-rooted kindliness toward all men, their desires and ambitions. He was ever tolerant, kindly, and polite. A lifetime in the public service had not changed him into a cynic or doubting Thomas. To the end of his service his viewpoint was fresh and without the sophistication that generally goes with long service in the House of Representatives.

Our colleague's outstanding achievement was the creation of the Jefferson Memorial Commission, on which he served as chairman for more than 3 years. This honor did not come to him undeserved. He was a deep student of Thomas Jefferson and understocd more keenly than any man I have ever contacted the great part Jefferson had played in the creation of popular institutions. For many years he had made an annual address either in the House or elsewhere in the country on the birthday of the author of the Declaration of Independence. His devotion to the memory of Jefferson culminated in the creation of the Jefferson Memorial Commission and the legislation providing for the erection of the exquisite memorial now building on the Tidal Basin.

In the progress of this work his motives and the propriety of his action was the subject of much unfair and indecent criticism. The yellow press assailed him and his efforts with characteristic stupidity and unfairness. The bitterness of these attacks did not affect the sweetness of JOHN BOYLAN'S character nor his unflinching purpose to obtain his objective. This modest gentleman pressed forward vigorously to the creation of this memorial. He sought no personal glory but only to immortalize so far as possible, by the creation of a man-made structure, the memory of Jefferson. New York State and the country has lost a valued Representative in his passing.

Peace be to his ashes.

N. Y. A. Legislation

EXTENSION OF REMARKS
OF
HON. CLYDE L. GARRETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. GARRETT. Mr. Speaker, the youth of our country is the manhood and womanhood of tomorrow. They are the ones who will have to bear the burden and pay the taxes which we are placing on them in this and similar bills. Some of those fine boys and girls will stand in our stead in this House in a few short years and the things which we do today in regard to the N. Y. A. are going to be deciding factors in thousands of young lives. Shall we give them a heritage of hope today or tell them that the Nation is ready to feed the hungry, provide work for the thrifty, embellish the beauties of our cities, and pour almost $2,000,000,000 down the pump for industry and not do a proportionate amount of good for them?

Literally hundreds of boys and girls in my district owe their chance for success in life to the meager help which they are getting through the N. Y. A. They are willing to work. They want to learn how to do things to take their place in life. Their hands and hearts belong to a generation which will have the burden to bear and it is not right to send them with untrained hands and untrained minds out to face the problems of the future.

Our citizenship has seen the work which they are doing. They have seen the progress which those boys and girls under N. Y. A. leadership have made in the past 7 years toward becoming good citizens and they want this work to continue. Our high schools have benefited, our colleges have advanced, and the full measure of our community life has been enriched by the labors of their hands and minds.

The letters and telegrams, printed herewith, a sample of hundreds of others in my files, show that our people want this work to go on unhampered and unchanged. You may destroy almost any part of the relief program and it will not create the furore that the destruction of N. Y. A. would cause. Our people want the minds and hearts of our boys and girls, regardless of their standards of living, the wealth or poverty which may be theirs, to have a chance at some training, some schooling, some development for the affairs of life.

I am opposed to the reduction in N. Y. A. funds from the amount recommended by the Budget. The full amount, in my candid opinion, is needed, wanted, and must be had for this work to continue and develop the youth of the land.

ABILINE, TEX., *June 16, 1939.*

HON. CLYDE GARRETT,
Member of Congress:

I would be pleased if you would vote to preserve N. Y. A. in full vigor.

W. W. HAIR,
Mayor, City of Abilene.

MINERAL WELLS, TEX., *June 15, 1939.*

Hon. CLYDE GARRETT,
Member of Congress,
Washington, D. C.

For the good of the National Youth Administration program we trust you will support National Youth Administration measure and appropriation as requested by the President.

JOHN C. MILLER,
Mayor, City of Mineral Wells, Tex.

ABILENE, TEX., *June 14, 1939.*

Hon. CLYDE L. GARRETT,
Member of Congress,
Washington, D. C.

Would appreciate very much your voting for the original bill on the original appropriation for N. Y. A. We feel that its vocational and educational value is worth more than any relief program that we have here.

CARL P. HULSEY,
County Judge, Taylor County, Tex.

RANGER, TEX., *June 14, 1939.*

Congressman CLYDE GARRETT,
Washington, D. C.:

We understand from the papers that several relief bills are coming up and there is one in particular in which we are interested—the National Youth Administration. We think this program is doing a nice piece of work in both its work program and its student aid. We understand that many boys and girls would not be able to continue high school nor college if it were not for the student-aid program of the National Youth Administration.

J. J. KELLY,
City Commissioner and Mayor Pro Tempore.
E. J. EUBANK,
City Secretary.

RANGER, TEX., *June 14, 1939.*

Congressman CLYDE GARRETT,
Washington, D. C.:

We understand from the papers that several relief bills are coming up and there is one in particular in which we are interested—the National Youth Administration. We think this program is doing a nice piece of work in both its work program and its student aid. We understand that many boys and girls would not be able to continue high school nor college if it were not for the student-aid program of the National Youth Administration.

Mrs. JOSEPH M. PERKINS,
President, Texas Federation of Women's Clubs.
Mrs. M. H. HAGAMAN,
President, Sixth District Texas Federation of Women's Clubs.

McMURRY COLLEGE,
Abilene, Tex., May 30, 1939.

Hon. CLYDE L. GARRETT,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN GARRETT: The press indicates that there will come up for discussion this week the National Youth Administration appropriation for the coming fiscal year.

I am sure that you are thoroughly familiar with all phases of the operation of student aid in our colleges and universities. However, I should like to let you know just how efficiently the program works in our particular college. The students in McMurry College who receive N. Y. A. aid rate distinctly higher in scholastic attainment than the average of the student body. They seem to have a deep sense of appreciation for the opportunity that is being afforded them to go to college. This appreciation and gratitude reflects itself in the type of work they do for the aid they are receiving and in their school grades. In the student-aid program it seems to us that the same benefits accrue to the student as in other phases of the N. Y. A. program; and, in addition to affording immediate relief and employment, these students are fitting themselves to become more useful and self-sustaining citizens when they finish their college work.

In order that you may know just how heavy the demand is for this type of aid, may we say that our applications the past year were nearly four times as much as the funds that could be made available. Our college does everything in its power to meet the needs of worthy students, but our resources are very inadequate to take care of any considerable percentage of the applications.

The State administration of this program has been very efficient; and as far as we can observe, the program has been handled at a minimum cost. We sincerely trust that the Congress will give earnest consideration to the need for a substantial increase in the appropriation to the student-aid program.

With personal good wishes, I am

Very respectfully yours,

O. P. THRANE, *Business Manager.*

TOCMBS & RICHARDSON DRUG CO.,
Eastland, Tex., April 18, 1939.

Hon. CLYDE GARRETT,
Washington, D. C.

DEAR MR. GARRETT: In recent months I have had the opportunity to observe the program being carried out by the N. Y. A. in our section of the country. It is my opinion that this work is very constructive and much needed throughout the district and I am sure would meet the approval of our citizens if it should be continued and expanded.

This work appears to be in the hands of very efficient management and fills a much-needed place for the youth of our country in giving him training, which no doubt would be impossible otherwise.

If you can use your influence in helping to continue this splendid work for our youngsters, it will be greatly appreciated by me as well as the citizens of this district.

Very respectfully,

T. E. RICHARDSON.

THE CITY NATIONAL BANK,
Mineral Wells, Tex., May 1, 1939.

Hon. CLYDE L. GARRETT,
House of Representatives, Washington, D. C.

DEAR MR. GARRETT: For some time now I have been interested in the progress of the National Youth Administration, and I should like to express my hearty approval of the splendid work carried on by this project.

In the program of economy now being proposed in Washington I trust due consideration will be given to the benefits derived compared to the small amount expended in the carrying on of this worthy project, and hope this project will be carried on as long as possible. It has afforded the youth of the Nation an opportunity to become better citizens and equipped them to earn a livelihood.

Yours very truly,

I. R. PRESTON, *President.*

RANGER, TEX., *June 2, 1939.*

Hon. C. L. GARRETT,
Congressman, Seventeenth District,
State of Texas, Washington, D. C.

DEAR CONGRESSMAN: I notice from the papers that the new appropriation will be passed upon in the very near future in regard to the N. Y. A. program for the coming year. I also notice the President is recommending an increase.

The public in this section of the country is very much pleased with the N. Y. A. work. It would be impossible for many students to attend school if this aid was not received, and on the other hand, it has given employment to the youth and a training that we are of the opinion will do our country a great good, and keep it going Americanism rather than some other "ism," which we all know to be harmful to our great country. I cannot think of anything that the Government has spent money for where they received more benefit than through the N. Y. A. program.

I hope and trust you will see fit to support the President's recommendation that this be increased for the coming year.

Yours very truly,

HALL WALKER, *Mayor.*

"It Is Happening Here"

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. NOAH M. MASON, of Illinois, before the Executives' Club of Chicago, also the introduction by the president of that club, on May 26, 1939:

PRESIDENT BEVERLY W. HOWE. Today at the Executives' Club, a little in advance, we are celebrating Memorial Day.

It is fitting that in such a celebration we would think of Abraham Lincoln. Verily, let us have him with us by description.

Henry Clay Whitney, an Illinois lawyer who practiced on the circuit with Lincoln and in the practice of law at least for many years was one of Lincoln's most intimate associates, wrote a book entitled "Life on the Circuit With Lincoln" which is prized by all Lincoln lovers who possess a copy and craved by all who do not own one.

To Whitney, more than to any other man unless it is Herndon, Lincoln's law partner, we are indebted for most of what we know about Lincoln before he was inaugurated President. Whitney thus describes Lincoln:

"He was 6 feet and 4 inches in height, his legs and arms were disproportionately long, his feet and hands were abnormally large,

he was awkward in his gait and actions. His skin was dark, sallow color, his features were coarse; his expression kind and amiable; his eyes were indicative of deep reflection; and in times of repose of deep sorrow as well. His head was high, but not large; his forehead was broad at the base, but retreated. He wore a hat measuring seven and one-eighth. His ears were large; his hair coarse, black, and bushy, which stood out all over his head, with no appearance of even having been combed."

With Lincoln with us on this occasion in such wise, we are pleased to have as our guest speaker a Member of the present Congress which has demonstrated and gives promise of further manifesting that it is determined that we shall not lose now what Lincoln saved for us in the 1860's and that "government of the people, by the people, for the people shall not perish from the earth."

The subject our guest speaker has chosen is "It Is Happening Here." I am pleased to present the Congressman from the Twelfth District of Illinois, Hon. N. M. MASON, of Oglesby. [Applause.]

Hon. N. M. MASON. Mr. Chairman, members of the Executives' Club, and guests, I have been a school teacher for thirty-odd years, and school teachers have things happen to them that no other class or group of people has.

For instance, some few years ago one of the boys in the Oglesby School was reported to me as not getting along very well in school and giving his teachers considerable trouble. After investigating the case I decided that the boy was not a bad boy at all, but that he had gotten in with some older boys who were having a bad influence upon him.

So I decided to invite the parents in for a conference. As usual on occasions of that kind, it was only the better half of the house that responded to the invitation. After talking the situation over with the good lady and pointing out the difficulties to her, I suggested that she have a heart-to-heart talk with the boy to see if she could not get him to see the error of his ways.

While I was making that request of her, she interrupted me with the exclamation: "That won't do at all, Professor; that won't do at all; he won't listen to me. He won't listen to anybody but darn fools. You'd better talk to him." [Laughter.]

And someone in this club thought I had better come and talk to you today.

I have been filling Congressman DIES' place on several occasions, speaking engagements that he could not fill, and in these various places I describe Congressman DIES as a six-foot-two, red-blooded, double-fisted Texas Democrat. He wears a No. 12 shoe. He is a real man. And here I am a little, squatty, runty fellow wearing a six-and-a-half shoe, and a Republican at that, trying to fill his shoes. [Applause.]

It is not always easy to do that. Your chairman called attention to the near approach of Memorial Day, and he painted for you a picture of Lincoln in the raw, and if ever there was a time in the history of this Nation we needed Lincoln's spirit abroad in this land we need it today. [Applause.]

I have made many Memorial Day addresses, and they usually cover a brief review of the past history, a description of the present, and a preview of the future. I am leaving out that review of the past, and my message today will devote itself entirely to the situation that confronts this Nation now, as we have learned it on the Dies committee, and, perhaps, a suggestion as to what the future will be if we do not take the proper steps.

I think every man in this room has heard more than once the statement: "It can't happen here." Perhaps most of you have said, as I have, many times: "It can't happen here."

Why, I have been buttonholed during the past 5, 6, 7 years by Legionnaires who tried to convince me of a "red" menace in this country, and I have said with a shrug of my shoulder, "Oh, it might happen in Russia where 90 percent or more of the people are illiterate, but it can't happen here." And I have been buttonholed by members of the Knights of Columbus and Catholic leaders in this State and in the Nation, and have had them call to my attention this supposed "red" menace, and I have given them the same answer: "It can't happen here."

EVIDENCE THAT IT IS HAPPENING HERE

Up until a year ago I would have given you that answer, but the revelation, the sworn statements, the written evidence that would be acceptable in any court in the land, that has been presented to the Dies Committee, has changed my opinion on that situation, and I apologize to those Legionnaires and to those Catholic leaders who recognized this menace long before any of the rest of us did, and I now say, "It is happening here." And I want to give you enough evidence in this talk of mine to prove to you that it is happening here.

One of the chief witnesses before our committee, Dr. J. B. Matthews, made this statement:

"Communism has made more progress in the United States during the last 5 years than it had made in the 50-year period previous to that time."

And when I asked him how he accounted for that rapid progress he gave four reasons, which I want to give to you. They are worth considering.

REASONS NOS. 1 AND 2

"First," he said, "this so-called depression has lasted so long that it has brought about mass discontent and mass discontent"—those are his words—"makes fertile soil for communistic crops."

Well, that statement does not need any explanation. It is our job, however, to remove that fertile soil, mass discontent, as soon as possible.

His second statement was this: "High Government officials have, through speeches, radio addresses, and written statements, deliberately created or engendered class hatreds in this country of ours, and class hatreds make an excellent seedbed for communistic seed." Think that over.

And if you review the past year or two—Ickes, Jackson, Hopkins, mouthpieces of the President, and the name callings that they have been spreading over this country of ours, deliberately creating class hatreds indicting a whole group of people, the industrialists, by the words "economic royalists" when it only applies to 1 or 2 percent of the group—you know what that witness meant when he said high Government officials have deliberately been creating class hatred in this land of ours.

And let me tell you people those same men decry race hatred and prejudice and religious hatred and prejudice, but they deliberately set about creating class hatred. I say class hatred is a twin brother to race hatred and religious hatred, and there is no place in this land of ours for any of those brothers, because where one is created it inevitably engenders the other.

In that connection I want to say that our investigators all over this country report to us that there is a surge, an upsweep, not only of class hatred, but of religious hatreds and race hatreds in this country of ours—plenty of evidence of it.

REASON NO. 3

The third reason that witness advanced for this rapid spread of communism is this: "High Government officials have not only sympathized with but they have actually encouraged communistic leaders in their activities in this Nation of ours."

Immediately I called the witness on that and said, "That is a strong statement to make, Mr. Witness; what is your evidence?"

He smiled and said: "Congressman, what about this man Bridges on the west coast? He is an alien—a guest, as it were, in this country of ours. He is a Communist and you have his Communist card in your files." And we have. We secured it from the Labor Department.

And he continued: "He has preached the overthrow of this Government by force from many public platforms, and you have sworn statements to that effect; and preaching the overthrow of this Government by force under our present law by an alien is a deportable offense. He has been picked up twice to face deportation proceedings.

"The first time they were canceled by the Secretary of Labor, and the second time they were indefinitely postponed awaiting a decision of the Supreme Court in the so-called Strecher case. Wouldn't you say that was not only sympathizing with but encouraging communistic leaders in their activities?"

And then he said: "If that is not enough, what about the Governor of Michigan"—who was the Governor, now ex-Governor—"who, when the sit-down strikes were called in Michigan, called out the State Militia? What for? To protect the sit-downers in their illegal possession of property and to prevent American citizens, 75 percent of the workmen in each of those cases, or more, who wanted to work, from going in and pulling them out by force. Wouldn't you say that that was sympathizing with and encouraging communistic leaders in their activities, particularly when the sit-down strike technique was first used in France by the Communist leaders there, and it worked so successfully that the Communist leaders of the C. I. O. adopted it and used it in those strikes there in Michigan?"

You people will recall the Secretary of Labor at that time was asked whether sit-down strikes were illegal, and her answer was: "The legality or illegality of sit-down strikes has not been determined as yet by the Court, and we shall not act until they have been determined by the Court." Thank God, they have been determined by the Court, lately.

REASON NO. 4

The fourth reason that he advanced for the rapid spread of communism in this Nation of ours was this: "Federal funds have been generously used to advance the cause of communism in the United States. Your tax money and my tax money has been generously used."

Again I called the witness and said: "Definite, concrete evidence of that, please!"

He smiled and said: "Congressman, I am leaving that statement stand as I have made it without any evidence, because I know your committee is going to have before it many witnesses from New York City in the next 2 or 3 days who will testify and give you plenty of evidence to back up that statement."

And, sure enough, for 3 days we listened to testimony from the W. P. A. and the Federal theater projects of New York City, which proved conclusively, and which has been substantiated by this new committee of Congress investigating the W. P. A. just lately, that the Workers' Alliance of New York City, a Communist outfit, controls, dominates, and directs the Federal theater project of New York City, for whose support we appropriated some $47,000,000 a year ago.

What have been their activities? They have been writing, preparing, and presenting communistic plays in the city of New York—presenting them on high-school platforms and public platforms.

I said, "We will have to have some copies of those plays for our files as evidence to the statement that they are communistic plays." And they filed for us some 18 or 20 copies. I have two or three of them in my grip, and, take it from me, they are communistic plays.

ABETTING COMMUNISTIC PROPAGANDA

I will just sketch one, because it is a sample. This one is called "The Revolt of the Beavers." The word "beavers" is synonymous with "workers." This is the synopsis of the play:

A little boy and girl about 9 years of age get tired of school, play hookey, go out into the woods and play around until they get tired, fall asleep, and in their sleep they dream and in their dream they are transported by the north wind to some imaginary country near the North Pole called "Beaverland."

When they get to Beaverland they discover the poor, down-trodden, hard-worked beavers, forced to work long hours at very little pay, little substance, while the chief beaver lives in all the luxury possible, and he is supported in his control over the workers by his trained army.

A beaver professor organizes a revolt, imports arms, overthrows the government by force, the workers take over, and then they have heaven on earth in Beaverland, with frequent references to the situation in Russia and to what has been going on in Russia in the last 15 or 20 years.

Would you say that is a Communist propaganda play? And that is the kind of stuff that has been produced by the Federal theater project of New York City at our expense.

Oh, yes; I could give you others. For example, there is the play called "The Class of '29," built around eight or nine college graduates who went out in the world, could not find jobs, became radicals, and preach all through the play, free love.

One of the girls proposes to one of the young men that they live together without the blessings of matrimony, because of the situation. They make fun of religion and of home life all through the play.

That is what our money is being spent for, and it is time the American people woke up to that fact. Oh, I could go on and tell you about the writers project, a guide book from every State, infiltrated with Marxism in those guide books, at our expense.

WHY COMMUNISM SPREADS

The rapid spread of communism is because of the mass discontent, which we must attempt to remove, because of those speeches by high Government officials engendering class hatreds, because of the sympathy and encouragement shown by high Government officials to communistic leaders, and because of the expenditure of Federal funds to promote the cause of communism in the United States—that is the situation we are facing as we approach this Memorial Day.

The evidence that was placed before us, and the sworn testimony, proves conclusively that the slimy trail of communism can be traced right into our schools—college instructors and professors testifying to the spread of it in their own colleges, not in the other fellow's college, and activities on their campuses and what they are trying to do to get rid of it. It can be traced right into the churches of the land, the last place you would expect to find it.

Why, the testimony of Earl Browder himself is to the effect that many of the pulpits of our land are occupied by silent Communists, so far as membership is concerned, but who thoroughly believe in the principles of communism and who try to preach communism alongside of Christianity, and it won't work. You cannot mix communistic principles and Christian principles at the same time. They do not mix any more than oil and water.

Where communism thrives Christianity dies, and where Christianity is held uppermost there is no place for communism.

It has spread into our labor ranks. This year John P. Fry, vice president of the American Federation of Labor, testified for more than 2 days to the spread of communism in the A. F. of L. units, and what he and others have been trying to do to get rid of it in their units, and that testimony was to the effect that more than 100 well-known Communists are on the pay rolls of the C. I. O. as C. I. O. organizers, and that has come home to roost, as Homer Martin could tell you.

I want to give you a little sample of that. Let me submit Senate Document No. 14 of the Sixty-eighth Congress, entitled "The Attempt by Communism to Seize the American Labor Movement," consisting of 43 pages. That is the most complete and damaging indictment of the Communists and Communist objectives that anybody could possibly compile, and do you know who compiled it? John L. Lewis—the great John L. Lewis, and he compiled it in 1924. Send and get a copy from the Government Printing Office. It is the most damning indictment of communism and its effect upon the labor movement that could be prepared, and that same John L. Lewis now, 14 years later, employs some of these Communists that he decries in that statement as labor organizers for him in the C. I. O.

HOW COMMUNISM "HELPS" LABOR

Another little thing on this communism in the labor movement. I have here a few figures.

Akron, Ohio, 60,000 people 20 years ago, 270,000 now—that tremendous growth based entirely upon the growth of the rubber industry.

Akron, Ohio, paid the highest wages in the land, common working wages—$1 an hour for women and $1.10 an hour for men—minimum wages, mind you. Yet labor troubles came to Akron, Ohio, 2 or 3 years ago, mostly from Communist leaders, not over hours, not over wages.

Akron used to process 66⅔ percent of the world rubber industry. Today the rubber industry there has been decentralized, as it is called. They now process less than one-third of the rubber industry of the country.

Akron, Ohio, has more people out of work running the streets and more people on relief today than any other city of its size in the United States, mostly the result of Communist influences in the labor ranks.

Here is another little card: "Labor economic loss on strikes." I want you to get this. During the 4-year period from 1929 to 1933 there were 3,209 strikes in the United States. They involved 1,135,000 men. There was a total loss of $260,000,000 during that 4-year period.

But in the 4-year period from 1933 to 1937, the latest year we have complete figures upon, there were 12,577 strikes or 4 times as many as the previous 4-year period. There were 6,399,000 men out of work because of those strikes—6 times as many as in the previous 4-year period. There was a loss of $4,200,000,000 as a result of those strikes—16 times as much as the previous 4-year period—mostly the result of Communists' influences and their infiltration in the labor ranks of this Nation of ours.

Is it time we took stock, paused, and wondered where we are going?

And then, last but not least, the fourth place where this slimy trail of communism is leading is into our Federal Government and Federal departments.

I had the pleasure and the doubtful honor of pointing that out in the first place early last summer.

The Labor Department particularly, the Social Security Department particularly; yes, and the Wages and Hours Division, have many well-known Communists occupying key positions today, and you will hear more about that later. Let me give you an example.

Some 2 years ago there were about 15 or 16 radicals, most of whom are Communists, who were employed by the Department of Justice, the Attorney General's Department. This was 2 years ago. They were caught at subversive activities. They were fired, as they should have been, by the Attorney General's Department.

Get this. They walked in a body up the street and secured employment the same day from the Social Security Department, and today they are on the pay roll of the Social Security Department.

Is it time we sat up and took notice of the slimy trail of communism in schools, churches, labor ranks, and Federal departments?

COMMUNISTIC DOUBLE-CROSSING TACTICS

What is the strategy of these Communists? According to their own statements, mind, the Trojan horse strategy, up until about 5 years ago. What is that? Well, you all know the story of how Troy was captured with that wooden horse.

Legitimate organizations have Communists inserted into their ranks—Communists boring from within—to destroy and to control legitimate organizations such as labor organizations. Christian organizations, Y. M. C. A.'s, and the rest of them. If you want to know more about that get it from Lewis' indictment and read it and you will know what was going on up until about 5 years ago.

They have changed their tactics now. That was too slow a process. They now organize themselves into what are known as legal, legitimate organizations, with wonderful objectives for window dressing, and inside those legal organizations they have small holding companies or illegal organizations that control and dominate and direct the activities of the big organizations. There are some 100 of those in the United States today. They are known a united front organizations, the best known of which is the American League for Peace and Democracy, and I will describe it to you because it is typical of all the others.

Have you ever heard of it? You know, in the name of a good many of these organizations you will find the word "peace." Well, everybody is for peace. That is part of the window dressing—to attract.

The American League for Peace and Democracy, organized in 1933, receives orders from Stalin in Moscow. This is how it happened:

In 1933 Stalin became alarmed at the rise of fascism. He saw what he thought an inevitable death struggle between fascism on one side and communism on the other, and he decided the situation was serious enough to call in the executive committee of the Internationale to Moscow.

Earl Browder was our delegate at that meeting. They discussed the situation. Here was Hitler coming into power in Germany, Mussolini rattling the sword in Italy, Japan already having gobbled up Manchuria and making a puppet state out of it. They discussed the situation and decided that they would organize what is known as the popular front government in France, which is the government of France today, the popular front government in Spain, which was the popular government of Spain known as the Royalists.

But the United States, Canada, Australia, and some other countries were not ready for the popular-front government. They had to be brought to it by degrees. So, they thought, they will organize what is known as the united front government or a united front organization to bring it on by degrees, and that is what these united front organizations are.

Stalin gave Earl Browder orders to come back to America and organize what then was called the "American League Against War and Fascism" which was changed about 2 years ago—and, by the

way, it was changed at the same time in Canada and Australia and several other countries—from American League Against War and Fascism to the American League for Peace and Democracy. That sounds better. It attracts more flies.

That is the origin of the American League for Peace and Democracy.

This witness of ours, Dr. J. B. Matthews, was its first president and was its president until late in 1935, when he became so disgusted with the whole thing and began to realize what was going on that since then he has been trying to undo what he had been doing before.

There are four kinds of members in this American League for Peace and Democracy and similar organizations. What are they? Active Communists, occupying strategic positions and doing most of the work. Fellow travelers, who are Communists at heart and to all intents and purposes, but do not take out a membership card because they want to deny that they are Communists, and so they are called fellow travelers.

Dr. Matthews was one. They go around to the different college campuses and church pulpits lecturing as liberals, and when anyone accuses them of being a Communist the answer is, "No; I am not a Communist."

STOOGES, DUPES, AND DECOYS

The third class is an interesting class. There are none here in that class. They have, interchangeably, three names: Stooges, dupes, and decoys. Who are they? The stooges, dupes, or decoys are the outstanding people of the Nation in university life, in church life, in Government life, names that have great publicity value, and if they can get one of those fellows to speak at one of their meetings it gives prestige and standing to that organization and thus helps attract the innocent.

Who are these stooges and dupes? I could name a lot of them.

By the way, it was in this connection that poor little Shirley Temple's name was brought in, and the Dies Committee was held up to scorn for trying to say that poor little Shirley Temple was a Communist. Not so at all.

The evidence that was presented showed some eight or nine of the prominent movie stars of this Nation, for publicity purposes, signed a letter of commendation to a certain achievement of a Communist newspaper in Paris called "LeCour," and poor little Shirley's name was added to the list, and that is all Shirley Temple knew about the thing.

But get this: Sixty Members of Congress signed a manifesto to the so-called Loyalist government of Spain, but which was a popular front government, on having achieved successful resistance for 1 year against the Franco forces, and two of those Congressmen went over there and gave their personal blessings at the front.

Thank God, those two are not in Congress now. [Applause.]

Does that mean those 60 Congressmen were Communists? Not a bit. I know many of them. They are as good Americans as any one in this room. But they were dupes, shall we say? They did not know what they were doing and have regretted it, of course, since the publicity.

And let me tell you something else. When we were having that testimony before us, the same day the wife of the President of the United States was speaking on the campus of Vassar College under the auspices of the American Youth Congress that was the host to the World Youth Congress, and 35 out of the 50 delegates to that congress were representatives of the Communist organizations—a straight out-and-out Communist organization.

Let me read what the American Youth Congress stands for: "The American Youth Congress fights for peace because, among other things, it means that the world proletariat is given still more time to rally its forces for the final overthrow of capitalism."

Does that mean that the President's wife is a Communist? No.

Does that mean that the President's wife sympathizes with and encourages communism? Not necessarily.

But it does mean that her name and the name of the highest office in the land was used to give prestige and standing to that organization that is an out-and-out united front organization. That is what it means. And I think it is time that we awoke to what is going on in this great Nation of ours.

AMERICAN COMMUNISTIC PROGRAM

What is the program of the American Communists? I will tell you what it is, from their own statement. It is the overthrow of the present party in power, the so-called Democratic Party, but really New Deal Party. How are they going to do it?

This is their program: Drive a wedge in between the left wing and the right wing, split them in two, and we on Capitol Hill have evidence every day that that wedge is more than halfway driven through. And let me suggest to you that the President's purge program gave more impetus to that wedge than any other thing that has happened, and drove it further in. And that is the situation of the party that now holds the reins of Government.

That does not mean that the President deliberately played the game of the Communists, but he certainly played into their hands in that purge program of his.

What after they overthrow the party in power? Their program has been changed since, but this was their program a year ago: "Place in power the Farmer-Labor Party." Why? Because the Communists hold the strategic positions in that Farmer-Labor Party and can control and dominate it the minute they get in the saddle.

What next? Why, the next thing is to overthrow capitalism, which is the final purpose of the Communists, and to bankrupt the Nation. Why bankrupt the Nation? It is necessary to bankrupt the Nation at the same time so as to bring about that condition of chaos that requires a receiver to be appointed to take over, and that receiver naturally and logically will be this militant, well-organized, aggressive group known as the American Communist. And then what? They will have heaven on earth in America, just as they have heaven on earth in Russia today.

God save us from that kind of a heaven on earth. I want none of it. [Applause.]

That program has been changed or revised—not given up but revised—in view of last fall's elections when so many of the Farmer-Labor Party candidates went down to defeat.

This is their program now, according to the testimony of witnesses and evidence that we secured under subpena last week: If they can get America involved in a European war—every leading Communist in the United States, although they are all for peace supposedly, is doing his darnedest to encourage the involvement of America into a European war at this present time—they don't have to wait 5, 10, or 15 years to take over. They can immediately take over under the dictator powers that are always in evidence during wartime.

Read your morning's papers on what went on in England—a dictator over industry in democratic England, getting ready for the war; and there are dictator bills before us in Congress—the May bill of 2 years ago, and there is the Lee bill before us today.

There is another bill that would confiscate practically all of the profit during war. If we are involved in war, as sure as night follows day, we will come out of it not a democracy but something very close to what they have in Soviet Russia today or in Germany today. God forbid!

Now, that is a fantastic program, isn't it? It can't happen here? I tell you men it is happening here. This communistic business is working today just like yeast in dough, quietly permeating the whole lump. If there are any doctors present, it is working just like a deadly virus injected into the blood stream of the body politic, poisoning the whole of it.

WHAT SHOULD BE DONE

The only thing that can be done is to bring this out into the sunlight of public opinion, air it, let the people know what is going on. Then we do not need to worry about it. It is not dangerous then. It cannot live and thrive in the sunlight of public opinion, but it is certainly deadly as long as it is working underneath, permeating the lump quietly and very efficiently.

What should be done? I have been asked that many times. I have said: "Why, take every Communist and every parlor pink, and we have too many of them, send them over to Russia, make them live there 3 or 4 years until they get their bellies full of it, and you won't need to worry about them any more." [Applause.]

This beautiful idealistic thing called communism as pictured, and this dirty, filthy thing that is communism in reality, are two different things.

Now, it is our job and we had better attend to it. We are just 10 years late in tackling it, and now some would turn our attention from our real job at home to an idealistic internationalist something abroad. Our real job is to put those ten or twelve million men to work and get rid of this mass discontent which makes fertile soil. [Applause.]

Our real job is to stop men in high positions from deliberately creating the seedbed for communistic seed by preaching class hatreds and race hatreds and religious hatreds. There is no place in this Government of ours for that. Go back to the founding fathers, go back to the principles upon which this Nation was founded. There is no place for class hatreds and prejudices here. Let us stop that and tackle the real job. That is what we are facing this Memorial Day.

I shall close with a little poem. As a school man I have had thousands of school children memorize it. I have been a school man in a very small town, composed of 17 different nationalities, three-fourths of the population either foreign-born or foreign-born parents. I required this little poem to be taught in every room until when my students went through the grades most of them could recite it. This is my idea of Americanism. It is called "The Patriot's Creed":

"If I knew a better land in this glorious world of ours,
Where a man gets bigger money or is working shorter hours;
If the Briton or the Frenchman had an easier life than mine,
I'd pack my goods this minute and I'd sail across the brine.

"But I notice when an alien wants a land of hope and cheer
And a future for his children he comes out and settles here.
Here's the glorious land of freedom, here's the milk-and-honey goal,
For the peasant out of Russia, for the long subjected Pole.

" 'Tis here the sons of Italy and the men of Austria turn
For the comforts of their bodies and the wages they can earn.
And with all that men complain of and with all that goes amiss
There's no happier, better nation on this world's broad face than this.

"So I'm thinking when I listen to the wails of discontent
As some Communist agitator spreads his evil sentiment
That these enemies of freedom who are spreading sin and shame
In this glorious land of freedom should go back from whence they came.

"And I hold it is the duty, rich or poor, of everyone
Who enjoys this Nation's blessings to be all-American."

[Applause.]

If and when we get the masses to thinking and acting along these lines, I verily believe we will have no occasion for further concern over the preservation of our Nation. [Applause.]

Dedication of the Palestine Pavilion at the New York World's Fair

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

ADDRESSES AT THE DEDICATION OF THE PALESTINE PAVILION AT THE NEW YORK WORLD'S FAIR, MAY 28, 1939

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following message of Governor Lehman, read by Lieutenant Governor Poletti, and speeches made by Senator King, Mayor LaGuardia, Emil Ludwig, Dr. Einstein, Dr. Wise, Dr. Weizmann, Dr. Goldstein, Dr. Goldman, Mrs. Moses P. Epstein, George Backer, and Louis Lipsky, at the dedication of the Palestine Pavilion on Sunday, May 28, 1939, at the New York World's Fair, 1939:

MESSAGE FROM GOV. HERBERT H. LEHMAN, OF NEW YORK, READ BY LT. GOV. CHARLES A. POLETTI

It would have been a source of very great satisfaction and pleasure to have had the privilege of participating in the dedication of this Palestine Pavilion. Unfortunately, however, official engagements of long standing made it absolutely necessary for me to remain in Albany today. I have, however, asked my colleague, Lt. Gov. Charles Poletti, to bring you my greetings and good wishes in the following message:

Many thousands of men and women pioneers have gone to Palestine with the single purpose of escaping from cruel oppression and of reviving a cultural and spiritual history of which they, like ourselves, are justly proud, and which indeed has vastly added to the civilization and humanity of the world. These men and women have been real pioneers, brave and strong, undergoing indescribable hardships on the road to the Promised Land and accepting cheerfully great sacrifices for years after their arrival. Like the pioneers of our own country, their lives have frequently been austere and somber, with little or no material comfort. They have toiled early and late to wrest a hard living from the soil. They have gone out into the lands that have been desert for centuries and have turned the deserts into garden spots.

They have been producers and builders of their country. They have worked in the fields and in the orchards. They have created irrigation; they have built roads and power plants, and factories and hospitals. They have not been ambitious for wealth and power. Their standard of success and accomplishment has not been measured in terms of material or worldly gain, but by those things which make for character, spirituality, and idealism. In spite of the rigor of their life, which taxed body and soul, they have visioned and built universities, schools, hospitals, and orphan asylums. They have drained the marshes to eliminate the dread scourge of malaria, which for generations decimated the country. They have created a modern water supply and sewers to combat typhoid. They have introduced intelligent nursing service, which has lessened mortality and illness, and eased the bed of suffering of thousands. In no place in the world has there been evidenced greater social consciousness or more constructive effort to improve the conditions of living.

And in everything that they have done, whether it was material in character, such as the building of roads and power plants and orchards, or social, such as the elimination of disease, the care of the sick, and the furthering of education, the Jews have shared the results of their efforts and sacrifices with the country as a whole.

No act of theirs—save of a purely religious character—has been reserved for their use alone. In every instance all the elements of the population—Jew, Christian, and Mohammedan—English, American, European, and Asiatic—shared alike in the benefits. Their efforts were truly community-wide and country-wide. They did all these things secure in the guarantees which had been given them.

It is inconceivable to me that the world in general—Jew and gentile alike—will be willing to have that work, so well carried on, nullified; the sacrifices of generations brought to naught.

It would be a tragic anticlimax if at this most sad and critical moment in Jewish history Jewish immigration to Palestine should be stopped or greatly curtailed, and the obligations recognized in the Palestine mandate repudiated. I am convinced that the right-thinking peoples of the world will regard as cruel and unwarranted any action which would make even narrower the difficult path of great masses of homeless Jews seeking a place of security and peace.

This pavilion brings to the people of this country and of other countries visual evidence of what a brave group of men and women have been able to accomplish against great odds through the strength of their vigor and courage and idealism.

But it is more than that.

It is a symbol of peace and liberty, of tolerance, and of good will, of spiritual aspirations, and of the right to free worship.

These are the fundamental principles of all true democracy and of all true religion.

They are the spirit in which this pavilion was built and in which it is dedicated to mankind. May it carry a message of good will to all the world.

ADDRESS BY HON. WILLIAM H. KING, UNITED STATES SENATOR FROM UTAH

Mr. Chairman, Mr. Mayor, ladies, and gentlemen, it is a privilege to meet in this magnificent temple of peace and to speak from the same platform with Dr. Einstein, one of the greatest scientists of his age.

It is most fitting that the dedication of the Jewish Palestine Pavilion should be celebrated in the Court of Peace. For the Jewish people have throughout the centuries been dedicated to the ideals of peace. We can have no more graphic demonstration of its devotion to peace than the heroic self-restraint which the Jewish settlers in Palestine displayed in the face of violent provocation on the part of the Arab terrorists during the past 3 years.

And even at this crucial hour for the Jewish homeland—an hour in which the entire civilized world is shocked by the British Government's unconscionable repudiation of its sacred pledges under the Balfour declaration and the League of Nations mandate—the Jews of Palestine have shunned the use of violence in registering their protest and indignation. As long as the Jews continue to answer White Papers with further colonization and broader settlement activities, what they have so gloriously built in Palestine will endure long after the Hitlers and Mussolinis have passed from the earth.

What a remarkable spirit of faith and optimism the Jews possess! Is it not the highest idealism that has sustained Jewish pioneers in building up a homeland at a time when in so many other parts of the world their people and their Jewish name are being destroyed and vilified by blind forces of hatred and oppression? Palestine holds aloft the torch of hope for the entire world, because it symbolizes a new life and a new future wrenched out of the despair and misery of the Old World—a world grown too old and weary to honor the primary values of international justice and morality.

It has been said that Great Britain and the United States are the foremost democracies in the world. English jurisprudence and English law form the basis of many of our most cherished democratic institutions. The example of England during the past century has been an inspiration to all democracies in establishing more firmly the right and dignity of mankind everywhere. But the policy of the present government threatens to retreat from the noble role she has played. First at Munich, and now again in this White Paper, she seems to be surrendering to a policy of appeasement where expediency is the measure and barometer of her conscience. It is my feeling that England must stand by democratic America in pursuing a policy based on moral and ethical grounds. Certainly, it is inconsistent with our common conception of democratic policy, for England now to close the doors of Palestine to homeless refugees, to reward Arab brigands and gangsters, and at the same time to penalize courageous Jewish pioneers who heroically defend not only Jewish colonies, but the entire country. Certainly, as a great democracy, she cannot follow the example of the dictators of the world, and reduce to a scrap of paper the Balfour declaration and the League of Nations mandate, which was entrusted to her by 52 nations, including the United States.

If England is desirous of cultivating and preserving the friendship and sympathy of the American people—as I am certain she is—then she cannot ignore our deep interest in the continued upbuilding of the Jewish national home in Palestine. Her action in Palestine is not an isolated instance of pressure by the dictators. We cannot have any faith in the determination of a government that will yield to the war-mongering axis powers, if it is to have these unjustifiable relapses of appeasement.

The world must for all time banish the rule of the jungle. We must return to a sane life, free from the suspicion and poisonous propaganda that has reduced so many individuals to the low level of the mob. Let us not fall into the error of mistaking mob rule for popular rule. The rule of democracy is the rule of justice and freedom and tolerance. The rule of the mob is slavery, bloodshed, and barbarism.

The Palestine Pavilion that is being dedicated today is living testimony to the eternal faith and creative energy of the Jewish people. It is the embodiment of a modern miracle in which Jewish intellectuals and professional men became the most successful colonizers of the twentieth century. The Jews who are being driven out of Europe are reenacting in Palestine the historic pioneering days of our own country.

The Jews in Palestine, as well as those who are seeking liberty and justice in other lands, must move forward courageously in the defense of truth and liberty and justice. We must not forget there are forces greater than those of man; that the purposes of a divine Providence will ultimately prevail. The Prophet of Old indicated that spiritual and moral achievements would be attained "Not by power, and not by might; but by My spirit, saith the Lord."

EXCERPT FROM ADDRESS BY MAYOR FIORELLO H. LAGUARDIA

On behalf of the people of the city of New York I send fraternal greetings to the people of Tel Aviv.

This small exhibit is not in the nature of those of the strong countries, it is not constructed to display the products of the land. It is a temple of thanksgiving, a token of gratitude from a people who gave civilization the fundamentals of law and order—the Ten Commandments. It is a symbol of thanks from a people who are now grateful for a tiny piece of land.

As for the world contributions of the Jewish people, you can find them in other buildings at this fair—in the exhibitions of the arts, of science, of chemistry, of medicine, and of all the exhibitions that typify the aims of the fair. That is where you can find the great contributions of this people, who have been misrepresented but never afraid, who have been persecuted but never despairing, who have been injured but have returned love for hatred.

And now in your exhibit you greet the dawn of a new day, when there will be no persecution, when the Jewish people will take their place in a world of peace and freedom and brotherhood.

ADDRESS BY EMIL LUDWIG

What Palestine created in 20 years you will see in the Palestine Pavilion at this fair. What Palestine has been during the last 3,000 years or more is exhibited in that great permanent world's fair of mankind which we call history. Why does everybody look to Palestine? Not for the Jaffa oranges; not because of the Suez Canal. Towns and money excite the curiosity of men for only a short time. What endures for centuries has always been the spirit. Palestine, the young colony, excites the hearts of men because she is mankind's oldest colony.

The British knew that when they promised the Jews, 22 years ago, to faciliate the establishment of the Jewish national home in Palestine. Lord Balfour once told me that his practical motives as a member of the British Cabinet and his spiritual motives as a Christian and a philosopher went together when he gave the British Government's solemn promise to the Jews. In those days the British Government's word still had its gold value, and had not yet been devalued. In the time of Balfour a treaty was still the firm basis of international life.

If today the Jews should lose Palestine, the motives which induced the investment of more than a hundred million dollars by Americans in that far-away country would be swept away. But the passion which the British Government's pronouncement has aroused everywhere is due to something far greater and deeper than the fear of monetary loss on the part of the investors.

It is due to the fact that a mighty people has announced that it would sacrifice a weak people whom it had solemnly promised to protect; that the official protector has forgotten his mandate.

If today anyone wishes to break treaties, he calls it "dynamic"; and when he refuses to pay his just debts, he calls it "autarchy." It seems that Mr. Chamberlain, on his repeated business trips to Germany, made studies there in the art of the dictators and learned how to change a sealed treaty into a scrap of paper. Whether that is done because of impertinence, bluff, or plain fear does not alter the nature of the action. In Munich the menacing guns of Germany and in Jerusalem the menacing outburst of the Arabs paralyzed the nerves of the British so much that they sacrificed one small people after the other.

But in politics, as in ordinary life, morality is not merely a matter of ethical argumentation. It is perhaps strange to say, but nevertheless true, that in politics too the results of lack of morality are bad. Let me give you a picture:

One evening in spring, 10 years ago, I sat in Nazareth on a very old fountain where probably the mother of Jesus drew water. Under the cypresses sat other Jews with their dark eyes and their silent thinking. Suddenly there arrived a dozen British riders, who watered their horses at the fountain. I recognized in them the revived Romans who came to the same fountain as so-called protectors of the country 2,000 years ago. As long as these Romans enforced the law and lived up to their treaties they remained a great nation. When corruption and demoralization set in among them they perished.

The powerful British Empire, on whose flag the sun never sets, will not sanction the breach of its treaties. The spirit of the British people will arise against any government which is guilty of such a breach.

Palestine belongs to the Jews because there are there the same mountains and deserts, rivers, plains, and even the towns where the Jews lived and worked millenia ago. The Jews claim Palestine under their treaty with Britain and because of historical traditions and their own efficiency in the rebuilding of the land. In 20 years they have done more for the country than the Arabs have done in a thousand years. Here in the Palestine Pavilion may be seen the proofs in some measure—in the Palestine Pavilion which stands in a country that has given the same rights to its 5,000,000 Jews as it has to all its other citizens. It is unthinkable that the rights of the Jewish people to their national home in Palestine should now be denied. I wish to remind Great Britain that the greatest book ever written contains 2 Testaments and that it was written in Palestine, the spiritual center of the world.

ADDRESS BY DR. ALBERT EINSTEIN

The world's fair is in a way a reflection of mankind, its work and aspirations. But it projects the world of men like a wishful dream. Only the creative forces are on show, none of the sinister and destructive ones which today more than ever jeopardize the happiness, the very existence of civilized humanity.

Such a presentation seems fully justified, though it be one-sided. Whoever has learned to appreciate and admire the positive side of man's aspirations is sure to be willing to protect and, if necessary, to fight with all his might in defense of what has been achieved.

I am here entrusted with the high privilege of officially dedicating the building which my Palestine brethren have erected as their contribution to the world's fair. The thing that will strike the discerning observer about this structure is its quiet nobility, the spirit of simplicity and harmony which pervades it. In Palestine a handful of people is threatened by the political intrigues of the powers. Sheer brutal mob violence would rob it of achievements won at the price of hard work and bitter sacrifice. It is exposed to constant attack, and every one of its members is forced to fight for his very life, even over and above the bitter economic struggle for survival.

Nothing of this shows here. We see only the quiet, noble lines of a building and within it a presentation of the Palestine homeland, new and at once age-old—and also a practical demonstration of what productive work was there created. Only a people that has found an inner security rooted deep in tradition—a security tempered in thousands of years of bitter history—only such a people can thus express itself.

May the fine creative spirit of those who have built this structure find an understanding and appreciative public.

ADDRESS BY DR. STEPHEN S. WISE, PRESIDENT OF THE AMERICAN JEWISH CONGRESS AND HONORARY PRESIDENT OF THE BOARD OF THE JEWISH PALESTINE PAVILION

The dedication of the Palestine Pavilion is the answer of American Jewry to the Chamberlain White Paper. Not only the answer of American Jewry, but the answer of world Jewry. World Jewry is gathered symbolically within the walls of the Palestine Pavilion. It represents and embodies the work of the Jewish builders, and even though the Chamberlain government rejects this stone it will still become the cornerstone of the world of tomorrow for the Jewish people in Palestine.

The Palestine Pavilion is Sukkat Shalom—a pavilion of peace. This is not the hour for a summons to resistance against the British Government. Nonetheless the world would unite in declaring that Jews are unworthy of their calling and their high tradition if they failed to reaffirm today in the name of world Jewry that the Palestine Pavilion in the New York World's Fair is not only a sign of Israel's unshattered will, but a symbol of American concern with the right and the duty of the Jew to rebuild the Jewish national home.

Throughout 40 years, beginning with President Benjamin Harrison and up to this day, the Presidents of the United States, notably Presidents Wilson and Roosevelt, have uniformly given their wise and helpful furtherance to the Zionist movement. And at the peace conference in 1919 Woodrow Wilson moved his associates anew to understand that there could be no vindication of the rights of peoples to self-determination unless the Turkish—not Arab—province of Palestine were reestablished as the Jewish National Home.

Within that Palestine Pavilion we behold today the spirits of the great and good within and without Jewry, who have labored to make Palestine a free Jewish land for a free Jewish people. Invisible but real are the presences among the transfigured of Theodor Herzl and Max Nordau, David Wolfsohn and Nahum Sokolow, Achad Ha-am, Ben Jehudah and Bialik, of Balfour, Wilson, and Masaryk; and among the living we greet Louis D. Brandeis, Chaim Weizmann, David Ben Gurion, Chief Rabbi Herzog, and to name only the fewest of those who have been the understanding supporters of the ideal of the Jewish National Home—David Lloyd George and, above all, President Roosevelt.

We, of the House of Israel, stand within the court of peace of New York World's Fair, knowing that we have the right to say that we were among the chiefest builders of the world of yesterday, that world at its highest and truest, a world of spiritual aims and moral imperatives; that this court of peace and its temple of religion are nothing more than a symbolic fulfillment of the prophecy of Isaiah—"For my house shall be called a house of prayer for all peoples"; that we shall have an honorable part in the building of the world of tomorrow, that the Zion out of which the law came and the Jerusalem whence the word of God issued shall again become a center of the world's spiritual light and ethical leading; that wherever Jews dwell they are to be among the faithful, loyal, creative citizens of the nations of which they are a part, and that the remnant of Israel, dreaming, aspiring, creating, achieving, shall dwell within the Pavilion of Palestine.

The dedication of the Palestine Pavilion at the New York World's Fair, within the court of peace, is the answer of the people of the United States, including American Jewry, to them to whom the concepts of religion and race are invocation to strife and hatred and war. And America points to the world of tomorrow, patterned, it believes, after the American Commonwealth, and it reaffirms that within God's world men are brothers, that despite every difference of faith and race they may be one in their quest of the eternal and within the bonds of a brotherhood that liberates men unto freedom.

EXCERPT FROM ADDRESS OF DR. CHAIM WEITZMANN, PRESIDENT OF THE JEWISH AGENCY FOR PALESTINE, DELIVERED AT PARIS, FRANCE, ON THE OCCASION OF THE DEDICATION OF THE JEWISH PALESTINE PAVILION AT THE NEW YORK WORLD'S FAIR, MAY 28, 1939, AND BROADCAST TO THE UNITED STATES BY THE NATIONAL BROADCASTING CO.

I should have been happy to be with you on this auspicious occasion of the official opening of the Palestine Pavilion. Unfortunately the press of duties makes this impossible and I am bound to content myself with a greeting from afar.

It is a welcome coincidence that at a time when our rights in Palestine are harshly challenged we are given the opportunity of showing on the lofty stage of the world's fair what our work means in Palestine and what Palestine means to the Jewish people.

Palestine as a country is the product of Jewish history. And it is the constructive endeavor of the Jews of three generations that placed Palestine again on the map of the world, focusing the attention of civilized mankind upon its destiny.

The future of this endeavor is now in grave jeopardy. The decision of the British Government, amounting in effect to a retraction of the pledge made 22 years ago, came as a rude and painful shock to the Jews and deeply stirred the conscience of large numbers of non-Jews in both hemispheres. But this decision cannot become the verdict of history.

The great historical process of the return of Jews to the land of their ancestors will not be abruptly terminated by this decree. It will go on. It is the prophecies of old and the living determination of Jews of today that will eventually triumph.

The Government's decision has already been severely criticized by leaders of British opinion in various camps. It also evoked an echo of deep sympathy from the great American democracy. I have always been deeply appreciative of the recognition given by the Government and Congress of America to our rights in Palestine and the interest taken by American leaders in our work and struggle. We confidently hope to retain that sympathetic interest in the future.

But the salvation of the Jewish people always has been and remains first and foremost the work of the Jews themselves. We are already firmly established in Palestine and our future struggle will be borne by those who heroically withstood the onslaught over 3 years, building and planting by day, standing guard by night.

To enable them to continue from strength to strength and to enable more Jews looking to the gates of the homeland to join in the peaceful labor and self-defense is the imperative duty of our people throughout the world.

As on many critical occasions in the past, a special responsibility devolves today upon American Jewry. We look to them for the greatest support in our struggle and for the major share of the means for the work of reconstruction.

The threat to our future must be met, and at once, with vigorous, constructive effort. Let the Palestine Pavilion carry our message to the heart of America. Knowing the zeal and devotion lavished upon it by its organizers, I feel confident that it will succeed in this mission of serving as a beacon of Zionist faith to millions of American Jews and bringing home to the people of the United States the achievement and potentialities of our work in Palestine.

ADDRESS BY DR. ISRAEL GOLDSTEIN, PRESIDENT OF THE JEWISH NATIONAL FUND AND CHAIRMAN OF THE BOARD OF THE JEWISH PALESTINE PAVILION AT THE NEW YORK WORLD'S FAIR

What is to happen now that Parliament has reluctantly and barely approved its Government's black White Paper?

Although the British Government blandly announces that it is proceeding to carry out its policy without regard to the League of Nations Mandates Commission, it will, I believe, hardly dare to ignore the legal body from which it holds its mandate over Palestine.

For England, the prime prop of the League, to proceed with a drastic change of policy of a League mandate over Palestine in total disregard of that international tribunal which, weak as it is, next to the World Court at The Hague, is the only existing instrument of international judgment, would be a slap at the League of Nations by its chief sponsor. Germany, Italy, and Japan would enjoy nothing better.

There is a struggle before us for the preservation of our rights in Palestine, but it is not a hopeless struggle. It is not hopeless, because justice is on our side and we have been taught by our long history to believe that a just cause is bound to be vindicated. We are greatly encouraged by the sympathy and understanding of the American people as reflected in the utterances of its statesmen, its intellectuals, its press, its clergy, and the people as a whole.

To my fellow Jews I should like to say a special word. The way in which the Jews in Palestine are meeting this crisis is a glorious example of Jewish self-respect, courage, dignity, discipline, and determination.

If we shall do our share as well as they are doing their share, victory can yet be ours, for to a large degree the result of the struggle in which we are engaged will depend upon the Jews themselves. We have seen government papers before reduced to dead letters by the pressure of live resistance.

What is our share? To give moral and material support to the further upbuilding of Jewish life in Palestine. The cue has been given just a few days ago by the announcement from Palestine that six new colonies have sprung up in the past weeks as an answer to the White Paper. We must supply the material resources for buying more land which can be bought, for building more colonies, for strengthening and expanding the Jewish national home not merely to the fullest extent which the situation will permit, but to the fullest extent which the realities permit. This is not a distinction without a difference.

This tremendous multitude of Jews and non-Jews assembled to dedicate the Jewish Palestine Pavilion at the World's Fair should serve as a demonstration to all whom it may concern that the Jewish people will not be deflected from its resolution to go forward with the building of the Jewish national home, confident its just cause will prevail.

New York World's Fair is dedicated to the world of tomorrow. It is the hope and prayer of all of us that in the world of tomorrow international peace and fellowship will be more prevalent than they are in the world of today. These premises occupied by the buildings representative of the great nations of the world are dedicated to the cause of world peace.

It is well to remind ourselves that the moral foundation of world peace is the keeping of faith among nations and the fulfillment of international pledges, especially those given by the strong to the weak. When honoring of a pledge is in proportion to the strength of a pledgee, brute force is placed at a premium and the foundations of peace as well as honor become undermined.

The fulfillment of Great Britain's pledge to facilitate the establishment of a Jewish National Home in Palestine becomes, therefore, the touchstone of a program to which the world's fair is dedicated.

The Jewish Palestine pavilion stands and will continue to stand as witness to the world that the Jewish people has fulfilled its part of the undertakings implicit in the Balfour declaration.

EXCERPT FROM ADDRESS BY DR. SOLOMON GOLDMAN, PRESIDENT OF THE ZIONIST ORGANIZATION OF AMERICA

Recent political developments in Europe have convinced even the most fervent advocates of an appeasement policy that the most effective statesmanship, if world peace is to be assured, is a strong and uncompromising stand by the democratic nations against the forces of aggression. That incontrovertible truth, however, has not yet penetrated to the Near East. In Palestine the terrorists who have waged an unlawful war against the peaceful inhabitants of the country are to be rewarded, in the hope that they will be appeased. It will be of no avail.

The Jews' right and relationship to Palestine is not dependent upon government papers. In his long history the Jew has had occasion to read many state papers. His Majesty's Government, however, is little more than duped if its fancies that any state document can prove more effective than Psalm 137: "If I forget thee, O Jerusalem, let my right hand forget her cunning."

The new White Paper offers nothing original when it threatens to deny the Jew entry to Palestine in 1944. Such injunctions can be found in the classic Latin of antiquity and in the degenerate Latin of the early Middle Ages. The Jew has read such state papers. And he has also read Isaiah 62: "For Zion's sake will I not hold my peace, and for Jerusalem's sake I will not rest, until the righteousness thereof go forth as brightness, and the salvation thereof as a lamp that burneth."

The Jewish people claims that Palestine belongs to it. Christians and Moslems cannot deny this simple, incontrovertible historic fact. If their Holy Writ, the Bible, and the Koran, is not a scrap of paper, then it belies the White Paper. Palestine never was and never will be an Arab state. Palestine is a country that spews out injustice and resists the violent hand of force. Neither Roman nor Crusader nor Arab nor Turk were able to create anything grand and permanent in the land. Here in this pavilion we show you what Jewish love and longing achieved in a quarter of a century.

If the vote by which the British Parliament approved the White Paper last week and the reaction of the British press to it mean anything, they mean that the British people did not approve of the Government policy in regard to Palestine. The leaders of the real England—men like David Lloyd George, Winston Churchill, and the Archbishop of Canterbury—have unequivocally condemned the ratification of the White Paper by a minority of the total membership of the House of Commons.

In the world of tomorrow the Jewish national homeland in Palestine looms as a reality which no temporary setbacks can obscure. The Jewish Palestine Pavilion which is so integral a part of the world of tomorrow as represented in the New York World's Fair expresses not only our justified pride in what the Jewish pioneers have achieved in the past, but our unshakable faith in the Jewish Palestine of the future.

ADDRESS BY MRS. MOSES P. EPSTEIN, NATIONAL PRESIDENT OF HADASSAH, THE WOMEN'S ZIONIST ORGANIZATION OF AMERICA

Standing here in the Court of Peace surrounded by the pavilions of the nations of the world, it is hard to accept the fact that the genius of man, his creative urge, his conquest of Nature, should have failed in the task of producing a harmonious, peaceful society. Perhaps for that reason the fair is well named The World of Tomorrow, a future which beckons to us with its hopes that men will learn to merge their contributions, their talents, and riches to make a more abundant life for all men no matter where they live.

We who live in the world of today have a responsibility for the world of tomorrow. If we did not have faith that it would be a better world, it would be very difficult to face the dark clouds that overhang our present civilization.

The Jewish people has a great advantage over other peoples in that through its long history it has developed fortitude and has learned patience and faith in the attainability of a better order of society. Nowhere has that faith in the New World been more realistically evidenced than in the historic effort of the rebuilding of a Jewish national home in Palestine. Today the official opening of the Jewish Palestine Pavilion presents dramatically the miracle that ability, faith, and fortitude have accomplished. That there will be enormous interest in the exhibition, not only on the part of the Jewish world but from non-Jews as well, we do not doubt. Palestine has always played a role out of all proportion to its size. The cradle of three great religions, it has been the birthplace of teachers and prophets who envisioned a world of tomorrow in which men would live together as brothers.

It is a vision necessary today in a world made uninhabitable for men of conscience by the ruthless application of force, a world in which it is not easy to talk of morality and the self-evident rights of men and nations. And yet, if we are to continue to adhere to those democratic beliefs which are the foundations at least of American, and, indeed, of all moral, communities, we must be prepared to give our unflagging support to the rights of the oppressed throughout the world.

The world of tomorrow will understand that a society of men living in peace with each other will be possible only if each people is permeated with a belief that all have a right to a creative, constructive life. Such a world will understand at once the problem of the homeless Jew, harassed and driven for centuries from one land to another. That world will acknowledge the right of a people to rebuild its ancient land, neglected for centuries. It will accept the fact that it is possible for a people to return to such a land bringing progress and not hurt to existing populations. Indeed, such a return will be sponsored by men and nations who will evaluate properly the desire and the need of an ancient people for its home, as well as their desire to bring to it the benefits that they have learned in the lands of exile.

Hadassah, as the Women's Zionist organization of America, has brought to Palestine American techniques and American standards of public health and hospitalization available to all sections of the community. Its new medical center on Mount Scopus in Jerusalem is an American institution built with American funds. But it is also a Zionist institution, symbolizing American Jewish belief in the present and future generations of the country which shall be our national home.

It was natural that as women we should have chosen the traditional province of healing and teaching as our specific job. Our achievements in this sphere are the best testimony of our success. Even the British Royal Commissions have acknowledged the benefits which have redounded to the entire country through Hadassah's program.

But in an age of tragedy women cannot limit themselves to the peaceful pursuits of healing and teaching. This is a time of emergencies. We must be ready for emergency action. A political science based on exterminating those whose blood does not measure up to arbitrary standards of purity has victimized a whole generation of Jewish youth. It was to rescue this youth that Hadassah became the American agency for the Youth Aliyah movement which has brought almost 5,000 children from countries of persecution in Europe to a new life in Palestine. We cannot betray them; we will not betray them now.

The Jewish National Home is a reality, and the lives and destinies of millions of people are bound up with it. But more far-reaching than that, the honor of all mankind is involved in its destiny, and we cannot face the future at all unless we believe that honor to be eternal.

EXCERPT FROM ADDRESS BY GEORGE BACKER, PRESIDENT OF THE BOARD OF DIRECTORS OF THE JEWISH PALESTINE PAVILION AT THE NEW YORK WORLD'S FAIR, SPEAKING IN BEHALF OF THE BOARD AT THE FORMAL OPENING OF THE PAVILION, MAY 28, 1939

We have come to the point when our labors are done and we present this completed fact, this building, to the representative of the Jewish agency. We want all to feel that we have done this because we believe that what is symbolized in this building has a deep and powerful meaning. The things the Jewish pioneers are building in Palestine are different from anything ever done before. In former times pioneers went to virgin territory, unsettled by man. But we have come to the point when virgin territory no longer exists, and pioneering must take a new direction.

The Jewish pioneers in Palestine do not cut down forests or conquer the country by force of arms. They come there to replenish the earth, to rebuild cities which stood thousands of years ago. Because we believe these efforts are sincere we believe in their meaning and that they must be crowned with success.

I give you, Mr. Lipsky, this key to the Palestine Pavilion, the symbol of our belief that their efforts in Palestine will succeed.

ADDRESS BY LOUIS LIPSKY, AMERICAN MEMBER OF THE EXECUTIVE OF THE JEWISH AGENCY FOR PALESTINE, MAY 28, 1939

On behalf of the executive of the Jewish Agency it is my privilege and honor to accept the symbolic key to the Jewish Palestine Pavilion with gratitude and appreciation to the committee for its splendid service in making real a long-deferred hope. The structure you have designed and constructed is fit, in its modesty and simple beauty, as the stage upon which to reveal the fine achievements of the building of the homeland. You have created the setting, but it is they, the pioneers, the creators of the national life, who have contributed its contents. The exhibit is theirs, and to them our tribute must be extended, and our fraternal greetings.

In a world temporarily obscured and confused by passions and prejudices, they have recovered and re-created its once vanished dream, a Jewish national life of vibrant, colorful beauty, free of the vulgarities of hate, and filled it with the joy of discovery and creation.

In a world that has driven our people into exile, a refugee without status, they have laid the foundations of a commonwealth, inspired by the hope of freedom, justice, and peace. With malice toward none and kindness toward all, in the midst of deepest tragedy they have given dignity and wealth to labor; they have preached and practiced peace; they have brought again into the historic land the sanctity that once was there.

The Palestine Pavilion will give you in summary a vivid illustration of the work of redemption. But unfortunately it is being dedicated in a moment of crisis in the building of the homeland. It has nothing to do with them. There has been no failure of nature. The waters have not dried out, there has been no eruption of a volcano, no floods have forced the crisis. The crisis has been caused by man's unfaithfulness to man, and a great empire, the flag of whose imposing building lies virtually in view, in the Avenue of Nations, flouting its own covenant, has found it politic and opportune to halt the work of redemption, to yield it up to encirclement by the desert.

The Palestine Pavilion, when first thought of, was to have been a tribute to England, trustee of Palestine. Today it is a protest against the trustee and an appeal to the conscience of the world for justice and fair play. The life of Israel may be forced to bend, but it will not let itself be broken. The pioneers will resist oppression. The right to peace will be defended, as all rights must be defended.

We persist in the right, however, that the people of England will not permit an English army of conquest to occupy the city of Jerusalem, to transform the Holy Land into a battlefield, and once more Jews to be sent into exile from the Promised Land. It is our confident hope that just as in the past 20 years Jews of America gave generous moral and material support to the building of the homeland, so in the coming days of struggle they will, with deep understanding and sympathy and faith, in adequate measure, contribute to the maintenance, the growth, and the defense of the Jewish national home.

I take this symbolic key and I ask those who stand at the doors to open them, in order that the Palestine Pavilion may be officially opened to be viewed by all those who desire to see it.

Per Ton Costs of Maintenance by Rail and by Waterways

REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. MANSFIELD. Mr. Speaker, I ask unanimous consent to address the House.

The SPEAKER. Is there objection?

There was no objection.

Mr. MANSFIELD. Mr. Speaker, on the occasion of the passage of the river and harbor authorization bill recently I delivered an address on the floor of the House. Mr. J. J. Pelly, president of the Association of Railroad Executives, has taken issue with me in regard to some of my statements concerning traffic charges. He has sent me a letter which he requests that I have embraced in the CONGRESSIONAL RECORD. I ask unanimous consent to extend my remarks and to include his letter and also to include a reply which I have this day made to him.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The letter referred to follows:

ASSOCIATION OF AMERICAN RAILROADS,
Washington, D. C., June 8, 1939.

Hon. JOSEPH J. MANSFIELD,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN MANSFIELD: As chairman of the Rivers and Harbors Committee of the House, you presented on May 17, 1939, the omnibus bill (H. R. 6264) for river and harbor improvement, containing 72 projects and calling for an initial expenditure of about $120,000,000.

In the course of your remarks, page 5656 of the CONGRESSIONAL RECORD, you said:

"The Budget has approved the expenditure of $41,000,000 for the maintenance of all these waterways for the coming year. The maintenance for the year 1937, the last year for which we have official reports, amounted to $38,004,296.45. The waterborne commerce for that year was 583,100,000 tons. The cost of maintenance was 6½ cents per ton of all the freights handled.

"The maintenance of our railways for the same year 1937, as approved by the I. C. C., including equipment, was $1,322,302,748. The freights moved by rail originating on class I railroads for that year was 1,015,586,028 tons. This maintenance cost per ton of freights handled by rail was $1.30, as compared with the cost of 6½ cents per ton of freights moved by water. Maintenance of the waterways are paid out of appropriations made by Congress. Maintenance of railways is paid out of freight and passenger charges approved by the I. C. C. In both instances, Jones pays the freight."

The projects in the bill which you were discussing apply indiscriminately to harbors on the Pacific, Gulf, and Atlantic coasts, harbors on the Great Lakes, and improvements of rivers and canals. Combining these different types of water improvements leads inevitably to confusion and misunderstanding. Such confusion and misunderstanding appear in the remarks quoted.

So far as the railroad position is concerned, there has been no opposition to legitimate expenditures for harbor improvements on the coasts or on the Great Lakes. These are projects quite distinct from improvements of rivers and canals, and, in our opinion, they should always be kept distinct in any discussion of the subject.

The comparison which you undertake to make between waterways and railways is of the gravest concern to us, because we believe the comparison is invalid and wholly erroneous.

It is true that the maintenance figure for the year 1937 of $38,004,296 is in the official report of the Chief of Engineers, but it covers not only rivers and canals but also all harbors on the Atlantic coast, the Gulf coast, the Pacific coast, and the Great Lakes. It is also true that the figure of 583,100,000 tons appears in the official report (table No. 1, pt. 4, pt. II) but it likewise includes both foreign and domestic traffic in and out of all ports on the Atlantic, Gulf, and Pacific coasts and all ports on the Great Lakes.

It is on the basis of these figures that you derive your maintenance of 6½ cents per ton by including all the seacoast and lake harbors and all the tonnage moving in and out of these ports. You then set up the figure of 6½ cents per ton alongside a maintenance figure for railroads which, strangely enough, includes equipment, divided into tons originating on class I railroads, to arrive at $1.30 per ton. This is not a valid comparison, as even a cursory examination will show. In the first place, there is no real significance in a figure derived in this way on the basis of tonnage originating. If a comparison is to be made, it should be made on the basis of ton mileage, which is the measure of service by a transportation agency.

Furthermore, if a comparison is to be made between waterways and railroads, it should be between rivers and canals, on the one hand, and railroads, on the other. Out of the $38,000,000 total maintenance of waterways, about one-half, or $19,000,000, represents maintenance of inland waterways for 1937. The tonnage figure should also be one applying to rivers and canals. Such tonnage figure should not include floated and rafted timber, for the reason that river improvements are not made for this kind of traffic and may even be a hindrance to it. If it were possible to do so, Government traffic for the construction of the waterway itself should be taken out. The traffic for 1937 on inland waterways of the United States, eliminating floated and rafted timber, was about 16,000,000,000 ton-miles (15,909,282,515). On this basis, as you will see, the maintenance cost of inland waterways per ton-mile was 1.19 mills.

For class I railroads the freight proportion of roadway maintenance, excluding equipment maintenance, as is done in the case of waterways, was $335,963,000 for 1937. Ton-miles for freight traffic in the same year were 360,620,269,000. Therefore, maintenance expense for freight on class I railroads was 0.93 mill. This is one-third less than the maintenance figure for waterways.

Even this is not the entire picture. There are duplications to an undefined extent in the reported tonnage figures on inland waterways. Only "obvious" duplications have been removed in the engineers' report. For example, the Mississippi River, which is reported by sections, shows for 1937 a duplication of over 54 percent. It is not possible, unfortunately, from any published statistics to remove these duplications.

As has been said, river traffic representing materials for the construction of the waterway project itself has no place in this picture. An illustration will indicate the significance of this fact. On the Missouri River from Kansas City to the mouth, the reported total traffic for 1937 was 416,474 tons. The amount used in connection with river improvements was 149,227 tons. This means that 35.8 percent of the total traffic was for Government use on the river. Between Kansas City and Sioux City, on the same stream, the reported total traffic was 566,706 tons. The amount used in connection with river improvements was 465,230 tons, or 82.1 percent of the entire traffic. From Sioux City to Fort Benton, on the Missouri River, total reported traffic was 92,198 tons. Of this amount, 92,000 tons, or 99.8 percent, were in connection with river improvement. On the Missouri River, from Fort Benton to the mouth, 65.7 percent of all the reported traffic was for Government use in connection with river improvement.

It is interesting also to note that on the section of this river between Kansas City and Sioux City, all of the traffic, other than that in connection with river improvement, 101,476 tons, was sand dredged from the bottom of the river.

Even on the great Mississippi River, over 48.5 percent of the tonnage is petroleum products. It is important to note this fact because you say, as quoted, that the maintenance of waterways is paid out of appropriations made by Congress and maintenance of railways is paid out of freight and passenger charges, so that in both instances "Jones pays the freight." Who, then, is Jones? Is he who pays the freight the same as he who receives the advantage of subsidized transportation? Does the public get any advantage from subsidized transportation on these great waterways? With respect to the transportation of petroleum products on the Mississippi River the answer is given by Mr. W. H. Reed, an oil dealer in Memphis, Tenn., who said in a recent address:

"Taxpayers are fed the baloney that the Mississippi River is a wonderful thing for the people of Memphis. * * *

"As to the oil business, the truth is the Mississippi River is the curse of Memphis.

"The question is * * * if the public pays millions in taxes to get the benefit of cheap water transportation, does the public get the benefit of water transportation, or what?

"The answer is that the oil corporations get the benefit of cheap water transportation. And the oil corporations keep the profits themselves. The public pays the bills to make water transportation possible. The oil corporations get richer.

"When I buy a tank of gasoline, I pay the spot market price for the gasoline. But, in addition, I have to pay the oil company as freight the railroad freight rate on gasoline from Shreveport, La., to Memphis Understand that the gasoline I get never saw Shreveport, La. It came to Memphis by water from the New Orleans refining district. The actual water charge on this gasoline is about one-half cent a gallon, but I have to pay a railroad rate from Shreveport, which is over 2 cents a gallon. In other words, the oil corporation takes me for a buggy ride to the extent of 1½ cents per gallon. In money, this means that every time I get a 10,000 gallon car of gasoline, the oil company makes $150."

You also undertake to sustain the point that in the 22 years during which you have studied the problems of waterways you have never been able to find any successful waterway that has injured any railway. Surely you could not have had opportunity to examine the records carefully of those railroads that are compelled to compete with subsidized waterways, such as the Mississippi, the Ohio, and Warrior Rivers. Waterways have not developed new traffic. They have taken it from the railroads through Government subsidy, and the public that has furnished the subsidy has not received the benefit therefrom. The competing railroads have lost traffic due to this subsidy, and their revenues and their employees have been decreased.

You contend, as you have often done, that improved waterways develop great centers of industry and commerce from which railroads profit. In this connection you cite the development of the city of Pittsburgh. Have you also examined the record of Youngstown, Ohio, which is without the so-called advantage of subsidized waterways? From 1910 to 1920 Pittsburgh increased in population 10.2 percent. In the same period Youngstown increased in population by 67.4 percent. Business, industry, and traffic increased in these two cities in proportion corresponding to increase in population.

May I not most respectfully call your attention to the advice of the National Resources Committee in its recent report. It says:

"We need new estimating, accounting, and cost-finding techinque not only to weigh the advantages and disadvantages of river transportation but to determine the proper place of inland waterways in a coordinated national transportation system. It may be desirable to introduce a new element by imposing charges where they are justified by special services and special facilities and where the traffic can bear them."

I am quite sure that in making the statement which appears in the CONGRESSIONAL RECORD, quoted by me on the first page, you had no purpose to treat the railroad industry otherwise than in a spirit of fairness. I am writing you in that same spirit. The railroads ask nothing at the hands of Congress, and the people except fair treatment and an opportunity to compete on an equal basis. I hope I am not exceeding the proprieties when I ask you respectfully to insert this letter in the RECORD so that all the Members of Congress may have an opportunity to read our side of the question.

Very respectfully yours.

J. J. PELLEY.

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 19, 1939.

MR. J. J. PELLEY,
President, Association of American Railroads,
Transportation Building, Washington, D. C.

MY DEAR MR. PELLEY: I thank you for your letter of June 8, 1939.

The river and harbor bill (H. R. 6264) contained 68 projects for the improvement of lake and coastal harbors and inland waterways, the former predominating. In the course of my remarks in presenting this proposed legislation, I introduced statistics which I considered to bear directly on the subject, as they reflected the performance of existing projects similar in every respect to those contained in the bill.

It is gathered from your letter that you would have preferred the elimination of all reference to the benefits from harbor projects which are so necessary to the railroads and which are so freely used by them without any direct contribution toward improvement or maintenance. Every improved harbor from Puget Sound to Eastport, Maine, is a potential asset to American railroads. Even the great harbor of New York accommodates a greater value of tonnage in car ferriage than is borne in oceangoing bottoms. Apparently you also prefer to exclude all reference to the benefits of improved ports and channels on the Great Lakes, in the enjoyment and extension of which the interests you represent are content to participate at considerable profit to themselves. Every additional foot of depth on the Limekiln Crossing in Detroit River, in the St. Clair Flats, in the St. Marys River; every additional lock at the "Soo" has facilitated and encouraged the transportation of ore, coal, limestone, and grain, which otherwise could not move in such volume and which feed the railroads at both ends of the Lakes transit. You wish to exclude the many channels and harbors of the Great Lakes dedicated almost exclusively to railroad use in the ferriage of freight and passenger trains, and maintained at Government expense. You wish to limit my comparison to inland waterways versus railroads on a ton-mile basis.

To accept that wholly misleading basis of appraisal would be in effect to lend countenance and validity to a most transparent effort to discredit the national waterway policy in the eyes of the public. You cannot keep traffic off the rivers by drastic rate slashing and then point to its absence as being of any economic significance. Commissioner Eastman recently testified on H. R. 2531 that—

"The minute a waterway is constructed and the water carriers began to inaugurate low rates, then the railroads reduce their rates. The public gets the benefit of these reductions, but the waterway does not get the benefit of that traffic, and if you included all the traffic on all the reduced rates for which waterways were responsible there would be a very different showing."

The basis you propose ignores the fact that rate wars during the last 20 years have not only kept adapted tonnage off the rivers but have brought the actively competing rail carriers to the verge of mass bankruptcy in this short-sighted but relentless campaign to prevent the development of water-borne ton-mileage and the demonstration of the practical value of waterways. In effect you have said to the public:

"Refrain from using these low-cost water routes provided at your expense. Let them dry up. Use our lines in the meantime, and we will pay you back the difference between our normal rates and water rates out of our earnings on other traffic that can't help itself. Until we can wipe out the water carriers."

Such practices represent a two-fold economic loss that the public will have to bear in the long run. They do not afford any basis for true appraisal of the value of waterways to the public.

The Interstate Commerce Commission very aptly described the situation in Ex parte 115:

"In their need for increased revenues, applicants" (the railroads) "have been careful to avoid proposing any increases in rates which have been published to meet the competition of other forms of transportation, although these are the depressed rates which are so largely responsible for their financial troubles."

I concur with the members of the Commission in this and similar statements to the effect that such a policy spells collapse of the whole transportation system. I cannot concur with them in freely granting relief to the rail carriers from the operation of the fourth section for the purpose of carrying out such disastrous practices. With all this evidence that the Commission is aware of both the objectives and the consequences of such a policy, I cannot help but feel the gravest apprehension for the security of the public's stake in its low-cost water-carrier service, if placed under the control of that body.

You say that the railroads ask nothing but an opportunity to compete on an equal basis. That simply means on a basis on which they can destroy water competition forthwith. The inherent differences are too great and too one-sided. Inland water transportation will always be at a disadvantage. Without protection it will always be at the mercy of rail carriers. It has no backlog of noncompetitive tonnage to bear the burden of rate wars. It must earn a profit on each ton transported, and its only salvation lies in its extremely low operating costs. This situation accounts for the natural regulation which functions automatically on inland waterways to hold the scale of freight charges within reasonable limits and closely related to the cost of service. It is quite possible that artificial regulation, in the guise of equality, could be applied to water carriage with completely destructive effect.

I would like to answer the allegations in your letter one by one, although this requires a candid analysis of the method of presenting the statistics. You say that you write in a spirit of fairness and I am sure that you mean it. I will use passages in your letter to show how difficult it is for any man or body of men, trying sincerely to be fair, but interested primarily in the profitable operation of their own properties, to avoid distortion of evidence to the injury of the public interest. It calls to mind a passage in Commissioner Eastman's recent testimony in which he said:

"The railroads will tell you that almost anything they do is done at a profit, when they want to show it that way. If they want to show it another way, it is always at a loss."

Accepting for the sake of argument your statement that in 1937 the maintenance cost of inland waterways per ton-mile of freight which managed to reach them was 1.19 mills and that for class I railroads it was 0.93 mills. How do you make 0.93 one-third less than 1.19? And is not the 0.93 mill rather an indication that railroads are not properly maintaining their roadbeds? They spent practically twice as much on maintenance in the 8 years preceding the depression as they did in the 8 years following 1929. Even with the greater ton-mileage of the prosperous period they spent 1.3 mills per ton-mile, which is greater, not less, than 1.19 and reverses the picture you painted.

Your next paragraph indicates that the comparison is still more unfavorable to waterways because tons passing from one division to another are reported in each division. You have already put the comparison on a ton-mile basis, and it must be obvious to you, if not to the casual reader, that there is no duplication of ton-mileage involved in that method of reporting the statistics.

Exception must be taken, however, to your exclusion of sand, gravel, and rafted freight from the benefits of river improvement. Testimony at our hearings is overwhelmingly to the effect that before improvement the movement of this class of freight was restricted, hazardous, and dependent upon seasonal and river stages. After improvement rafted freight is towed and may therefore find markets both up and down stream and at all seasons.

Your next two paragraphs deal with the tonnage, or more properly, the lack of tonnage on sections of waterway under construction and not yet open to traffic. Your rail statistics are all for class I carriers, but it is noted that a comparison with class I waterways is invariably shunned in favor of some such section as that from Sioux City to Fort Benton. It would be as logical to expect revenue tonnage over a section of railroad on which the ties were in place but no rail laid. Furthermore, there is no sound reason why water-borne materials and Government freight destined for use in connection with projects for flood control, power development, and like purposes should not be counted as commercial freight and the savings credited to the waterways over which they move. For instance, the only practical method of transportation available for materials required by the P. W. A. for Fort Peck Dam, and by the War Department for projects on other sections of the Missouri involved movement over the waterways. In the absence of these waterways the projects would be prosecuted just the same, while the materials would have to move by the more expensive rail routes. In this case the savings are reflected directly in the balance of funds in the United States Treasury.

Incidentally, I am reliably informed that the railroads have profited enormously from transportation of machinery and materials for river improvements throughout the country. Certainly they have profited from the transportation of machinery and materials for each other's use. If the same rules were applied to the large tonnage of steel rails handled by the Pennsylvania out of the Pittsburgh district, or by the L. & N. out of the Birmingham district, for connecting railroads, as you apply to materials moved over one waterway for use in improving another, your ton-mile computations would be still further upset. The same would apply to the large tonnage of cross ties and bridge and trestle timbers, forms, etc., transported by southern railroads for their northern connections.

The page of your letter next following is dedicated to the theory that savings made in the transportation of petroleum products in bulk on inland waterways are not passed on to the consumer but are "pocketed" by the distributor. It is passing strange that the testimony to that effect by two individuals has been publicized to the farthest corners of the Nation, while testimony to the contrary by more numerous and certainly equally credible witnesses, as well as the teachings of leading authorities on economics are ignored. Personally, I am far from claiming any prestige as an economist, but I am familiar enough with the oil industry to know that, in a business so highly competitive, it is impossible for any savings over and above a reasonable profit to be permanently "pocketed" by anybody along the line from producer to dealer. The aggregate transportation bill—that of getting the product from refinery to consumer—by pipe line, barge, tank car, and truck—is one of the costs of production, along with drilling and refining, and these combined costs determine the base price of the product, in the long run. The greater the proportionate volume that can take advantage of low-cost tank-barge transportation, the lower the base price to all consumers.

Locklin, in his "Economics of Transportation" (1938), very aptly says:

"The most obvious way in which cheap transportation reduces prices is through the reduction in the cost of getting goods from the point of production to the consumer. The process of production is not complete until the goods are placed in the hands of consumers.

"The short-time result may be quite different, but in the long run prices must be high enough to cover costs of production, including transportation costs, or the goods will not be produced."

Conversely prices cannot be much higher than necessary to cover costs of production, including transportation charges, or else competition will take away the market. Additional light was inadvertently thrown on this matter in the testimony of counsel for your association on H. R. 2531 in behalf of limiting the period for recovery of overcharges when he said:

"Now the man who is the wholesaler in the jobbing center has paid the rate and he has passed it on to the retailer, the man at the point of destination. The retailer has taken that rate into consideration in pricing his product. The real chap who has suffered is the consumer. He is the man who has to bear the burden. The wholesale merchant has not lost a nickel. He has just added the freight to his price."

The fact that this witness was referring to high rail rates rather than low water rates would seem to indicate that the consumer pays the transportation bill and that he suffers when it is high and benefits when it is low.

This is not intended as merely an unproductive series of criticisms of the claims advanced in your letter. Along with most of the rest of the country I am seriously concerned over the railroad situation and want to see everything done that can be legitimately and fairly done to better it. I offer for consideration a plan that has been suggested and that may be the solution of your problem.

It is said that there is a present surplus of transportation facilities throughout the country. If true, the fact will have to be faced that the uneconomical, overobligated, and unwisely located carriers, by highway, water, or rail, must inevitably make way. But assuredly it is not the part of wisdom to sacrifice sound and economical public waterways to save the so-called weak and superfluous rail lines.

This is illustrated in your paragraph on gasoline distribution, in which you show that it costs 2 cents per gallon to move gasoline by rail 321 miles from Shreveport to Memphis, while it costs but one-half cent per gallon to transport it 648 miles by inland waterway from the New Orleans area to Memphis. On your ton-mile basis this works out 19 mills by rail against 2.3 mills by water. It is obviously worse than futile for the rail carriers to continue their attempts to compete with water service at such great odds. Even adding the 1.19 mills for maintenance of the waterway fails to change the comparison appreciably.

Perhaps it would be better for all concerned—for the producers, the consumers, and the railroads themselves—to let such traffic go as is so obviously adapted to barge movement; to restore their rates to normal levels, both those that are too high and those that are too low; to desist from flying in the face of economic law and trying to substitute fictitious savings for the real savings made possible by water; and with the increase in the movement of commerce that would follow, continue to carry the great preponderance of the Nation's freight, which always has and always will travel by rail, but at rates restored to profitable levels.

It is on these grounds that I sustain the point that in 22 years I have never been able to find any successful waterway that has injured any railway. It is the depression of rates below cost in a futile effort to hold water traffic on the rails that has proved so disastrous for rail carriers and water carriers alike. You can easily prove by the simplest computation that the restoration of all the inland-waterway tonnage to rail at these competitive levels would neither restore rail revenues nor increase the number of employees, as you so categorically seem to claim.

None of us know all the factors which might affect the rate of growth of such centers as Pittsburgh and Youngstown. We know that both share the benefits of inland-water transportation in varying degree, although Youngstown is not yet a river port. We know that the site of Pittsburgh is topographically so restricted that her native industries have had to expand up and down the rivers out of the metropolitan area in order to grow. But for the sake of fairness, why go back to the decade 1910 to 1920 to show the rate of growth for Youngstown of 67 percent and for Pittsburgh of 10 percent? Why not use the latest available decade, 1920 to 1930, during which the relative percentages were 28 and 14? Or, better still, report the testimony at a recent hearing concerning the exodus of industries from the Youngstown area because of lack of waterway connections?

As you probably realize, there is nothing new in the allegations contained in your letter. Like the Committee on Rivers and Harbors, reporting officers of the Corps of Engineers are practiced in sifting the claims of over-enthusiastic advocates as well as of implacable adversaries of waterway improvement. Converting such claims to a factual basis has become more or less routine in the analysis of the economic phases of proposed improvements, and it is seldom found that the public interest coincides with the desires of either faction. It is logical, therefore, to expect your association to be displeased with any favorable recommendation of the Army Engineers and to sponsor the delegation of their duties to some one of the perhaps more amenable agencies which are more or less constantly seeking to expand. It is well to bear in mind the absolute necessity that some group keep its feet on the ground and analyze competently and dispassionately the economic and engineering phases of proposed Government improvements for the guidance of Congress.

If the agencies responsible for the engineering and economic investigation of proposed Federal projects were to permit the influence of pressure groups to sway their recommendations, they would cease to be good public servants. This great democratic Government is fortunate in having its waterway investigations in the hands of the Corps of Engineers of the Army, who are free from partisan interests and motives of every character and who are also exceptionally skilled in the tasks assigned to them by law.

Careful consideration of all that you have said leads me to the conclusion that the argument simmers down to whether or not we shall continue to have a democratic form of government. Our actions must be governed by the interests of the whole public. We must continue to work for the welfare of all the people, particularly labor, including men working on railways, highways, and waterways.

In the final analysis, "Jones pays the freight." In the case of the railroads, at least in times past, the entire objective was private profit. Private capital built the railroads, showed large profits, and the securities were disposed of to "Jones," the public. In each case "Jones" bought of his own free will, without coercion of any kind. The public generally had no voice in erection of the financial structure. If it had been possible to prescribe that structure and regulate its alterations so as to protect each and every "Jones," that would have been advantageous. However, up to the present time the accomplishment of that end has not been practicable. The situation may be like visiting the sins of the fathers on the children, and, of course, we should endeavor to alleviate the hardships of the results. But this should not be done by penalizing all other kinds of transportation, such as waterways.

The public has a voice in the expenditures for waterways, and it reaps the benefits. There is no monopoly on their use. From the beginning of the history of the Nation its waterways have been free to each and every "Jones," and I am not alone in hoping that this right will never be taken away from him. It would be a most fallacious presumption to think that the railroads could gain thereby. In the long run such a procedure would result in their greatest injury. In conclusion, let me repeat that I have the greatest sympathy for the railroads, and I hope that we shall grow out of the present business depression, so that invested capital of every kind will receive a fair return.

Very truly yours,

J. J. MANSFIELD,
Chairman, Committee on Rivers and Harbors, House of Representatives.

Repeal of the Seventeenth Amendment

REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 19, 1939

Mr. THORKELSON. Mr. Speaker and Members of the House, I am introducing a resolution for repeal of the seventeenth amendment, which I hope will be reported favorably by the committee to which it is assigned for consideration. This resolution when adopted will restore a republican form of government to the United States, as guaranteed in article IV, section 4, of the Constitution:

The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and on application of the legislature, or of the executive (when the legislature cannot be convened), against domestic violence.

This article is plain, and states in fact that 47 States must guarantee to each State a republican form of government, in these words: "The United States shall guarantee to every State in this Union a republican form of government." It is now evident that the seventeenth amendment does not conform to article IV, section 4, and its adoption by three-fourths of the States is therefore not allowable under the Constitution. The seventeenth amendment does not amend the Constitution, but it destroys it instead, and there is no provision for destruction of the Government in the Constitution of the United States. Destruction of the Constitution is paramount to civil war, and that will be fought by the people.

The seventeenth amendment does not conform to the ninth and tenth amendments in the Bill of Rights, for it has abrogated rights reserved to the States and to the people, and this is clearly evident when I quote the ninth and tenth amendments:

ART. IX. The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

ART. X. The powers not delegated to the United States by the Constitution nor prohibited by it to the States, are reserved to the States respectively or to the people.

It will be seen after reading these amendments that each State delegates certain power to the Federal Government, but reserves the remaining power to itself and to the people, and such rights must not be treated lightly, as set forth in amendment No. 9.

Technically the seventeenth amendment may therefore be held invalid by Congress and the Supreme Court if one State failed in ratifying its adoption, and if so, it can now be repudiated by such States as did not agree to it. The safety and the security of our Republic is a matter which concerns all the United States and all the people, and may therefore not be destroyed by any State or States but must instead be a matter of vital interest to all the States.

It is indeed difficult to understand why this amendment was adopted, for it is so flagrantly not only unconstitutional but absolutely destructive to our Government, as it is set forth in the Constitution of the United States. In order to clarify this, I shall now quote article V:

The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which in either case shall be valid to all intents and purposes as part of this Constitution, when ratified by the legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress, provided that no amendments which may be made prior to the year 1808 shall in any manner affect the first and fourth clauses in the ninth section of the first article; and that no State, without its consent, shall be deprived of its equal suffrage in the Senate.

This provides the manner in which the Constitution may be amended, but we must always bear in mind an amendment to fundamental laws should improve such laws and not destroy them.

Article V further states that—

No State, without its consent, shall be deprived of its equal suffrage in the Senate.

It should now be clear to everyone that all the United States have been deprived of equal suffrage in the Senate, and that in itself is such clear violation of the Constitution that it should be plain to a schoolboy.

The question the American people must ask themselves is what happened to the United States when this amendment was adopted? And who were the forces that brought about causes for its adoption?

This is what happened: We destroyed constitutional representative government, and substituted instead a pure socialistic organization, no different from the socialism now prevailing in nearly all European countries. We speak of it as a democracy, but it must be clearly separated from democratic constitutional government, for the two are far apart. Our Government is a democratic republic, and Jefferson was often called a "republican democrat." Yet the word "democracy" was not used until European agitators formulated socialism, communism, and anarchy, so democracy and communism are actually synonymous terms. We have two parties, a Republican Party and a Democratic Party, but neither of the two bears any relation to socialism, communism, or democracy as it is used today by those who are misinformed disciples of dangerous European philosophies.

Let us now look back a few years and try to determine what causes led to the adoption of the seventeenth amendment. There is no question in my mind but that attempts to destroy our Government have been held by certain interests who are more interested in their own welfare than in that of the United States. While this thing dates back many, many years, it has been active only since 1895 or 1896, when impetus was given to it by events in Europe. The influence of communistic philosophies is felt more and more from that period on. Agitation for adoption of the seventeenth amendment was brought about by bribing of certain individuals in Congress, particularly in the Senate. It finally became a national scandal, which prepared the public for adoption of this amendment.

This, in my opinion, was a deliberate attempt to prepare for gradual conversion of a republican form of government into a socialistic or communistic state, which we have now. It should be clear to us that State representation in the Senate is the anchor that secured us to a representative, republican government, as set forth in the Constitution of the United States. It was, therefore, necessary, in order to bring about conditions that we have today, to destroy this link. It could be done only by the destruction of the Constitution itself, and the seventeenth amendment accomplished this destruction.

It was not felt at first, because a few of the Senators in 1913 remaining in the Senate adhered to the Constitution in its original intent, probably without recognizing the change that had taken place. We find, however, as we go on, greater and greater departure from State representation in the Senate. That is to be expected, because the Senators as well as the Representatives in Congress are now elected by the popular majority and not by the legislatures of the States.

According to the Constitution, the State legislature elected the Senators, and having the power of election or appointment of them, had also the power of impeachment or recall. This was a wholesome power and should never have been abrogated, because of corruption, but should instead have been used to recall those who fell victims to barter and trade. As it is now, the State has no real power over the Senators, any more than it has over the Representatives, and that is the real cause of the chaotic condition in which we find our Nation today.

Let us not forget that all governments are either aristocratic or democratic, and that intolerance and persecution are always present in extreme or too zealous application of either one of these types. The founders of our country were aware of that and in this knowledge provided for our security by making the United States an "aristocratic democracy."

The 48 States are the aristocrats. We the people are the democrats. The Senate represented the States, and the House of Representatives, the people.

The Senators were elected by the State legislature, and therefore represented the States and the State government alone. The Representatives represent the people, and are elected by popular ballot. This provided for a balance in the Government and it is the most humane and practical form of government that the world has ever had.

It is now my desire that the people be given an opportunity to restore such sane and sound government, and it can only be accomplished by the repeal of the seventeenth amendment. If we fail in this, no power can prevent a totalitarian government in this country.

Analyses of S. 1796 and House Amendment Thereto

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. MAY. Mr. Speaker, first, S. 1796 merely provided bond authority for completion of the tentative deal specified in the contract of sale and purchase of the Tennessee Electric Power Co. and Southern Tennessee Power Co., dated May 12, 1939, between the power companies and the Tennesseee Valley Authority. That is all it did except to make a slight change in the language of sections 15 and 15a of the original T. V. A. Act of 1933, as amended.

The House Military Affairs Committee, after exhaustive hearings and careful study of the matters disclosed therein, struck out everything in S. 1796, following the enacting clause and so amended the acts as to provide:

First. Authority to issue ample bonds to carry into execution the contract as fully and completely as could be done under S. 1796 as passed by the Senate and at the same

time allowed all money necessary to purchase additional electrical properties in 27 counties in north Alabama and Mississippi not actually included in the contract of May 12, with money for rehabilitation and integration of these properties of about two and one-half million for completion of a tentative deal with the city of Memphis and yet we brought about an actual saving of $35,000,000 as compared with the Senate bill.

Second. The House amendment restricts the operations of the authority to the Tennessee River drainage area, the 27 Alabama and Mississippi counties, plus the area embraced in and served by the properties acquired in the Cumberland River Valley until such time as the Authority secures the approval of Congress to expand its territory. This was done by the committee and approved by the House of Representatives to prevent an unfortunate recurrence of a similar situation as that already created by the Authority's competitive activities that have made necessary this legislation. In other words the committee guarded against the use of unlimited power and large amounts of money by the directors to further confiscate and destroy good-faith investments of innocent people.

Third. The committee bill, as passed by the House, places the accounting system of the T. V. A. under supervision and auditing of the General Accounting Office, and your committee was induced to do this because of the fact that all other money-spending agencies of the Government are required to submit to the General Accounting Office all expenditures for auditing, and we felt that there were no reasons whatever for exempting this particular Government corporation from that wholesome rule. On the contrary, we found from the evidence that there exists today, and has from the very inception of the T. V. A., a discrepancy of many millions of dollars in their accounts. This we do not think a desirable situation, especially when there is such widespread spending of taxpayers' money.

Fourth. The evidence before your committee shows that T. V. A. now has, or at least its directors claim, a present income of more than $2,000,000, and simultaneous with the acquisition of the T. E. P. properties and the conclusion of the pending contract will have an additional income of $5,000,000, making a total of $7,000,000, and with bond interest fixed in the bill at a maximum of 3½ percent of the net earnings would carry a $200,000,000 bond issue, and they will have to issue only $65,000,000 to consummate the deal and integrate, rehabilitate, and otherwise improve their network of the whole system.

Fifth. Your committee by another provision of the House amendment requires the corporation to put itself on a business basis by setting up a regular sinking fund for retirement of its bonds, and to safeguard it against raids on its earnings by taxing agencies of State and local governments, and thus we put it in a position where the Board will be able to avoid local controversies and difficulties if it so desires.

Finally I am sure the House provisions as a whole are a wholesome step toward better relations between Government and private enterprise, and, if finally written into law and the T. V. A. directors cooperate, the difficulties of both Government and industry, so far as T. V. A. is concerned, will be over.

Economy in Government

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

LETTER FROM CITIZEN

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from a citizen of New York:

BUFFALO, N. Y., *June 5, 1939.*

Hon. W. G. ANDREWS,

House of Representatives, Washington, D. C.

DEAR SIR: The mental attitude of the rank and file of the American people has not drastically changed during the past 10 years. Many millions of our people today retain the same mental, spiritual and physical ability which enabled them and their forbears to build our Nation as it was in 1928, and these same people are still living, striving, and working to maintain the American way of life and its standard of living; under tremendous odds it is true, but with determination that America shall grow to even greater heights.

The blight, which of recent years has been steadily growing, has not come from the rank and file, the workingman, the little-business man nor the big-business man, but from the distorted and wrong economic theories advanced by those temporarily in power in Washington and those groups who have the official ear.

It is high time that Congress takes a definite stand to reassert itself in the interest of true economy in Government, regardless of pressure blocks and groups clamoring for legislation to aid one group of citizens at the expense of another.

Congress can and must stop the drain upon our national income which has arisen during the past 12 years 259 percent, thereby killing initiative and keeping 10,000,000 on our unemployment rolls.

Congress can and must stop the enervating propaganda that we are living in a time of perpetual emergency, and the doctrine that the National Government is a charitable institution. Neither shall it allow the gullible to be fooled, by the adroit changing of a portion of the bonded debt, into seeming assets, by clever manipulation of Government figures.

Congress must assume its full responsibility toward correcting the evils which have put this blighting influence into the laws, regardless of party affiliation.

Congress must, by its own power and will declare an end to unbalanced budgets; by reduction of expenditures of the National Government, through efficient operation, and the curtailment of nonessential services and functions.

Congress must again make laws for the welfare of all the people instead of classes of its citizens, and must stop saddling them with ever-mounting taxes.

This is an urgent call for true statesmanship and courage of the highest order, to give back to all our people the opportunity to raise themselves out of the slough of despond, by their own efforts, instead of allowing those temporarily in power to try to establish a utopia by Government edict.

This letter is not written for the purpose of the repeal or amendment of any particular laws—the evils which you are called upon to correct are hydraheaded, and cry out for correction—it is an appeal to you, as a representative of all your constituents wherever located, to act in behalf of all of them, so that Americans in every part of this great Union shall again be able to assert their God-given initiatives and ambitions which now lie dormant. You personally have it in your power by your influence and by your vote to put men to work by the correction of legislation which has proven wrong in practice. To stop waste in Government wherever it may be found.

Opportunity is asking each of you to give of your best, unselfishly, for every individual American of tomorrow. Do not load him with a burden you have not been asked to assume by yesterday's children—he has been handicapped too much already.

This letter is being sent to all Congressmen alike—to those of you who have been fighting for the things mentioned may it serve as an encouragement to still greater effort—success is sure. To those of you who have up to now been merely time servers and "rubber stamps," I say to you, time changes all things—the chaff is even now being winnowed. The spirit of America marches on!

Sincerely and respectfully yours,

G. ROBT. SUTTER,
One of the Rank and File.

How Canby, Oreg., Did It

REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. PIERCE of Oregon. Mr. Speaker, I have received a most remarkable statement from a little community in Oregon that started the work of distributing its own electricity during the year I was elected Governor of Oregon in 1922. I encouraged them all I could during the 4 years I was Governor. I lived near this little town while at the State capital.

This is a very remarkable showing, Mr. Speaker, and I ask unanimous consent that I may insert it in the Appendix of the RECORD. I call it to the attention of my colleagues

in the House who are interested in electricity, particularly the gentleman from Michigan, and I ask them to read this showing of the little town of Canby, Oreg., with a population of under a thousand people, that in less than 20 years has saved out of the operations of its electric plant almost $200,000.

The SPEAKER. Is there objection to the request of the gentleman from Oregon [Mr. PIERCE]?

There was no objection.

The statement referred to follows:

HOW CANBY IN OREGON DID IT—A REMARKABLE STORY OF SUCCESSFUL MUNICIPAL OWNERSHIP IN A SMALL CITY

(By A. C. Heyman, of Albany, Oreg.)

(The following article is a summary of four addresses delivered by Mr. M. J. Lee, of Canby, for the Chambers of Commerce in Brownsville, Harrisburg, and Halsey and the Lake Creek Grange in Linn County, Oreg. It was prepared by A. C. Heyman, chairman of the sponsors committee of the proposed Linn County people's utility district. The figures have been confirmed by the mayor, the city treasurer, and the superintendent of the water and light department of Canby.)

One of the most outstanding achievements in public ownership of power is that of the little town of Canby, Oreg.—population 744—as told to several Linn County audiences by Mr. M. J. Lee, of Canby, who was one of the city council in 1922 when the new venture was made and who is still a leader in the civic improvement projects. Mr. Lee was chairman of the light and water committee and sought to serve his town to the best of his ability. On investigation he found that the citizens of Canby were paying $3.30 for 20 kilowatt-hours of electricity when other neighboring towns were paying to other private utilities only $1.49 for the same amount of energy. This appeared to the committee very much like discrimination, and so it sought to correct the matter.

TURNED OFF THE LIGHT—TURNED ON THE HEAT

The franchise of the private utility serving the town had expired and the committee decided to use this leverage to get free street lighting for which it was paying $75 a month before renewing the charter. The private utility bluntly refused with the excuse that it could not be done. At the following council meeting the matter was further discussed with the owner of the private utility with the result that both parties went home that night furious with anger. The owner was so enraged that he turned off the street lights the next night and left the town in darkness. This was his Waterloo.

The townspeople then became even more enraged, and the next night, through the initiative of Mr. Lee, the whole town turned out to a mass meeting. The result of this meeting was an organization setting on foot a movement for public ownership of light and power. It also confirmed the conviction of many that private utilities cannot be controlled or regulated by State public-utility commissions or any other regulating bodies. From here on action was speedy.

HOW THE CITY GOT A REASONABLE PRICE

The owner of the private utility bought his "juice" wholesale from the Portland Electric Power Company and served seven other small towns besides Canby. The light committee dickered with the owner for his distribution system in Canby. He wanted $25,000. The price was outrageously high. A survey was made of the property and it was found to be worth only $5,500. Then the owner came down to $14,000. No agreement could be reached. The city, therefore, called an election to vote general-obligation bonds for $10,000 to build an entirely new distribution system. Bids for construction were received.

While still trying to bluff, the owner saw that the city meant business and became more amenable to reason. The committee recommended the purchase of the going business if a reasonable purchase price could be agreed upon rather than enter into competition and all kinds of litigation. After considerable wrangling $7,000 was offered by the city for the system and this was finally accepted by the owner. This was in the middle of October 1922. On the first of November the city of Canby became the owner and operator of its own distribution system.

THE CITY BEGINS OPERATION

Of the $10,000 bonds voted by the citizens only $8,000 was issued; $7,000 for the distribution system, $500 for engineering services, and $500 for some immediate improvements.

Thus by January 1, 1923, with the acquiring of the water system 6 years previously, Canby had a debt with bonds and outstanding warrants drawing 6 percent interest, of $56,000 together with an interest payment of $3,360 due on January 1, 1923. The city-owned water system had only enough income to pay interest and operating expenses and when new mains were laid or extensions made, new bonds had to be issued. The water system therefore increased rather than diminished the city debt.

When the city took over the light system the two systems, light and water, were put into one department and under one management. The previous manager of the private system was retained as the superintendent of the newly created department of light and water and has now been serving the city for 17 years.

A 30-PERCENT INITIAL REDUCTION IN RATES

The first stroke of the new department was to reduce the light rates 30 percent, give the city free street lighting, besides extending the street lights and doubling the watt capacity of the lamps. This saved the city immediately $100 a month on street lighting. It also gave the city free electricity to run three motors for the water system, which was also costing the city another $50 a month.

OTHER RATE REDUCTIONS

To the question, "Did you make any further reductions in rates after the first reduction of 30 percent?" Mr. Lee replied, "Yes; we made four or five reductions, amounting in all to something like 10 percent. Whenever the people protested that rates were too high we made a reduction. And then we published the fact loudly far and wide just as the private companies do. But we did not reduce the rates any faster than we had to, because there were other things that we wanted to do. We wanted to pay off our debt and get rid of the interest burden. Also we wanted the other things mentioned below. Our citizens are now glad that we have these things. And it is not particularly hard for them to get them in this way."

LAST YEAR'S NET PROFIT $5,464

Hearing of the success of the municipal plant at Canby, the citizens of Woodburn, a considerably larger city about 12 miles away, sent a committee down to Canby to inquire into the matter. An examination of the books showed the Woodburn committee that the plant was making an annual profit of $5,464 a year, besides saving the city in many other ways.

In the calendar year of 1938 the committee found Canby's gross receipts from electric customers were $16,025.50. Expenditures the same year were $8,802.38 for the purchase of power and $1,759 cost of administration, a total of $10,561.38—leaving a net profit of $5,464.12. To this could be added the free street lighting which would have cost the city $1,104 under private ownership; also the electricity used to light the city hall and to pump the city water. This would bring the net profits for the year up to $7,480.87. However, Canby ignores the items of free service and figures its net profit for the year at $5,464.12.

Out of the net profit the city spent $1,868 for various improvements and extensions, equipment, etc., including transformers, poles, wire, meters, labor, and other necessities to keep the system in good working order. Subtracting these items leaves still a net of $3,595. But if the value of the free services is added this would bring the figure up to $5,611.

MAKES AND SAVES $194,938 IN 16½ YEARS

Speaking of the final results of the municipal-ownership enterprise in Canby for the period of 16½ years that the city has owned the system, Mr. Lee submits the figures below to show that the city has made and saved a total of $194,938.96.

PAID FOR IN 10 YEARS

The following are the payments made on the system during the 10 years to pay for it:

Date	Bonds and warrants outstanding	Payments on principal	Payments on interest	Total payments
Jan. 1, 1923	$56,000		[1]$3,360	[1]$3,360
Jan. 1, 1924	49,000	$7,000	3,360	10,360
Jan. 1, 1925	42,500	6,500	2,940	9,440
Jan. 1, 1926	40,000	[2]2,500	2,550	5,050
Jan. 1, 1927	35,000	5,000	2,400	7,400
Jan. 1, 1928	28,000	7,000	2,100	9,100
Jan. 1, 1929	18,500	9,500	1,680	11,180
Jan. 1, 1930	7,500	11,000	1,110	12,110
Jan. 1, 1931	1,500	6,000	450	6,450
Jan. 1, 1932		1,500	90	1,590
Total		56,000	20,040	76,040

[1] Paid by city warrants and later repaid out of income.
[2] In 1926 Canby built a 10,000-gallon steel water tank and tower paid for out of earnings of light department.

Mr. Lee's audiences marveled at this remarkable showing in a city the size of Canby in paying off such a large debt in less than 10 years. "But wait," said Mr. Lee; "the half has not yet been told. We had money to do other things as well as pay off the debt. The following improvements and donations have been made from money coming out of our light income:

Improvements to the light and water system:	
389 light and power meters, at $10	$3,890.00
317 water meters, at $16	5,377.00
43 transformers, at $125	5,375.00
1 100,000-gallon steel tank and 110-foot steel tower	10,000.00
Spring for water reservoir, pump, and motor	8,500.00
Engineering fees	500.00
	33,642.00

Donations to high school:	
3 acres of land	3,000.00
Concrete tennis court	800.00
Water main and hydrant	819.29
Transformer	536.67
Paving walks and road	1,000.00
	6,206.96
Other donations:	
20-acre cemetery for city	$6,500.00
Part payment to city hall	7,150.00
New fire truck and hose	5,000.00
	18,650.00
Savings:	
16½ years' street lighting	16,500.00
16½ years' power for water system	9,900.00
Cash reserve in bank	21,000.00
	47,400.00
Losses covered by plant earnings:	
Bank failure	2,000.00
Burning of powerhouse	2,500.00
Damage suit for personal injury	7,500.00
	12,000.00

SUMMARY

Summarizing the above figures, we have the following:	
Payments—bonds, warrants, and interest	$76,040.00
Improvements to system	33,642.00
Donations to high school	6,206.96
Savings on light and power	47,400.00
Other donations	18,650.00
Losses covered	12,000.00
Grand total for 16½ years	194,938.96

This money was saved for the benefit of the Canby community and not contributed to the profiteers and holding companies.

IS IT A GOOD POLICY?

Several individuals asked Mr. Lee if he thought it was a good policy "to keep rates up in order to raise money for other city expenses?" To this Mr. Lee replied: "There are two theories in setting rates and use of revenues of publicly owned utilities. One theory is to set the rates just high enough to care for operating, maintenance, interest, amortization, and depreciation. In this manner the people get the benefit of the lowest rates possible as is the case in Eugene (Oregon municipal plant). The other theory is to keep the rates high enough so that after taking care of all operating and other fixed charges there remains a surplus for other purposes. Your choice of the two methods will depend on your circumstances. The citizens of Canby choose to have a surplus for other purposes."

"How do your rates compare with those in surrounding towns?" was another question asked of the speaker. To this Mr. Lee replied: "Our last reduction brought our rates down in every respect to the rates of the Portland Electric Power Co., from whom we buy our energy wholesale, costing us about $8,500 a year. With this rate we still made a surplus last year of $5,464, and at the present time (April 1939) we are making a net profit of $1,000 a month."

He further explained that Canby is seeking a contract with the Bonneville project for energy at the announced rate of $17.50 per kilowatt-year. At this cost the city will save another $4,000 annually.

WILL AID IRRIGATION

Mr. Lee also brought another interesting and unique feature of this Canby municipal plant. It proposes to aid the surrounding rural and farm population by helping them to develop their irrigation system. With the savings effected already and additional savings that will result from the lower rates for power purchased from the Bonneville project, he said, there will be some surplus power at off-peak periods which the city will give to an irrigation project of some 2,500 acres adjacent to the town. "Canby has agreed to furnish free of cost," he said, "half of the energy required to pump the water for this project."

A WARNING

"But there is a final warning," said Mr. Lee. "Look out for the agitators who undermine the public sentiment for public ownership. After we were running smoothly for 5 years our success looked too good to the private power company. Our example, they thought, would very likely stimulate other communities to undertake municipal ownership, as indeed it already has done. So the Portland Electric Power Co. offered to buy our water and light system for $45,000. The Canby council refused. But the hired agitators succeeded in bringing the sale to a vote. No one thought the city would sell out and so the vote was very small. We saved our plant by only two votes.

"This vote being so close, the power company agitators called another election as early as possible, hoping to gain the few votes necessary for victory. But by this time the Canby voters awakened to what was going on and we beat the sell-out by a 2-to-1 vote."

The reproduction value of the Canby light and water plants is figured at $64,500, the actual value at $54,000. The reproduction value of the light plant alone is figured at $19,988 and the actual value at $15,450.

Serious Situation Confronting Retail Meat Industry

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. CELLER. Mr. Speaker, under date of May 31, 1939, there was passed in the Senate, S. 2390, a bill to amend an act entitled "An act to provide for the complete independence of the Philippine Islands, to provide for the adoption of a constitution and a form of government for the Philippine Islands, and for other purposes."

Before its passage by the Senate, there was stricken from this measure an amendment introduced by Senator CARL HAYDEN, of Arizona, which would repeal the tax on all coconut oil which is denatured and rendered inedible. While this proposal was killed in the Senate, it has reappeared in the House measure now pending before the Committee on Insular Affairs.

It is important that immediate steps be taken in the House to bring about the defeat of this proposed amendment. For, should said amendment receive favorable action and be enacted into law, the tax on all coconut oil which is denatured and rendered inedible would be repealed. This applies not only to products from the Philippines but equally as well to coconut oil from all parts of the world. The net result would be the fixing of the price of coconut oil in the United States at a level not far from the present price of 2.75 cents a pound. That, in turn, would fix the price of tallow and greases as well as of most other domestic oils and fats. This would make futile all the work on fats and oils taxes that has been done in the past 5 years.

Last year the coconut oil used in the United States in soap amounted to 343,000,000 pounds, and in other nonedible products to about 4,000,000 pounds additional. There were available in our commerce in 1938 the enormous total of 555,000,000 pounds which might have been so used. There were available in world trade in 1936, the last year for which figures are available, a commercial copra crop which would produce 1,029,000 tong tons of coconut oil (International Institute of Agriculture). This is equivalent to 2,283,000,000 pounds of coconut oil. Every pound of that oil is a potential competitor of the domestic oils, both edible and inedible, if the amendment under discussion is enacted into law.

Thus it can readily be seen that the retail meat dealers, as well as the renderers, have much at stake in having retained the present tax on coconut oil. For, if the said tax is removed, the soap manufacturers will be able to use far more coconut oil than before. The immediate result of this would be a decreased use of tallow, the price of which would consequently be reduced about 40 percent below even the present low levels.

Every butcher in New York City and in the country at large is desirous of receiving a reasonable price for his fat and other byproducts. But if this amendment is permitted to stand, returns from byproducts will be greatly reduced and foreign producers of coconut oil will secure all the benefits. It is apparent, therefore, that a situation of serious import would confront the retail meat industry should the amendment in question be adopted.

In light of all the above I shall do all in my power to the end that the proposed amendment to the afore-mentioned measure be not enacted into law.

Imperative Mining Needs

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, western Congressmen are receiving many letters from their constituents asking for some phase of legislation pertaining to the mining industry in the West. I would like to mention a few of these problems which I have had presented to me and indicate the importance of some of them. For the last several weeks I have been urged to try to extend the moratorium on mining-claim assessment work for another year. Many arguments which appeal to me have been presented showing why this should be done, but I have also received arguments against it from those who feel that there should be no further moratorium in this respect. The assessment work must be done on unpatented claims at once, as the time limit expires on June 30. In view of the fact that the Senate committee some weeks ago postponed consideration of this moratorium, and the House Mines and Mining Committee later did the same thing for a companion bill, it seems impossible to get any such measure through this session. I have advised my constituents to that effect.

Another immediate problem directly concerning Arizona is the question of the price of silver. I do trust that the silver-purchase program will be continued with regard to domestically produced silver at a higher price than the Government has been paying for the past 18 months. This means that Congress should continue some legislation which would otherwise expire June 30, 1939. If this is done and the President can see his way clear to raise the price of silver, it will mean life to many mining camps in the West, and if not done, some that have been thriving centers of human activity will become ghost towns.

Arizona is our greatest copper-producing State. It might be supposed that any legislation for the benefit of silver would have little or no effect upon copper mining. Such is not true. Many of our copper mines produce silver as a by-product. To such mines the price of silver is almost as important as the price of copper. The passage of H. R. 6851 today is not only a good move for revenue production but affords some needed protection to American workers and businessmen in the copper camps of the West. This measure carries with it the 4 cents per pound excise duty on foreign copper. Should this protection be removed every copper camp in our country would close down and thousands now working would be thrown on relief.

Mining throughout the great West is in a dormant or semi-dormant condition generally. This is due to the lack of new capital and new development. Mining men feel that this is partly due to low prices for our metals and partly due to the new restrictions that have recently been thrown around the investment of capital. The R. F. C., it is true, is authorized to make loans for mining developments, but such loans are restricted to a few metals, such as gold, silver, and tin. Western development calls for more private capital and more public credit such as has been extended to other lines of business. We think that the R. F. C. should be permitted and encouraged to make loans in the development of all important metals, but particularly the strategic war materials.

Private capital is not now going into the mining field. One reason for that is the restrictions laid down by the Securities and Exchange Commission. The West would like to have a new set of regulations by the S. E. C. so liberalized as to encourage capital to invest in mines. Recently a new division has been set up within the S. E. C. to facilitate mining applications, which is a start in the right direction. However, this all-important industry in the West really justifies a special commission with a sufficient working fund and regulations suited to the industry to help bring mining to its rightful place in American industrial life. Let it be remembered that mining is one industry, not considering gold and silver, which has received no Government aid comparable to that which has been given to agriculture and other lines of industry.

As a wartime provision, we have recently embarked upon a policy of laying in a supply of strategic metals. Some of these are to be obtained from abroad at once, but the general policy is to be the encouragement of home production. Nothing would be wiser policy, as a matter of national defense and a stimulation of home industry, than for the Government to give liberal encouragement to mining throughout our entire West of gold, silver, copper, lead, and zinc, and especially the other strategic metals, all of which the country needs both in peace and in war. If the mining West prospers, it pours all of these metals into the channels of trade and furnishes the best market for the heavy-production goods, machinery, and all the manufactured articles which the eastern centers wish to market. I verily believe that a mutual exchange of goods between our East and West is a far more important thing to encourage than all of our export trade or all of our international trade added together. I submit that national prosperity waits on proper legislative treatment of the mining industry in the far West.

National Convention of Paper Mill Superintendents

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

ADDRESS BY W. J. CAMERON

Mr. MURRAY. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein an address delivered by Mr. W. J. Cameron, of Detroit, Mich. He is a nationally known commentator and is on the Ford Hour every Sunday evening.

I had the pleasure of having heard Mr. Cameron give this address on June 15 at the National Convention of the Paper Mill Superintendents, held on that date:

Your convention occurs at a moment when the difference between public policies and public thought is reaching an acute state of tension. During the long infatuation public thought and public policy romped the primrose path together toward the great mirage, and there was little to be done about it. The fever had to run its course. But now that wholesome separation between truth and fallacy has begun and no one any longer believes that extravagant promises can be fulfilled, the task before us is clear—which task is, for the sake of the future, to identify and cultivate principles that will carry over into the future, and that, as you will not be slow to observe lets many present policies out. We might as well make up our minds that some things in this country will have to be endured for at least another year and a half. That year and a half will be more endurable if we remember in the meantime that the country is steadily recovering its recognition of principle. That is true of all of us equally. It must be admitted that these last few years the business mind has not been conspicuously superior to any other. Indeed, had not business dallied these last 40 years with the very economic heresies that recently have come full circle; had not business, equally with the crowd, mistaken political sheet lightning for the dawn of the millenium; in brief, had we been different, our condition today would have been very different. If we were even now what we ought to be, a different cast would overspread the face of events.

I regard business today as the chief hope and anchor of our country. With all that it includes, business governs life more directly than government does; economic laws go deeper than political legislation. At this moment business provides the only substantial basis that exists for the maintenance of the human values we cherish. The material pedestal on which our spiritual and social values rest is formed by plentiful production and vigorous circulation of wealth. Home and health, community and education, religion and government flourish where business and industry flourish, and where industry and business fail these fail, too. Ordinary observation confirms that. A profounder responsibility, therefore, devolves upon businessmen to maintain the

soberness and wisdom and courage of American business than has ever devolved on us before.

Now, to bring ourselves up to that standard—and it is a common confession that on the whole we are not up to it—it may be well to assess the gains and losses of the last 10 years. In one respect "gain" and "loss" are not the words, for there has been no change at all. Heretofore, national crises were expected to produce a great leader or to disclose a new principle. The artificially prolonged condition under which we have lived for 7 years has not produced either—it has not led forth a new leader, it has not unveiled a single new economic principle. And, probably, that is as it should be. For myself, I cannot find the slightest tinge of disappointment in it. I accept it as the voice of events recalling us from utterly un-American dependence on dazzling personalities, and also as bespeaking from us a new consideration of the principles that have brought us so safely and so far. As to the first our way of life does not depend on brilliant and erratic comets streaking across the political heavens every 4 or 8 years; we only require sound, dependable administrators of the system of government the people have set up—not men who regard themselves as being the Government, but men who realize that under our system they can only be the servitors and not the rulers of the state. Administration has so long given way to innovation that we have forgotten that innovation begins where the mandate of administration begins—with the people. The American people's obsession for glamorous personality in public life is one important source of their late defection toward principle. The voice of events is clear that we are not to be saved by supermen.

Nor need we be disappointed that no new economic principle has emerged. We may interpret that as the voice of events informing us that no new principle is needed—we were on the right road of principle before. Never old or new, principle is always potent with pristine virility; whatever apparent weakness it may exhibit is the reflection of our failure to apply it intelligently and to follow it through to complete demonstration. Our cry for new principles indicates we have not yet understood those we call the old. Events are telling us we must go through on the road where we began. Travel is impossible on any other. Consciousness of this necessity that is upon us is now apparent in all classes of our people. And while all this does not represent positive headway, it does represent a return to the place whence headway may be made.

In other matters, however, there has been a decided change. Amongst the gains, we may name a better conception of business on the part of the American people. For years they stood on the side lines seeming to regard as a private feud the antagonism of political administration toward business, apparently unaware that business is their business, not merely the business of the businessman. They saw certain despicable evils in commerce which they attributed to the essential nature of business itself. Crack-brained leaders preached to them that business was naturally and necessarily predatory. Selfishness, greed, and crookedness did exist, God knows; restrict the gaze to those and the record is black indeed. But the fact has now gained general currency that these out croppings of human nature are not indigenous to business, are not necessary to business, are not helpful to business, are positively detrimental to business, and that the real history of business is the record of how the morality requisite to constructive transactions between man and man has been ruthlessly breeding these evils out. Business is fundamentally and necessarily moral as a condition of its own survival, and of its own volition, for its self-preservation, has curbed the economic license of lower human tendencies. That fact is now pretty well established in the public mind. Moreover, people generally are becoming aware that the real beneficiaries and profit takers of business are not the makers and sellers, but the users of its goods and services; that business is not a sucker on life but a feeder and supporter of it.

This new enlightenment or reversal of the public mind has been accompanied by the exposure and utter defeat of a false political philosophy. That philosophy has not been rescinded as legislation and I don't expect it to be—yet. But nonetheless it is defeated, not by anything that human beings have done against it, but by the blight it drew down upon itself by its own violation of the laws of life. It has even confessed its defeat. It confessed when it announced its conversion to views that you and I have always held, and for holding which we were excoriated. For 2 or 3 months of this year that philosophy used as its approved official vocabulary the very words we were denounced 3 years ago for using; and the very contentions for which it visited on us the name of "economic royalists" were for 2 or 3 months the approved official contentions. During that brief period of pretended reform I was accustomed to say that I hoped, for the sake of the political souls involved, that the conversions were genuine, but I was not willing to trust my country to that hope; I preferred to trust it with men who had shown a steadfast, unwavering, intelligent loyalty to American principles from the beginning—men who had never wasted the country's substance in prodigal-son fashion and had never had to creep home for pardon.

But that is all over now; the conversions have been repudiated, they seem to have been only political expedients after all, and I am sorry for those businessmen who were temporarily fooled by them. It is not with any exultant feeling that I view the utter defeat of this false political philosophy; boasting is hushed when we remember how many, even of our own class and calling, fell victims to its spurious plausibilities. But we may, and I do, indulge a deep sense of gratitude for the unchanged integrity of the universe; had it been possible for any of those unnatural, uneconomic, and ultimately inhuman ideas to work, then this no longer had been the universe of law that the long experience of humanity has conceived it to be. Because they did not work, faith in the universal verities remains.

Gentlemen, expect nothing from that philosophy, not even a serious attempt to ease the burdens it has laid upon this Nation. The childlike reliance of many businessmen in the definite promise of economy, was pathetic to see; the "economy" we got was a burden a billion dollars heavier than before. The cost of going wrong is going up. The occupational disease of politics is spending. You may confidently assume that even an effort toward change is no longer possible to those who constructed this politico-economic monstrosity. They are now completely mastered by it as by a gigantic Frankenstein.

Having made up your mind to that, some of the worst is over. We do not know how much more punishment the Nation can take, but one thing is certain—if you are inclined to tragic prophecies, be warned in advance that most of them will turn out to be false prophecies. They take no account of what America is. They put a handful of men—temporary occupants of public office—they put a few false quantities above the great fact of American resourcefulness. Our fears always grow great when knowledge of our people is small. The choice with us is always between Fear and Faith, and the difference between Fear and Faith is that fear is faith in the wrong thing. The man who fears today only confesses his faith—confesses he actually believes that the Providence which guides this Nation is impotent, that our national destiny is a delusion. Let him take his fears and write them out as a formal confession of his faith, and he will discard them instantly; he will just instinctively know they are not so.

On the whole there has been, I think, a gain in the stamina of America business enterprise. I regard that as extremely important because I believe that when American enterprise rises sufficiently high, it will float a number of activities that are now aground. Only enterprise can do it; politics cannot; the expenditure of another $20,000,000,000 cannot, for weal or woe it is in our own hand, and I think it will be for weal. Putting this job of national salvation up to business may seem reminiscent of something that has been said at Washington lately. But I don't mean it in that sense. There is a considerable difference between enlisting business to keep the New Deal afloat and enlisting it to keep the United States afloat. If they remain too long tied together, ultimately one of them must sink. Should it be the United States that sinks—which I cannot regard as even a remote possibility—why the New Deal sinks with it; but if the New Deal sinks, the Nation floats free. I expect this Nation to float free. That issue will not be decided by politicians, but by the quality of popular common sense and of American business enterprise. In saying this it is readily admitted that the obstacles in the way of business are enormous; what we want to know is whether American business will maintain its magnificent record of meeting the obstacle by an overmatching effort. That is what enterprise means—adjusting efforts to obstacles, and topping them. We were pretty soft in 1929. We were almost totally bewildered by the bludgeonings given us from 1933 to 1937. Our softness permitted woeful interference with the freedom of American enterprise. Yet with all this true, we must take our stand upon the fact that never could we have become an enterprising people had we waited until someone made us a free people, we made ourselves a free people as soon as we became enterprising; and that still remains the formula—enterprise brings freedom. There is no other way. Enterprise was not legislated into us and it cannot be legislated out of us. To go around crying that we are interfered with only proves something wrong with the quality of our enterprise. There seems to be evidence that we are opening our eyes wide enough to see that.

What we are now asking is whether enterprise itself is sufficient? Can independent business enterprise alone do this thing—pull this country onto the road again? Men say, your motor may be tuned, your gas tank full, but on a road filled with barricades how far can you go? The answer to that question is in the person that asks it. One who believes that enterprise is sufficient of itself is likely to make it so; all of us know men who have done this all through the depression. But if you do not believe it, why, there you are. Many of us believe that enterprise of itself is sufficient for the present duty, not only because of its direct accomplishments on the spot where it is used, but also because of the indirect forces it puts in motion. There is nothing more radioactive in the field of human affairs than intelligent enterprise centered in a man who knows where he wants to go. We may say what we like about the surrounding hindrances, and no man in his senses would minimize their number or their power, but that will not whittle down by one-millionth of an inch the fact that the greatest hindrance any of us has had to meet is the collapse of our own spirit. That brings this matter directly where it belongs into the inner throne room of human forces—for there we win, there we lose, there we may recover. Of course, there could occur an event—say a complete change of political attitude or control—that would restore confidence and energy to business and the whole Nation in a single day; we have stood waiting and hoping for some such event. Gentlemen, the surest way to that end is to recover the sturdiness of attitude and unremitting effort that creates the event. If we accept that view of the case we will save time; if not, then the wilderness is wide and we can still go on wandering. I stress this because we do not

always give self-generated enterprise or recovery of spirit the place they deserve among real and tangible things. On its negative side we do recognize it; we go about collapsing each other's spirits. When we try to turn to its positive side our efforts usually evaporate in trivial "optimism" and back slapping. The regenerative power will come of a profound knowledge of what America is, which means more than at first appears. All of us agree that an event could and would change the whole mood and tempo of this country in a matter of hours; but I don't see how the event can come save out of a condition our own restored spirit first creates. That is to say, I believe business enterprise can accomplish this thing more quickly than votes can.

One thing that puts the brake on thought and energies is our tendency to look at conditions in the large, to the neglect of more immediate elements. Men think almost exclusively of the times as making them; a moment's reflection would show that they also make the times. We all think we are world statesmen nowadays, we are all economists, we are all experts in the effect of this or that on business—but seldom experts in the greater effect of business on this or that. Hence, the immediate duty to the immediate job is often dissipated in a welter of disturbing impressions. We run with the times when half our job is always to buck the trend of the times. Those who bucked the delusion misnamed "prosperity" in 1929 were wise men and escaped the plague; these men also refused to bow the knee to psychological gods of the depression, and though they passed through the furnace the smell of fire is not upon them. Forbearing to hunt with the hounds, they found need to run with the hares. The spirit of the times is a much too inferior guide for those who serve the spirit of the ages. You never saw a kite aloft except it bucked the winds. In all our business offices we know more about the process of yielding to adverse influences than we do about utilizing the exceedingly stronger favorable influences. But, as I said before, this view of things does not minimize the hindrances—they are there, and they are serious. However, they arose under our democratic form of government, and under our democratic form of government they will be removed—in time. But to accomplish this desirable end more quickly, work for a rebirth of basic American enterprise. If each of us did the much more that we can do even under present conditions, we should be sterilizing hindrances at every advance we make, at the same time rendering ourselves immune to them. If we could focus our attention on the hindrances that business is up against in itself, the rest would follow in course.

Business has nothing whatever to be ashamed of. Making things that people use to get their living with—which is the sole function of industry; providing services that make for wider distribution through exchange and easy access to the things that belong to comfort and security—these never had any part in bringing on the state of things we all deplore. It is because these social contributions have been stopped by forces with which they had nothing whatever to do that the present state of things persists. What I am urging is that the best way now open to us to override these destructive forces is to increase our energy in efforts toward the resumption of that contribution.

That brings us to an element we hear much about today—the element of risk. Men who have the means and could use them will not take the risk today, we are told. Need I go over the long tally of legislation that shackles business hand and foot in this respect? Any country merchant, any publisher of a country weekly can give it to you. But what it amounts to is this: The thought is ingrained in the business mind—and has long clouded the wage earner's wind—etched there by 7 years of experience, that risk, which was never anything more than a fair chance, is now become sheer jeopardy; risk that was always the normal next step of intelligent enterprise now partakes the dread certainty of a leap over the precipice. Constructive business risk has been legislatively transformed into a steel trap—that is the general conviction. I am not going to argue that; there is no argument. The thing stands stark before us. It approaches to a grave degree the totalitarian process of conscripting wealth in support, not of government but schemes administrators of government have invented. And they are not sound schemes; they are self-destructive schemes. Except for intervention, they can only live as long as the tree lives on which they are parasites; then both fall together.

Now, all of us are for having the tree of American life live. I am wondering if we cannot discover some way to circumvent or neutralize the damage done to the element of risk which has always been a nutritious element in that tree's soil. I think we can, if while we recognize that risk is discouraged, we do not also assume that all business action is thereby necessarily paralyzed. Admit that not many if any new fields are being opened now; are the old fields fully developed? Regardless of what new things may come, does anyone believe that existing staple industries and services will be supplanted? If he does, he should study his country a little more carefully. Or does anyone believe that existing industries and services have anywhere near covered their respective fields? No; that job is not nearly done, and to do it, the kind of risk that is primarily needed is not the risk that is now forbidden. We need a more reckless risking of personal energy—we lack that more than money; it is where all the money comes from; it commands money. All financial risk begins in personal risk of personal vision and effort. I have yet to see where the genuine, simon-pure quality of competent personal enterprise generously invested has yet been retarded by lack of money. Contrariwise, I have never seen money accomplish anything where that other more powerful investment did not accompany it. It isn't the hesitancy to take financial risk that occurs first; that follows our hesitancy to take risk of work and hope. It would be very nice if we could start new enterprises as we used to, but in the present situation it would be nicer if we could prick awake some of the enterprises we have. There are unnecessary burdens attached even to that, to be sure, but for the little time they are likely to remain we could makeshift to carry them. The difficulties are greater than before, but the opportunities and the facilities are greater still. Those who talk about the "ceiling of production" have never seen it—we have never come within telescopic sight of it in this country. Production and supply have scarcely begun. We boast of business accomplishments in a tone that suggests we have attained the summit. We even assume that parts of the country not now supplied are too poor ever to be supplied.

Gentlemen, there is in this country today literally a wider area and a greater population awaiting service, than awaited all the great business enterprises of our time when they began. These great enterprises grew out of less promise than our most unpromising fields offer us today. No industry or service that you will point out as a "big success" had anything like the unserved area and population to begin with that is still awaiting us. The times they chose for their beginnings were no more propitious, the opportunity was not nearly so alluring. If there is little encouragement today for new ventures, there is ample need and room for the growth of business ventures already established—if we recklessly risk the personal energy for which we are supposed to be famous.

Personally, I have no expectation whatever for national release from the ghastly spell that is upon us, save in the revived faith and dogged courage of persons—persons in the business world—the same sort of single-pointed dogged courage that we would hope to show were we at war. I wish we could see that the present duty devolving upon business is as much if not more patriotic than war would require of us. If you know anything better to do for your country than what you are doing, then for God's sake go and do it; if you remain at your present task, do it as for your country. I think it all comes down to that at last—personal dedication to a social service that builds the country. This may require of us some sacrifice of pride, some dimming of our self-conceived grandeur. It may require the abandonment of certain prejudices, certain professionalisms that never meant anything anyway. It may require us humbling ourselves to the devotion of learners.

And there is not a man in the world who can tell you how to do any of these things. There are no charts—over this sea no ships have passed before. We do know that every one of our jobs can be done better—every one of them. There's a better housing job waiting to be done, a better banking job, a better manufacturing job, a better distribution job, a better educational and legislative and administrative job. We haven't touched the frontiers of any of them. And the only wise and faithful counselor that can tell us how, is our job itself. All we have learned up to now, our job has taught us. All you will learn in this convention is what some men learned from their jobs. Sit down before the job and listen to it. I have seen many businessmen—the biggest as big as they come, and the smallest—but the best I have seen were those who learned from the job.

The Crime of Lynching

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

PRESS RELEASE OF THE NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I am calling the attention of Members of this House to a press release issued on June 2 by the National Association for the Advancement of Colored People.

This press release tells the horrible story of the hot-iron lynching of a Negro citizen of Canton, Miss., on May 8.

A considerable number of Members, including myself, have introduced bills to end the infamous and un-American crime of lynching. We are, however, concerned only with the immediate passage of a Federal antilynching act, and not with pressing for passage of our own bills. For that

reason most of the sponsors of antilynching bills have already signed the Gavagan discharge petition, which is No. 10 on the Speaker's desk and to which more than a hundred signatures are already appended. Every man in this House who honestly wants to wipe out the shame of lynching in America should sign discharge petition No. 10 at once and speed the Gavagan bill to passage in this session.

It is no accident that lynchings, like the barbarous crime described below, are again increasing. Even the prospect of passing a Federal antilynch law in the Seventy-fifth Congress had a deterrent effect on those who presume to take the law in their own hands, and during its consideration lynching actually ceased. It was only after the Senate filibuster defeated the Wagner-Gavagan bill in the Senate and again put off the passage of this desperately needed legislation that the crime of lynching again began to flourish.

If we can temporarily halt lynching by debating a Federal antilynch law, we can put an end to it for all time by passing such a law.

I therefore urge that all my colleagues read carefully this tragic story and sign discharge petition No. 10 today.

[Press service of the National Association for the Advancement of Colored People]

HOT-IRON TORTURE LYNCHING IN MISSISSIPPI REVEALED BY N. A. A. C. P.—LUMBER WORKER SHOT, BURNED, AND BODY THROWN IN RIVER FOR OBJECTING TO $5.50 DEDUCTION FROM PAY

NEW YORK, June 2.—The hot-iron torture lynching of Joe Rodgers, lumber worker, and respected citizen of Canton, Miss., on May 8, was revealed here today by the National Association for the Advancement of Colored People, following receipt of an investigator's report.

According to the investigator's report, Rodgers, a deacon in Canton's Mount Zion Baptist Church, was shot, tortured by hot irons, brutally cut, and his body thrown into the Pearl River by a foreman of a local lumber mill where he was employed.

He was lynched, the report said, because he refused to accept a weekly deduction of $5.50 from his wages in payment for renting a company-owned cabin which he did not occupy.

The lynching represents the fifth in the United States for 1939 and the first in Mississippi this year. It followed by 9 months the lynching of Claude Banks, in the same town, July 21, 1938. Banks was the innocent victim of a white mob which was seeking suspects in the killing of a white man.

The lynching of Rodgers has brought no arrests, no publicity from the local papers, and an order from town officials advising local citizens to refrain from discussing the crime, despite the fact that the millworker's body has been recovered from the river and given a decent burial. The text of the investigator's report follows:

"On the 8th of May at Canton, Miss., a Negro named Joe Rodgers was lynched. He was a workman at a lumber company, and was notified by his foreman that he had to live in the mill quarters. He refused to obey these orders. However, the company deducted from his weekly wages the sum of $5.50 for rent, just as if he were living in the mill quarters. This Rodgers protested and asked for his full payment. His foreman struck him with a shovel and Rodgers struck him back with one, whereupon he was captured, tied hand and foot, shot, tortured with red hot iron, and cut and the body thrown into the Pearl River.

"The body was recovered from the river 3 days later and held in the funeral parlors of People's Funeral Home at Canton, Miss. He was later buried at Forest, Miss.

"This man was a deacon of Mount Zion Baptist Church at Canton, president of the church choir, and had a splendid record in every way. The newspapers of Canton have not written a word, and there have been no arrests made. The Negroes have been told not to discuss the incident.

"The sheriff of Canton is C. H. James. The mayor of the town is C. N. Harris."

Other lynchings during 1939 listed by the N. A. A. C. P. follow:

February—Eldorado, Ark.: Walter Lee Frazier, alleged to have molested white couples—shot.

March—Woodcliff, Ga.: Charley Williams, accused of having said "something to a white woman that she didn't like," was snatched from a freight train and hanged.

April 1—Panama City, Fla.: Miles W. Brown (white), convicted of first degree murder for the killing of a former employer, was shot to death after being taken from jail by a band of masked men.

April 29—Daytona Beach, Fla.: Lee Snell, Negro taxi driver, was shot to death on a highway near Daytona Beach while being taken to jail, and Constable James Durden said the slayers were two brothers of a boy fatally injured by Snell's taxi several hours earlier.

The Democratic Party Offers Its Service for the Future on Its Record of the Past

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the junior Senator from Florida [Mr. PEPPER] before the joint meeting of 10 Young Democratic Clubs of the District of Columbia at the Shoreham Hotel in Washington on June 17.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In 1936 the Democratic national platform began with this stirring declaration of faith: "We hold this truth to be self-evident, that the test of a representative government is its ability to promote the safey and happiness of the people." There followed these words, which laid down for all time a real declaration of independence for the American people: "We hold this truth to be self-evident, that government in a modern civilization has certain inescapable obligations to its citizens, among which are:

"1. Protection of the family and home.

"2. Establishment of a democracy of opportunity for all the people.

"3. Aid to those overtaken by disaster.

"These obligations, neglected through 12 years of the old leadership, have once more been recognized by American Government. Under the new leadership they will never be neglected."

The record of the Democratic leadership which promulgated those truly American sentiments has kept the faith; those high objectives have not been neglected. We have laid down the sacred hearthstone of home for millions of American families; we have saved the citadel of home for another million American families against the dire day of mortgage foreclosure; we have kept America's families together, given the husband a job, the children a chance to go to school, where a widowed mother struggled with dependent children she has been borne upon her Government's arm, by aid for her and her children; the blind, the crippled, the maimed, and the halt have, too, not been neglected. The dread of their children being kidnaped no longer grips the hearts of America's mothers and fathers; we have built scores of hospitals to serve America's families, provided nurses to bind up the wounds, to attend the ills of the impoverished. We, too, have carried the boon of electricity for the first time into farm homes, and through an interested Government the burden of toil has been lightened upon the back of the rural housewife. The privilege of the radio has become possible for more millions of America's families; opportunities for recreation and inspiration, altogether new in American life, have been provided.

Is there any man anywhere who questions that the American family is not healthier, the American home more secure, the institutions of the American family better assured than ever before against disruption and dissolution under the solicitude and the protection of America's first family man—Franklin D. Roosevelt?

Meanwhile, on another front has progressed the most dramatic battle in all American history for the establishment of a true democracy of opportunity for all the people of this country. The principles of democracy have not only been preserved in the sphere of politics, they have been actually extended to the realm of business. There has been a new Magna Carta for American labor, but instead of being wrung from a hostile and unsympathetic government it has been freely and gladly given by an administration which actually represented the people of America. Immunities of little men against being crushed by octopuses of the business world have been protected and effectively reestablished; the constitutional immunities of free speech, freedom of assembly, have been restored to their ancient integrity. The right to live, the right to a place in the political and economic sun of the American life has been vouchsafed to the individual man, woman, and child to a degree that challenges the admiration of the world.

Even the herculean efforts of this administration in 6 years have not been able to give to the average man and woman of this country the opportunities he and she should have. But who is there to question that a man, woman, or child has now a better chance since 1933 than they had before to some measure of success in their pursuit of happiness? Who questions that there is a greater dignity, a more assured sense of importance felt by the average man in this country than ever before? Who thinks that

the man and woman in the little home beside the road doubt in their heart that there is in the people's White House and in power in the Nation's Capital a dominating spirit which after God's own teaching has tried to be a good Samaritan?

The hundred millions of dollars spent, the millions of families cared for in distress, the soothing hand of governmental assistance and succor which has been held out to those overtaken by disaster, attest with what fidelity we have kept our obligation to those stricken by misfortune. When one regards the help that this Government has given to the Dust Bowl, the area stricken by floods, hurricane, and other disasters, what a contrast is presented by the spectacle of President Hoover fighting with all the power at his command and accusing those who offered to provide a moderate sum of money to feed hungry drought victims in Arkansas and other States, with "playing politics with human misery." In every home in America a family can lie down to sleep at night with unquestioning confidence in their hearts that if disaster shall break upon them in the stillness of the night and all the pent-up fury of unbridled nature destroy all that they have, on the morrow true as a minister to his faith, they will find sympathy and succor from their Government, which believes in the principle of the brotherhood of man.

Is it now time to abandon these objectives? Have they been found unworthy ends? Have we placed an undue emphasis upon the protection of the family and the home; the establishment of a democracy of opportunity for all the people, upon aid to those who are the victims of disaster? Is there no longer any need for government, and by that we mean for society in general, to concern itself about the welfare of individual men, women, and children, about whether they have jobs, decent homes, safe health conditions; about a fair chance to get a foothold on the economic system?

How tragic is the picture confronting us when we lift our eyes to the horizon of what yet needs to be done. There are 29,000,000 American families, consisting on an average of four and a fraction persons per family. Fourteen percent of those families have an annual income of $500 or less; 42 percent an annual income of $1,000 or less; 65 percent an annual income of $1,500 or less; 87 percent an annual income of $2,500 or less; 97 percent an annual income of $5,000 or less; 99 percent $10,000 or less as annual income, and 1 percent only, $10,000 or more per year. The figures for farm groups alone would be distinctly less. In some sections of the country the wage of a farm laborer sounds almost like the compensation of the Chinese coolie. With such a standard of living condemning 25,000,000 American citizens to a bare margin of nutritive safety, is there any wonder that there is widespread pellagra and very general undernourishment, that every year there are over a million preventable deaths of somebody's loved ones.

There are some 1,300 counties in the United States in which there are no hospital facilities. It is the opinion of the United States Public Health Service that in all probability another 10 years could be added to the life expectancy of the citizenship of this country by the application of measures known to medical science to be wholly, or even partially effective; that the death rate in cancer could be cut in half; infant and maternal mortality with vigorous and intelligent attention could be reduced another 50 percent; that pneumonia, the "captain of men of death," can be diminished at least 25 percent; that venereal diseases, a major cause of insanity, insecurity, and death, could be practically abolished; that tuberculosis could be practically wiped out; that the improvement of general conditions and the application of proper medical care would relatively abolish insanity; that the life expectancy of our people could be pushed up to 70 years even within the next decade.

Two hundred of the largest corporations of this country still own approximately one-fourth of all the wealth of this country and about one-half of all the nonbanking corporate wealth of the Nation. One-tenth of 1 percent of the corporations of the United States earn 50 percent of the earnings of all the corporations of the country. In a recent year 4 percent of all the estates transmitted by inheritance represented one-third of all the property descending by inheritance.

In the year 1910, with a population of 92,000,000, there were 32,000,000 farmers in the United States. In 1938, with a population of 130,000,000, the country had only 31,819,000 farmers. There are 650,000 farmers tilling 100,000,000 acres of land where the farms are too poor to yield a decent living. Forty-two percent of the farm population are tenants. An additional 10 percent rent the land they cultivate. Between 1930 and 1935 there were over 200,000 increase in the number of tenant farmers in the United States.

A territory as large as the State of North Carolina has been eroded into uselessness. There are probably 10,000,000 people in this country of employable age, who actually need work, want to work, and can't find a decent job. We have more illiterates than college graduates. Only two and one-fourth million of our population are college graduates; only 5,000,000 are high-school graduates; 32,000,000 have had only elementary school work. Rural school teachers receive less than $550 per year. Out of a population of 20,000,000 boys and girls from 16 to 24 years of age, nearly 5,000,000 are out of school, unemployed, and seeking jobs.

There are 700,000 crimes committed annually by people under 21 years of age in the United States. We have over 4,000,000 criminals. A felony is committed every 24 seconds. Thirty-six lives are taken every day by homicide. There is one murder in our civilized country every 40 minutes. In institutions of juvenile delinquency there are 30,000 inmates; in our State and Federal prisons, 140,000; in State and county prisons, there are another 46,000. The total United States annual crime cost is estimated at $15,000,000,000, which is $28,500 every minute—over $40,000,000 every day.

In 1933 we had 300,000 children under institutional care, 350,000 patients in hospitals for mental diseases, 100,000 feeble-minded and epileptics in State institutions, 66,000 children blind and partially seeing, 100,000 crippled children, 500,000 deaf and hard-of-hearing children, another half million delinquent children, 1,000,000 more children with defective speech. Fifty percent of all these defectives lived in rural areas.

Does this picture convince anyone that the time for constructive effort and for a crusade for human welfare is past in America? Can anyone see this sad spectacle without his heart going out to the suffering and the sorrowful, to the neglected, the forgotten, the little-privileged, the weak, the victims of their own disabilities, those caught in the fell clutch of untoward circumstances? Remember there is none of these but who has a human soul and in his heart the echoes of all the lofty aspirations that have ever reverberated in the conscience of men. Remember that through his heart surges all those human hopes which man has ever dreamed of. Remember that he, too, yearns anxiously for his place, though small, in the sun of life—in his country's destiny.

Here is presented then a period in our history when in a way never approximated in the Nation's past a whole political party, the Government of the United States by the will of the American people, has devoted itself to making things better for those who dwell upon this soil, and with the singleness of purpose which no administration past has observed, it has persisted in its determination to make this Nation a conspicuous example of how in the crucible of honest cooperative effort there may be refined the greatest and happiest Nation in all the world. This policy has represented no maudlin sentiment, no unreasoning sympathy, no irresponsible emotionalism; it has been at once an administration that joined both head and heart. For while it has placed first things first, while it has contemplated that the only thing that mattered about this country was the way the people who inhabited it lived, nevertheless, it has not only made conditions better for the man at the foot of the structure, but as well for the man who sits in his exalted position at the apex of the economic pyramid. That man in his rarified atmosphere is, too, better off than he was, because those things which were once but the signs of wealth have become tangible and real economic assets. His business, his home, his personal and physical well-being enjoy a security which comes from an ordered nation where chaos, anarchy, the threat of revolution have been destroyed. A government has dared to grapple with economic difficulties challenging the best efforts and the best brains of the world. People have been guided into new services and new vocations, they have been taught new skill. Work has been provided for those displaced by the irresistible march of technological improvement. A purchasing power to enjoy the good things and to give a market to the sellers of good things has been developed. Without trespass upon a single immunity, without the violation of any right, without force, any manner of coercion, but through the sheer compelling power of intelligent and devoted leadership there has come about an order, a pattern, a spirit of coordination in our national life which makes America now the strongest Nation she has ever been in her history. Not only that, it has given America again the feel of herself. Like Antaeus of old, our people have touched Mother Earth, and in touching it they have gained new strength that comes only from contact with the eternal forces of the world.

We young men of America have a right to be concerned about our inheritance. It was being wasted away and squandered by those who neither knew how to preserve it nor cared a great deal about its conservation. Now it is in the hands of a new trustee. It has been restored. It has been saved, not only for us but for our posterity. We have a right to expect and to demand that no little group of economic royalists shall again be allowed to build a wall around an economic system and emblazon to ambitious youth from the crest of its ornamented gates the sign: "Keep out—Private property." Young men and women have a right to ask and to demand the answer to the question: "What kind of a future are we building for them—for their bodies, their minds, their souls, and dynamic ambitions?"

Ahead lies a vista that challenges the scope of the imagination, a future that grasps the fancy and sends the blood racing through the veins of a proud and understanding citizenry. The long road is winding toward the top of the hill. If we but hold our course, husband our resources for the final climb, spend ourselves in our fidelity to our cause, there shall soon burst upon our vision the green valley on the other side.

The Alien Problem

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

RADIO ADDRESS BY HON. ELBERT D. THOMAS OF UTAH

Mr. MINTON. Mr. President, on June 18, 1939, the Senator from Utah [Mr. THOMAS] delivered a radio address on the program of The American Forum of the Air, on the subject of our alien problem, which I ask to have printed in the Appendix.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In this country the alien problem never sleeps. Our attention to it varies from day to day, from mild concern during ordinary periods of our national life to sudden desperate legislation when there is an unexpected migration our way. It is not new for us to blame the foreigners for many of our ills.

As a result our immigration laws are a patchwork, and in some ways a poor one.

To this, if we are to add the two applications which the United States makes in determining citizenship, and their ramifications; we often have been in doubt as to just who is a stranger within our gates. How to act toward these strangers has always been a problem.

A short time ago I took occasion to raise my voice in defense of citizenship as a result of place of birth, a doctrine known as jus soli. The Supreme Court decision, newly rendered, reaffirming this doctrine gives me a feeling of satisfaction that we have made at least one great step forward.

The question arose concerning children who were born here, whose parents later removed to another country and renounced their citizenship, and who themselves, having grown up with their parents and not wishing to lose United States citizenship simply because their parents did, had been denied the privilege of choice.

I protested such an interpretation of our laws in vain before several of the departments affected. It was most gratifying to learn once again from the Supreme Court that to be born in the United States constitutes a treasured and unshakable right. When we are born here something important in the way of a right is vested in us. Security of citizenship is as important as any other form of social security.

Then, we may ask, what about the security of residence? Here we come to the alien question. First, let us take those who are with us and consider them. I shall not take up the various so-called antialien bills in detail, because tonight I do not want to analyze bills, but simply talk about governmental policy. We have a number of persons in the United States who are under our jurisdiction but who are not citizens. It is important to weigh these words. These men, women, and children are under our jurisdiction, but they are not citizens of the United States or of any State. They are, though, under our jurisdiction, and, therefore, subject to our laws, but they are aliens.

These persons may or may not take out citizenship papers. They may or may not be eligible to naturalization. They may or may not be deportable according to the various conditions of their residence. As they are under our jurisdiction, we tax them. In some instances we have even let them vote. We may enlist some for our wars. We give their children free schooling. We give them rights in our commerce and let them ply their occupations as freely, as independently, as unrestrictedly as citizens. Under this plan we have been getting along pretty well.

Then something happens abroad. The roar of a totalitarian state is heard. There are signs of impending emigration. We take it as a signal to tighten up all along the line. We learn to despise totalitarianism in any form as a more or less uniform nation. Then we look around where we always look around when there is a suspicion of dissent in our country. We behold the alien in our midst and we behold the alien awaiting embarkation to America. We turn our legislative machinery into a grist mill and out pour antialien bills. We are shocked into action contrary to our national habits and contrary to our happy experiences. We have been faced with demands to prohibit any further immigration from any country for the next 5 or 10 years. We have been faced with demands to register every alien here. We have been faced with demands to deport every alien or give him the alternative of becoming a citizen. Indeed, under the stress of emotionalism we are acting strangely. Imagine, if you will, making American citizenship so cheap that we force persons into it.

It is time we did something about our immigration laws, but not these things. This is no new problem for me because I served on the advisory committee that recommended our present quota law. That was, as I remember it, work lasting many years.

I believe there are 60 bills in Congress today directed against aliens. This itself is not imposing as there are always 60 bills in Congress on every subject, and, indeed, it is a task keeping abreast of them all.

We must not lose sight of the fact, however, that some of these bills have made rather startling progress. One measure passed which provides for deportation of aliens believing in changing the American form of government or belonging to any organization which subscribes to such belief.

I think I know the feeling that prompted such a bill. The endeavor undoubtedly is to get rid of persons who, not citizens, constitute a threat to democracy. We have democracy, we love it, we have kept it through our use of the ballot box, and because our representatives remember their oaths, and we are likely to keep it in this manner to the end of time. A change in the American form of government is a very grave thing to contemplate. Remember, though, our Government is one of law.

Already before the Senate has considered this bill it is explained that constitutional lawyers disagree about the meaning of the expression found in the bill, "any change in the American form of government." It is at least debatable whether a person advocating the reorganization bill which just passed both Houses and became law would not fall under the ax of this alien bill and be deportable for his political views. Advocates of judicial reform might come under the same ban, if they chanced to be aliens. We must never forget that there have been times in our country in some of our States that the majority of the grown persons in it were immigrants.

We encounter the same difficulty when we set about to register aliens without registering ourselves. If it is meet that we should be fingerprinted let us all be fingerprinted. If one should carry a card, so should another. American passports are about all that is asked of Americans visiting or living in most foreign lands.

Because if an alien commits a crime we not only arrest him but we punish him and may deport him. Thus we have two safeguards against his conduct. Against our own we have but one. We do not deport citizens. America does not send her sons and daughters away. This is a blessed right, the right of an American citizen not to be banished or exiled. There are no St. Helenas for our people. We banish only aliens who have misbehaved. This is a strong preventative against alien misconducts. I have heard it said that a short time ago deportation of certain aliens meant their immediate conscription for service in the Spanish war; this I have not attempted to verify but I do know that the fear of deportation was always present in the hearts of aliens when their own countries were at war or contributing to one. Whether a real or fancied danger, the fear was real. To this fear we need add nothing. Registration only would open the door to abuse of civil rights, rights no less real to human beings no less human because they are only under the jurisdiction of, and not part and parcel, of our governmental structure. As one who sat in the civil liberties hearings month after month and learned that among all the lashes of involuntary servitude none had a greater sting than that of industrial spying, I cannot advocate any measure of restriction among aliens so great that it might, or could, make him cow before antilabor organizers and antisocial employers, their agencies and their spies or a racketeer labor leader with an anti-immigrant bias.

Compulsory naturalization is, of course, ridiculous. We do not want any shotgun citizens. Duress invalidates any proceeding, whether it be marriage, the signing of a contract, the making of a will, or the forced renouncement of allegiance to foreign kings and potentates. To make American citizenship anything but a prize to be competed for and earned only after a struggle is to cheapen it beyond words. I appreciate the fact that we should not lower our sights, but should make an alien measure up to our standards or get out. But if we do this by law, we shall have lowered our standards in the very act. We shall have held up citizenship as a bad-tasting medicine; we shall have labeled it as something to be resorted to under pain of banishment; we shall have made it the subject of threat. What then shall we have done to that abstract thing which our ancestors fought for so valiantly, and which, representing as it does constitutional and democratic government, we would protect with our very lives?

I am not discussing bills; I am discussing policy. One bill sets out to restrict immigration in whole. Right at the moment I am deeply interested in a family whose members are separated. The husband and father is here because he came here to a land of opportunity, came because he loved our country, and has recently applied for citizenship. We opened our gates to him gladly under our immigration quota, for someone very, very responsible had guaranteed him to be of high type and guaranteed further he would never be a public charge. His family are abroad. They are as anxious to be with him as your families are to be with you. They may expect to come soon under what is called, I think, second-preference quota. It is a relatively short process. Uncle Sam never wants to see again the baby-snatching cases—few, to be sure, but heartbreaking to those who went through them that occurred after our Chinese Exclusion Act and again after we made immigration from Japan almost airtight.

Now, along comes an alarmist and cries out: See, these countries are expelling their peoples in great numbers. Boats are making a file on the high seas toward our shores. We soon will be deluged with refugees. An emotional wave sweeps the country and we say to all foreigners, here is a 5-year moratorium on the pack of you. Families may be broken up. All the care with which you prepared for coming in under reasonable quotas must be swept away. This is no estray pound. Our labor must not be made to compete with you.

But wait. There is no appeal from labor to pass these anti-immigration and antialien bills. Labor has been preyed upon for support. Sufficient propaganda has been launched to convince the unions, if they are to be convinced. As chairman of the Education and Labor Committee I have no petition before me from labor seeking sharp exclusion of aliens, pointing to our unemployment lists and blaming immigration quotas for their existence, or offering to prove that Americans are being underbidden for their services. I believe that the worker is entirely sympathetic to the problems of his foreign brother who already is over here, and to those few who, in the normal run of things, may confidently expect to join kinsmen and friends in this land of opportunity.

I am making an appeal, if you please, not for but against radicalism. Let us be natural. We know that events are happening in many places in rapid succession.

When the refugee problem became acute I shared the feelings of President Roosevelt concerning preferences without alteration of quotas. Surely there must be some mercy somewhere for peoples who are expelled ruthlessly from countries which because of racial and religious intolerance will not have them longer.

Our quotas are low enough all around, in any event, and they are perhaps undoubtedly high enough.

We do need revision of our citizenship and immigration laws. There are some inconsistencies, and there were more before the Supreme Court of the United States spoke definitely to affirm citizenship by place of birth but a few days ago. We need a comprehensive, deliberative study so that those having security may obtain greater security and those who are insecure may have security, in keeping with the times and the trends. Impassioned and sudden legislation would be fatal to our whole structure of suffrage, citizenship, and immigration.

The Great American Theater "On Its Way"

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

STATEMENT BY KATE OGLESBY

Mr. WOODRUM of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following short statement on the Federal Theater Project:

Francis Wilson used to sing an amusing ballad that ran something like this:

> "I just dropped in, in an offhand sort of way;
> I haven't long to linger, I hadn't ought to stay;
> I don't know where I'm going, but I'm on the way."

This seems appropriate now to the Federal theater. The Government is in the show business the tune of many millions. It is a W. P. A. project known as the F. T. P.—Federal Theater Project. The director is Mrs. Hallie Flanagan, formerly of the department of drama at Vassar College.

The object of the F. T. P. was ostensibly to put back to work actors and other workers of the theater who were out of employment because of the depression. Someone who knew very little about the situation assumed that a state of unemployment was an emergency in the theater. During the winter of 1927–28, at the peak of employment, only 30 percent of the members of Equity were employed over 15 weeks. Equity is the actor's union, affiliated with the Federation of Labor. It sets the minimum salaries, conditions, and hours of work of the actors and protects them from infringements of these rules on the part of managers. It is necessary to be a member of Equity in order to be allowed to play in a professional performance on Broadway.

Accepting Equity's statistics as the best available, it therefore can be seen that the unemployment among actors was not an emergency caused by the depression but only an exaggeration of a permanent situation. With employment at its peak, there was no place nor any living wage for 70 percent of the actors of America. Even this did not take into account a large number of men and women, boys and girls, who were not members of Equity and who yet were haunting managers' offices and calling themselves "actors." It always has been an enigma how these people lived. One thing, however, was always certain: That too many years of a hand-to-mouth existence, with its enforced lack of work, unfitted them for normal jobs later on.

There was always a desperate need in the theater for some sort of clearing house for this talent, some plan by which the very talented could be given a chance early (for the theater is a race with youth) and some plan by which the rest could be led gently into other channels—channels giving them a living wage. Some such job—of a clearing house and reeducation of the people not fitted to make a living in the theater—the Government had at hand, but it did not see fit to consider so great a necessity. Instead, according to their own statistics, the Federal Theater Project took on 12,000 theater workers, 50 percent, or 6,000, of them "actors," and proceeded to build performances around them. It is questionable how many of these were accredited actors, as Equity's membership is 4,500. On the face of it, it would seem as though groups of young people who were eligible or partly eligible for relief were "tipped off" to the fact that the going would be good in the arts, and so made haste to register as "actors" and were automatically taken off relief and given salaries by the Federal Theater. Before this was done, nothing could have been simpler than to inquire whether they were, or had ever been, members of Equity. This was too simple a process, and a more complicated one of developing more actors to add to the future unemployed was chosen.

Granted that dues of $18 a year and a membership in Equity doesn't always make an actor, neither does being on a relief project, although it seems as though Mrs. Flanagan thought it did. Times change.

With Equity it is not so simple. To be a regular member assures an audience that the player has had at least 2 years on the professional stage. Mrs. Flanagan, not being of the professional theater, was doubtless accustomed to calling amateurs "actors." Some few are, but with them acting is an avocation, not a vocation, and therefore they should not have been eligible for relief as actors. Later the F. T. P evidently found itself embarrassed by this situation, for newspapers carried the message that "W. P. A. headquarters will clear its rolls of actors—who never acted." It is an interesting commentary that in the Federal Theater strike in May of this year no Equity member took part.

No one can possibly have any criticism of relief for anyone who is in distress. Relief in New York averages about $17.40 a month per person. Digest the following paragraphs and see for yourself what it means to transfer anyone from relief to the Federal Theater—and what it costs to keep an actor "acting."

Instead of relief at $47.40, a salary of $104 monthly began with the transfer to the Federal Theater organization. This remuneration goes on whether those chosen are acting, rehearsing, or just sitting. Rehearsals with hundreds of actors on salary go on indefinitely. "Indefinitely" is used discriminately. Two examples are typical. One play started rehearsing in December and hoped to open in June. A children's-theater group rehearsed several months then changed the play and began rehearsing again.

Katherine Cornell is credited with saying that nothing is such a menace to the theater as inferior acting. The Federal Theater discovered this fact and found it necessary to hire actors of standing and not on relief to play the important parts. The first ruling was that 10 percent could be taken on outside the relief rolls. At times this has come nearer to being 30 percent.

The same situation developed in other departments, and persons not on relief were hired as organizers, managers, producers, and members of office forces. Soon the unions took a hand in the game. The heads of the departments of the stage crews were raised to $130 a month. And the Government established a 4-hour working day. In some cases this necessitated a double crew.

There has never been a direct statement of the number of persons not on relief who have been hired on this project, and the total amount paid for their salaries; but it is a large sum.

Now, actors can't just act. So theaters are rented, heated, cleaned, and run—theaters for 6,000 actors. It has been stated that the entire gross receipts of the F. T. P. are not sufficient to pay even the rent of the theaters. Scenery is designed, executed, and trucked at union rates. Costumes are designed and kept in order. Offices and rehearsal rooms are rented, cleaned, and manned. And part of this force, also, is made up of nonrelief workers.

Many of the players have paid understudies. To have understudies for important parts is usual; but there are understudies in the Federal Theater for actors who have no lines to speak. Such actors used to be known as "extras." It is current gossip that in one production the stage manager had difficulty persuading the extras to stay in the theater until their part of the show was over. They didn't think it worth while. An endowed theater without morale!

There is also a plan providing for vacations with pay for all who have been at work on salary since January 1, 1936. They are allowed 2½ days for each month's work, even if that meant only 4 hours a day on the job.

Winning Back the Road, has also proved rather costly. Carrying scenery from place to place, paying railroad fares for actors and crew, and making each person in the company an allowance of $3 a day for personal expenses, is not cheap. One report states that at the first performance in Richmond of the traveling

company presenting Jefferson Davis, with 29 players, there were 153 paid admissions at 25 and 55 cents.

And this isn't all. There is a publicity account. Besides general publicity, it was found necessary to pay for regular ads in the newspapers, so much an inch. Publicity is very expensive.

Now, add up for yourself what it costs the Government (and you) to keep an actor "acting." You will be surprised. Acting is a luxury at best, and should be an avocation for all except the few whom the gods have chosen. The world is overstocked with mediocre art. If the Government plans to subsidize the theater, let it give support to the best in the theater. It might prolong the runs of the most artistic and most popular plays, keeping the original casts, by guaranteeing the expenses and selling the seats at such prices that all could attend, and paying the deficit.

On one of the printed folders of the Federal theater project there is a naive statement by Mrs. Flanagan: "The New York Federal theater project is securing excellent cooperation from Victor Ridder and Mr. Nurn, from the Procurement Bureau, and from the United States Treasury." Last but not least, the United States Treasury! Some of it may come in on your milk bill.

Why has our Government elected to open the back door to an already overcrowded profession? Why has it elected to set up a new semiprofessional organization instead of using established channels? The professional theater had every facility to carry on by itself with a little aid from the outside. A guaranteed audience is all it ever asks. Guarantee an audience to cover expenses, and the theater will hire actors and will hire the ones who should stay in the theater. The theater is like the dry-goods business. An actor sells himself wholesale to the manager, who must then retail him to the public. If he does not sell in the theater, it does not mean that he may be very valuable somewhere else. But he should take his wares to the other markets.

Into the midst of this "abundant life" of the theater drops a letter from the Actors' Church in New York, asking for aid for a sick and unemployed actress, "Our money has been stretched to the limit taking care of other needy actors and actresses." Yet there are 6,000 actors in the Federal theater and there were only 4,500 members in the Actors' Equity to start with; and recently Mr. Frank Gillmore, president of Actors' Equity, stated that only 751 members of Equity were employed in the Federal theater. Where did the Federal theater project dig up the other 5,249? The Federal Theater Project is a grand amateur dramatic recreation program—combined with a school for actors—but can truly not be called the legitimate theater.

Theodore Roosevelt said there was a "lunatic fringe" to every party. Is the Federal Theater the lunatic fringe of the W. P. A., or are its fantastic doings only indicative of all the relief departments of the W. P. A.?

The Government has been in the "show" business before. Hundreds of actors toured the country during the war. They played in the Liberty Theaters. These 36 theaters the Government owned and ran in the camps distributed over the United States. The entrance fees were set at 25 and 50 cents. Here was a large potential audience, but not a guaranteed audience, and yet these theaters were booked every week on a regular percentage basis. The performances had to be seen and passed on by a committee under the War Department. There were many managers anxious to send out companies. The companies stopped en route from one camp to another at any city or town where there was an available place in which to play, in order to eliminate the long jump and the attendant high railroad fares. Good performances prospered; mediocre ones died a natural death, as they should. At the end of the war the Government, as well as most of the touring companies, showed a substantial profit, not a deficit. And yet the same objectives as those of the Federal Theater were arrived at: More actors hired, good performances at low cost, and road tours. This was brought about by encouraging established managers who knew their business. Another idea—too simple to be used by the Federal Theater.

Burns Mantle, dramatic editor of the New York Daily News, says that there are too many actors now—most of the unemployed "are, unhappily, the intermediates—neither good nor very bad, and there just isn't any place for them in the modern theater's schemes. The sooner they are sufficiently discouraged to seek work in other lines of endeavor, the better it will be for them, for the theater, and for the Government."

Teach them a commercially valuable byproduct while there is yet time, or put them back on relief. If they belong in the theater, the artists among them will band together and, having a bed and a biscuit, they will somehow manage to bring forth something of interest and value to the theater through the real artist urge. They will beg, borrow, or steal a stage and a setting, and with "a chair, a table, and a passion" they will find their audience.

As things are, it is to laugh, but it also is to weep. When the supply of toys has given out, Santa Claus will have to make useful presents. Tastes adjusted to the excitements of taking part in public performances will have hard sledding. Actors who are being encouraged to stay in their always overcrowded profession will find that a theater that has to earn its keep has small place for them. No place to go but back to oblivion and to readjustments when the masquerade is over and the curtain is down.

KATE OGLEBOY.

The Amazing Silver Program

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

STATEMENT BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE

Mr. GURNEY. Mr. President, I ask to have printed in the Appendix of the RECORD a statement made by the very able Senator from Delaware [Mr. TOWNSEND] on the subject The Amazing Silver Program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Chairman Eccles, of the Federal Reserve System, states that silver certificates are no better than greenbacks, that there is no monetary justification for any kind of silver program, that the purchase of foreign silver is "wholly and totally unnecessary," that the silver program is "very inflationary" in tendency, and that there is nothing which will ultimately destroy the American silver industry so surely as the continued purchase of foreign silver.

The Secretary of the Treasury has never endorsed the present silver program.

The Secretary of the Treasury has testified he has no way of telling whether or not he is buying Mexican silver.

The Secretary of the Treasury has testified that he is opposed to all subsidies.

The money this Government has spent for silver since the Silver Purchase Act was passed is enough to pay all the expenses, of the legislative, judicial, and executive branches of the Federal Government for more than 24 years, believe it or not.

Government experts, including Marriner S. Eccles, have testified that silver is useless to us for the settlement of international balances, and so we may never expect to dispose of the huge hoard of silver we have already built up.

The administration now has the power, delegated by Congress, to make $12.92 of currency out of a piece of silver really worth only a dollar.

Although one object of the silver program was to raise the price of silver, the world market price, even though artificially supported by the Treasury, is today lower than it was when the Silver Purchase Act was passed in 1934.

This country's silver program has completely reversed the flow of metal since 1933 and has made us a large importer instead of an exporter of silver.

At a time when there were over 500,000,000 standard silver dollars in coin reposing in dark Treasury vaults in 1934, the administration commenced to mint more of those coins—believe it or not.

Although the silver program was designed to increase the monetary standing of silver throughout the world, it has resulted in and actually financed the complete abandonment of the silver standard abroad.

Over four-fifths of the silver bought by the Treasury to date has been foreign silver.

The Treasury now holds almost as much silver sterile as it holds as backing against silver certificates.

In 1934, before the Silver Purchase Act was a demonstrated failure, 2,560 economists were polled on bimetallism, and only 31 were found who favored it, believe it or not.

Although the Treasury has paid out over $1,000,000,000 for silver, there is almost as much silver required under the terms of the Silver Purchase Act today as when the act was passed.

There is no way of telling how much more silver would have to be bought to fulfill the terms of the Silver Purchase Act of 1934.

Although silver with a "monetary value" of about $2,500,000,000 has been acquired under the present program, the actual increase of silver dollar coins in circulation has been less than 12,000,000 or not even half of 1 percent of the purchases.

Although the London silver agreement, which had for one of its objects stabilization of the price of silver, was sought and signed by this country, subsequent action by this country produced violent disturbances in the silver market, and even crises in foreign countries.

Until June 30 the administration has the power, which it has long had, to revalue silver and bring to an immediate end the Silver Purchase Act, without further action by Congress, believe it or not.

Georgetown University Sesquicentennial

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

ADDRESS BY ATTORNEY GENERAL MURPHY

Mr. O'MAHONEY. Mr. President, the University of Georgetown celebrated its sesquicentennial this year. Upon that occasion the Attorney General of the United States, Hon. Frank Murphy, delivered a notable address at the Georgetown Law School upon the Lawyer and the Economy of Tomorrow. It was a summons to the members of the legal profession to meet the opportunities and the responsibilities which the present crisis offers them.

I deem the address well worthy of the attentive study of all who are so fortunate as to have the opportunity of reading it. I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LAWYER AND THE ECONOMY OF TOMORROW

It is not given to many institutions to enjoy the distinction that Georgetown University has borne for a century and a half. It came into being under the guidance of a noble Christian priest and patriot at the very time that a group of far-visioned men, also Christians and patriots, were founding the American Republic. The university has grown and prospered in company with the Nation. While the one has become one of the great nations of history and the embodiment of an enduring democracy, the other has developed into an educational institution known throughout the country, alike for its intellectual vigor and its spiritual ideals.

There is more in this parallel than a mere historical coincidence. It reflects a relationship that has profoundly affected the character of both the Nation and the school.

Only because the United States has remained a free nation has it been possible for Georgetown to become the distinguished hall of learning that we honor today. And this democracy in turn owes its continued existence, in a large measure, to the fidelity and ability with which its educational institutions have trained the youth of the Nation to bear the responsibilities and welcome the privileges of a free people.

As a vital link in our educational system, Georgetown University has recognized that democracy, like any other system of life, is not self-perpetuating. Just as autocracy, which is founded on force, must sustain itself by resort to force, so democracy, which is more nearly founded on agreement and a faith in human reason, must sustain itself by searching through reason and mutual agreement for the means to strengthen individual liberty and make it, as nearly as possible, complete.

It is because democracy operates through reason, rather than force, that the lawyer's role has been of such tremendous significance from the very outset of our national history. For it is the lawyer who translates the reasoned standards of social conduct into the rules by which we live. And, on a more ultimate plane, it is the lawyer, under our governmental system, who measures the legislative acts of the people's representatives against the fundamental principles of our organic law.

For the century and a half that America and this university have grown together, we have succeeded, generally speaking, in protecting our political freedom and civil rights.

And for most of this century and a half we also enjoyed quite generally the benefits of economic freedom—freedom from want and the fear of insecurity. It is only of late that our economic life has changed. But the change has been so vast, so deep-seated, that now, to preserve democracy, we are compelled to solve an entirely new problem—a problem new in kind and incredibly new in size.

It is no longer the simple matter of discovering and exploiting new natural resources. That day is gone. Our vastly more difficult problem today is to discover new fields of endeavor, to develop wisely our existing resources, and to organize the economic machinery in such a way as to insure a more stable and equitable distribution of its products.

The cost of our failure so far to solve this problem has been demoralizing misery and suffering for millions of the least fortunate of our people, demoralizing uncertainty and fear for the rest. History suggests that the cost of our continued failure to solve it may be something far worse—the destruction of the people's faith in the ideal that has always been the symbol of civilization—the ideal of individual liberty.

Beyond any question that faith is the most precious thing that we possess or that any people could possess. And because that is so, we must solve the economic problem. We must recognize that, being a new problem, it demands a new approach, a new orientation, both of individual and of national thought. There must be a new attitude of wise and sober restraint and a ready admission that private interests must be subordinate to public welfare. We need on a national scale the kind of conscience that asks not merely, "Will this venture or this method profit me?" but also, "Will this in the long run profit society?"

Whether or not that kind of attitude shall become a characteristic of our society, and how soon it will do so, rests to an almost unbelievable extent with the lawyer. As Woodrow Wilson once said, "We can go only as fast as the legal habit of mind of our lawyers will permit."

At first glance that statement may seem extravagant. After all, in a democracy it is the people themselves who ultimately decide all questions. But, looking closer, the sobering truth of President Wilson's analysis becomes apparent.

It is the lawyer who shapes the tools of social progress—the rules by which the will of the people is concretely expressed. Lawyers helped write into law the public's desire that men and women be insured against unemployment and old age. They framed the act that gave legal recognition to the worker's right of collective bargaining. They drafted the legislation under which an effort has been made to protect the farmer against destructive fluctuations in the price of his crops. They wrote the laws that enlisted the National Government in the struggle to replace the slums with decent homes.

By the care and precision, or the lack of it, with which he shapes these tools of progress, the lawyer has it in his power to make a wise and wholesome policy succeed or fail. In terms of generations, of course, his role in shaping governmental policy can be only temporary. But in terms of a decade or less, the lawyer may be responsible for the welfare and happiness of a whole nation.

But the lawyer in our society is more than a toolmaker. He is also an engineer, a practitioner of the art of government. One could almost say with accuracy that, of all professions, the lawyer is the engineer. Our Presidents since the founding of the Union represent an almost unbroken line of men whose profession was the law. There is hardly a judicial post of consequence that is not occupied by a lawyer. Persons trained in the law are found in many of the highest administrative offices. In most departments and agencies a substantial number of the subordinate staff are lawyers. And it is common knowledge that since the foundation of our National Government a majority of our representatives in the Congress have been lawyers.

The explanation, of course, is simple. It is not that the American people believe those who enter the profession of law are necessarily wiser or more capable or more honest than others. Obviously lawyers are not a superclass, and obviously a training in the law does not immunize any man against human weaknesses any more than it guarantees great learning or wisdom.

The answer is simply that ours is in fact a government of law and not of men. And because that is true we do not ordinarily look to the warriors or the propagandists or the businessmen to direct public affairs, but to those who are schooled in the law, who understand its origins and its devious ways, and who are skilled in framing law as an expression of the popular will.

There was a time, however, when the lawyer bore an even broader responsibility, when society did more than give him the major part of the task of framing and administering the law. Having bestowed these obligations on him, it looked to him also for counsel in determining what the law should say.

So much was this true that Rufus Choate once said the lawyer "shared in the dignity of founders of states, of restorers of states, of preservers of states." "While lawyers," he said, "and because we are lawyers, we are statesmen."

But Rufus Choate lived 100 years ago, and in the course of that century the status of the legal profession, like so many other things, has undergone a considerable change.

As far back as 1910, Woodrow Wilson, then president of Princeton University, was admonishing the American Bar Association that "society has lost its one-time feeling for law as the basis of its peace, its progress, its prosperity. Lawyers are not now regarded as the mediators of progress."

Just 5 years ago, Mr. Justice Stone declared that "candor would compel even those of us who have the most abiding faith in our profession, and the firmest belief in its capacity for future usefulness, to admit that in our own time the bar has not maintained its traditional position of public influence and leadership."

And among thoughtful people, there is little doubt that what Wilson said in 1910, and Mr. Justice Stone repeated in 1934, is equally true in 1939.

Why has this come to pass? Why has the lawyer lost prestige?

Certainly it is not that the lawyers of today are less able, or less honest, or less industrious. As a matter of fact, it is likely that with our present educational facilities we have more good lawyers, relatively speaking, than the country had a century ago. And I know of no reason for believing that the industry or the personal integrity of the members of the legal profession have gone into a decline in the last 100 years.

We must look elsewhere for the reason.

We will find it, I believe, in the same transition that has revolutionized our economic life and left us with a huge task of economic reconstruction. We will find it in a new kind of

economic system—a system of mass production and vast corporations that has had the effect of reducing not the lawyer's professional ability or competence but his ability to know the people and their needs.

Before the Civil War, the average lawyer was in a very genuine sense a general practitioner. He drew his clientele from many walks of life and thereby acquired an education in public affairs more diversified and more real than any that he might obtain from books and classes. In the course of the day's work, he was likely to serve both a laborer and his employer and to deal with one case involving a few dollars and another involving thousands. His work was the liberal education that any man needs to keep in tune with the times.

Move on a few decades and the picture changes radically. Instead of the general practitioner we find, in rapidly growing numbers, the legal specialist—the corporation lawyer, the patent attorney, the tax expert, the labor attorney, the specialist in this field and that. We find an increasing number of lawyers deepening their knowledge in one particular phase of the law at the cost of a broad knowledge of the whole field of the law. We find their clientele restricted to persons engaged in one particular branch of activity, and their contacts with a cross-section of the people greatly reduced or almost entirely eliminated.

In short, we find vast social forces over which the individual lawyer—in fact, the entire profession—has little control, steadily cutting down the opportunities for a liberal education that enabled the lawyer of another day to enjoy a profound influence on the thinking of his fellow men in other walks of life.

Inevitably, as a result of this process, the legal profession has developed a tendency to become a trade or specialty, a profession in which the object is mainly to provide legal service and advice in large volume and for high fees. Let me quote again from Mr. Justice Stone. "The successful lawyer of our day," he said, "more often than not is the proprietor or general manager of a new type of factory, whose legal product is increasingly the result of mass-production methods. More and more the amount of his income is the measure of professional success. More and more he must look for his rewards to the material satisfactions derived from profits as from a successfully conducted business, rather than to the intangible and more durable satisfactions which are to be found in a professional service more consciously directed toward the advancement of the public interest."

It was probably inevitable, also, that as the profession placed more and more emphasis on specialization and material gain, many of its members have given less and less attention to cultural and spiritual values. It is an unhappy truth that when men begin to concern themselves primarily with the size of their income, the Sermon on the Mount and those other matters we refer to as the "finer things in life" seem to recede into the distance. I recognize, of course, that this has been true no more of the lawyers than of our society as a whole.

These factors—specialization, the tendency to emphasize material satisfactions over public service, and the slurring of spiritual and cultural values—I believe are the primary reasons for the legal profession's lowered estate.

There is another reason that we should not overlook. It is the fact that while these things have been happening within the legal profession, other professions have been climbing upward. Education, engineering, business administration—all of them have been steadily gaining in stature and coming more and more into the public eye. And by gaining in stature, they have inevitably taken over some of the responsibility for leadership that once belonged to the lawyer.

This, then, is the situation. What is to be done? Are we to make an effort to turn back the clock? Shall we make a stand against specialization in the legal profession?

Obviously that is not the remedy. Even if men would they cannot undo the natural development of the economic system. The conditions that have brought about specialization are here to stay, at least until economic processes or public policy change them.

Yet, we are in the midst of an era of tremendous reconstruction—greater, perhaps, than any period of transition in our history. Steadily, if slowly, we are moving from the boom-era economy of the post-war days, with its recklessness and disregard for the future, toward the more stable economy that we must devise if our system is to be saved. In this transition the legal profession, I am sure, has no desire to devote its great talents to opposing reform and defending the status quo. Society needs that talent, exercised in wise statesmanship and calm leadership, to make the transition smooth.

It needs men who can resolve the conflict between the need of industry for freedom from unnecessary restraint and the desire of the people as a whole for that reasonable measure of governmental control that will wisely regulate the private use of economic power and smooth out the devastating fluctuations in the economic cycle.

Society needs men who can interpret and make effective in law the desire of the people to protect the farmer against anarchy in the market for his crops.

It needs men who can wisely lead the way to a broader and more effective system of social security.

It needs the impartial type of mind that can show us how better to preserve the just rights both of the laborer and the employer without damaging the mutual confidence which should inhere in their relations.

It needs men who can reconcile the views of those who believe that government must take action to protect the health of the underprivileged and those who fear for the rights of the medical profession.

It needs statesmen and diplomats who can guide us in our search for the proper balance between public and private works, for a relationship between government and business that is sound and mutually beneficial.

If ever there were tasks that called for the skilled and sympathetic attention of legal minds in touch with the public needs, these are the tasks. They are not tasks for lawyers alone, of course. To be successfully completed they must be done at the willing hands of a people united into one great partnership for the preservation of democracy.

But if these tasks are to be completed on time and in the right way, the legal profession must meet its responsibility as it once did.

How shall it do that? I cannot prescribe a cure-all or guarantee a treatment. No more, I believe, can any living man.

But of one thing I am sure as anyone can be with regard to so intangible a problem. It is that the lawyers themselves possess the means at least to halt the trend that has so seriously reduced their value as servants of democracy.

They cannot, of course, go back to the old days when the legal profession was primarily a group of general practitioners. They need not do so.

They do need, very urgently, to encourage among themselves a more careful, more sympathetic, and more earnest familiarity with the world around them. They do need to take care that their study of social events and human problems does not end with their college days.

In their study, and in their work, they do need to remember that the lawyer is a member of a learned profession and a servant of the public. He is not an entrepreneur. His tradition is not one that supplies advice as to how obligations may be avoided, or how the laws of society may be flouted. In its noblest traditions, the legal profession is one that advises clients how to make their behavior conform with the law, and that helps to make the law conform with the needs and the larger interests of society as a whole.

In short, the lawyer must again be primarily a servant of society. His eyes must be fixed less on private gain and more on the spiritual satisfactions which derive from a disinterested public service. With skill and intelligence and a devotion to the highest professional standards, he must combine a fine concern for what Bismarck once spoke of as the "imponderables"—the things that purify and uplift the human personality.

So doing, the lawyers of this democracy may come once more to be the "mediators of progress," the ultimate architects of an intelligently organized social life.

Draft of Capital in Time of War—Foreign Policies

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

RESOLUTIONS OF THE BROTHERHOOD OF RAILROAD TRAINMEN

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted by the Brotherhood of Railroad Trainmen in support of the proposal to draft the use of capital in case of war, and in support of the President's foreign policies.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION ON WAR PROFITS

Whereas wars take great toll in human life and bring untold suffering to the common people, while in the past it has made huge profits for war profiteers; and

Whereas Congress has previously subscribed to the conscription of human life for war and should also have conscripted wealth and put an end to war profits; and

Whereas there is no logical reason or objection to a law conscripting wealth in time of war; and

Whereas Congress has as much power to conscript wealth as it has to conscript men; and

Whereas President Roosevelt, in his message to Congress of January 28 of this year, endorsed such a plan; and

Whereas the conscription of men and not the conscription of money would be to the benefit of a very small percentage of the

people and to the detriment of a vast majority of the people: Therefore be it

Resolved, That the Brotherhood wholeheartedly endorse the position of President Roosevelt in urging conscription of wealth in time of war; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, to the Members of Congress, and to the press.

RESOLUTION ON PEACE AND FOREIGN POLICY

Whereas we deplore the fact that nations are now seeing fit to make the largest peacetime military appropriations in history; and

Whereas we deplore the destruction of labor unions and civil liberties in nations that have corrupted education and imposed mental and physical tyranny upon their people while attempting to glorify war and aggression against peaceful peoples; and

Whereas wars take great toll in human life and bring suffering to the common people while making huge profits for war profiteers; and

Whereas Congress conscripts human life for war and should also conscript wealth and put an end to war profits; and

Whereas on October 5, 1937, President Franklin D. Roosevelt wisely urged that the American people and other peaceful peoples and governments should "quarantine the aggressors"; and

Whereas the President then proceeded to institute such a policy by securing the cooperation of all the American countries in the formation of an antiaggresion bloc, coupled with the exchange of goods on a reciprocal trade basis in the spirit of the good neighbor; and

Whereas in his opening message to the Seventy-sixth Congress the President made a declaration of American foreign policy that received the overwhelming approval of American citizens and of peoples from other countries who, bereft of democratic leadership, look to our own land for guidance, which declaration was as follows:

"Obviously they—the democracies—must proceed along practical, peaceful lines. But the mere fact that we rightly decline to intervene with arms to prevent acts of aggression does not mean that we must act as if there were no aggression at all. Words may be futile, but war is not the only means of commanding a decent respect for the opinions of mankind. There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people.

"At the very least, we can and should avoid any action, or any lack of action, which will encourage, assist, or build up an aggressor. We have learned that when we deliberately try to legislate neutrality our neutrality laws may operate unevenly and unfairly—may actually give aid to an aggressor and deny it to the victim. The instinct of self-preservation should warn us that we ought not to let that happen any more"; and

Whereas the President has since commanded the respect of the world by urging the settlement of all international differences around the conference table, and the immediate effect of his message has been to stay the aggressors, to put new heart and courage into the democratic nations: Now, therefore, be it

Resolved, That the Brotherhood of Railroad Trainmen, in convention assembled, endorses wholeheartedly President Roosevelt's foreign policies and his peace program, which, as he puts it, consists of utilizing "many methods short of war" to stop aggression; and be it further

Resolved, That the Brotherhood cooperate with other organizations who are supporting such a peace program as herein outlined, to the end that American democracy, in which labor particularly has a vital stake, shall be fortified against war by helping to keep war out of the world; and be it finally

Resolved, That copies of this resolution be sent to the President of the United States, the Members of Congress, the press, and that the resolution be published in full in the Railroad Trainman.

Jobs—the Paramount Issue in America

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

ADDRESS BY JOHN CECIL

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD a talk made by the Honorable John Cecil, president, American Immigration Board, 92 Liberty Street, New York City, before the Kiwanis Club of New York City, Hotel McAlpin ballroom, May 10, 1939, over the network of the Intercity Broadcasting System of that section. This address is most interesting and informative and I think deserves the attention of every reader of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The program of the American Immigration Conference Board is American. It is pro-American; it is not anti-Jewish, not anti-Irish, not anti-Armenian, not anti-Greek, nor to the detriment of any citizen representing any race, nationality, political or religious creed. There is not an iota of evidence covering any phase of our program which does not benefit the hyphenated American citizen as much as the native-born citizen.

I want to talk to you about a problem that is not 3,000 miles away. I want to discuss our own unemployment problem. "Jobs—the Paramount Issue" is my topic.

I am convinced that "America's way out" is to provide jobs for our own unemployed.

Evidence is plentiful that we cannot longer afford to take in the surplus and unwanted labor of the entire world.

STARTLING GOVERNMENT FACTS

Government figures recently released plainly verify the truth of this statement. In 1929 there were 37,700,000 available workers in America; today there are 43,000,000 available workers, an increase of 5,300,000 available workers in 10 years. In 1929 there were 36,100,000 workers employed in this country. Ten years later there are only 33,000,000 persons at work.

In other words, based on the last 10-year record, we are increasing our available workers by over a half million a year and decreasing our jobs by 300,000 a year. No nation can face such a situation and continue to import surplus labor from abroad. To do so will wreck us economically, politically, socially, and morally.

Recently Mr. Harry Hopkins, now Secretary of Commerce, testified before a congressional committee that there were as many as 20,000,000 Americans who were subsisting on public relief. He said that as many as 6,000,000 families were on public relief. In case you do not realize how many families 6,000,000 families are, let me point out it is 1 out of every 6 families in the United States, which, according to Mr. Hopkins, are all on relief.

TWENTY-SEVEN MILLION AMERICANS NEED FULL-TIME JOBS

More recently, Mr. Leon Henderson, New Deal economist, testified before a senatorial committee that "only"—and I quote his word "only"—ten and a half million Americans are totally unemployed. If we assume his unusually low estimate as correct—add to it, if you will, a varying figure of somewhere from ten to seventeen million other citizens who work intermittently and part time, depending upon the season of the year, and you arrive at the staggering figure of from twenty to twenty-seven million American breadwinners who are at this very instant in need of full-time jobs.

In making this statement I want to be well understood; it's not my purpose to come here today and blame any philosophy of government for this failure to put people back to work. I am simply stating the facts.

Jobs are the paramount issue in the United States today. Jobs are the "cure-all" for our National, State, and municipal social, economic, and political ills. Jobs will be the paramount issue in the political campaign of 1940, and on that issue we will elect a Congress and will elect a national Presidential candidate.

THE WAY TO STOP ALL FOREIGN "ISMS"

You ask me how to stop communism, fascism, and nazi-ism in America? Here is the way to stop all foreign "isms" in the United States: Put every person in America who wants to work back to work at decent wages at a job they can do and like to do, and you will stop communism, fascism, and nazi-ism dead in their tracks. Jobs are the key to American stability. Jobs are the very key to the perpetuity of the American form of government.

MILLIONS OF ALIENS AT WORK AND ON RELIEF HERE

But the sad fact is that while millions of our own people are out of work and are walking the streets unemployed, there are at least 4,000,000 legally and illegally entered aliens—citizens of foreign countries, for whom we have no responsibility whatsoever—at work in the United States. That statement has been made repeatedly on the floors of the United States Senate and House of Representatives over the period of the last few years. It has never been refuted.

The American Immigration Conference Board maintains, therefore, that economically there is no justification for importing to America at this time one potential shopkeeper, doctor, lawyer, workingman, skilled mechanic, or unskilled laborer while we are confronted with the most gigantic unemployment problem and the greatest relief problem ever known in the entire history of mankind.

Have you seen the recent survey released by the League of Nations, through a commission which had studied the world-wide unemployment problem? It discloses that as many as 70 percent of all unemployed in the entire world are in America, at this instant.

EIGHTY-THREE PERCENT OF AMERICANS SAY "NO OPEN DOOR"

In the April issue of the magazine Fortune, the results of a nation-wide survey made to ascertain the attitude of the American people toward opening floodgates to immigration, have been set forth. This survey, which was carefully made by experts, reveals that 83 percent of the American people are opposed to open-

ing the immigration doors. The survey stresses the fact that anti-Semitism did not enter into the voting. It states in unmistakable language that the matter was considered entirely from an economic standpoint, and that racial and religious matters were not considered.

In a more recent issue of Liberty magazine, Bernarr Macfadden has a signed editorial in which he said: "As long as there is a good American citizen on the unemployed list there is no earthly reason why we should be accepting prospective job-seeking citizens from other countries. We should protect our own homes first of all."

Now, I want to ask a pertinent question: What in the name of heaven is American citizenship worth anyway, unless it first provides the right to Americans to the jobs made available by American industry and American business?

Until we study the question we have the idea that immigration here has stopped. Under the immigration laws of 1921, and particularly under the Immigration Acts of 1924, quotas were established restricting immigration from certain countries, limited practically to Europe. The opinion has grown up that this series of legislation abolished immigration. That is far from the facts in the case. The net increase in population in the United States because of permanent immigration, since we passed the quota laws in 1924, has been well in advance of 1,000,000 persons.

OVER 22,000,000 IMMIGRANTS IN MY LIFETIME

Do you know that beginning about the year I was born—in the nineties—and continuing until the present time this Nation has received over 22,000,000 aliens? Only a small percentage of these have departed for their native lands. Most of them came here to make their stake and remained in America. This number of aliens who entered is a number almost equal to one-sixth of the present population of the Nation. Most of them were born in countries which today do not have even the semblance of self-government.

Is it any wonder that thoughtful people have begun to tremble for the preservation of American institutions and American standards of living? Is it any wonder that we are confronted with the problem of our own fitness as a nation to govern ourselves? Is it any wonder that we have the most gigantic economic problem of unemployment, and its companion problem of relief, known to man?

NOW WE ARE CONFRONTED WITH A NEW PROBLEM

There are millions of refugees now knocking at our doors clamoring "in the name of humanity" for the right to come here. You all know of their troubles. Minority pressure groups largely, but the humanitarian aspects of their case particularly, have brought about a full understanding by the American people of the plight of 9,000,000 human beings who must migrate from Europe.

The refugee problem, of course, is an old one. We have had it since the World War, but it now threatens to become America's most serious economic threat.

We have a grave responsibility—and it is our sole responsibility—to put 20,000,000 Americans back to work at full-time jobs. We have an inescapable responsibility to take 20,000,000 Americans off public relief and three and a quarter million American families off starvation wages of the Government dole. There is not an American who will deny that to find jobs for our own unemployed citizens is America's sole responsibility in this hour.

In saying this I want you to understand me fully. I am not without sympathy for the victims of the political machinations in central Europe, but, I must affirm, I have much more sympathy for the unfortunate victims of the American depression, my own countrymen, who are unemployed, hungry, and in dire want.

However humane may be the pronouncements of this administration for the political refugees of Europe, my compassion is greater for the economic refugees in the United States.

AMERICA MUST NOT ASSUME RESPONSIBILITY FOR ALIENS

I am looking at this question entirely from the standpoint of what I consider best for America. I want it to be understood; I have no prejudice against any people because of race or religion. I am not actuated by hate because of political differences with these people. I would like to see these refugees in a permanent home somewhere. We will never have world peace until a national home is provided for them. I have suggested it not only as their right but as an absolute necessity. I know that under the circumstances America cannot and must not assume responsibility for more of them. We cannot give away our jobs to foreigners and at the same time provide jobs for our own unemployed. We have not jobs enough for both.

Why should America be looked to for asylum for the unwanted labor of the entire world?

There are many sparsely settled, rich, fertile territories in the world to which these refugees could go if the great nations would combine to make such a territory available to them.

We have done our share in bringing here 22,000,000 aliens during my lifetime. Now, we have not jobs—neither have we further responsibility for more immigrants.

THIS IS THE TIME FOR US TO ATTEND TO OUR OWN BUSINESS

America has no greater business than to put millions of Americans back to work. This can best be done by insuring that American jobs shall go to Americans, and only Americans.

To continue to allow an influx of foreigners to come here at this time and usurp jobs belonging to our citizens, in my estimation, is a culpable offense and a rank injustice. Those responsible for bringing these job seekers here eventually will be held accountable before the high court of public opinion of the common citizens—the workers of this country.

In no other country are aliens allowed to enter and take jobs belonging to nationals, or to receive the relief benefits intended for citizens, no matter what the excuse for migrating may be.

My plea is that America may arise as a man, and demand laws of Congress which will insure that American jobs and relief shall be given only to Americans.

Every other nation has laws safeguarding jobs for nationals, and this administration and Congress is well aware of that fact.

IS AMERICA A "SUCKER NATION"?

Call the roll of all the nations of Europe, of North and South America; read the restriction imposed on aliens who seek to enter and usurp the jobs. The story is the same throughout the world. Only in the United States are foreigners allowed to enter and take jobs belonging to citizens.

In one midwestern American city there are actually more aliens employed in a single industry, than the number of Americans at work in all foreign countries combined.

If no further importation of foreign labor is permitted in this country from this time on, we will still be unable to give employment to every workman now here, or who will be born here for the next quarter of a century.

The United States will never get out of the depression; it will never provide work for its jobless; we will never take the millions off relief rolls until drastic legislative steps are taken to safeguard American jobs for Americans.

Foreign job seekers and potential workers, whatever their excuse may be, whether refugees or fortune hunters, must now be barred, if we are to get out of this depression.

REFUGEES ARE COMING BY THE SHIPLOAD

Refugees are coming into our ports by the shiploads. They are being rushed into employment with as little delay as possible, especially right here in New York City. They are coming under the quotas. They are coming under the permits of temporary visitors, the number of which has no legal limit. These temporary permits are extended time after time for the benefit of aliens who hold American jobs.

I make the statement without fear of contradiction—more refugees have settled in the United States in the last year than the number who permanently settled during this period in all the rest of the world.

I urge your support therefore for the bills introduced by United States Senator ROBERT R. REYNOLDS, of North Carolina, and Representative JOE STARNES, of Alabama, known as the Reynolds-Starnes bills. These bills are backed by the American Legion and by literally hundreds of religious and patriotic groups scattered throughout the Nation. These bills seek:

(1) To protect American labor and to provide jobs for Americans first by the enactment of legislation which will stop all immigration for a period of 10 years, or until such time as the Department of Labor shall certify that unemployment in this country does not exceed 3,000,000 persons;

(2) To provide for national defense by enactment of legislation providing for the fingerprinting and registering of all aliens in the United States, and also to provide for deporting any alien whose presence here is inimical to the public interest, or who engages in espionage or sabotage, or who is an alien criminal or undesirable, or who is illegally in the country; and

(3) To reduce the cost of government by enactment of legislation to provide for the immediate deportation of aliens subsisting on relief for a period of 6 months.

These bills undoubtedly will come up for vote in the United States Senate before Congress adjourns this summer. I predict that some form of remedial legislation will be passed during the Seventy-sixth Congress.

Jewish Refugees on Steamship "St. Louis"

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

ARTICLE BY JAMES M. THOMSON

Mr. CLARK of Missouri. Mr. President, I think every humane person in the United States has been interested in the terrible problem of the German refugees, especially those who are Jews, and particularly those who are on the steamship *St. Louis*.

I ask unanimous consent to have inserted in the Appendix of the RECORD the very able and eloquent discussion of that

subject by James M. Thomson, editor and publisher of the New Orleans Item and Tribune.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New Orleans Item and Tribune]

FOR MORE HELP TO THE HOMELESS AND HELPLESS

(By James M. Thomson)

In another column is a summary by Time Magazine of late stories of ships laden with Jewish refugees but turned back from American shores. I imagine that many other Americans who read this story are having something of the feeling of shame and regret that I felt as we printed the story from day to day in the newspapers and as I read Time's brief summary of this incident. I would not discuss it if I did not have the feeling that our own United States is overlooking a practical duty, not to Jewish refugees but to itself and to its own best traditions, because its people have failed to do all that they could have done.

Conditions are such in the United States, with millions of unemployed, that none of us want to see our wage scales broken down or to see more labor competition, that it may not be practical to take into this country all of the refugees from Europe who would like to come here. But conditions are such in the United States that it should be easy for the people of this country, if properly aroused, to raise from a hundred million to three hundred million dollars to aid these Jewish people in settling where they can be taken in.

For as I read these articles the problem which has confronted them in entering Cuba, Central and South American countries, as well as other countries, has been the problem of having enough money to insure their being taken care of until they establish themselves in some line which would be noncompetitive for the natives of these countries and to be helpful to them.

My own ancestors were principally Scotch, Scotch-Irish, and English, and most of them came to this country prior to the American Revolution; and I have never had the time nor the inclination to look closely into their reasons for coming. But they, along with nearly everyone else's ancestors who came to this country from Europe, came because they felt that they could enjoy more freedom over here and lead a better life than they could in the old country.

Whatever feeling of racial loyalty I have is loyalty to Scotland and the Scottish people. Let us suppose that some great government for purposes of its own had started out to exile the Scottish people—to run them out of their own country and to get up such propaganda against them throughout the world that no one in the world that is going through panic conditions would want to receive them, not because they are not a thrifty and useful people, but because they didn't want the competition of new peoples in lands where there was not sufficient employment for the people at home.

I don't believe that the Scotch people could take care of their own case under those circumstances, as well as could well-meaning people of other races. I don't look on this Jewish problem as a Jewish problem alone. It is the problem of all of us. I have felt that in the United States—the richest nation in the world—a Nation which has benefited most by being an asylum for refugees, that the people of old English, Irish, and Scottish stock should associate themselves, raise money among themselves, and should tackle this Jewish problem both with their own Government and with the other governments of the civilized nations of the world.

I don't believe it can be handled by the Jews, for they have not enough money and influence on their own account to handle it alone. What is more, they have met with the disagreeable and hampering propaganda which would not confront leaders of the types who are found in the Episcopalian, Methodist, Baptist, and other churches of our country.

The United States may not be able politically just now to change its immigration laws. But the old protestant elements in the United States have plenty of money to finance the settlement of many of the Jewish and European immigrants in the two Americas. Two questions arise. Have they the will to do it? Can they get the leaders interested to handle the job? All that I can do is to make this suggestion and to say that in my opinion it should be done, and that it is a reflection on the people who came to the New World and who have established great fortunes here that they should not furnish at least the leadership and put up the money to help solve the problem.

The Americas represent lands which have been largely taken away from the Indians. For one I am glad of this, for the Indians lived in a way that enabled these lands to support a very scant population and they were not cohesive and sufficiently advanced in the arts of progress and organization to survive.

The people who have made the most use and the best use of these lands have been immigrants from Europe. And among some of the most valuable immigrants that have come from Europe have been the Jews.

If we have no religious feeling in this great country, no sentiment about people who both gave us our Old Testament and our dominant religion, we should figure that the Americas have been made worth while because of European immigration and because a great part of that immigration represented sturdy, able, and intelligent stocks who came here to enjoy religious and political freedom.

If, with our money and intelligent organization, we could help successfully locate some millions of these European exiles on unused lands on the South American continent, we would be building it up, helping put its people to work in the development of their resources and we would be transplanting people to the Americas who would be forever grateful to the people of the United States because they had helped them in their hour of need.

It is ridiculous to discuss the question whether there is room in the Americas for a million, two million, or even five million of these people. There is room in the Americas for hundreds of millions of additional people. The slump in the world is a temporary slump. If Europe persists in destroying itself, the United States is committed to keep it from taking over and destroying either of the Americas. And the more able and intelligent people we have on these two continents the better off we will be.

I don't like to present my thought here on a purely practical basis. I like to think that there is enough love of liberty, enough sympathy for suffering humanity among the fortunate people of our country to make them want to do something to remove from our continent the stigma that attached by turning back homeless refugees from Europe. I know that our so-called Christian people are horrified by what has happened. I don't think that they have organized in the most practical and intelligent way to put a stop to what has happened.

If European countries are driving these people out and starting world-wide propaganda against them, they should be helped to locate where they can be located, and that, in my mind, is purely a question of determination, of organization, and money.

Many of us have talked about this thing and have written about it without doing anything about it, and it is because I believe something more should be done about it than has been done that I am registering my own opinion and the best thought that I have on the subject. To repeat, it is evident that existing machinery is not sufficient to solve this problem, and that something more should be done than has been done.

President Wilson and Colonel House

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

ARTICLE BY WILLIAM F. WILMOTH

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD one of the most amazing documents I have ever read on the behind-the-scenes events leading up to this country's participation in the World War. The document was written by William F. Wilmoth, a Washington, D. C., businessman, a keen student of foreign and domestic affairs, and a genuine patriot anxious to maintain his country's traditional policy of isolation. This document, I believe, merits the attention of every thinking American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENT WILSON AND COLONEL HOUSE

(By William F. Wilmoth)

The revolutionary reversal of American history and the established foreign policy of the United States was contrived by Col. Edward Mandell House, one of the most inscrutable characters in all political history. This fact is undubitably established by the colonel's own correspondence and the official record of England and the United States. These records show that Colonel House prevailed on President Wilson, the pacifist, to make belligerent utterances and moves against his own better judgment. Colonel House, an astute Texan with a great deal of money, indulged in national and international politics as a hobby. He engineered the nomination of President Wilson in 1912. Wilson later remarked that "Mr. House is my second self. He is myself independent of me. His thoughts and mine are one."

House dominated Wilson. He dictated appointments of ambassadors and of most of Wilson's Cabinet officers. Internal affairs of the United States Government were side issues with House. His main interest was centered in international politics, and he worked zealously for a league of powers founded upon Anglo-Saxon solidarity.

With the outbreak of the World War in 1914, House lost no time in giving expression to his ideas on this country's foreign policies. He records, "There were other things he (Wilson) could do which would be far more delightful in accomplishment, and would add even more to his fame. I referred particularly to his foreign policy, which, if properly followed, would bring him world-wide recognition. I found the President singularly lacking in appreciation of the importance of this European crisis. He seems more interested in domestic affairs, and I find it difficult to get his attention centered upon the one big question. Congress will adjourn now within a few days, and when it is out of the way it

is my purpose to make a drive at the President, and try to get him absorbed in the greatest problem of world-wide interest that has ever come or may ever come before a President of the United States."

Thus is revealed the startling attitude of Colonel House by his own admission. As early as November 8, 1914, when there was no thought of this country's entry into the World War, House continued prodding Wilson for a definite expression of the United States' stand on the European conflict. Wilson and his countrymen wanted peace. They desired strict neutrality at any cost. House, the internationalist, believed the European outbreak was definitely the concern of this country, an idea which even today is sweeping certain sections of the United States. His incredible diary entry quoted above was followed by this amazing statement, "I wanted to find out what his (Wilson's) views were regarding the Army. He did not believe there was the slightest danger to this country from foreign invasion, even if the Germans were successful. He talked as innocent as my little grandchild, Jane Tucker. He spoke with great feeling, and I fear he may give trouble."

House spent much time in England in conference with Sir Edward Grey and other members of the British Government and English leaders of opinion.

At the outset of the war, the British and French established a blockade of the sea, cutting off German commerce with the outside world. Germany retaliated with submarine warfare, sinking ships with cargoes for England. The English were seizing American cargoes destined for Germany and the Scandinavian countries and the Germans were sinking ships loaded with ammunitions and supplies for the Allies.

The American State Department was strongly protesting to England and Germany against this high-handed treatment of the commerce of a neutral nation. House counseled the British on the replies they should make and over the head of the State Department, dictated the despatches of the American Government.

Sir Edward Grey formulated a private code for use between himself and House, to keep their communication secret from the State Department and from the British Ambassador. House was not only exercising the powers of the Chief Executive but the functions of the Secretary of State. House wrote in his diary: "His (the President's) immediate entourage, from Secretary of State down, are having an unhappy time of it just now. He is consulting none of them and they are as ignorant of his intentions as the man in the street."

In February 1916 House, back in London, was "full of the idea of American intervention," according to no less an authority than American Ambassador Page, then in England, where he was certainly in a position to ascertain the inner workings between the United States and Great Britain. Page writes: "First his plan was that he and I and a group of the British Cabinet should at once work out a minimum program of peace, the least the Allies would accept, which he assumed would be unacceptable to the Germans, and the President would present his program to both. The side that declined would be responsible for continuing the war. Then, to end the war, the President would help the other side—that is, the Allies. Of course, the fatal moral weakness of the foregoing scheme is that we should plunge into the war, not on the merits of the cause, but by a carefully sprung trick." This was too much for even the pro-English Mr. Page. Colonel House reported to the President, "If the Allies will agree to the conference, and if Germany does not, I have promised for you that we will throw in all our weight in order to bring her to terms."

About this time, House relates: "He (Lord Kitchener) was very cordial when I put the question as to whether it would be of benefit to the Allies for the United States to come in on their side. He said, 'Nobody but a damn fool could think it would not be of benefit to us and I am surprised that any Englishman could question it.' "

On House's return to America, following the House-Grey agreement for intervention on the call from Great Britain, he wrote his friend Sir Edward Grey, British Foreign Minister:

"DEAR SIR EDWARD: After explaining to the President all that occurred at our conference, he wrote the cable I sent you on March 8. I added nothing, for it was a complete approval of what I had done. If the situation continues as now, and if Congress does not restrict him, everything will go through as planned. It is now squarely up to you to make the next move. Be assured, my dear friend, that I am thinking of you always."

The hesitation of the Allies greatly rankled House, for he wrote: "It is stupid to refuse our proffered intervention on the terms I proposed in Paris and London. If Germany refused to acquiesce in such settlement, I promised we would take the part of the Allies and try to force it."

Though rebuffed, House continued to press Sir Edward Grey by cable to give the word for the President to intervene. Sir Edward's replies were that the situation of the Allies made that action impracticable. House wrote after receiving Sir Edward's cable May 13: "I am disappointed that he does not rise to the occasion. For 2 years he has been telling me that the solution of the problem of international well-being depended upon the United States being willing to take part in world affairs. I am distinctly disappointed. We are running up against the incohesion of the British Government." He wrote Sir Edward, "The President has gone a long way toward placing upon this country its share of the responsibility for the future. I sometimes feel discouraged when the Allied Governments and press overlook the weight the President has thrown on their side at almost every turn of the war." "If Sir Edward had tried hard, he could scarcely have contrived anything which would more surely be a damper on the pro-English ardor of such Americans as myself."

House never received from Grey the anxiously awaited word for the President to intervene and America's entry into war was delayed for almost a year. The refusal of the Allies to accept House's plan of intervention and at the same time ignoring the State Department's continued protests against the seizure of American cargoes and mails was greatly embarrassing the President, who wrote House that something had to be done.

On May 17, 1916, House answered the President: "It has been apparent that when our difficulties with Germany were settled our difficulties with the Allies would begin, and the solution has disturbed me greatly. The more I see of the dealings of governments among themselves the more I am impressed with the utter selfishness of their outlook. Gratitude is a thing unknown, and all we have done for the Allies will be forgotten overnight if we antagonize them now. Nevertheless I am convinced that it is your duty to press for a peace conference with all you command."

Two days before House had written Grey:

"DEAR SIR EDWARD: We have been on the eve of a break with Germany so long that I have not written, as it seemed it must come each day. For the moment matters are quiet again, and unless Germany transgresses further there will probably be no break."

The facts were that Germany had been held to "strict accountability" and had yielded to every demand, and even the ultimatum that the United States had made for the respect of American neutral rights, while hardly a pretense, had been made of holding the Allies to a similar account.

The Anglo-French naval blockade of Germany and the North Sea attempted to cut off all trade between Germany and the neutral nations of the world. They held up American cargoes of food, cotton, oil, and copper, destined for Germany and even neutral Holland and Scandinavia, and the protests of the American Government went unanswered. They seized and opened American mails, blacklisted American merchants and manufacturers, while Great Britain and France received a continuous stream of ammunitions and everything they wanted from the United States, floated loans, and borrowed huge sums from American bankers, which was later repaid from the United States Treasury after this country had joined them in the war.

Spring-Rice, the British Ambassador, hoped that the Allies would make some concessions to the United States "before Congress meets" for "we are using this country as a base of supply."

American ships bound for neutral countries were compelled to go into allied ports for examination of the mails. Lansing complained that, "Important papers which can never be duplicated, rare documents, checks, money orders, are lost or delayed for weeks and months."

House records that at a conference with the President, "When we were discussing the seizure of vessels by Great Britain he read a page from his History of the American People, telling how, during the Madison administration, the War of 1812 was started in exactly the same way as this controversy."

The State Department under both Bryan and Lansing had protested vigorously against the seizure of American ships and cargoes by the Allies, but the effect was nullified by the interference of Colonel House or Ambassador Page, who advised the British Government to disregard the protests. Page made no secret of his bias for the interest of the British, against those of the Nation he represented and his contempt for the President and the State Department. House writes: "We dined at the Embassy in order that Page and I might have a quiet talk. My entire evening was spent in listening to his denunciation of the President and Lansing and of the administration in general. He thought the State Department should be cleaned from top to bottom. The President has no policy, he has lost the respect of Great Britain and that of the world. Lansing insults everyone with his notes." "What damn fool in the State Department," wrote Page to House, "supposed I was making agreements with any government." "In no event," wrote Lansing to House, "should we take a course that would seriously endanger our friendly relations with Great Britain. But it was nonetheless essential that the infractions of international law involved in the allied blockade could not be passed over, after assuming such a strong one in the controversy with Germany. Wilson must maintain American principles, as against Allied methods, otherwise American impartiality might fairly be called in question and the American position in future crises with Germany might be seriously weakened."

President Wilson in his proclamation of neutrality had said: "I venture, my fellow countrymen, to speak a solemn word of warning to you against that deepest, most subtle, most essential breach of neutrality which may spring out of partisanship, out of passionately taking sides. The United States must be neutral in fact as well as in name. It is easy to excite passion. Those responsible for exciting it will assume a heavy responsibility, for no less a thing than the people of the United States, whose love of their country and whose loyalty to its Government should unite them as Americans, all, bound in honor to think first of her and her interests. Every man who really loves America will act and speak in the true spirit of neutrality, which is the spirit of impartiality and fairness and friendliness to all concerned."

Here was the Government of a great Nation with two diametrically opposed foreign policies—one, open; the other, secret. The State Department, in charge of foreign affairs, endeavoring with all its might to maintain the declared neutral policy of the Government, while the President's "second self" was secretly plotting with foreign governments, with the aid of an American ambassador, to nullify that policy and to bring the country into war as an ally of one group of the belligerents.

During one of the crises over the British seizure of American ships and cargoes, House wrote the President that Page was greatly disturbed over the situation and he says the President replied, "That if Page was disturbed by the attitude of the State Department, he, Wilson, was disturbed by that of the Ambassador, that he did not enjoy having the work of the State Department, which emphasized the American point of view, referred to as that of a "library of lawyers."

House writes that while at the White House: "A large package of papers come from the State Department, marked 'urgent.' The President and I immediately got down to work. The State Department had written a long letter to Page concerning the 'Declaration of London' and its effect upon neutral shipping. This letter of instructions to Page was exceedingly undiplomatic, and I urged the President not to permit it to be sent. I suggested that he permit me to have a conference with Sir Spring-Rice, British Ambassador, and get to the bottom of the controversy, which he approved. I showed the Ambassador the letter the State Department had prepared to send Page. He was thoroughly alarmed over some of the diplomatic expressions. One paragraph, he thought, amounted almost to a declaration of war. We discussed the best ways and means of getting out of the difficulty. We outlined a despatch for this Government to send to Page, and then we outlined a despatch which he should send to Sir Edward Grey. We agreed to be absolutely frank with one another, letting each know what was being done." Of this incident, Professor Seymour says, "It would be difficult to find in all history another instance of diplomacy so unconventional and so effective." "Colonel House, a private citizen, spreads all the cards on the table and concerts [sic] with the Ambassador of a foreign power, the despatches to be sent to the American Ambassador and the Foreign Minister of that power."

The tension between the State Department and the Allies over the blockade and with Germany over the submarines continued. Great Britain claimed that to modify the blockade would be to surrender the great advantage the navy gave her of putting economic pressure on Germany, which in effect made the high seas British property, and the Germans contended that the submarine was their only weapon against the iron ring the Allies had forged around the Central Powers, with the purpose, they said, of starving them into submission. The last thing, however, that Germany wanted was war with the United States and had agreed to the American demand not to sink merchant ships, even of the enemy, without warning and providing for the safety of passengers, as required under international law, but refused to agree that the submarine was an illegal ship of war. It was the arming of merchant ships by the Allies that brought another crisis with Germany and at last the United States in the war.

In January 1916, Secretary of State Lansing had presented to the Allied Ambassadors a note suggesting that all merchantmen be disarmed, in return for which, by agreement with Germany, they would not be attacked without warning. Provisions would be made for the safety of passengers. President Wilson, following House's advice, rejected Lansing's proposal. The President, apparently influenced even to the point of adopting House's own language, wrote to Senator Stone, "For my own part I cannot consent to any abridgment of the rights of American citizens in any respect. The honor and self-respect of the Nation is involved."

There was insistence in Congress and among the people that Americans should be kept out of the war zone and off armed belligerent ships and they would not then be drowned, and the submarine dispute with Germany would lapse. Says Professor Seymour, "Members of the House of Representatives virtually served notice upon the President that unless he would warn American citizens that they must not take passage on armed ships, the House would issue such a warning in the form of a resolution." Such a resolution was actually presented by Representative McLemore, of Texas. "Champ Clark, Speaker of the House, led a delegation to interview the President, and told him that it would be carried 2 to 1." "Senator Stone, chairman of the Foreign Relations Committee, insisted that unless Wilson yielded, he would be repudiated by his own party." While the Democratic leaders in Congress stood firm, the President brought sufficient pressure on the rank and file to defeat the resolution. The President then demanded that Germany "give assurances that the submarine warfare against merchant vessels (whether armed or not) be conducted in such a way as not to imperil Americans traveling on the high seas."

In the period A. D. 1913 to 1919, the United States of America had three Houses of Government—the White House, the Congress House, and the real Colonel House.

This battle of the "Houses" showed which was the Power House, through the latter House was in England during this controversy.

On the return voyage, House writes, March 4, 1916, "The captain had delivered to me each day his Marconi messages. In them I find that the President and Lansing have gotten themselves into deep waters, brought about by their ill-timed proposals as to the disarming of merchantmen. I have received two wireless messages from the President, asking me to come direct to Washington." "In precipitating this controversy with Congress and making the situation so acute with Germany, I feel that the President and Lansing have largely interfered with my plans abroad." On March 24 a German submarine sank the French channel steamer *Sussex* on which there were American citizens, but no American lives were lost. This brought another crisis, and House was going to force the United States into a European war because the Germans had sunk a small French steamer in the English Channel. House writes:

"I am inclined to believe that he (Wilson) intends to make excuses for not acting promptly in this new submarine crisis forced upon him by the sinking of the *Sussex*. He does not seem to realize one of the main points of criticism against him is that he talks boldly, but acts weakly."

Mr. Wilson's every word and act from the beginning of the European war showed that participation in that war was as far from his mind as it was from that of Mahatma Ghandi's. He ridiculed the bloodthirsty speeches of the pro-allies in this country, who would drag the country into war, and said that some day to their confusion he would turn their words against them.

Professor Seymour comments: "The arguments of House produced no immediate effect on the President, who in his annual message to Congress refused to approve plans for a large reserve force and the principle of compulsory training." Wilson insisted that "any revolution in our established military policy would indicate that we had been thrown off our balance by a war with which we have nothing to do, whose causes cannot touch us." Thus House quotes the President on November 25, 1914.

House in London writes in his dairy May 30, 1915: "I concluded that war with Germany is inevitable, and on June 1, 1915, I told Plunket I was leaving for America and my reason for doing so. I said it was my purpose to persuade the President not to conduct a milk and water war, but to put all the strength, all the virility, and all the energy of our Nation into it, so that Europe might remember for a century what it meant to provoke a peaceful nation into war. Plunket wanted me to see some of the British Cabinet and talk with them before I left. He arranged for me to meet Lloyd George at 6."

Evidently House's belligerancy had been cooled by the sea voyage for on June 16, 1915, in a gloomy report to the President, he wrote:

"I think we shall find ourselves drifting into war with Germany. Regrettable as this would be, there would be compensations. The war would be more speedily ended, and we would be in a strong position to aid the other great democracies in turning the world in the right path."

Contrary to House's expectations (and hopes) Germany agreed to abandon or modify her submarine warfare, in accordance with American demands. This served to emphasize the controversy with Great Britain over the seizure of American cargoes and mails. The President cabled House of the "change that was coming over American opinion, because of British interference with neutral trade and expressed the fear that it might be impossible to prevent the passage by Congress of an embargo upon the shipment of arms."

The following is an illustration of House's methods. He records in his diary, June 3, 1915: "Lord Crewe (Acting Foreign Minister) and I lunched alone, in order to have a farewell talk about matters which could not be discussed before a third party. I read him the President's dispatches to me regarding the shipping controversy and urged him to impress his colleagues the necessity of straightening this out, provided we did not immediately drift into war with Germany. I told him the President was being criticized for writing one kind of note to Germany and demanding an immediate answer, and writing another kind to Great Britain and having no reply for months. I considered it necessary for them to prepare an answer at once to the note sent in February, concerning the stoppage of cargoes, and to hold it in readiness for delivery in the event it was asked for. On the other hand, I would advise the President not to ask for it until the German submarine controversy was settled one way or the other, and if it was settled by war, there would be no need for an answer, but if our differences with Germany were settled—then an immediate answer should be forthcoming. I spoke of how pressed the President was in this matter, and that it would not do to act in the future as they had acted in the past."

That the United States had not broken with Germany, caused bitter disappointment and recrimination against the President in England.

House records, August 6, 1915: "I arranged to meet the British Ambassador at the home of a mutual friend, Hetty Higginson. We met at Hetty's because we could do it without notice. We discussed cotton and the relations between Great Britain and the United States. I showed Sir Cecil the letter I wrote Page. I wished him to know that I felt strongly the injustice the Allies were doing the President of our people."

Page wrote House from London, July 21:

"We are in deep water with the Government. It is a curious thing to say, but the only solution that I see is another Lusitania outrage, which would force war." House wrote the President: "Page is in a blue bunk. So is Sir Edward."

House answered Page on August 4, 1915:

"Sir Edward and you cannot know the true situation here. I did not know it myself until I returned and began to plumb it. Ninety percent of our people do not want the President to involve us in war. They desire him to be firm in his treatment of Germany, but they do not wish him to go to such length that war will follow. He went the very limit in his last note to Germany. If the President had followed any course other than the one he has, his influence would have been broken, and he would not be able to steer the Nation, as he now is, in the way which, in the end, will be best for all. He sees the situation just as you see it, and I do, but he must necessarily heed the rocks.

"I am sorry there is anyone in England who thinks so ill of the President as to write A Merry Ballad of Woodrow Wilson.

"A year ago the Allies would have been content beyond measure if they could have been assured that munitions of war would go to them from here in such unrestricted volume, and they had known that the President would demand of Germany a cessation of her submarine policy, in regard to the sinking of merchantmen without warning, to the extent of a threat of war. What neutral nation has done so much?

"I outlined very briefly," House noted, "a plan which has occurred to me and which seems of much value. I thought we had lost our opportunity to break with Germany, and it looked as if she had a better chance of winning; and if she did, it would be our turn next. Therefore we should do something decisive now—something that would either end the war, in a way to abolish militarism, or that would bring us with the Allies, to help them do it. My suggestion is to ask the Allies, unofficially, to let me know whether or not it would be agreeable to them to have us demand that hostilities cease. We would put it upon the high ground that the neutral world was suffering along with the belligerents, and that we had rights as well as they, and that peace parleys should begin upon the broad basis of both military and naval disarmament.

"If the Allies understood our purpose, we could be as severe in our language concerning them as we were with Central Powers. The Allies, after some hesitation, could accept our offer or demand and if the Central Powers accepted, we would then have accomplished a master-stroke of diplomacy. If the Central Powers refused to acquiesce, we would then push our insistence to a point where diplomatic relations would be broken off, and later the whole force of our Government, and the force of every neutral, might be brought against them. The President was startled by this plan (records House). He seemed to acquiesce by silence. I had no time to push it further, for our entire conversation did not last longer than 20 minutes."

House lost no time in communicating to Grey his success with the President, in a "split letter," telling him that he was coming to Europe to confer and put his plan into operation. He says, "This was one of the most important letters I ever wrote."

"It is in my mind that (he wrote Grey) after conferring with your Government, I should proceed to Berlin and tell them that it was the President's purpose to intervene, and stop this destructive war, provided the weight of the United States, thrown on the side that accepted our proposal, could do it. I would not let Berlin know, of course, of any understanding had with the Allies, but would rather lead them to think our proposal would be rejected by the Allies. This might induce Berlin to accept the proposal, but, if they did not do so, it would nevertheless be the purpose to intervene. If the central powers were still obdurate, it would (probably) be necessary for us to join the Allies and force the issue. The President inserted the word 'probably'."

"I do not like the general outlook this morning," wrote House on November 17, 1915. "We are beset on all sides, both at home and abroad. By 'we' I mean the administration. The part that gives one faith in the course we are pursuing, is that all the critics differ violently among themselves as to the remedy. I have no doubt that it is the right course and will so prove itself, provided it is not made impossible by the extremists here and abroad. It is all very clear in my mind now what this country should do. The question is: Can the President do it unmolested? The convening of Congress puts a new and disturbing element into the situation."

This is a brief sketch of the role played by Colonel House before and during the Great War in which millions of men and women were so needlessly slaughtered. We entered that war "to make the world safe for democracy." We failed in our objective. Are we going to be dragged into another conflict? Is, after all, a foreign crisis, any of our business?

Mr. Berle Didn't Advocate It

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

EDITORIAL FROM MILWAUKEE JOURNAL

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Milwaukee Journal on Saturday, June 10, 1939. This editorial, entitled "Mr. Berle Didn't Advocate It," was printed by the Journal at Mr. Berle's request to correct certain erroneous ideas conveyed in a Journal editorial of May 28. Since I entered that editorial in the RECORD, I feel that in fairness to Mr. Berle this subsequent explanatory article should be printed.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of June 10, 1939]

MR. BERLE DIDN'T ADVOCATE IT

On May 28, under the head "Berle Outlines a Revolution," the Journal said: "The Nation ought to be grateful to Adolph A. Berle for making it clear that he is advocating a revolution in the American way of life and thinking." It followed with quotations from published accounts of a memorandum Mr. Berle had presented to the Temporary National Economic Committee. Mr. Berle now writes us:

"In that memorandum, I made the point that continued Government spending, to be effective, would mean that the Government would enter into many activities now supposed to be private; that I did not favor this; that in order to prevent the danger of this occurrence it would be advisable to extend the operation of our present banking system so as to take care of capital needs as well as commercial needs."

We are glad to make the correction that Mr. Berle did not advocate the revolution which he outlined as possible. The error was due to the fact that in published reports, one from a metropolitan newspaper of very large circulation and the other from one of the great press services, this brief sentence from the Berle memorandum was not included:

"If, therefore, wealth is to be created by creation of government debt, the scope of government enterprise must be largely increased." Then followed the sentence which standing alone was sensational: "Briefly, the Government will have to enter into the direct financing of activities now supposed to be private; and a continuance of that direct financing must be inevitably that the Government ultimately will control and own those activities."

In the Berle memorandum it is immediately added that: "This is certainly so fundamentally a change in the course of American life that the decision to make it should be taken for reasons other than relief of a series of temporary difficulties." This, if Mr. Berle will pardon us, might have been put more clearly. Read alone, it would be interpreted as advocacy of the change.

We are very glad that Mr. Berle did not advocate such a complete change from private to public ownership, for this would be serious coming from an Assistant Secretary of State.

Turning to what Mr. Berle says and recommends in his memorandum, we, nevertheless, find proposals which will seem to many to go far in the direction of substituting Government credit for private credit. The Berle position is:

"In a democratic organization of economy, the obvious end should be to permit and require private initiative to do as much of the work as it can, consistent with maintaining the national economy on a reasonably even flow, distributing the burdens and benefits meanwhile so that no class will be unduly favored, no class unduly burdened, and a maximum of opportunity be provided for everyone to use his abilities usefully with corresponding reward. It is the definite function of the financial system to make this possible at all times. The conclusion seems inevitable. Either we are on the eve of a change in our financial system, or we are on the eve of a change in our social system."

If government is going to undertake all that, it will not be an immeasurable distance away from the ownership Mr. Berle deprecates.

Consider one of Mr. Berle's three specific recommendations, "a bill to insure loans for small business." His idea, Mr. Berle told the committee, is contained in the Mead bill now in the Senate. The Mead bill would authorize the R. F. C. to insure loans of up to $1,000,000 for 90 percent of their face. If the insurance is to be effective, it must pledge the credit of the Government, and any loss suffered must ultimately be paid by the Government.

How different is this scheme of using the Government credit up to a possible total of many billions from "direct financing of activities by government"? A continuance of this, Mr. Berle said, "must be inevitably that the Government ultimately will control and own those activities."

The latter, Mr. Berle says he does not favor. But if what he does expressly favor is not a step and a long step toward what he does not favor, he has not made it clear in a memorandum many thousands of words long.

North, South, East, West

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

ARTICLE BY FRANK L. PERRIN

Mr. TOBEY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article from the Christian Science Monitor of last Saturday, entitled "North, South, East, West," and commend it to the public, regardless of party, race, or creed.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor]

NORTH, SOUTH, EAST, WEST—JUST AROUND THE CORNER

(By Frank L. Perrin)

There is no doubt that the people of the United States have displayed courage, patience, and supreme endurance in their desire to be released from the entanglements of what they have believed to be unavoidable economic and industrial distress. They have permitted themselves to be persuaded, to a degree which now appears to be fantastic and visionary, to believe that by the legerdemain invented by those of an undergraduate school of economists the dross of imposed lack, scarcity, and managed nonproduction could, in some way, be transmuted into the gold of prosperity and contentment.

But now there has come an awakening to the realization that those who offered the assurance that "just around the corner" would be found the opportunities and the fulfillment of their hopes have spoken out of turn or with a desire to deceive. The turning point, the elusive corner, has receded as the goal has been sought. It cannot be insisted by those who pointed the way and repeated stereotyped reassurances that those who hoped for the relief promised have hindered the leaders and their army of strategists and experts. Twice, once in 1932 and again in 1936, the right-of-way has been given to those who professed to be able to undo and rectify the mistakes which all agreed had been made. That there is doubt expressed now, after more than 6 years of patient wandering in the economic wilderness, is not due to a lack of faith originally, but to the realization that those who have led have themselves followed false guides or designing mentors.

Now, despite realized failures, the difficulties of reversing or retracing the course daily become greater. The juggernaut of false and destructive hopes, once it has gained momentum, moves swiftly in its course of destruction. It is not to those who man and guide it that we must look for admissions that they themselves have erred or been misled. Even those who have suffered and will suffer most from past mistakes may despair of escaping the consequences of their own folly. But we all feel the responsibilities imposed by the implied pledge we have taken to preserve for succeeding generations of Americans the heritage which we ourselves have so carelessly protected.

Realizing this, we are convinced that the time has come when, not counting the cost to ourselves, not conscious of the threat of lost pride or prestige, the trek back to economic and political fundamentals must be begun. Beyond the borderland toward which the war-battered economic trail is now leading lies the no-man's land of destroyed hopes and lost human safety. From it there is no returning by any process short of revolution. The ballot box, in that devastated territory, cannot be made the agency of free expression or the mouthpiece of an awakened people.

What of the way back? It will not be a pleasant or an easy journey. But it must be undertaken. It can be made. You say there must be leadership, that from the people there must rise up one able and willing to point the way and rally the forces of true democracy from the four points of the compass. Admitting this, it is reassuring to know that when the need is realized and the extremity recognized, the hour will produce, as it always has, one worthy and capable, one who can go forward with confidence. The greatness of men is discovered in their willingness and ability to catch and reflect the inspired and inspiring vision of right and justice.

With our eyes on the horizon we do not limit our vision by selfishly or stubbornly insisting that one who is worthy of our trust and confidence must subscribe to some particular political code or declare his allegiance to prescribed party dogma. That, as I see it, is the generous state of American consciousness today. It may be difficult, in the full realization of such a release from past ties, to lay aside persuasive prejudices and predilections. We all like to believe that we have always been right, that we have been reasonably liberal, that we are willing to desert the old for the new or the new for the old when changing conditions demand.

Now, or quite soon, the opportunity will appear when we can prove our political sincerity. In this testing time we must not forget that our obligation is not to ourselves alone, but to those who by right look to us to protect what is theirs as well as ours.

The American Flag

EXTENSION OF REMARKS

OF

HON. JAMES M. BARNES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

ARTICLE BY MRS. JOHN ENGLISH

Mr. BARNES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mrs. Sara John English, of Jacksonville:

If yonder flag hanging in graceful folds could find a voice and speak its thoughts, what message would it give us today?

Hark! I think I hear it whispering to us now, "I am the flag of the United States. I am your flag. I am 154 years old. My Nation pays me loving homage. Who designed me? Ah, that's a secret I can never tell. I was born of the sun, the sky, and the stars. I was baptized by patriotism and dedicated to liberty's cause. My Nation and I have changed with the tide of time. I have added many brilliant State stars to my azure field, but our principles are ever the same.

"During these long years I have led my beloved glorious country from a mere infant in the cradle of liberty until it has become a giant of power in the world.

"A mighty traveler I am. I have entered every port of the world on the masts of ships, yea, even from the North and South Poles I've floated. Through the air and on sea I fly to the breeze, on mountain and plain you'll find me again. Even the children carry me in their dear tiny hands and I flutter whispering my love.

"When joy fills the heart of my Nation in triumph I wave; but when sorrow or gloom bows her heart, I, too, am bowed with grief and droop at half mast. Sad are the moments when my heroes fall asleep in eternal rest. Then tenderly I enfold their caskets in farewell embrace.

"I was first carried in battle by the troops of the Father of his Country at Brandywine. I was first saluted at the surrender of Burgoyne. I first flew in battle in the Pacific on the mast of the United States frigate *Essex* in the War of 1812. During this war Francis Scott Key gave me an inspiring name which brought me honor and fame. It was he who immortalized my Nation as the 'land of the free and the home of the brave,' when he breathed undying devotion to us in his wondrous story, "The Star-Spangled Banner.'

"I have never been sullied, though I have been stained with the smoke of many a battle and drenched with the blood of our hero brave who suffered and gave all that you and I might live. I have been sorely rent and torn with shot and shell and cannons of war and strife.

"But never daunted, you will always find me in the lead to give heart, courage, and cheer to the children of Uncle Sam wherever they be. June 14 is my day. My Nation honors me and I am filled with great joy, not for the honor but for the love that is given to me. I am happy, for I float over a country at peace with the world and because my Nation is the leader in the causes of right—that's how she gained her might.

"I hope always to merit your love and respect and on through the ages to hear you exultantly shout, 'And the Star-Spangled Banner in triumph shall wave o'er the land of the free and the home of the brave.'"

After knowing what our flag means to us and what it represents, may we cry with one of our 1812 heroes, Stephen Decatur, "To her we drink, for her we pray, for her we'll fight, come what may, the Stars and Stripes forever."

Is Representative Democracy Worth Saving?

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

RADIO ADDRESS BY HON. A. WILLIS ROBERTSON, OF VIRGINIA, JUNE 17, 1939

Mr. SMITH of Virginia. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by Hon. A. WILLIS ROBERTSON, of Virginia, over stations of the National Broadcasting Co., on the Grange Hour, from Washington, D. C., June 17, 1919:

On the one hundredth anniversary of the birth of George Washington, Daniel Webster, speaking of Washington's contribution to the triumph of social principle over feudal principle and the maintenance of social rights against military power through the establishment of a representative democracy, said:

"If disastrous war should sweep our commerce from the ocean, another generation may renew it; if it exhaust our Treasury, future industry may replenish it; if it desolate and lay waste our fields, still, under a new cultivation, they will grow green again, and ripen to future harvests. It were but a trifle even if the walls of yonder Capitol were to crumble, if its lofty pillars should fall, and its gorgeous decorations be all covered by the dust of the valley. All these might be rebuilt. But who shall reconstruct the fabric of demolished government? Who shall rear again the well-proportioned columns of constitutional liberty? Who shall frame together the skillful architecture which unites national sovereignty with State rights, individual security, and public prosperity? No, if these columns fall they will be raised not again. Like the Coliseum and the Parthenon, they will be

destined to a mournful, a melancholy immortality. Bitterer tears, however, will flow over them than were ever shed over the monuments of Roman or Grecian art, for they will be the remnants of a more glorious edifice than Greece or Rome ever saw, the edifice of constitutional American liberty."

If that great statesman deemed it necessary 107 years ago to warn us that our unique form of government was not safe from attack, that it could be destroyed, and if destroyed it could never be rebuilt it becomes especially pertinent for us to give thought to what has happened to other governments in the last 22 years as bearing upon our security and the perpetuity of our cherished institutions.

The subject I have chosen today, "Is Representative Democracy Worth Saving?" is, of course, in the nature of a rhetorical question to which the overwhelming majority of American people would promptly answer, "Yes." But in making such an answer many do not fully comprehend what representative democracy is and how it differs from all other forms of government in the world. They do not fully appreciate the benefits we have enjoyed, nor do they understand the attacks being made both here and abroad upon the "well-proportioned columns of constitutional liberty." While we have in this country more Communists and more Fascists than many realize, I do not fear their open assaults, if the Dies committee can expose them, as much as I do the covered and insidious suggestions that autocracy is more efficient than democracy. The termite is more to be feared than the lightning bolt.

During the past 9 years I fear all too often the large number of unemployed in this country has obscured our vision of what was happening in foreign lands during the same period and blinded us to the fact that the lower ratio of unemployment in the dictatorship nations has been due in part to employment growing out of the manufacture of war munitions and in part to their policy of conscripting labor for public works, to say nothing of their use, as Westbrook Pegler says, of soap wrappers, tobacco tags, and sea shells for money. Under our form of representative democracy, even after 9 years of depression, our banks are overflowing with idle money seeking investment, our knowledge of the technique of mass production has advanced, our inventive genius has continued to discover new ways and means of converting our natural resources into consumable and enjoyable wealth, and our farms have continued to produce more than a sufficiency to feed our own people. With 6 percent of the world's area and 7 percent of its population we have two-thirds of civilization's banking resources, with a purchasing power greater than that of the 500,000,000 people of Europe, and much greater than that of a billion or more Asiatics. And even at the bottom of the depression we had the highest standard of living of any nation in the world and the fullest measure of personal freedom. The unemployment to which I have referred and which is a seedbed for foreign "isms" has grown, not from a lack of abundance of good things but in part from a temporary break-down in methods of distribution and in part from a lack of confidence and courage to go forward. Our immediate task, therefore, is to solve that problem without destroying either the foundation of American constitutional liberty or the superstructure of a National Government composed of 48 separate and sovereign States.

Long before Webster issued his warning, John Philpot Curran said, "The condition upon which God hath given liberty to man is eternal vigilance; which condition, if he break, servitude is at once the consequence of his crime, and the punishment of his guilt." The United States of America was 150 years old this spring; years so filled with prosperity that a majority of our people have taken their form of government for granted and have posted no sentinels to warn of the approach of invading enemies. Those, who, like myself, are past fifty, can recall how as school boys we read of the imperialistic power of the Russian czars, and never dreamed it could be broken. We read of the emperors of Germany, as proud and as powerful as Charlemagne or a Roman Caesar. The picture of a German emperor sawing wood in a Dutch village hadn't been painted. But the World War did more than kill some ten million men, disable many millions more, and cause a property destruction estimated at $400,000,000,000. It gave birth to a virus called "new ideologies" that has changed the social, economic, and political order of Europe, with serious repercussions on this side of the Atlantic. "Postulates of the past," said Chief Justice Hughes, "must show cause."

The great Harvard psychologist, William James, wrote many years ago, "It is habit that protects the rich from the envious uprisings of the poor." Habit, which had been the safeguard of the czars and emperors, was broken by the World War. We must face that fact and then ask ourselves has it likewise been broken here? And is there any safe reason for assuming that representative democracy can't be lost in this country just as existing forms of government were lost and destroyed in Russia, Germany, and Italy? Where the established order of things under pressure of economic unrest has been overthrown in a foreign country the first point of attack has been on property rights, ignoring the advice of Edmund Burke, who, in condemning the somewhat similar program during the French Revolution, said, "When liberty and justice separate, the fate of neither is safe."

The most violent attack upon property rights occurred, of course, in Russia, although the attack upon the property rights of Jews in Germany cannot be ignored. The Kerensky revolution in Russia, designed to supplant the absolutism of the czars with a modified type of democracy, survived only 8 months when the White Army was destroyed by the Bolsheviks, who, in the name of giving to the proletariat a still greater measure of personal liberty, abolished all property rights.

I recall so well a conversation I had in January 1936 with my beloved friend, the late Speaker Byrns, when the subject turned to a discussion of the possible objectives of a few of the prominent so-called "brain trusters," then so active in the affairs of the Nation. I expressed the fear that some of the pending proposals might undermine our form of government and eventually lead us to fascism, since I was convinced that a nation of small home owners with the highest standard of living of any nation in the world would never turn to communism. Speaker Byrns then asked me what fascism was, and, being unable on the spur of the moment to give him a satisfactory answer, I returned to my office and got from the Library of Congress all available books on the subject. After reading those books I jotted down this memorandum on January 29, 1936:

Fascism is a new political philosophy that sprang up in Italy about 1922 and was born in the fertile brain of its chief exponent, Mussolini. The three cardinal principles of his philosophy are:

(1) Unity; and if any element in society attempts to split off for itself, the Fascist philosophy is that an army must be available to compel unity.

(2) The supremacy of the state, in which the individual is subordinate to the state and has no rights except those accorded him by the state; all that the citizen has belongs to the state, even life itself, when the state demands it.

(3) (And this is the most important of the three.) The recognition of the biological truth that all men are not created equal (which Jefferson declared to be the philosophy of a democracy), and that those best qualified have the right to rule.

Brushing aside the involved language used by some to explain the fundamental philosophy of fascism, we may say it is just the opposite of democracy. In a democracy we claim that the people are competent to govern themselves. In a Fascist state it is claimed that the people are not competent to govern themselves and must have a strong and superior man to rule and govern them. Yet that right to rule does not pass from father to son. Each ruler who assumes power must, under what the Fascists call a "pragmatic scheme," demonstrate his right to have and exercise it.

Of course, the essence of fascism is to concentrate in the chief executive supreme power, who in turn will delegate certain powers to a limited group of master minds. They, in turn, under a planned economy, will take from one group and give to another until they think they have the social order properly balanced, and then they will proceed to administer it according to their idea of the general welfare.

Fascism in theory is the enemy both of socialism and communism. Communism, beside destroying property rights, believes in leveling the social mass by killing off all of the superior elements of society. Socialism believes in the state owning the instrumentalities of production and having them operated by the producers. The Fascists, on the other hand, believe that a strong personality should be given the power to determine the conflicting interests of capital and labor while permitting the private ownership of the instrumentalities of production.

I can find no essential difference between fascism and nazism, and I must also confess that while under both systems the right of private ownership of property is recognized, it exists in both Italy and Germany, so far as the instrumentalities of production are concerned, more in theory than in fact. It necessarily follows that when any overlord embarks on a program of planned economy (a foreign term we have, without proper understanding, borrowed from Europe), it is difficult if not impossible to stop short of controlling all of the activities of a nation. That type of program strikes at the heart of the American form of government of the people, for the people, and by the people in which equality of opportunity is the fundamental principle. It strikes at the heart of a National Government whose powers are limited and circumscribed by a written Constitution which reserves to 48 sovereign States all powers not specifically granted to the National Government or relinquished by the States through the necessary implications of such grants. It also strikes at the heart of the powers to be exercised by the political subdivisions of States, on down to those fundamental rights and privileges reserved primarily in the first 10 amendments to the Constitution to be exercised and enjoyed by the individual citizen.

In a memorable address on the occasion of the one hundred and fiftieth anniversary of the First Congress under the Constitution our distinguished Chief Justice, Charles Evans Hughes, said: "We have a National Government equipped with vast powers which have proved to be adequate to the development of a great nation, and at the same time maintaining the balance between centralized authority and local autonomy. It has been said that to preserve that balance, if we did not have States, we should have to create them. In our 48 States we have the separate sources of power necessary to protect local interests and thus also to preserve the central authority, in the vast variety of our concerns, from breaking down under it own weight."

No other nation in the world has ever had that form of government, and one of the best evidences of the fact that our form of government must be better than any other yet devised is the fact that it has survived in its present form for a longer period of time than any other now in operation. We have had unity in our Nation, but it has been a unity based upon a common understanding and agreement of what constitutes true liberty and what constitutes true liberalism. Lincoln remarked in 1864 that the wolf and the lamb would never be able to agree on a definition of liberty. But by holding fast to Jefferson's democratic theory that all men are born equal we have never divided into groups of

wolves and lambs to debate and determine the definition of liberty. Yet that is just what happened in certain European countries following the World War.

And if we do not find adequate means of checking the tendency of legislating in this country on the basis of pressure groups, the same thing may happen here. There has developed in some quarters a tendency to regard the financially successful man in America as a predator, although the opportunity for the poor American boy to rise to the heights of business success has been the boast and glory of our American institutions. There has been an inclination in some quarters to treat the highly efficient mass production of American industry, which has largely made possible our present standard of living, as a source of economic evil. In approaching the problem of a better distribution of opportunities and of the good things with which this Nation has been endowed by a beneficent Providence some have proposed laws which were characterized a few days ago by a prominent newspaper columnist in a radio address from Washington as proper "rights-of-way across private property." Now, if there is one thing above all else that should be clear to the American people, it is the fact that the heart of the American Constitution is a twin-lobed heart, one side of which pumps the lifeblood to human rights and the other to property rights. You can't cut a right-of-way across one lobe of that heart without killing it. When such a right-of-way was cut across private property rights in Russia and other dictatorship nations, personal liberty died.

Everyone recognizes the right of labor to engage in collective bargaining, but in the present Wagner Labor Relations Act we have a law that not only favors one labor group above another but favors all labor groups above industry. That situation, unless changed, will ultimately result in a right-of-way across property rights. All want to see labor have fair labor standards, but in the Wage and Hour Act we have created a lever through its 40-cent minimum wage and 40-hour maximum week to raise the living standards of industrial labor by using the back of agriculture as a fulcrum. If by law you increase the price of what the farmer buys but do not increase the price of what he sells, you have certainly cut a right-of-way across his property. If that same law gives the Federal Government power to take charge of all commerce, as some seek to construe it, you have likewise cut a right-of-way through the sovereignty of the States in nullifying the commerce clause of the Constitution; and if we ever reach the contemplated expenditure of $2,000,000,000 per year for the industrial workers covered by the Social Security Act without extending similar benefits to the agricultural worker, the farmer will be still further depressed in the economic scale.

We are providing under the Social Security Act annuities for the retired industrial workers that exceed the present average cash income of our farmers. Who can deny the equal right of farm labor to old-age security, but how can our farmers, with an average cash income of about $300 per year, contribute to an old-age security fund for their employees? How can farmers provide for their employees what they don't have for themselves? If our Constitution is to be changed, let it be by open covenant, openly arrived at. We can and must work out our problem of distribution within the safeguarding limitations of our Constitution if we are to preserve our religious and political freedom. Temporarily with respect to material things that may call for self-denial and sacrifice. But the game is worth the candle. Representative democracy is well worth saving. The fate of the governing classes of Russia is well worth avoiding. May it never be said of us, as it has been said of the Russian exiles in Siberia:

"Only in future years when their sins have taught them charity and their despair has taught them hope, and their loneliness has led them to faith, they shall listen again to the sound of bells coming across the field and comprehend and reverence the symbolism of the cross."

Agricultural Legislation

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, June 19 (legislative day of Thursday, June 15), 1939

RADIO ADDRESS BY GLENN J. TALBOTT

Mr. MURRAY. Mr. President, upon the request of Glenn J. Talbott, president, North Dakota Farmers Union, I ask leave to have printed in the Appendix of the CONGRESSIONAL RECORD an address delivered by Mr. Talbott over the Columbia radio network, Sunday, May 21, dealing with agricultural legislation, sponsored by the National Farmers Union.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, members of the Farmers Union and other listeners to this broadcast. Notices of this broadcast have been sent out over the State advising that tonight at this hour I would answer the radio address of Congressman WILLIAM LEMKE over the Columbia Broadcasting System, Sunday noon, May 21, 1939.

I should not put the expense of this broadcast on the treasury of the North Dakota Farmers Union or impose upon your time for half an hour merely to reply to the unfair and inaccurate statements made by Congressman LEMKE. I shall take but a few moments to dispose of these unfair and inaccurate statements and then I shall outline briefly to you, agricultural legislation now sponsored by the National Farmers Union which will give to the farm families of North Dakota and the other agricultural States, the economic security which they have a right to expect and which they have been seeking through the National Farmers Union for the past many years.

Leading up to my reply to Congressman LEMKE, just bear with me a moment while I review the democratic processes historically used by the National Farmers Union to bring into final expression the will and the concluded judgment of the members of our organization.

The procedure which is used by the National Farmers Union assures complete democracy to all of its members through the very definite constitution and bylaws of our organization. Of course, I, as president of the Farmers Union of North Dakota, which means its hired man, am under obligation and am bound to support and fight for such economic programs as are determined and approved by the Farmers Union members of North Dakota.

Our State Farmers Union, as well as other State Farmers Unions, is composed of local organizations which are usually representative of the farmers living in a single township. Under the constitution and bylaws of our organization these township locals each year select delegates to attend the annual State convention of our Farmers Union, and then these delegates to the State convention carry on, over a period of days, the discussions that bring final judgment of the majority of the delegates on all questions of interest to the convention.

We have within our State Farmers Union a set-up which divides the State into six districts. Each one of these districts each year elects its member to our State board, and the convention elects the seventh member of the State board at large, after which the seven members of the State board select and elect the State president and the other State officers. In other words, the members of the North Dakota Farmers Union enjoy the maximum of democracy.

Last fall our State convention was held at Mandan, N. Dak., and after four serious deliberative days, adopted a program for national legislation in the interest of American agriculture. This program has been published in full in the North Dakota Union Farmer. You are familiar with it, I'm sure. Similarly in other States, the Farmers Union State organizations determine their will and judgment relative to national legislation for agriculture. Each year in November the delegates from these various State Farmers Union organizations, through their chosen delegates, meet at a national convention. Last fall the annual convention of the National Farmers Union was held at Madison, Wis., and I know what the National Farmers Union decided, relative to national legislation on behalf of agriculture because I was chosen and acted as chairman of the resolutions and legislative committee for that convention. For 4 days and nights a large committee on resolutions considered the legislative proposals of the various State units of the National Farmers Union.

Now let's see if that committee on resolutions and legislation was truly representative of the Farmers Union of the United States. It was composed of 17 members selected by the national board of directors and it represented approximately 90 percent of the total membership of the National Farmers Union. Members of this committee were each duly elected delegates sent to the national convention from the following State organizations: Ohio, Arkansas, Oklahoma, Nebraska, South Dakota, North Dakota, Wisconsin, Iowa, Montana, Colorado, Louisiana, and Kansas.

After Congress convened the beginning of last January, the chosen leaders of the National Farmers Union and its cooperative organizations met at Omaha, Nebr., to discuss ways and means of preparing bills for the consideration of Congress in conformity with the legislative program demanded by the members of the Farmers Union.

Congressman LEMKE, without consulting any of the officers of the National Farmers Union or the officers of the Farmers Union in his own State of North Dakota, introduced a bill in the Congress of the United States, which bill declares for its purpose the securing of cost of production for American agriculture. I want to emphasize that throughout the years there has been and is only one general farm organization in the State of North Dakota—and that is the Farmers Union. Again I state that Congressman LEMKE did not discuss with any of us here in North Dakota his bill to give the American farmer cost of production. Likewise, he did not discuss his bill with the lifelong buddies of the late John Simpson. John Simpson was for years the president of the Farmers Union of Oklahoma. Through all of his life in Oklahoma his closest friend was Thomas Cheek, who, since the death of John Simpson, has been the president of the Farmers Union of Okla-

homa. Congressman LEMKE did not discuss his bill with any of the officers of John Simpson's organization. The entire group of officers and directors of the National Farmers Union were dumfounded that Congressman LEMKE would presume to introduce a cost-of-production bill in the Congress of the United States, creating the impression with the repeated statement that it was the Farmers Union bill, without ever having discussed any of the provisions of the bill with the officers of the National Farmers Union.

Repeated assertions by Congressman LEMKE that his bill was sponsored by the Farmers Union caused many other Congressmen to accept Mr. LEMKE's assertions as facts. It became necessary to inform Congress that Mr. LEMKE was not authorized to speak for the Farmers Union. Many meetings of Farmers Union officials were held during January and February before we were ready to present the real Farmers Union program to Congress. These meetings finally culminated in a large gathering of Farmers Union officials at Omaha, Nebr., in March of this year. There—we had most of the presidents of the State units of the Farmers Union—the national officers of the Farmers Union, the directors of the National Federation of Grain Cooperatives and the members of the Wheat Conservation Conference, and for 2 days we analyzed, and discussed, and debated Congressman LEMKE's cost-of-production bill. Unanimously this group of more than 40 chosen representatives of agriculture, opposed Congressman LEMKE's cost-of-production bill. We agreed with its objectives but we disagreed with every mechanical feature in his bill which he states would give farmers cost of production.

Then we determined the kind of legislation and the mechanics of legislation which would conform to the program adopted by the National Farmers Union and which, if passed by Congress and signed by the President, would in fact, give a parity income to American farmers for their products, based upon an abundance of production and upon a price per bushel or per pound, which would be parity price or cost-of-production price each year, whichever price might be higher. Such a program was unanimously adopted by all of those in attendance at the Omaha meeting.

I, as your president of the North Dakota Farmers Union, and your hired man, desired the fullest understanding and approval of the people of our organization here in the State of North Dakota and the other Northwest States. With my associates, I took advantage of a large group meeting held in St. Paul, Minn., in April of this year. At this meeting were the directors of our three large regional cooperative organizations, some presidents of State units of the Farmers Union, the board of directors of the National Farmers Union and its national president. For a day and a night we reviewed the conferences of January, February, and March, to which I have referred, and again discussed Congressman LEMKE's cost-of-production bill, why we had opposed it, and the mechanics of legislation upon which we had agreed and which would, in fact, give cost of production to farmers.

This large group meeting of our own people in St. Paul, unanimously supported the action of the group in Omaha, in opposing Congressman LEMKE's cost-of-production bill, and they approved our suggested mechanics and proposed legislation for giving cost of production to our farmers. And in addition, they discussed and approved our plan and our proposed bill, to scale down the debts that our farmers can never hope to pay, to put an end to ruthless foreclosure of the mortgage debt owed to the Federal Government, and to provide a corrected method of financing mortgages within which there would be adequate protection to the farm family to maintain their liberty and security in the farm home.

Following the April meeting of our group at St. Paul and under their direction, I did not return to North Dakota, but proceeded to Washington with my associates for the purpose of preparing bills for the consideration of the Congress to carry out our legislative proposals. Upon the arrival of our group at Washington we found that throughout Congress and the administration it was universally believed that Mr. LEMKE's cost-of-production bill was sponsored and supported by the National Farmers Union. At once we realized our responsibility to do two things, first to advise the Congress of the United States that Mr. LEMKE's cost-of-production bill was not, and is not, the method by which the National Farmers Union proposes to procure for the farmers cost-of-production prices and cost-of-production income. Our second responsibility was to present to the Congress a statement of our proposals for legislative consideration and the philosophy and mechanics upon which those proposals rest. A thorough and comprehensive statement was prepared for the consideration of the Congress and mailed to each Member of Congress under date of April 25, 1939. This letter was signed by the national president of the Farmers Union, the national directors of the Farmers Union and the officers of five States of the Farmers Union who were there in conference with the national officers. That is, a statement of the democratic processes through which the Farmers Union operates, and conducts the affairs of our organization on behalf of its members. It is a statement of the true manner in which we held four group meetings to arrive at the most careful judgment that a group of people could possibly consummate. It is a statement of our continued work at Washington, D. C., at great expense, to carry out the will and mandate of the National Farmers Union and the several State organizations.

Now, with this unimpeachable statement of facts and history, I want to call your attention to what Congressman LEMKE stated in his Columbia radio broadcast on last Sunday. Among other things, he stated that we had betrayed the gallant leader of another day, Mr. John A. Simpson, former president of the National Farmers Union. He stated that the Farmers Union had strangled its own child, the cost-of-production bill. He stated that our national leaders are subsidized by the Federal Government to defraud the American farmers. He stated that farm leaders had been subsidized as far back as 1933 to sell the American farmer down the river. He stated that we had waited until the eleventh hour to stab the farmers in the back. He stated that we are opposed to having his bill come on the floor for consideration. Now, in answer to Mr. LEMKE's last statement as just quoted, I call your attention to the fact that his bill was introduced in the other branch of Congress, that is, the United States Senate, by Senator FRAZIER. It has been reported in by the Senate Committee on Agriculture; Congressman LEMKE's bill is now on the Senate Calendar, and it has been there for weeks, awaiting the will of the United States Senate to debate it, and vote upon it; and I, with my associates, hope that the United States Senate will debate that bill and vote upon it.

May I suggest that Congressman LEMKE would better spend his time urging Senator FRAZIER and other Senators to bring the LEMKE cost-of-production bill up for debate and vote by the United States Senate, rather than taking to the radio to make an unjustified and false attack upon the National Farmers Union and its officers.

I now state with great reluctance and regret that our old friend Congressman LEMKE, in his attack on the Farmers' Union, has stooped to the lowest level of demagoguery that I have ever heard of in national politics. All he needs to do is to get the Senators to debate and vote upon his cost-of-production bill, which hangs day by day on the Senate Calendar awaiting the voice and the demand for consideration of the bill by the 17 United States Senators he claims are supporting his bill and seeking its enactment. Again I repeat that I have never read or heard of a public statement by a Member of Congress that was so deliberately misleading and false and so full of demagoguery as this radio address of Congressman LEMKE, which I have before me and which I have read many times. Again I state we all hope that the United States Senate will at once debate Mr. LEMKE's bill and vote upon it.

I want to add that not one of the three national farm organizations—and there are only three—supported this bill drawn by Congressman LEMKE. The only farm organization in America which is behind this bill is Mr. LEMKE's farm organization, and nobody knows very much about that one other than that they have superimposed themselves to speak for organized agriculture. We do not know of a single national or regional cooperative marketing organization in support of Congressman LEMKE's cost-of-production bill. After weeks of serious consideration of this bill drawn by Congressman LEMKE, the House Committee on Agriculture voted it down 17 to 6.

A reproduction of the statement made by the National Farmers Union to the Members of Congress relative to Congressman LEMKE's bill appeared in the Farmers Union Herald and in our own State paper, the North Dakota Union Farmer. There you may read the many important and unquestionable reasons why we oppose the mechanics figured out by Congressman LEMKE to give American agriculture cost of production and you may also read in the Herald and in our State paper the mechanics by which we propose to give parity income based upon parity price, or cost of production, whichever is higher, to the American farmers and at the same time protect the average sized farm against monopolistic feudalistic corporation farming. We have prepared and caused to be introduced four important bills for the consideration of the United States Congress in support of our proposals for national legislation. One bill covers rice, one covers cotton, one covers wheat, and the other one deals with the agricultural debt situation. In addition we have since prepared and will soon furnish to the Congress of the United States, separate bills for flaxseed, rye, and barley. We have not as yet prepared a bill for corn. That part of the program is under consideration by our national vice president, Mr. H. G. Keeney, president of the Nebraska Farmers Union. The National Farmers Union dairy committee hopes to present its bill in the interest of the dairy farmers very soon.

I wish now to discuss for a few moments our wheat bill and our debt adjustment bill and in that connection I want to read to you at this moment the statement of Senator B. K. WHEELER of Montana. You may recall that Congressman LEMKE claims that Senator WHEELER is one of the supporters and strong advocates of his cost-of-production bill. Senator WHEELER introduced the Farmers Union wheat bill the other day and it is known as Senate bill 2395 and he is now introducing our debt adjustment bill. When Senator WHEELER introduced our wheat bill he gave a public statement to the press, and wired me a copy of it, as follows:

"At the request of the National Farmers Union, National Federation of Grain Cooperatives, Northwest Farmers Union Legislative Committee, and Wheat Conservation Conference, through Mr. M. W. Thatcher, I am today introducing a bill which seeks to give the American wheat farmer the cost of production or parity price, whichever is the higher. One of the most difficult problems facing Congress today is to guarantee to the farmers of this country their cost of production. This bill is a practical approach to that phase of the problem insofar as wheat farmers are concerned. Under the existing law the farmer is compelled to come to Congress and seek appropriations from the Federal Government for parity prices. Only day before yesterday the Senate voted hundreds of millions of dollars for parity payments. To keep faith with the farmers it was necessary that this appropriation

be made. Under the bill which I am introducing, no money will be paid from the Federal Treasury. It is self-financing. There will be no dumping of surpluses on foreign markets but our legitimate wheat exports will not be disturbed. There will be no favoritism to foreign markets. The American farmer can plant what he wants and as much as he wishes to plant. He will receive payment for production on allotments based on his historic acreage. But he can plant more and store the surplus for years of drought or for years when production would be low at no cost of any kind to himself. Last fall in Montana it took 1 bushel of wheat to buy 3 loaves of bread and in some communities 1 bushel of wheat would buy only 2 loaves of bread. Every thoughtful person agrees that such conditions cannot continue. The cost of this plan will be borne by the processors, who will be compelled to purchase wheat income certificates. The wheat income certificate is issued by the Secretary of Agriculture, and its amount is determined by the difference between the estimated level of wheat prices and the cost of production or parity prices, whichever is the higher. The farmers' interest derived from compliance, in the wheat income certificates, will be represented by a payment made him in cash by the Secretary of Agriculture. While this bill will increase the price of wheat for the processor and miller, it should not raise the price of foodstuffs to the consuming public. A bushel of wheat produces 62 loaves of bread and the price of wheat has little influence on the price paid by the consumer for a loaf of bread.

"It is my intention to press for immediate consideration of this legislation by the Congress. In the near future I will introduce Federal farm-debt adjustment legislation designed to meet a definite need."

Now, let me repeat, Congressman LEMKE states that Senator WHEELER is one of the advocates and supporters of his cost-of-production bill. Now, since Senator WHEELER has introduced the real and genuine bill of the National Farmers Union, will Congressman LEMKE state over the radio that Senator WHEELER has betrayed the American farmer, that he stabbed the American farmer in the back, that he is a Judas to the memory of John Simpson? Will Congressman LEMKE state that Senator WHEELER has been subsidized, bribed, bought off, to sell the American farmer down the river?

I, as your president of the Farmers Union of North Dakota, desire and hope that the Senator from our State on the Senate Committee of Agriculture, and the representative from our State, Mr. LEMKE, on the House Committee on Agriculture, will seriously and honestly review our criticism of his bill, our alternative bill, and join with us in the National Farmers Union in a vigorous prosecution of national measures to at least bring to American farmers parity income and cost of production which they have so patiently waited for these many years.

Briefly, our bill for the wheat producers gives no disturbance to the orderly marketing of wheat through the country elevators and the processing of it through the mills and the distribution of the flour and bread to the consumer. Our bill makes it mandatory that the farmers shall receive, net in their pocket, parity income based upon parity price or cost-of-production price, whichever is higher, making allowance for discounts for lower grades or for premiums for the top grades, for protein content, etc. One farmer might receive, because of poor wheat, $1 a bushel, whereas another might receive, because of extra quality wheat, $1.40 per bushel. The last available figures indicate that the United States average cost-of-production price for wheat was $1.04 in 1937. Parity price for wheat in 1937 was $1.15. We want all we can get, therefore, when parity is higher than cost of production we want parity price and, if and when cost of production should be higher than parity, then we want cost of production.

The essential things which are mandatory in the bill are as follows: There shall be created a committee of five; three of whom will represent wheat producers, one the consumer, and one the Federal Government. This committee of five will, on May 15 of each year, taking into account the estimated production of wheat against the estimated need for wheat, determine the probably average level of the wheat price. Let us assume such a determination to be 65 cents per bushel net to the farmer. Since the farmer under our bill must receive parity price or cost-of-production price, whichever is higher, the committee would look at these different prices.

Let us assume that the higher price is $1.15 a bushel. It is immediately apparent that the wheat farmer is being short changed in the amount of the difference between 65 cents and $1.15 or 50 cents per bushel. The committee will then declare that the farmer is being underpaid 50 cents per bushel. Upon this finding of fact the Secretary of Agriculture shall declare to the Nation that all processors of wheat shall buy wheat income certificates as a condition for processing wheat and selling the production therefrom. Since all processors of wheat would be required to buy certificates at the rate of 50 cents per bushel and pay the money to the Secretary of Agriculture, it is perfectly apparent that there will be created a fund of money in his hands out of which he can and must make allotment payments to wheat farmers at 50 cents per bushel for their share of marketed wheat. In our bill the marketing of wheat rests upon selling a historic amount of wheat for domestic consumption in the amount of 500,000,000 bushels plus 100,000,000 bushels in foreign commerce, a total of 600,000,000 bushels.

The reason we have stated in our bill that marketed wheat must include 100,000,000 bushels in foreign trade is because our historic share of the export market is 20 percent of the total, and since the foreign markets now are buying about 500,000,000 bushels per year, we demand under our bill 100,000,000 bushels, or 20 percent of the world wheat market. Therefore our bill provides that American wheat farmers will have an outlet, other than for seed and feed, of 600,000,000 bushels of wheat for which they will receive parity price or cost of production price, whichever is higher. We merely use the income certificate as the device for raising the difference in the price which is represented by subtracting the cash market price from the parity or cost-of-production price predetermined by the committee of five previously referred to. I repeat, our bill makes it mandatory to give the wheat farmers parity income based upon parity price or cost-of-production price, whichever is higher that year.

To any extent the committee is inaccurate in its estimates of the market price for the year, correction will be made in the following year by adjusting the value of the certificate up or down as an offset to any mistake that may have been made in the previous year. This is also mandatory in the bill.

Our bill provides definite mechanics for a definite end, and the provisions are all mandatory in the bill. I also want to add that this 600,000,000 bushels represents the average production of wheat sold for processing and export during the past 20 years.

I now call your attention to what would be the situation of the wheat farmer if our Farmers' Union wheat bill becomes law. Every wheat farmer who receives an income certificate allotment, and that can be all of the wheat farmers, will have complete assurance and insurance of an income if he also takes out crop insurance. The crop-insurance bill, which we sponsored and secured, insures yield. The wheat income certificate plan insures price, so the wheat farmer who comes under our program is assured of an income, if he seeds his acreage, because the crop insurance and the wheat income certificate insurance pays the money to the farmer whether or not he is visited by grasshoppers, hail, drought, rust, a 50-cent market price, or any of the other misfortunes with which he has become so familiar. Our wheat bill, together with our crop-insurance bill, is the complete emancipation of the wheat farmer of America to the goal of a guaranteed income for his work each year.

In closing I want to make brief reference to our debt adjustment bill. This bill, when provided by Congress, and we know one day they will provide it, puts an end to ruthless foreclosure of farm mortgages on debts owed to the Federal Government. When the Federal land bank system finally decides to foreclose a mortgage and be done with the farmer, our bill provides that a new department in the Federal Government or a new agency in the Federal Government, will issue Government-guaranteed bonds to the Federal land bank system in payment of the foreclosed mortgage. Thereafter this new agency under our program will give the farmer a 5-year experience during which a county committee, composed of farmers in his county, will keep in close contact with his farming operations, determine the productivity of that farm, and what that farm can possibly pay out on mortgaged debt each year based upon the 5 years' experience. This county committee will determine the amount of debt that that farmer can hope to pay out over a long period of years, and the mortgage on the farm will be scaled down to that debt possibility. The bill also provides that where misfortune comes to the farmer from either lack of production or low price for the products of his farm, that the debtor farmer may have the opportunity to pay, instead of dollars on the mortgage, a percentage of the production off of the farm. Our bill also provides the mechanics through which all other debts owed by farmers to the Federal Government will be scaled down to the farmer's ability to pay out. That means seed and feed loans, etc.

Our wheat bill is a guaranty of an annual income to the wheat-farm family whether or not the crop comes up for harvest and our debt-adjustment bill is the guarantee to the farmer that he will be protected in the future against ruthless policies of collection now imposed upon him by some agencies of the Federal Government. We believe that our bill to protect debtors to the Federal Government will have the tendency to direct the attitude and policy of other mortgage holders, such as insurance companies, to giving comparably fair treatment to farmers who are in debt to them.

I want to state further, and most emphatically, that what I have been doing in the field of national legislation with my associates in this State and other States is in complete conformity with the wishes and determination of our members as expressed in their resolutions adopted at our last State convention of the Farmers Union. To have pursued any other policy than that which I have followed would have betrayed my duty as president of the Farmers Union of North Dakota. I hope I shall never again be called upon to discuss any Congressman from our State. We prefer to spend our time and our effort seeking relief and protection to our people rather than to be engaged in endless debate with those who disagree with our program. The North Dakota Farmers Union does not and will not engage in any partisan political controversy. We do, however, stand ready at all times to defend our organization and our program against attack from anyone, be he politician or not.

It has been my pleasure to sit here this evening at a banquet attended by a large group of officers and members of the Farmers Union, administrative officers and employees of the Farm Security Administration, and representatives of many other groups, and to have the opportunity to discuss briefly with the people in attendance at this banquet, as well as our members out over the State, the Farmers Union program for national legislation.

Thank you, and good night.

Work Relief, Relief, and the Federal Public-Works Program

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. KEOGH. Mr. Speaker, the press and membership of the House have been engaged in lively discussion during the past month concerning the construction of public works as a means of pushing forward encouraging signs on the business front. It is general knowledge that a large construction program, during favorable summer weather, will aid greatly in the promotion and maintenance of good business conditions. The bang of the hammer and the grinding of a concrete mixer spell out joy in the hearts of the community, for work is at hand and that work is needed.

Mr. Speaker, it is true that we have been spending money for public works for some 6 years now. We have learned that speed in the execution of a P. W. A. program largely determines its effectiveness. In 1933 the unchartered course of a gigantic public-works program made for slowness in order to insure the public funds not be wasted. Today, with the experience of the past few years, P. W. A. has learned to build jobs quickly as well as wisely.

Perhaps the most striking illustration of the need for speed, and the appreciation of the value of rapid execution of a public-building program, was recorded last summer, in the administration of the Public Works Appropriation Act of 1938. I incorporate an excerpt taken from the news comments of Fulton Lewis, Jr., president of the Radio Correspondents' Association, which was broadcast over station WOL and the Mutual Broadcasting System Wednesday, August 24, 1938:

> The Public Works Administration made an inventory, today, on the progress of its share of the President's spending program.
>
> It may seem a long time ago, since the battle over the spending program was going on, down in Congress—but, as a matter of fact, it isn't so long, at all * * * The President signed the bill, on June 22, which was just 2 months ago, day before yesterday.
>
> The purpose of that bill, of course, was to get money into circulation as quickly as possible * * * and it carried an item of about $850,000,000 for Public Works projects * * * about $520,000,000 of that has been allotted to private, State, and municipal projects.
>
> But Mr. Ickes, the Public Works Administrator, has allotted about $200,000,000 for strictly Federal projects * * * that is, projects that are financed and operated by the Federal Government * * * and on that lot, the inventory figures, today were rather impressive. * * *
>
> The records show that in this first 60 days of the spending program the Public Works Administration has actually broken ground and started construction on 80 percent of those Federal projects—$152,000,000 worth to be exact * * * which smashes all speed records for Government construction programs.
>
> One hundred and fifty-two million dollars worth of projects started within 60 days after the bill was signed * * * and whether you approved of that spending bill or not * * * I think you'll agree that the wheels must have been grinding very effectively and very efficiently to produce that record in so short a time.

It is because the Public Works Administration and the departments and agencies of the Federal Government made this wonderful record and demonstrated the ability to execute Federal construction contracts with a minimum of delay that a specific appropriation for Federal projects should be included in current legislation. If we appropriate money for Federal projects, we get speed plus necessary Federal buildings, institutions, power plants, hospitals, dams, vessels, or whatever other units are needed for the proper maintenance of Federal establishments throughout the country.

I am told that there is on file in the P. W. A. a large number of requests from Federal agencies for Federal project allotments. These applications have been examined from the standpoint of need and urgency and arranged in priorities on that basis. P. W. A. is, therefore, in a position to select useful projects, and a comprehensive program, based on needs, could be started without delay.

If this Congress determines that a public-works program will foster the economic welfare of the people, then I say that funds should be set aside for projects which will remain in the ownership of the Federal Government. Immediate construction of needed Federal facilities will mean that work which would be undertaken within the next few years under normal conditions would be accomplished now, with a consequent reduction of expenditures for such projects in future years.

A public-works program has become an integral part of the activities of the Federal Government. Some 80 Federal agencies have carried on construction programs with allotments from the P. W. A. Necessary facilities and institutional plant for the varied functions of the National Government have been provided. Every community has in some way become the beneficiary of these projects.

Among the Federal agencies sponsoring P. W. A. projects is the Corps of Engineers of the War Department, with its rivers and harbors improvement and flood-control projects. In New England at the present time the threatened ravages of future floods are being checked under the supervision of the Army engineers with a $3,000,000 P. W. A. allotment.

The Public Health Service is building important hospital, quarantine, and laboratory units. The job of providing necessary health facilities is only started and countless building units are needed and will be needed to take care of the health requirements of the Nation. Not only vital experimental and research laboratories but detention and hospital quarters are sorely needed.

Among other branches of the Government which are prepared to execute needful projects are the National Park Service, the Coast Guard, Veterans' Administration, the Bureau of Yards and Docks of the Navy Department, the Bureau of Reclamation, the Quartermaster Corps, the Office of Indian Affairs, the Forest Service, and the Soil Conservation Service.

It thus becomes apparent that Federal projects having a value of hundreds of millions of dollars could be advantageously undertaken within the next few months. Employment at project sites and in the mines and mills of the country would be stimulated. Wages at rates prevailing in the community in which the job is being built will place needed dollars in the hands of consumers. Government contracts will spur the contracting business and all interrelated industries, as well as financial institutions.

Mr. Speaker and Members of the House, I earnestly request that a Federal public-works program be supported. We are insured of speed in its execution and guaranteed that these capital investments will add to the permanent wealth of the Federal Government and its proprietors—the citizens of every community in the land.

Florida Canal—An Answer to Senator Vandenberg's Theory of Nonuse of the Florida Canal

EXTENSION OF REMARKS

OF

HON. LEX GREEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. GREEN. Mr. Speaker, in compliance with permission given me to extend my remarks in the RECORD, I include herewith statement concerning the Florida canal.

The distinguished Senator from Michigan [Mr. VANDENBERG], during the course of some recent remarks, read to the Senate a number of letters from concerns operating oil tankers, purporting to show that, when built, the Florida canal would not be used.

It appears that this is the only basis for a somewhat elaborate theory of nonuse which the Senator has built up and to which none of the authoritative agencies of the Government subscribe.

In the first place, it should be marked that, while there have been read into the RECORD a few letters from steamship operators indicating nonuse of the project by those particular companies, the great bulk of the really vigorous opposition to the project is voiced by the oil-tanker operators, owned by the great oil companies. These interests are obviously attempting to defeat the project, and their letters must be judged in the light of this knowledge.

This fact and this conclusion were reached definitely by the House Committee on Rivers and Harbors, which heard this whole matter in greatest detail. On this point they have reported as follows:

The very positive opposition of the large oil companies and certain of the ship operators is a factor which must be taken into consideration in studying their statements with regard to the project. Here again there is raised a presumption that such statements are designed to serve the policies of those corporations and are not primarily directed toward the public interest. Support is afforded to this view by the history of other great canal projects.

Also—

There are in evidence letters from a number of steamship companies which indicate that they will not use this waterway. On the other hand, there are, in a number of cases, letters from the same companies, written at a different date, stating that they would use the canal with substantial savings. In view of the fact that, manifestly, the canal will shorten the distance between Gulf and Atlantic ports by approximately 400 miles, and in view of the testimony presented by the Chief of Engineers and the Board of Engineers for Rivers and Harbors, and by navigation experts, that the canal will afford an unusually expeditious, safe, and convenient waterway for practically all vessels sailing to and from the Gulf of Mexico, the committee finds it impossible to agree with the nonuse theory, and concludes that the estimates of traffic of the Chief of Engineers are conservative, representing probably a minimum of commerce which would benefit by the project.

This is not a phenomenon unknown in the history of canals.

The distinguished and able Senator from Texas [Senator SHEPPARD] recently made to the Senate a statement on this subject that was so illuminating that I desire to quote it at this point:

The same contention about shipper nonuse was made in connection with the Panama Canal. Representative J. J. MANSFIELD, of Texas, chairman of the Rivers and Harbors Committee, said the original decision of shipping interests not to navigate the Houston Ship Channel has broken down; that 67 ship lines now use that channel, and that it carried annually about 23,000,000 tons of freight. General Markham stated that shipowners originally opposed also the Beaumont Channel, the Sabine-Neches Channel, and the Port Arthur Canal, stating they would not use them, but that these waterways are now being used most extensively. He said that there is nothing unusual about shipowners or ship captains saying they will not use a proposed channel; that it is the customary thing to anticipate; but that a ship will go anywhere it can gain a profit, unless the captain should find something in the situation that counterweighs that profit; and that he, General Markham, could find nothing in the Florida project that counterweighs that profit.

Now, let us turn to another recognized Federal authority, which has pronounced on this matter in opposition to the theory of the distinguished Senator from Michigan. The Department of Commerce, through the Bureau of Foreign and Domestic Commerce, with the help of the Bureau of Navigation, the Bureau of Lighthouses, and the Coast and Geodetic Survey, made a most exhaustive survey of this particular subject in 1933 and 1934. They received and reported the same expressions from certain ship operators offered by the distinguished Senator from Michigan in support of his nonuse theory. After duly weighing these expressions for what they were worth, and after carefully examining all other evidence, the Department concluded and reported as follows, under date of February 1, 1934:

The first question—Is the waterway practical from a navigation standpoint?—may be answered in the affirmative. A ship canal across the Florida Peninsula along designated route 13–B may be considered practical from a navigation standpoint. Most of the potential transits reported would have been actually made, provided (a) the waterway be available for ship movement on a 24-hour basis; (b) that all expenses incident to transit represent only a reasonable proportion of the resulting savings to ships utilizing the waterway.

It should be remembered also that the above statement was based upon a consideration of a canal with a minimum bottom width of 200 feet as compared with the canal now being discussed, which has twice that minimum bottom width.

Now, let us turn to a third Federal authority, the Department of the Navy. In a letter to the chairman of the Senate Committee on Commerce, under date of March 9, 1939, the Assistant Secretary of the Navy stated:

It is the opinion of the Navy Department that by shortening the distance and providing an additional route for seagoing vessels between the Atlantic Ocean and the Gulf of Mexico the Atlantic-Gulf Ship Canal would be of definite value during war in the shipment of necessary material for both military and commercial use as well as for the passage of naval vessels if sufficient draft is provided.

The Navy Department, comprising as it does, the Hydrographic Office, is probably the highest of all authorities on navigation in the world. The above statement definitely confirms the use of this canal by commercial vessels.

Further, let us examine the report on this question, made by the Board of Army Engineers, transmitted to Congress by the Chief of Engineers, and appearing in House Document 194, Seventy-fifth Congress, first session; pages 144 and 145:

The claim has been made by opponents of the canal that ships will not use it. If shipowners fail to use a route offering an average saving in time of 22.02 hours per trip, with probable annual savings in 1935 estimated at $9,553,244, it would mean a complete reversal of past policy and would be contrary to all business principles, unless the route be attended with so many hazards to navigation as to eliminate or greatly reduce the savings.

The Board has endeavored to ascertain the view of shipping companies with reference to the canal. Seventy-four letters were directed to owners or operators from which only 29 replies were received. Of these, 14 were favorable to its construction, 5 were unfavorable, and 10 were unresponsive. (See exhibit 2, annex 2, for details.) The lack of response to questions of this character is not unusual.

The great majority of potential users of the Atlantic-Gulf Canal are vessels pertaining to the petroleum industry carrying crude oil from the Gulf field to refineries located largely on the Atlantic. The effect of the canal would be to place the Gulf oil fields in a better competitive relation with other fields, particularly South American fields. As a matter of public policy this effect may not be a desirable one at this time. It may be better to allow present demands for petroleum to be supplied from the latter fields, while domestic resources are conserved.

The establishment of terminal facilities along the canal is essential to a realization of the predicted local benefits. No local commerce of importance can be expected to develop at once, particularly the kind whose movement is dependent on expensive facilities, until there have been provided wharves, warehouses, cooling plants, etc., the construction of which should be assured as promptly as possible.

There is no question that the canal will offer a practicable and safe route for ships. The dimensions are ample and the lights and signals proposed are of a more advanced type than any heretofore in use. There are no sharp turns or bends in the channel except at Dames Point in the existing improvement below Jacksonville, which has been widened to 1,000 feet. Visibility is ample, and there are no objectionable currents. There are fewer bends per unit of length than on any other major canal. The ships in this trade are now using channels and canals all over the world offering less facilities for navigation.

It is believed that the use of the Atlantic-Gulf Canal, at least to the extent estimated herein, will follow as the logical and inevitable business or commercial result.

These are the studied opinions of four great Federal authorities, namely: (1) The House Committee on Rivers and Harbors; (2) the Department of Commerce; (3) the Navy Department; and (4) the War Department.

Each and every one of these authorities definitely and conclusively combats and rejects the nonuse theory of the distinguished Senator from Michigan, who is supported in the main only by a number of letters from the great oil-tanker companies whose statements are reported by the House committee to be—

Designed to serve the policies of these corporations, and are not primarily directed toward the public interest.

However, that is not the whole refutation of the non-use theory of the distinguished Senator from Michigan. If other evidence were lacking, we should still have the affirm-

ative declarations of a large number of ship operating concerns. I shall read a number of these, all of which were addressed to the War Department during the month of July 1936 and were in response to a questionnaire sent out by the Army Engineer Board examining this project. These letters are a part of those from which the distinguished Senator from Michigan selected the letters he read to the Senate:

CONTINENTAL STEAMSHIP CO.,
Baltimore, Md., July 24, 1936.

BREHON SOMERVELL,
Lieutenant Colonel, Corps of Engineers, United States Engineer Office, Ocala, Fla.

DEAR SIR: I have noted with interest the description and map of the proposed Atlantic-Gulf Ship Canal across Florida enclosed with your letter of July 17.

Provided transit of the canal can be made in 24 hours or less and navigational risks are not too great for our use, I estimate our saving in operating cost on each ship per round trip from a Gulf to North Atlantic port would approximate $900. Operating three ships in this service, as we are at present, our annual saving should be about $45,000.

In my opinion, however, a reduction in ship-operating costs will ultimately result in lower freight rates, and with the exception of private carriers the shipper rather than the shipowner will most benefit from the canal.

Yours very truly,

(Signed) I. C. STOCKDALE,
Manager.

UNITED STATES TANKSHIP CORPORATION,
New York, July 28, 1936.

Atlantic-Gulf Ship Canal across Florida.
WAR DEPARTMENT,
United States Engineer Office, Ocala, Fla.

GENTLEMEN: In reply to yours of July 17, we wish to advise that the four ships operated by this company are mainly engaged in the transportation of cargoes of blackstrap molasses from the West Indies to the Gulf or to the North Atlantic ports. It is quite a rare occasion when we find it necessary to transport a cargo of molasses from the Gulf to the North Atlantic, under which circumstances the proposed Florida canal would be valuable to us.

During the fall and winter months when the heavy movement of molasses is over, we sometimes find it desirable to operate one or two of our tank steamers in the oil trade. Under such conditions the vessels transport oil from Texas ports to North Atlantic ports and under such circumstances the trans-Florida canal could be used to our advantage. However, we are not an oil company, the United States Tank Ship Corporation being organized directly for the transportation of molasses. In common with other petroleum carriers, we would be able to effect some savings in the round trip from Texas to North Atlantic and return by use of the trans-Florida canal. We would not, however, anticipate netting any greater profit from our seasonal oil transportation operations as a result of the canal for the reason that oil transportation rates would naturally seek a lower level as a result of the Florida canal being completed.

Every operator offering chartered tonnage to oil companies would naturally be forced to use the canal, so as to place them in a competitive position, the net gain accruing to the oil company.

However, from a general navigation standpoint we feel that the canal would be a good thing and would result in the economical betterment of the country.

Very truly yours,

UNITED STATES TANK SHIP CORPORATION,
(Signed) E. A. ARENTZ.

THE BANK LINE OF STEAMERS,
New York, July 27, 1936.

Proposed Atlantic-Gulf Ship Canal.
WAR DEPARTMENT,
United States Engineer Office, Ocala, Fla.

GENTLEMEN: We have carefully considered the above project and your letter to us of July 17, and are of the opinion that the proposed Atlantic-Gulf Ship Canal across Florida would be of great value to shipping, if it is to be constructed according to your description, and there are to be no tolls levied or other incidental charges, except pilotage.

We do not have any regular services operating between the Gulf and North Atlantic ports, but nevertheless consider that in our case the canal would reflect an annual saving in operating costs to the extent of about $20,000, and in these circumstances there can be no question of the benefits that would be derived from the construction of the proposed canal.

Very truly yours,

G. F. ANDOE.

ISTHMIAN STEAMSHIP CO.,
New York, August 6, 1936.

UNITED STATES ENGINEER OFFICE,
Ocala, Fla.

GENTLEMEN: With further reference to your inquiry of July 17, 1936, concerning the Atlantic-Gulf Ship Canal, I am pleased to advise you as follows:

Our present volume of business involves about 36 Gulf-to-Atlantic and 24 Atlantic-to-Gulf movements per annum.

Our vessels are oil-burning steamers, principally turbine driven, but a few reciprocating engine driven, of from 425 to 450 feet in length, from 55 to 56 feet beam, from 26 to 27 feet draft, loaded, of about 9,500 tons dead weight, and about 11 knots speed.

A bottom width of 250 feet and a depth of 33 feet certainly ought to accommodate such ships and if the traffic rules and regulations, lighting, current conditions, passing arrangements, and terminals, and so forth, are favorable, we see no reason why we would not use the canal. Of course, consideration will have to be eventually given to extra insurance costs, auxiliary charges such as tugs, and the extra cost of repairs on account of extra hazard.

Assuming the traffic outlined above and only extra charges of $40 per transit for pilotage, we figure roughly that a saving to us of about $20,000 per annum should be realized.

Very truly yours,

LOGAN CRESAP,
Marine Superintendent.

JANUARY 8, 1936.

From: George L. Holt.
To: Mr. A. V. Moore, president.
Subject: Florida Ship Canal.

Reference attached communication from the United States Senate. We find that the distance from Philadelphia to Tampa via the proposed canal would be 1,081, whereas via Key West it is 1,389, showing an actual saving of 301. The distance from Philadelphia to New Orleans via the proposed canal would be 1,364, whereas the distance via Key West is 1,713, showing a saving in favor of the canal of 349.

From information on hand, the proposed canal is to be 30 feet deep, 700 feet wide, and 206 miles long. The route of the canal is St. Johns River to Palatka, up the Oklawaha River Valley to point about 8 miles south of Ocala, thence to Withlacoochee River near Dunnellon and to Gulf of Mexico at Port Inglis.

It would appear that this canal would be very advantageous to the operation of the coastwise service. While traversing the canal the vessel's speed would be, of course, reduced to probably half speed, so that one may well assume that the 30 hours saved in both the north- and south-bound trips would be reduced actually to 20 hours each way due to this reduction in speed. It is correct that hazy weather might be expected in Florida in certain seasons of the year; however, if the canal were well and closely buoyed, it should be navigable except in dense fog.

Due to the prevalence of hurricanes in certain seasons in Florida, we assume that some special arrangements would be made for tying a ship up along the banks of the canal at certain intervals, so that in the event of a storm a ship could tie up, as otherwise, of course, she would blow ashore.

GEORGE L. HOLT.

JULY 31, 1936.

From: S. Aitken, vice president.
To: Capt. G. L. Holt, marine superintendent.
Subject: Atlantic-Gulf Ship Canal.

Re the attached chart of distances and time saved. This seems to vary a great deal from the data that you made up. I understand that Major Locke has these charts, which are very bulky, in his office, and I suggest that you check this over, as you will note that from Philadelphia to Tampa (according to this), at 10½ knots, we would save 27 hours, and from Philadelphia to New Orleans we would save 30.7 hours.

Are we not overlooking something here in going against this project?

S. AITKEN, *Vice President.*

AUGUST 4, 1936.

From: George L. Holt.
To: Mr. S. Aitken, vice president.
Subject: Atlantic-Gulf Ship Canal.

Reference your memorandum which I am returning herewith. Apparently you have forgotten the contents of my memorandum of January 8, in which I quite agree that there is a 30-hour saving both south- and north-bound were our vessels to go through the canal. However, I deducted 10 hours of this saving from each passage for reduced speed going through the canal, which is, of course, a matter of conjecture and is anybody's guess, because it cannot be established at what speed vessels would maintain while in transit through the canal.

It is my opinion, and always has been, that this canal, providing that excessive tolls were not charged, would be an enormous asset to our coastwise service, actually bringing the Gulf ports one day closer to the seaboard ports north of Hatteras.

I am attaching hereto copy of my memorandum of January 8, addresed to Mr. Moore, which is the only correspondence that has been issued by this office on the subject.

GEORGE L. HOLT.

FREEPORT SULPHUR TRANSPORTATION CO.,
New York, August 6, 1936.

BREHON SOMERVELL,
Lieutenant Colonel, Corps of Engineers, War Department, United States Engineer Office, Ocala, Fla.

DEAR SIR: Your circular letter of July 17, addressed to the Freeport Sulphur Co., this city, has been referred to us for reply because

the Freeport Sulphur Co. does not own or operate steamers engaged in coastwise service.

Upon reviewing our records for the past year we find that about 50 percent of these sailings were made by ships that proceeded into the Gulf from an Atlantic port, and if a canal were built it would be available for the use of such vessels, the other 50 percent being ships that proceeded direct from the West Indies to the Gulf. East-bound out of the Gulf to Puerto Rico the canal could not be used to advantage.

It is assumed that in transit reduced speed over a considerable portion of the canal would be necessary; and, taking into consideration the possibility of delays occasioned by the proposed bridges, we estimate that a vessel proceeding from an Atlantic port to the Gulf would save approximately 1 day as against the present route via Key West.

Very truly yours,

J. M. CASTLE, *Assistant Secretary.*

MOORE & MCCORMACK CO., INC.,
New York, August 12, 1936.

Lt. Col. B. B. SOMERVELL,
Camp Roosevelt, Ocala, Fla.

DEAR SIR: I have pleasure in attaching hereto report from our port captain, Captain Holt, from which you will note he favors the construction of the Atlantic-Gulf Ship Canal.

When this matter was previously put before us it was our understanding that tolls would be charged and we naturally believed that the tolls would be consistent with the cost of the canal, or at least an attempt made to return the cost of it; that there would be three pilots required at an unknown cost, and in all probability would be a State compulsory pilotage. It appeared to us at that time that the advantages of distance were overcome by the other unknown costs. Apparently, from our later information, these objections are overcome, and we can therefore favor the construction of this canal.

Very truly yours,

S. AITKEN, *Vice President.*

To sum up: This whole theory of nonuse advanced so repeatedly by the able Senator from Michigan rests chiefly on a group of letters from the great oil-shipping companies who, for reasons best known to themselves, are fighting to kill this important public enterprise. Representative ship operators unconnected with the oil trade affirm the use and benefit of the canal, and all departments and boards of the Federal Government which have ever investigated the matter are unanimously explicit in their findings that ships will use the canal to the very limit of their operations into and out of the Gulf of Mexico.

The Stake of Business in Peace

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 19, 1939

PROGRAM OF THE BUSINESSMEN'S COMMITTEE OF THE AMERICAN UNION FOR CONCERTED PEACE EFFORTS

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following peace program of the Businessmen's Committee of the American Union for Concerted Peace Efforts:

The shadow of war hangs over business like a pall in every great industrial country, including America. It stifles investment and postpones new enterprise.

The current forecasts of business activity by the advisory services are all contingent on the possibility of war. The "stake of business in peace" is the first subject on the agenda of the International Chamber of Commerce at its forthcoming world conference in Copenhagen.

Business faces a further burden of taxes to rearm America in a world the security of which is dependent upon the whim of one or two men in Europe. A great many of our present internal problems, both economic and ideological, are the price we pay for past and future wars.

If a general war breaks out, we know that the commodity and security markets in the United States will be thrown into a paroxism, exchanges closed, and thousands of our fellow businessmen ruined.

The polls of public opinion now show that our citizens favor the use of our resources in behalf of Great Britain and France. The Gallup poll of April 9 was as follows:

	Percent
Sell food to Britain and France:	
Democrats	88
Republicans	80
Sell arms to Britain and France:	
Democrats	70
Republicans	65

The American people obviously would wish also to sell Britain and France such things as cotton, copper, motors, scrap iron, and other products which today constitute the sinews of war equally with arms themselves.

With characteristic common sense the plain people of the United States have discarded the theories of the pacifists and recognized that the world today is governed by force. They have decided that the resources of our country must be on the side of the nations opposed to the aggressors—whether our own frontier be on the Rhine or on the Atlantic Ocean.

"It is clear that the weight of America's resources, both physical and financial, will be thrown against Hitler" (Standard Statistics, March 27, 1939).

Yet headlines on the front pages of the newspapers quoting Borah, Johnson, Nye, et al., would indicate that we would seal up our ports at the moment of the outbreak of war and let American shipping rot at the docks. Anyone who considers the history and temper of the American people knows better than this.

War or peace will depend, according to one authority, upon the single factor of what Hitler believes to be the attitude of the American people. He knows he cannot win against the resources of the United States.

With these facts before them, a group of 100 people met in Washington on April 15–16, and formed the American Union for Concerted Peace Efforts. Present were representatives of business, labor, the professions, and 13 peace organizations.

The basic question considered was this: What "methods short of war but stronger and more effective than words" can we use to improve the chances of peace?

The group agreed that the likelihood of war could be lessened by a 3-point program as follows:

1. By the amendment of the Neutrality Act to distinguish between aggressors and victims of war, as provided in the Thomas amendment, which states that the President with the consent of Congress may apply an embargo against a nation at war in violation of a treaty with the United States;
2. By the promotion of justice between nations to provide fair opportunity for trade and equal access to raw materials; and
3. By the development of adequate peace machinery.

Up to now businessmen have done little in the American peace movement. We believe it is high time, our stake being what it is, that we devote some of our practical brains and money to the prevention of war. The public is ready to follow sound leadership in foreign policy. The American Union for Concerted Peace Efforts offers a program.

A Series of Political Prognostications Indicating Which Way the Winds Are Blowing

IS THE REPUBLICAN PARTY GOING TO WIN IN 1940?
(*January 23, 1939*)

Mr. MASON. Mr. Speaker, some 40,000,000 voters of this Nation are pondering over the question, "Is the Republican Party going to win in 1940?"

From 1929 to 1932 the Republicans did nothing but fumble the ball. They could not seem to get going. Conditions changed from bad to worse. Republican leaders lost the confidence of the people and became discredited. Our people properly and naturally turned for guidance and help to the Democratic Party, whose leaders eagerly seized the opportunity provided them and offered the Nation "The best platform ever submitted to the voters of this Nation by any political party." They won in a landslide.

Soon after taking over the Government, however, the Democratic leaders, under the advice of crackpot socialistic theorists, discarded their excellent platform, and put into effect a social reform program of experimentation, designed

to bring about "heaven on earth"—but which after nearly 8 years of trial has produced little else than a great national headache. Recovery measures were entirely discarded and only just now have been brought back temporarily into the picture. The problem of farm prices, the number of unemployed, the relief mess, all stand about as they were in 1932, and we are now in debt to the tune of over $40,000,000,000. Do you wonder that the American people are growing tired of reform and beginning to insist upon recovery? Do you wonder, after nearly 8 years of Government doles, that people are clamoring for another change, demanding decent jobs in private industry at fair wages, and looking eagerly around for new leadership?

This is the situation confronting us today. It offers a real opportunity to Republicans and should present a challenge to the Republican Party. Father Time and the vicissitudes of political fortune have kindly removed most of the old discredited leaders. New leaders have developed, eager, anxious, alert, progressive, to take over and manage the G. O. P. The elephant has fully recovered from his sleeping sickness and is now "raring to go places." All signs point to a landslide in 1940. The people want another change. The Republicans will win if they do not fumble the ball or call the wrong signals.

A GREAT TEAM

(March 13, 1939)

Senator VANDENBERG is one of the most constructive thinkers in either branch of Congress. He has supported New Deal legislation when he considered it sound and beneficial and has opposed New Deal legislation when he considered it unsound and harmful. His batting average in this respect is practically perfect. He is seasoned, experienced, and a great campaigner.

Mr. Dewey is glamorous, colorful, aggressive, the hero of "Young America." He would appeal to the entire country and carry New York. In the greatest campaign ever staged in New York, a campaign that brought out 5,000,000 voters, he lost by only 60,000 votes. He bucked the Tammany machine, the influence of both Farley and President Roosevelt, the full strength of the LaGuardia city machine, and had all radicals, racketeers, and organized vice against him. Besides all that he had for his opponent the best Governor New York has had during the last 25 years. Some vote getter.

What a team they would make. VANDENBERG for President, seasoned, mature, constructive, sound; Dewey for Vice President, young, virile, colorful, aggressive. An unbeatable combination. What do you say?

MODERN ENCIRCLEMENTS

(May 1, 1939)

The word "encirclement" as defined by Webster means "a state of being enclosed, enclasped, embraced." The world has always thought of encirclement as a protected condition, surrounded by friends, enclosed in loving arms idea. Hitler, however, has recently given it the opposite meaning, such as surrounded by enemies, prevented from realizing desires, blocked off, frustrated.

This new connotation of "encirclement" might well be applied to our domestic political situation and the coming 1940 battle. The President's New Deal advisers are planning an encirclement movement against JACK GARNER. They hope to block him off from the Presidency by creating an alliance of New Dealers, labor leaders, radical "reds," and northern Negroes. It is a stop-Garner program.

Within this large encirclement movement several smaller encirclements are going on. John L. Lewis, with the aid of Madame Perkins and the N. L. R. B., is encircling and trying to block off and destroy the A. F. of L. The Communists are trying an encirclement movement upon the industrial unions of the C. I. O. and are having some success with the United Automobile Workers, at least that part not following Homer Martin. Then, again, the New Deal administration has been maneuvering during the past 6 years to put across an encirclement movement upon business, and almost succeeded before Congress woke up to what was going on. It is interesting to note that the final success of all these smaller encirclements depends to a large extent upon the success or outcome of the large encirclement movement that is aimed at the Garner camp of Jeffersonian Democrats.

We are living in an age of encirclements, and no one knows what the outcome will be. However, each individual American, each minority, each religious group, each political camp, must be eternally vigilant if we are to preserve freedom of action, freedom of thought, freedom of religion, and freedom of speech in this land of ours. We should go back to the horse-and-buggy kind of encirclements, the loving, protecting, helpful kind, and leave the Hitler kind of hatred encirclements to the dictators of Europe.

WILL THE PRESIDENT RUN FOR A THIRD TERM?

(May 8, 1939)

Millions of people in both parties are guessing, wondering, and worrying about that unpredictable person, the President, and about what he will do. Will he seek a third time? He has smashed many precedents already, and seems to enjoy doing so. He would not hesitate to attempt smashing the precedent against a third term that Washington established 150 years ago, if he took a notion to do so.

The picture concerning a third term has changed during the last few weeks. As you know, the war scare has prolonged this session of Congress. The war scare has also changed the President's attitude toward a third term. Judging by both his words and actions he now feels that war will break out in Europe before 1940 and we will become involved. Under those conditions he is convinced that he must remain at the helm of the ship of state. He would not trust the job to any one of his New Deal lieutenants in such a crisis, and most certainly he would not trust the job to a conservative Democrat; therefore, he is faced with the alternative of carrying on himself. Besides that, he has grave doubts that any of the lesser lights in the New Deal camp could win the election, and so in order to save the country from the Republicans he must carry the New Deal banner himself in 1940.

Then again, his truculent letter to the Young Democrats a short time ago, ordering all Jeffersonian Democrats either to bow to the New Deal program or to get out and join the Republicans, is a clear indication that the purge is not over, that he intends to lead the fight next spring against the conservative wing of his party, and plans to rally all radicals and new dealers around a third-term banner. Everyone agrees that he is the natural head of the New Deal party, and the most popular new dealer in the Nation; therefore, he should be the most likely candidate to win on a straight out-and-out New Deal platform.

Next spring will witness a desperate struggle in the Democratic ranks, a knock-down and drag-out fight, with no quarter asked and none given. Both camps, the one led by the President, the other by JACK GARNER, are getting ready for the battle of the century. The affair of honor will come off next spring, and third-term ideas will then be settled forever.

THE SITUATION IN THE DEMOCRATIC CAMP

(May 22, 1939)

The 1940 Democratic battle has entered a third phase. Now the Garner group has taken the offensive and has set out to frustrate the encirclement program of the New Deal group. It is understood that Big Jim Farley has been sent out by the Garner group to secure pledged delegates for the 1940 Democratic convention battle. As a result of this move, the New Deal leaders are panic stricken. They remember that it was Farley and GARNER that nominated F. D. R. in the first place. They now realize that the Farley-Garner team can probably nominate whomever they please at the next convention. No wonder F. D. R. and his lieutenants are scared stiff and are wondering what move to make next.

THE SITUATION IN THE REPUBLICAN CAMP

(May 29, 1939)

Republicans know that two large voting groups, labor and agriculture, are dissatisfied with present conditions and results that have been attained by the New Deal. The situation confronting the country today is about the same as it

was following the panic of 1893, when unemployment, bread lines, and labor troubles, coupled with low farm prices—13-cent oats and 20-cent corn—were prevalent. McKinley won the 1896 election with his "Full dinner pail" slogan. Today American labor wants jobs, not doles, and the American farmer wants parity prices not parity payments coupled with regimentation. The situation therefore calls for another McKinley, running on a platform of "Jobs, not doles." Republicans are looking around for a Presidential candidate that is sound, seasoned, mature, and courageous.

Everyone agrees that if the Republicans are to win in 1940 they must carry New York, so a New York favorite son will be selected for Vice President. The Republicans must also carry the Midwest, the bread-basket States, in order to win, so the Midwest is being scanned for the McKinley type of candidate. At present VANDENBERG and TAFT are being sized up as possible candidates for the White House job. No one knows today who the Republican Presidential candidate will be, but everyone agrees that Republicans must select forward-looking candidates.

PRESIDENT ROOSEVELT IN A NINE-HOLE

(June 6, 1939)

The air is full of speculation concerning a third term. The new dealers are ready to support Roosevelt, but as yet he says neither yea nor nay. Farley reported after his trip that New Deal policies are still popular over the country, but he carefully avoided advising the President to run for a third term. Now, Senator VANDENBERG comes out with a statement that the next President will have a real job on his hands, and in order to do it he should forget about a second term and keep both eyes upon his job, not one eye upon the job and one eye upon reelection. In fact, he proposes that the next Republican candidate should prepledge himself to one term. This puts President Roosevelt in a nine-hole on his third-term ambitions.

In view of these developments I advise the Republicans to run VANDENBERG for President, prepledged to one term, on a platform of "clean-cut, constructive, courageous principles which definitely promises to save the American system of free enterprise," and Dewey for Vice President with a 4-year seasoning, maturing, preparation period ahead of him. Republicans would then have an unbeatable team to carry their "Forward to '40 banner." Let us go!

W. P. A.

EXTENSION OF REMARKS

OF

HON. FRANK W. FRIES

OF ILLINOIS

EDITORIAL AND ADVERTISEMENT FROM THE ILLINOIS STATE REGISTER

Mr. FRIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Illinois State Register with respect to W. P. A. and its program, and also an ad bought and paid for by 33 outstanding citizens and businessmen of Springfield, Ill.:

[From the Illinois State Register of June 8, 1939]

LIGHTER VEIN

To smile all day keeps the frowns away!

Our motto: Boost and the world smiles with you! Knock and you frown alone!

SIZZLING IN BLAZING SUN, OUR LOCAL W. P. A. WORKERS WIN SMILES OF OBSERVERS

George ("Sodie") Nelch is bossing this downtown W. P. A. rail-removal project. He and his men are doing a bully good job of it. They are creating smiles of satisfaction, entertaining the crowds, winning public approval, and offsetting much of the malicious derision that has been directed at W. P. A.

At Fifth and Monroe, Fifth and Jefferson, and other points I watched these men at work yesterday. The sun was blazing down upon them. Whites with bronzed arms and walnut backs were carrying brick and lifting huge steel rails. Blacks with bulging muscles and Joe Louis-like power were bending to their tasks in the blazing sun. There was no loafing on the job and no monkey business. It was work, work, work, with wonderful, amazing human endurance and praiseworthy efficiency. Those boys really hit the ball.

I steamed alongside of smiling "Charlie" Warner, tall, picturesque, snowcapped, sartorial and tonsorial specialist, who shared our admiration of the remarkable human endurance of those W. P. A. workers toiling in that blistering sun: "Charlie" laughed and said:

"I asked 'Sodie' Nelch if he would give me a job on that W. P. A. project. 'Sodie' looked at me a moment, laughed, and exclaimed: "'Charlie, if I gave you a job of that kind in that hot sun, you wouldn't last as long as the proverbial snowball.'"

And, judging from a remark we overheard a perspiring blond drop at Fifth and Monroe, it must have been at least that hot.

So, let's give the W. P. A. boys a hand. Approximately 1,200 of them working day and night in three 8-hour shifts will have removed huge steel rails from, and repaved, 24 blocks in the business area in approximately 20 days. Doesn't that sizzle your smiler?

If you've sneered, and thumbed your noses at W. P. A. you will feel doggone guilty if you go and watch "Sodie" Nelch and his men accomplishing this marvelous piece of work. All along the street we heard people praising the boys. That's why we fire this salvo of smiles in their honor.

APPRECIATION

We, the undersigned merchants of Monroe Street between Fourth and Fifth Streets, wish to publicly express our thanks and appreciation to the city officials and officers of the work's program, and especially to the hard-working men who labored day and night to finish our street between Fourth and Fifth on Monroe Street in almost incredible time for the benefit of our businesses.

Again we say W. P. A. you did the job quickly and most efficiently.

Thanks.

Watch for our grand Monroe Street opening, between Fourth and Fifth Streets. Free dancing—souvenirs—prizes. Date to be announced later.

The following merchants have contributed to this cause:

Monroe Market, 416 East Monroe Street; Lawrence Mizeur, vegetables and fruits, 406 East Monroe Street; Monroe Annex, 406 East Monroe Street; Coney Island, 420 East Monroe Street; Compo Market, 418 East Monroe Street; Maloney's Tavern, 401 East Monroe Street; Conner's Market, 405 East Monroe Street; The Annex, Robinson Bros., 426 East Monroe Street; Thrifty Cleaners, 426 East Monroe Street; The Music Shop, 414 East Monroe Street; Buckley's Plant Shop, 407 East Monroe Street; Oriental Cafe, 424 East Monroe Street; Arcadie Gifts, 402 East Monroe Street; Farmers' Market, 411 East Monroe Street; The Golden Well, 411 East Monroe Street; The Man's Store, 415 East Monroe Street; Claypool's Drug Store, 229 South Fifth Street; Winch Floral Shop, Fourth and Monroe Streets; Liggett's Drug Stone, 424 East Monroe Street; Ideal Cafe, Corner Fourth and Monroe; Koch's Barber Shop, scalp treatments, 222 United Mine Workers Building; Fred Slater's, band instrument shop, 412 East Monroe Street; Consumer's Coffee Co., 403 East Monroe Street; Roxy Cleaners, 422 East Monroe Street; The Den, John Goddall, 424 East Monroe Street; B. & F. Toggery, 412 East Monroe Street; Shoe Repair Works, Hy Ettelbrick, master shoe dying, 404 East Monroe Street; Modern Beauty Salon, 228 United Mine Workers Building; Paris Engraving Co., 410 East Monroe Street; Paramount Market, 422 East Monroe Street; Lee's Barber and Beauty Shop, 426 East Monroe Street; The Atlantic-Pacific Tea Co., United Mine Workers Building.

Success to our merchants on Monroe.

Busses are always at your service. * * *

America on the Move

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

ARTICLE FROM FREE AMERICA

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD I am very glad to include

the following article by Miss Helen E. Livingston on the pressing problem of interstate migration, as follows:

[From Free America for June 1939]

AMERICANS ON THE MOVE

(By Helen E. Livingston)

Not the least in the crop of derogatory labels which has sprung up out of the bewilderment of the past decade is the term "transient." Particularly in southern California, where the transient population is greater than in all States west of the Mississippi—where the problem in Los Angeles County alone exceeds that of many entire States—has the nonresident family become an object of public suspicion and editorial alarm.

It is a strange right about face on the part of a community which has so industriously and indiscriminately offered itself as a mecca for the retired farmer, the prospective tourist, and the man seeking opportunity and a job. Like a nervous hostess taking stock of her larder as she views the response to a too enthusiastic invitation, Los Angeles is attempting to restrict her guest list to a carriage trade.

The retired farmer is no longer welcome unless he arrives with a healthy bank account. And the laborer, whom an earlier policy invited to California in order that "two men for every job" might insure an open shop, now finds himself unwelcome and unwanted. It is significant that the State which reveres the "Forty-niners" and the covered wagons of the pioneers, has chosen to classify the "horde of transients" as undesirables, dismiss them as shiftless ne'er-do-wells, and warn against their criminal tendencies.

In the face of such public censure, the transient has found little opportunity to speak for himself through the public press or in the voting booth. That he has a story to tell, I have learned in the past 5 years of working with him. Who are these transients and whence do they come? Day after day I have talked with them across a desk; have visited them in their new-found homes; their furnished rooms; their trailers. Young girls with fresh country complexions; broad-shouldered men with work-worn hands, faces sunbrowned and weathered by adversity, or pale and tense; and unwanted old men and women. In the twang of Texas, and the clipped nasal of the Bronx; in "high Yankee" and with a Southern drawl they tell their stories. They are stories the statistics do not tell.

In the name of their American citizenship, in the name of their self-respect and their hopes for the future, they ask for the chance to prove themselves: For the "grub stake" of the pioneer. But the statistics have spoken. Transients must be returned to their home States as soon as permission can be obtained from their legal residence.

One answer to the charge that these people are all aimless and confirmed wanderers, is the fact that I have been able to verify established residence for 71 percent of my families. For, bear in mind the fact that the home community, already overloaded with problems of its own, would be glad to refuse this permision if it could prove a lack of continued residence there. A once-established people, they have been uprooted by drought and flood, or cast aside by industrial lassitude. To the charge that the transients represent a horse of deliberate "spongers," the statistics on my cases offer further enlightenment. For 79 percent of them arrived in California with funds of their own or promise of employment, and were the victims of circumstances usually beyond their control.

The A family is an example of this group. Mr. A had sold out his business in Ohio and moved to California with a "stake." Besieged by promoters he had purchased a filling station upon his arrival, and made a substantial down payment on a home. He lost the filling station in a series of gas wars staged by the large oil companies to squeeze out independent dealers. His home was threatened as his funds grew low. Before the A's had been in California a year, it was necessary for them to apply for relief. When I told them they could only be returned to Ohio, Mr. A was inclined to be bitter. He had "fallen among thieves," he said. California had "stripped him of his raiment and robbed him," and now offered only to return him penniless to the community where he had been respected and, to a degree, prosperous.

When the aircraft company in my district shut down until a technicality over contracts could be adjusted, I heard more stories. Within the year this firm had imported from eastern branches a group of trained aircraft workers not available in California—and paid them from $16 to $24 a week. The shut-down found these families with no surplus of funds. But the company assured them that they would soon be back at work. Two months went by while the men called each week at the factory and were told to "come back next Tuesday."

In the meantime they had, of necessity, applied for relief and were classified as "indigent transients." When I offered them the alternatives of return transportation to their home States or suspension of relief, they were bewildered. Suppose they did return—what then? The jobs they had vacated there were already filled. Their prospects for going back to work were better in California where the tools they had put down when the plant closed waited for them. "They tell us we'll be going back any time now," they assured me.

And then one night I met socially an executive of the company and got another side of the picture. Production, he said, would not start for another 3 months at least.

"Then why," I asked, "do you tell these men they'll be back at work within a week or two?"

He was frank about it. "We have to have them when we are ready to start producing," he said. "They're trained men, and if we tell them they must wait 3 months, they're liable to go out and get another job. Then we would have to import more trained men."

In the interim, while he didn't approve of "all this relief expenditure," and the transient program in particular, he felt this situation was different from most. And he hoped we would not find it necessary to return the particular group of men his company would need—3 months hence.

There are other families whose situation is more hopeless. Elderly farmers, who had worked hard all their lives, had paid taxes, and owned their own farms, came for assistance. They had watched a lifetime of labor and the hope of a competence for their old age disappear with a mortgage foreclosure. They dreaded the prospect of becoming objects of public charity in the small communities where they had been respected citizens. The California sun was warm on their bodies aching with the arthritis and asthma born of their struggle with the elements in the business of raising crops. They had always paid taxes willingly, they argued. And on $30 a month they could live in California far more comfortably than in the rigorous climates from which they had come.

If persuading some of these people to return was often a great problem, then it was by no means the only one. The important duty of "establishing legal residence" had a way of presenting a tangle of technicalities. For the several States and even local communities make their own laws concerning residence—and they have done it with a vengeance. Some require only 6 weeks within their borders; others 5 years. And residence is lost with equal variation, ranging from "6 months willful absence," to the variously interpreted "until residence is acquired in some other State." Even these rulings serve only as a working basis, are subject to change and, sometimes, to the whim of the authorizing agency. Thus it was that a letter from one small Texas community read: "They're nice people and they have lived here a long time. But times are hard and we can't authorize their return unless we get a rain in the next month."

And time after time families have come to me asking to get home and been startled to find that they have no home. The urge to remain self-sufficient, which has prompted them to move on to new and untried fields when their own small world collapsed, has robbed them of their once-established residence in the home community. Unaware of residence laws, they have followed the American tradition of searching for greener fields, and found themselves disowned as a result. According to the statistics they are part of the army of aimless wanderers. But they insist their wanderings have not been aimless. One Oklahoma farmer stated it bluntly: "I'd 'a' been better off," he said, "to have applied for relief before I left Oklahoma, instead of trying to make out on my own."

These, then, are some of the problems of the transients. Beset with all of the consequences of business recession, natural catastrophes, and family and health problems, they emerge as a group who have, at least, attempted some positive action to counteract the situation in which they found themselves. And they have encountered new obstacles in the way of complex residence laws and bewildering hostility and public censure.

But what of the problem in relation to the community? What of Los Angeles, for instance? Suppose she offers a haven for all. It is estimated that 100,000 in need of employment entered the State by automobile alone in 1938. Can California, already staggering under heavy problems of her own, be expected to shoulder all of the additional problems attracted by her climate? And if California cannot, then who can?

Present methods of rendering assistance, based on the responsibility of the community of residence, have come down to us from the English poor laws, designed to repress a growing tendency to migrate. Even before 1929 their inadequacies were becoming apparent due to the increased mobility of population demanded by an expanding industrial system. But thriving communities were willing to "stretch a point" for potentially solvent newcomers and the manpower demanded by their busy factories. With the depression and mounting relief loads, however, came a revival of the strict interpretation of community responsibility, and the transient problem emerged.

Just how far does community responsibility extend? Is it fulfilled in meeting the bare subsistence requirements of its citizens, while it urges them blandly to "get another job"? Action taken by citizens of Manchester, N. H., is to the point. Manchester was a one-industry town. Every citizen of the community, directly or indirectly, was dependent upon the pay roll at the Amoskeag Mills. When hard times came, he could look forward to the day when the mills would open up again. Then came the staggering announcement—the mills were closing, never to reopen. In one stroke hundreds of potential transients were created. But Manchester determined otherwise. All possible resources of the town were pooled to purchase the mill buildings. And within them, gradually, have developed industries varying in character, building for many markets.

If every community could command such resources in the form of civic spirit and the necessary funds, large numbers of transients would never "leave home." But this is not always possible. The drought areas are also one-industry communities. From these depleted districts thousands of families have migrated. Can these drought-ridden communities be held entirely responsible for caring for all the victims of the unwavering sun? The answer lies in the sere grain fields, the dried cattle bones, the abandoned villages of the plains.

Speaking before the annual meeting of the United States Conference of Mayors in Washington, D. C., in 1937, former Mayor Frank Shaw of Los Angeles said: "Any attempts at solution on the part of the separate States will unavoidably involve a snarl of reprisals that will only complicate the difficulty. * * * Only the Federal Government can rise above such efforts and carry out a program that will be at once effective and fair to all.

What is the fate of the transient in the hands of the Federal Government? A Federal transient program born with the New Deal collapsed in September 1935, for lack of public support and public funds. In isolated areas the Farm Security Administration has continued to concern itself with the problems within the limitations of its budget by reclaiming drought-swept lands and assisting the dust-streaked residents to adapt themselves to the new conditions. Mindful also of the refugees from these regions struggling to find themselves in new lands, it has established migratory labor camps offering sanitation, medical care, and some hope of reestablishment on small plots of their own; their small income as "pickers" in the great fruit orchards and vegetable fields of the large-scale farming interests, supplemented by a cow and a small garden plot of their own. Heartening as the results have been, they are limited both by lack of funds on the part of the administration, and by the fact that the problems of the migrants, desperate as they are, are only a part of the whole transient problem.

To date the most comprehensive measure before Congress is the Voorhis bill, which attempts not only to meet the immediate need by Federal grants-in-aid, but proposes to straighten the tangled mass of residence laws by stipulating that benefiting States shall have residence requirements of not to exceed 3 years, of which 21 months must show self-sufficiency on the part of the family. Further, it requires that residence cannot be lost in one State until it has been acquired in another.

The fate of this bill—introduced in the last three sessions of Congress—is significant. Congress, as a whole, has shown profound lack of interest in this or any other attempt to formulate some adequate transient legislation. In the first place, transients can't vote, and any efforts on their behalf must be based on a purely humanitarian basis. In the second place, Congressmen, faced with the problem, have represented too effectively the attitudes of their own overburdened districts. One Texas Representative says, "Let the Texans go to California. We've more than we can handle in Texas without them." This, in general, is the attitude of most Congressmen—and their constituents—in the States from which people are migrating.

And what of the States on the receiving end of the problem? Far from being disinterested in legislation which would attempt fair and humane measures for the transient, they are actively hostile unless they are able to dictate the terms. California, for instance, approves of Federal funds, but revolts when she must loosen to some extent her strict residence requirements. Commenting on the Voorhis bill, the Los Angeles Times says: "Transient indigents are truly a Federal responsibility and a temporary one: but the Federal Government should not permit them to choose their own place of indigence."

And thus is the problem hedged between the Scylla of disinterest and the Charybdis of hostility.

Speaking as a California Congressman, Mr. VOORHIS says: "California needs Federal aid to help meet the nonresident relief problem. But a far more constructive approach from the standpoint of California is Federal action to guide, stabilize, and reduce this whole migratory movement." This is close to the heart of the matter. For we cannot forever say to our fellow citizens, "Stay where you are and starve." Neither can we expect some communities to assume the entire burden either cheerfully or adequately. The transient problem is part of every break-down in our economic system; part of every drought, flood, and dust storm. Any positive effort toward promoting "the general welfare" on the part of the smallest hamlet or by the National Government is an important contributing factor in its solution.

In the meantime the immediate emergency remains. It will not be solved by alarmist headlines, or even entirely by enlightened legislation. Above everything else, the transient asks to be regarded as a fellow citizen rather than as a mass menace. He asks understanding of his situation and its complex problems, and on that stand he rests his case.

In the Caribbean Sea

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 15, 1939

Mr. IGLESIAS. Mr. Speaker, the recognition of the importance which the control of the Caribbean Sea has for the United States of America—which insures the control of the Antillean Archipelago and that of the Gulf of Mexico—is shown by the policy constantly followed by the United States during the last third of the last century when said country began to realize the importance of creating its hegemony in the said sea for the defense of its eastern coasts and also for its commercial interests, the only way of guaranteeing control of the Panama Canal.

The passage of the Canal to the Pacific Ocean will be insured only by the efficiency of battleships and the bases of our islands and lands near the outlet of the Canal, where a permanent service of vigilance and control should be established; and the battleships are going to be armed and maintained only by the United States. Congress has already passed measures to organize the service of national defense of Puerto Rico for the purpose of permanent vigilance and control.

Only Puerto Rico as a Territory in the Caribbean Sea is in a position fully to live in common with the United States. As it appears, the admission of Puerto Rico to the confederacy as a free and sovereign State would be the first step in the attainment of the high ideal which we maintain for Puerto Rico, which in historical prestige, in ethical values, in spiritual exquisiteness, or in material resources can be considered a great possibility to reach the standing of a prosperous State of the Republic.

True "Monroeism" consists in making friends, in gaining good will, and in making converts. Right intentions, honest actions, a straight road, and noble ideals—that is the clear, defined policy that the President has recommended and followed; and in that sense, and believing that the policy which the President was advocating will be the appropriate policy which the United States may follow in the future, there may come forth in the Caribbean Sea as by magic, not a new image or representation of its personality but its own true self, and its own essential and genuine rights, must, above all, lift Puerto Rico to the category of a free and sovereign State of the Union, under conditions equal to those of the other States. It also greatly concerns Puerto Rico that its final status—implying always a more or less ample grant, a "state of being," which does not depend on the will of the Puerto Rican people—be statehood; that is, to become an entity which acts.

A memorandum has been received which is self-explanatory, as follows:

MEMORANDUM TO THE RESIDENT COMMISSIONER FOR PUERTO RICO IN WASHINGTON, D. C., HON. SANTIAGO IGLESIAS, AND TO THE PRESIDENT OF THE SENATE OF PUERTO RICO, HON. RAFAEL MARTINEZ NADAL

MAY 31, 1939.

I—FISCAL POLITICAL STATUS

The Legislature of Puerto Rico, in the performance of its duty and exercising the right of the people it represents; according to the principles of liberty and democracy informing the traditions and life of the American people, and inspired by pure sentiments of human dignity, desires that Puerto Rico become a State and be admitted to the American Union under the same conditions as the Federal States.

Toward the realization of such political status, we reiterate the petition formally made to Congress through concurrent resolution adopted by the Legislature of Puerto Rico in the regular session of 1934, to wit, that legislation be adopted by Congress authorizing our people to frame its own State constitution, which shall be submitted for approval to the United States Congress after its ratification by the electoral body of Puerto Rico, to which it shall be submitted through a plebiscite for such purpose. The result of said plebiscite shall be certified by the Executive Secretary of Puerto Rico, and the Governor of Puerto Rico shall give notice thereof to the President of the United States for the proper purposes.

II—IMMEDIATE LIBERALIZING REFORMS TO THE PRESENT ANTONOMIC REGIME OF PUERTO RICO

Until such time as the above-mentioned political status is definitely established for Puerto Rico, the Legislature of Puerto Rico, which is the genuine representation of our people, demands an immediate liberalizing reform of the autonomic régime of government as now enjoyed by this island, petitioning Congress, as it is hereby petitioned, to amend the Organic Act of Puerto Rico, approved on March 2, 1917, as follows:

One: That sections 12 and 13 of an act entitled "An act to provide a civil government for Porto Rico, and for other purposes," approved March 2, 1917, be, and the same is hereby amended to read as follows:

SEC. 12. That the supreme executive power shall be vested in an executive officer, whose official title shall be the Governor of Puerto Rico. He shall be appointed by the President, by and with the advice and consent of the Senate, and hold his office at the pleasure of the President and until his successor is chosen and qualified. He shall have general supervision and control of all the departments and bureaus of the government in Puerto Rico, so far as is not inconsistent with the provisions of this act, and shall be commander in chief of the militia. He may grant pardons and reprieves and remit fines for offenses against the laws of Puerto Rico, and respites for all offenses against the laws of the United States until the decision of the President can be ascertained, and may veto any legislation enacted as hereinafter provided. He shall commission all officers that he may be authorized to appoint. He shall be responsible for the faithful execution of the laws of Puerto Rico and of the United States applicable in Puerto Rico, and whenever it becomes necessary he may call upon the commanders of the military and naval forces of the United States in the island, summon the posse comitatus, or call on the militia, to prevent or suppress lawless violence, invasion, insurrection, or rebellion, and he may, in case of rebellion or invasion, or imminent danger thereof, when the public safety requires it, suspend the privilege of the writ of habeas corpus or place the island or any part thereof under martial law until communication can be had with the President and the President's decision therein made known. He shall annually, and at such other times as he may be required, make official report of the transactions of the government of Puerto Rico to the Executive Department of the Government of the United States to be designated by the President as herein provided, and his said annual report shall be transmitted to Congress, and he shall perform such additional duties and functions as may, in pursuance of law, be delegated to him by the President.

"At the general election to be held in Puerto Rico in the year 1940, and thereafter at each general election, the qualified electors of Puerto Rico shall elect the Governor, who shall qualify as such on the first Monday of January of the succeeding year; and upon such qualification the office of the appointed Governor shall cease and terminate. A Lieutenant or Vice Governor shall also, at such time, be elected for a term of 4 years, under like conditions. He shall act as Governor in case of a vacancy, the temporary absence or removal, resignation, or disability of the Governor, and shall exercise all the powers and perform all the duties of the Governor during such vacancy, disability, or absence. The Lieutenant or Vice Governor shall be the ex officio president of the senate and shall receive such salary as the Legislature of Puerto Rico may determine. The Governor and the Lieutenant or Vice Governor thus elected shall hold their offices for a term of 4 years and until their successors have been elected and shall have qualified.

"The elected Governor herein provided for may be impeached by the insular house of representatives, and on trial by the insular senate may be removed by a two-thirds vote of that body for any impeachment cause. Judgment in cases of impeachment shall not extend further than to removal from office and disqualification to hold and enjoy any office of honor, trust, or profit in Puerto Rico; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment according to law.

"SEC. 13. That the following executive departments are hereby created: A department of justice, the head of which shall be designated as the attorney general; a department of finance, the head of which shall be designated as the treasurer; a department of the interior, the head of which shall be designated as the commissioner of the interior; a department of education, the head of which shall be designated as the commissioner of education; a department of agriculture and commerce, the head of which shall be designated as the commissioner of agriculture and commerce; a department of labor, the head of which shall be designated as the commissioner of labor; a department of health, the head of which shall be designated as the commissioner of health; and a department of social welfare, the head of which shall be designated as the commissioner of social welfare.

"The heads of departments shall be appointed by the elected Governor, by and with the advice and consent of the Senate of Puerto Rico, for the term of 4 years, and until their successors are appointed and qualified, unless sooner removed by the elected Governor.

"Heads of departments shall reside in Puerto Rico during their official incumbency.

"The heads of departments shall collectively form a council to the Governor, known as the executive council. They shall perform under the general supervision of the Governor the duties hereinafter prescribed or which may hereafter be prescribed by law and such other duties not inconsistent with law as the Governor, with the approval of the President, may assign to them; and they shall make annual and such other reports to the Governor as he may require, which shall be transmitted to the executive department of the Government of the United States to be designated by the President as herein provided: *Provided*, That the duties herein imposed upon the heads of departments shall not carry with them additional compensation."

Two: That section 29 of the Organic Act of Puerto Rico approved March 2, 1917, be, and the same is hereby, amended to read as follows:

"SEC. 29. The next election in Puerto Rico shall be held the 5th day of November 1940. At such election there shall be chosen senators, representatives, two Resident Commissioners to the United States, as herein provided. Thereafter the elections shall be held on the first Tuesday after the first Monday in November, beginning with the year 1944, and every 4 years thereafter."

Three: That the first and fifteenth paragraphs of section 34 of the organic act of Puerto Rico, approved March 2, 1917, be, and the same is hereby, amended to read as follows:

"SEC. 34. That the enacting clause of the laws shall be, as to acts, 'Be it enacted by the Legislature of Puerto Rico,' and as to joint resolutions, 'Be it resolved by the Legislature of Puerto Rico.' Except as hereinafter provided, bills and joint resolutions may originate in either House. The Governor shall submit at the opening of each regular session of the legislature a budget of receipts and expenditures, which shall be the basis of the ensuing annual appropriation bill. Said appropriation bill shall embrace the estimated receipts and expenses hereinafter provided. No bill shall become a law until it be passed in each house by a majority yea-and-nay vote of all the members belonging to such house and entered upon the journal and be approved by the Governor within 10 days thereafter. If when a bill that has been passed is presented to the Governor for his signature, he approves the same, he shall sign it; or if not, he shall return it with his objections to the house in which it originated, which house shall enter his objections at large on its journal and proceed to reconsider it. If after such reconsideration, two-thirds of all the members of that house shall agree to pass the same it shall be sent, together with the objections to the other house, by which it shall likewise be reconsidered, and if approved by two-thirds of all the members of that house, it shall become law the same as if it had been approved by the Governor. The vote of each house shall be by yeas and nays, and the names of the members voting for and against shall be entered on the journal. If any bill shall not be returned by the Governor within 10 days (Sundays excepted) after it shall have been presented to him, it shall be a law in like manner as if he had signed it, unless the legislature by adjournment prevents its return, in which case it shall be a law if signed by the Governor within 30 days after receipt by him; otherwise, it shall not be a law. All laws enacted by the Legislature of Puerto Rico shall be reported to the Congress of the United States, as provided in section 23 of this act, which hereby reserves the power and authority to annul the same. If at the termination of any fiscal year the appropriations necessary for the support of the government for the ensuing fiscal year shall not have been made, the several sums appropriated in the last appropriation bills for the objects and purposes therein specified, so far as the same may be applicable, shall be deemed to be reappropriated item by item, and until the legislature shall act in such behalf the treasurer may, with the advice of the Governor, make the payments necessary for the purposes aforesaid."

"The general appropriation bill shall embrace the estimated receipts as determined by the treasurer of Puerto Rico, consistent with the existing sources of income and the revenue laws which the Legislature of Puerto Rico may pass, and all appropriations for the ordinary expenses of the executive, legislative, and judicial departments and agencies, dependencies, commissions, or bodies of the insular government, and for the payment of interest on the public debt. It shall also embrace appropriations for the works and services which, due to their nature and urgency, should be carried out and rendered during the fiscal year to which said appropriation bill refers. All other appropriations shall be made by separate bills, each embracing but one subject."

Fourth. That section 40 of the organic act of Puerto Rico, approved March 2, 1917, be, and the same is hereby, amended to read as follows:

"SEC. 40. That the judicial power shall be vested in the supreme court, composed of a chief justice and six associate justices, and in the other courts and tribunals now established and in operation under and by virtue of existing laws. The jurisdiction of said supreme court and other courts and tribunals, and the form of procedure in them, and the various officers and attachés thereof, shall also continue to be as now provided until otherwise provided by law: *Provided, however*, That the chief justice and associate justices of the supreme court shall be appointed by the elected Governor, by and with the advice and consent of the Senate of Puerto Rico, and the Legislature of Puerto Rico shall have authority from time to time as it may see fit, not inconsistent with this act, to organize, modify, or rearrange the courts and their jurisdiction and procedure, except the District Court of the United States for Puerto Rico."

Fifth. That the organic act of Puerto Rico, approved March 2, 1917, be amended granting authority to the Legislature of Puerto Rico to fix the powers and duties of the heads of departments and the number and titles thereof.

Respectfully submitted.

THE PUERTO RICAN LEGISLATIVE JOINT COMMITTEE,
CELESTINO IRIARTE.
MIGUEL GARCIA MENDEZ,
BOLIVAR PAGAN,
LINO PADRO RIVERA.

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

ADDRESS OF HON. JAMES A. FARLEY, MAY 20, 1939

Mr. HAVENNER. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. James A. Farley, Postmaster General of the United States, at the dinner of the Young Democrats of San Francisco, Inc., at San Francisco, Calif., on Saturday, May 20, 1939.

The address is as follows:

Visiting California has become a kind of habit with me and, I may add, a very pleasant one, indeed.

While here a couple of years ago I had the opportunity to thank the good people of the State for the splendid way in which they rallied to the Democratic cause in the Presidential election of 1936. At the time I suggested that it would be an excellent idea to complete the picture by electing a Democrat to the Governor's chair at Sacramento.

The voters responded with customary California courtesy, and I am now happy to congratulate you in person on the election of my good friend, Culbert L. Olson, to the governorship; and my good friend, SHERIDAN DOWNEY, to the United States Senate. The political climate of California has proved to be all that its admirers said it was.

This is a fine forum for the discussion of current political problems, because the people of the far West have always been noted for their progressive and liberal attitude on public questions. They are not afraid of an idea simply because it is new, and they are not afraid to root out old ideas and customs when experience has shown them to be useless and out of date. They know that government must adapt itself to changing times and changing conditions or else pay the penalty.

I came here primarily to visit the San Francisco World's Fair, the beauties and attractions of which are proving a magnet for untold thousands of people who never before had the pleasure of viewing this part of the country. The organization of Young Democrats very kindly invited me to be present at tonight's meeting, and as politics is never out of season, I was happy to accept. The strength of the Democratic Party in recent years has been due in large measure to the support of young voters, and one of the major aims of the party leadership is to justify this confidence and to insure its continuance.

The United States, like the rest of the world, has been going through a trying period of adjustment in social, economic, and political life. This condition was not a creation of the administration now in power at Washington. On the contrary, it was handed down as a form of unwelcome heritage from the administration which preceded it. The people of the Nation turned to the Democratic Party for guidance and leadership because the last Republican administration was either unwilling to face realities or unable to point the way out of these difficulties.

The task of clearing away the wreckage and then rebuilding is never an easy one. The new edifice does not spring up overnight as if by magic—its construction is the fruit of patience, wise understanding of the problems involved, and long hours of unremitting toil. For more than 6 years now the Roosevelt administration has been engaged at the labor of rebuilding. During all this time a lusty chorus of disapproval has come from those who wanted to discourage the builders. Disaster was predicted as each new step was taken. Some people, you know, love to believe that the worst is about to happen. Yet despite the clamor of the defeatists, the work has gone on until today it may be honestly said that the United States is in the strongest position of any nation in the world. We have problems to be met, of course, but these fade into relative insignificance when placed beside the dangers and the trials that beset other lands and other peoples. The United States has moved resolutely forward under a gallant President to do the things that had to be done. The necessary steps may have caused inconvenience to some individuals who felt happier under the old regime, but good fortune often hides itself under a disguise. If the fault finders would forget about their own personal discomforts for a while they might be grateful for the fact that the destiny of the country has not been in weaker hands.

The Roosevelt administration has based its policies on commonsense principles that should appeal to every right-minded person who has a care for the welfare of his fellow men. The administration has had two compelling objectives—to conserve natural resources, and, above all, to conserve human beings. President Roosevelt has never ceased to bring home to the American people the homely fact that a nation which tolerates continuing injustice to millions of worthy citizens is gambling on its own existence. Human lives may be blighted and destroyed in destructive warfare or they may fall the victims of an unjust economic system. There were too many lives being sacrificed to an industrial system that was out of order and badly in need of repair when the present administration took office. There were too many people living on the verge of poverty and ruin because waterpower resources went undeveloped and dust storms and erosion laid waste the soil while the Federal Government did nothing about it.

Now, there are two ways to meet an unwelcome situation in political affairs. The first is to turn away and do nothing, in the pious hope that time and nature will effect a cure. The second method is to look at the problem with candid eyes, measure the extent of the damage, and then proceed to correct it with the best tools that are available. President Roosevelt chose the latter course, because he believed that a courageous attack was far more typical of the American spirit than a spineless surrender. His purpose was not to add a blow-out patch that might keep the economic machine running on even keel for a few more miles, but to bring about a thorough overhauling that would preserve the machine for many more years of useful service.

This job the President has done ably and well, and the proof of his accomplishment lies in the grudging acceptance of his doctrine by the very individuals who protested in the loudest tones. The fact is that not a single outstanding political opponent has had the hardihood to advocate the repeal of the Roosevelt measures. They tried to block the enactment of these reforms, not for the public good but in the furtherance of their own selfish, partisan motives. They denounced social security as a menace to the country's fiscal structure; they opposed regulation of the stock market; they tried to halt the insurance of bank deposits; and they opposed every attempt to lift the buying power of the farmers.

They are still fundamentally opposed to these healthy reforms, but in the face of overwhelming public approval, they have come to the unhappy conclusion that it would be politically unhealthy to urge their repeal.

This attitude of obstruction, which has been the only visible sign of Republican statesmanship in the last few years, had an ironic twist just a few short weeks ago. In the light of experience, President Roosevelt recommended to Congress a number of changes which he felt would improve the workings of the Social Security Act, one of the most humane pieces of legislation ever placed on the statute books by this or any other administration. A leading Republican spokesman, frequently mentioned as a possible G. O. P. standard bearer in 1940, immediately announced to the public that the Chief Executive had yielded at last to popular pressure and had gone over bag and baggage to the Republican position. This statement was very fittingly distributed through the medium of the Republican National Committee. The eminent Senator who sponsored the statement apparently overlooked the fact that the Republican Committee had carried on a cruel and furious campaign to discredit and uproot the whole Social Security Act in the closing days of the 1936 campaign. I feel sure you recall that unfair and unfortunate attempt to deceive the public, even if the Senator did suffer such an amazing lapse of memory. In the face of the record, do you think the Republican leaders honestly wish to improve the workings of social security, or do they harbor a secret desire to rip it apart and toss the discarded shreds on the scrap heap? How long do you think any of these basic reforms would remain in effect if the reactionary forces succeeded in climbing into power once again?

It is always easy to stand on the sidelines and to offer advice and criticism to those who have been given a difficult assignment to carry out. We have learned from recent events in Europe that when a dishonest deed is about to be done it is a simple matter to find an excuse for doing so, even if it fails to convince anyone but the individual who offers it. By the same token it is always easy for those who oppose progress and reform to find an excuse for doing so. They never come out openly and say what they really think—that the Government should let the farmer, the workingman, and the unemployed take care of themselves, if they can. The tactics of obstruction are always clothed in plausible raiment and offered to the public on the high ground of patriotism.

Although a hailstorm of denunciation has been directed against every action taken by the administration now in power, the truth is that the past 6 years has been a period of imperishable gain for the United States. Old wrongs and abuses that should have been cured long ago have been rooted out of the economic system. The ideal of America as a land of equal opportunity for all has been recaptured and democracy has been vindicated by the simple process of making it work.

Our Republican friends, of course, remain dissatisfied. They have established themselves as champion Monday morning quarterbacks and bleacher managers. Ignoring the many fine things that have been accomplished, concerning which they find it wise to be silent, they point to the problems that remain and demand to know why they haven't been solved. The obvious answer is, why didn't they solve them when they were in authority? Every single sore spot that now troubles the Nation had its inception and grew to maturity in the 12 years of Republican misrule that took place before 1933. And please remember that an ounce of prevention is worth a pound of cure. Had these sore spots been treated earlier the task of removing them would be far easier than it is today.

A very distinguished neighbor of yours, Mr. Herbert Hoover, is badly upset because the National Budget is temporarily out of balance. If that is really a calamity, why did the Palo Alto statesman fail to balance it while he was in office? He left the White House with a distressing series of red marks on Uncle Sam's

books after what has amusingly been described as 12 years of Republican prosperity.

No honest man would attempt to underestimate the seriousness of the agricultural problem. No honest man would attempt to underestimate the problem of unemployment. These are two more unwelcome hangovers from the era of Republican misrule. The only difference is that this administration is making a genuine and sincere effort to correct these evils at their source—a policy in sharp contrast to the half-hearted and meaningless efforts that were put forth by the preceding regime.

The Republicans faced the same problems that exist today when they were in office a decade ago. They had nothing to offer then as corrective measures, and they have nothing to offer now. They have not moved an inch from the position they occupied on public questions during the disastrous period of Mr. Hoover's reign. The only statesmanlike leadership this country has known in our generation has come from President Roosevelt, and every constructive measure of his administration has been opposed by the full weight of the Republican Party.

It is an old custom in politics, when a party wishes to cover up its own shortcomings, to manufacture an issue that will distract the attention of the public. This is a period of chaos and upheaval in world affairs and the Chief Executive has been compelled to grapple with a series of foreign problems of unprecedented magnitude. The whole of civilization has been trembling at the fear of another general war. Every realistic person, who is ready to face facts, knows this to be true. And yet, only recently, another distinguished Republican Senator, also mentioned as a probable party standard bearer, gravely announced that the supposed crisis was merely an invention of the President to take the public mind off domestic questions.

If the Senator really believed his own words, then he must have convinced himself that every newspaper and every radio station in the United States had joined in this conspiracy with the Chief Executive to hoax the American people. His charge was so ridiculous that even the most biased Republican organs advised the Senator to forget about it and try something else. From other quarters, the charge has come that the Chief Executive wants to lead us into war because he has the courage to raise his voice against violence and international wrongdoing, a policy pursued by nearly every one of his illustrious predecessors in the White House.

I have known Mr. Roosevelt for many years, and there is no individual to whom I would rather trust the safety and security of the United States in these dangerous times. During his term of office, there has been a cruel war in the Orient, a war in Africa, a destructive civil war in Spain, and a number of border clashes that threatened to provoke a general conflict. In each one of these instances, American interests were involved either directly or indirectly. Yet the President, by his wise and skillful handling of these incidents, kept this country free of entanglement. Not a single American enlisted man has lost his life on foreign soil under this administration. They have not been chasing around the jungles of Latin America on questionable military ventures as they were under Republican rule.

For those who may be disturbed by the constant efforts to discredit the motives of the President in his quest for peace, it may be well to listen to the words of a public figure who has had first-hand acquaintance with the problems now facing the Chief Executive. Mr. Henry L. Stimson was Secretary of State in the Cabinet of Mr. Hoover. He occupied that position when the rule of anarchy was first beginning to take shape in international affairs. Like all men who are sincerely patriotic, Mr. Stimson believes that politics should end at the water line.

Instead of attacking the President's motives and policies for partisan purposes, Mr. Stimson has stated publicly that the course now being pursued is the proper one to follow in the interests of peace. I think you will agree with me that the unprejudiced testimony of Mr. Stimson should carry far more weight than the opinions of those gentlemen who like to believe that the President is always wrong.

In this period of confusion and danger, it is well nigh impossible for the individual citizen to appraise correctly what the President is doing, or even to understand fully the reasons that impel him to act. But the record speaks for itself and the record shows that the sacred cause of peace is far safer in his hands than it would be in the care of those who would like to convert the Nation's foreign policy into a political plaything for their own advantage. A brave voice raised in the interest of peace has never led to war and it never will.

The Democratic Party was called to power at a time of national crisis and in the stirring events of the past few years it has demonstrated its capacity to govern the country both wisely and well. In four successive national elections the party has been successful because the voters realized that no other party was equipped to do the job. The responsibility of continuing the chain unbroken rests with us.

The minority party is supposed, under the American system of government, to prove its capacity for leadership by the prudent use of the weapon of opposition while out of power. The people interpret opposition to mean something more than mere obstruction. If the minority wishes to prepare itself for the resumption of Federal authority, it should produce and train statesmen who have a program of their own and the ability to translate that program into reality. Despite the surface optimism now showing in Republican ranks the truth is that the party has woefully failed to produce a single leader of national dimensions and no one knows that fact better than the Republicans themselves. The G. O. P. is just as barren of leadership as it was when it surrendered the reins of government back in 1933.

Someone has very well said that the Republicans are now praying "O Lord! Help us get rid of Roosevelt and then give us a Roosevelt to take his place." The reason for their fervent plea is self-evident. Although they are unanimous in condemning the Chief Executive, they realize inwardly that not one of them is big enough to fill his shoes. Each one of them fears that the other fellow is not big enough to do the job. And so the great search is on—the search for a candidate who has little or no record in office and one who, if he can be found, has no public record of any kind. What they hope to discover is a political hermit who has managed to live through this vital period of world history without letting on that he knew what was taking place.

We face the election of 1940 with an unparalleled record of achievement for the public welfare. The Republicans face it without a leader, a policy, or a program. Victory is within our grasp if we seize the opportunity and march forward, shoulder to shoulder, towards the goal that lies ahead. The trail has already been blazed by the greatest public leader of his generation, President Franklin D. Roosevelt. The triumph of his principles will be a victory not only for the party, but a victory for the whole American people.

British Royalty and Broken Faith

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE

Mr. OLIVER. Mr. Speaker, under permission given to me to extend my remarks, I am pleased to incorporate the following copy of a broadcast made by me over station WCSH, Portland, Maine, on last Saturday evening, June 17, 1939:

Citizens of the first district, during the past 2 weeks many incidents of major significance have occurred in Washington. The most widely publicized of these was, of course, the visit of royalty. Yet of far more vital importance to each and every one of you was the action of Congress in considering measures designed to care for millions of unfortunate American citizens suffering from lack of jobs—lack of the necessities of life—and lack of opportunity ever to tread the paths of happiness and security so bountifully spread before the feet of our royal visitors.

This, my friends, is a land of opposites, indeed—a land of contradictions and astonishing contrasts. For, while our Government lavishes wealth upon the entertainment of foreigners elevated to a throne by accident of birth, while our Government outdoes itself to honor visitors amply able to pay their own way, that same Government bickers and hedges and hems and haws, seeking how best it may do least for its own unemployed citizens and how it may evade providing more than a pauper's pittance in the name of social security for its own aged and helpless. Is there then such difference in the clay of men that one—by whim of circumstance a foreign king—deserves the homage and the best our Government can offer—the while another—some lowly American W. P. A. worker perchance—receives from his own Government the treatment accorded a pauper?

I, for one, ladies and gentlemen, say that there is no such difference to warrant such amazingly opposite treatment. Both, in the eyes of true Americans are but men, imbued with the same impulses, the same hopes and ambitions and desires, equipped with the same general physical characteristics, molded from the same common clay. Here in free America we recognize no kings, no royalty but the royalty of free Americanism. Let any true American deny that statement.

In that same spirit of what I believe to be true Americanism I willingly grant the charm, the likeableness, the delightful humanness of our recent royal visitors. Undoubtedly they are very fine people, very gracious people, very kindly people. They would make fine Americans—granted that sacred title so dear to us all. As people, just plain common people, they would make, no doubt, fine neighbors and fine friends. Even as rulers of an empire, they remain fine people and their own subjects should be mighty proud of them.

I so express my opinion that all, friends and critics alike, may know my true sentiments insofar as these royal personages as human beings and as distinguished visitors are concerned. Never have I by word or deed, implied otherwise, nor have I denied their right to the courtesy and hospitality to which all distinguished visitors are entitled. Yet there has been some minor criticism of my decision to

put the interests of my constituents, the business of theirs for the doing of which they sent me to Congress, before the empty hypocrisy of taking time off to kowtow to these foreign folks. There has been some criticism, even as there has been an amazing lot of commendation and praise, because I believed, and frankly said, that I should not take time off from my official duties for such mockery when there were so many of my constituents destitute, unemployed, ill-nourished, ill-housed, and ill-clothed, so many of my own people desperately seeking salvation from economic misery. As I see it, my job is to do everything within my power, to devote all of my time, to battle to relieve my constituents of that agony.

To my mind, and let the critics bawl as they may, to have abandoned the interests of my own people in order to kowtow to these visitors, to have participated in the pompous and glittering and outrageously expensive welcome tendered at the expense of our suffering taxpayers—to my mind, my friends, that would have been nothing short of hypocritical bunkum. As a free-born American—royalty, the exaltation of one human being above his fellows—the worship of man by man, is most repugnant to me. In this land of ours no man is king. I serve my own people, not foreign royalty. If this be such horrible sentiment, such outrageous conduct as they would pretend, let my critics make the most of it.

It chanced that prior to the visit of these emissaries of good will, I introduced an amendment to the Johnson Act—that act which now prohibits war-debt defaulters from borrowing more American money until they square up their present long-overdue debts. This is a very fine law and has been keeping us from being trimmed again by these European war-breeding and gold-hungry nations. The chief of these is Great Britain, owing us some five and a half billions of dollars. Great Britain has refused to pay, year after year after sadder year. But now—with Europe readied for war—curiously enough Great Britain suddenly remembers her debt to us and starts talking about paying it. But not about paying it in full. Oh, no! To quote from a recent Associated Press story, "Great Britain reiterates her willingness to discuss settlement of her war debt to this country whenever circumstances are such as to warrant the hope that a satisfactory result might be reached.

Ask yourselves, my friends, what is meant by a satisfactory result? A result satisfactory to whom? To Great Britain, of course. Meaning another unholy alliance, through which first, our wealth and then our manhood could be drawn across the sea to fight anew the battles of the wily diplomats. What man can doubt it?

Great Britain does not want to pay her just debt; she wants to settle for a dime on a dollar, or some such ridiculous fraction of the whole, to buy us off cheaply. And why this talk of settlement now, after the silence, the evasions, and excuses of the long years? Why now? Because, my friends, Europe bristles with guns, guns standing mute, mute for the lack of gold. Great Britain needs us now, needs our gold, needs our industrial and material backing. Is not that the truth, and the whole truth, behind this sudden love for us, this good-will visitation, this display of interest in debts long ignored? Is the talk of settlement more than a mere attempt to lure us into accepting a penny, and so tearing down the protection of the Johnson Act and permitting the wily ones of Europe to plunder us again, to pick Uncle Sam's pocket as they picked it 22 years ago? What do you think?

And so, thinking how easily this pocket-picking could be accomplished should this administration fall for the schemes and the fanfare, and let these wily ones settle their long-defaulted debts for a picayune token, I introduced this amendment to the Johnson Act to provide that, should any settlement be made, these debtors would be compelled to wait as long to borrow as they waited to pay. If they had money with which to build great navies, great armaments, great empires, money to lend to their neighbors, and money to maintain their glory during all these years, surely, ladies and gentlemen, they had money with which to pay Uncle Sam, had they but wanted to be honest. They didn't pay. They laughed at Uncle Sam as the prize sucker of all time. But now, faced by war, they talk of paying.

My friends, who among you but knows that this visit of royalty was but a step in the unfolding plan of Chamberlain and other European diplomats to draw this Nation into their pit, to secure the financial and industrial, and, inevitably thereafter, the might of these United States to support them in the European struggle for power and profits daily drawing nearer? What intelligent man can doubt it?

Who among you remembers that this same Great Britain, this long-time defaulter now seeking our good will and money, is the Great Britain which but 22 years ago, was charging us transportation for every American soldier, sailor, and marine transported to Europe to fight Great Britain's battles for Great Britain's protection and for Great Britain's welfare? Yes; they socked us for every man we sent to fight for them. Yet what contrast when, compared to this charging for the transportation of soldiers for her own salvation, we scan a few of the many items of expense paid by this Government with the money of the American people to make royal the way of these rulers during the recent visit, the touching visit, of the heads of this same Great Britain. For instance, friends, according to my understanding, there was the little item of $150, for a piece of carpeting upon which the regal feet might tread; the little item of $18,000 for refinishing the President's reception room in the Union Station at Washington, momentarily to greet the guests; the thousands of dollars spent in smoothing the pavement in front of that station so the feet of the emissaries might not stumble; the thousands upon thousands of dollars spent in placing guards every 20 feet along the railroad right-of-way to protect the royal bodies from harm. But, above all else, in view of that they charged us to send them soldiers, is the report that we paid for the railroad expense, for the hauling and servicing of the royal train within our borders. How different the treatment accorded the British here and American saviors going over there!

No, ladies and gentlemen, I did not attend the glamorous and glittering and outrageously costly public circuses arranged at the expense of the suffering American people to honor the visiting dignitaries. I did not quit my desk to kowtow and shake their august hands. But I do attend at every opportunity the gatherings of my colleagues intended to further the relief of America's aged and needy and unemployed—and I do attend to the utmost of my ability to the business of my constituents of every hue and creed and station. Moreover, I am ever glad and proud to shake the hand of any man in public office, yes, and kowtow to that man, if he is honestly trying to better the condition of the American people.

And, following the fanfare of the royal visitation, of the royal dispensation which granted the legislators of this free land the privilege of touching their august hands, following the pomp and glory upon which was squandered the money of our people, when those legislators returned to their tasks, cause had I to marvel at their reasoning which could condone such extravagance and such waste and yet, in considering pending amendments to the Social Security Act, could approve the raising of the Federal contribution toward old-age assistance from $15 to a munificent $20 per month in those States matching that contribution. Could any man behold a greater delusion, a more cruel joke, against the background of wealth squandered upon royal entertainment? What a sad, sad jest, my friends, when we will know that only one State of the Union is now matching the pitiful $15 of the original act. If they cannot, or will not, contribute $15, will they contribute $20? Of course they will not. And the very men accepting such an amendment knew that as well as do you. In fact, one member of the Ways and Means Committee frankly admitted that it was not expected that the various States would or could take advantage of the increase. International frippery! Regal greetings for royalty! Contrast that to this administration's concern for its aged and helpless citizens.

After the fanfare I wondered too at the seeming determination of the dominant ones in Congress to turn from such glittering squandering of people's money and proclaim their vaunted desire for economy by saving at the expense of the unfortunate millions now reduced to the existence wage of the W. P. A. They talk, these dominant ones, of cutting off these unfortunates, of work relief for but 2,000,000 of the unemployed, of gradually denying work to even these and so compelling destitute men and women to leave the only refuge they know, thrusting them forth to seek private employment where these very dominant ones themselves know there is no private employment. They talk of caring for 2,000,000 for a while. But what of the other 10,000,000, and more, of American unemployed? Are these to remain unemployed, to remain pauperized, to remain desperate and discouraged and hopeless in a land men call the richest upon the face of the globe? Sad as is the fate of the two millions, faced by imminent discharge from existence wage jobs, what of the other ten.

I have been criticized in some quarters because I declined to lend my approval and my presence to the wasteful, the undemocratic, the international complication breeding, squandering of the people's money upon a welcome to a king and queen, because I refused to fall in line for the august hand touch and the meaningless and hypocritical salutation. Conscious of the mockery of such legislation as I have just mentioned, conscious of the hypocrisy of our treatment of our own aged and needy and unemployed citizens, what honest man, true to his own convictions, could have done otherwise?

Let me repeat that I admire the charm, the likeableness, the delightful humanness of our recent royal visitors. Undoubtedly they are very fine people, very gracious people, very kindly people. But my business is not to greet visitors to America, however regal such may be. My job is to take care of the business of my office, to look after the interests of my constituents. To those that fear lest the prestige of our proud State has suffered by my addiction to duty, let me remind you that four of the five Maine Members of the Congress extended to the royal folk the hearty welcome of Maine's people. To the few who have chosen to criticize my action in preferring to do my duty rather than to waste my time in hypocritical kowtowing, let me say that I shall go on, God willing, doing what I conceive to be my honest duty. And to the many who have so kindly expressed their approval and appreciation of my action, please permit me to say thanks for understanding.

Until 2 weeks from tonight, my friends, good night and good wishes.

Appreciation

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 19, 1939

EDITORIAL AND ADVERTISEMENT FROM THE SPRINGFIELD (ILL.) REGISTER

Mr. DIRKSEN. Mr. Speaker, on a number of occasions I have expressed to the House my pride in some of the good work done by the Works Progress Administration in my district. On occasion I found pride in extolling the efficiency of the W. P. A. in the Peoria district in Illinois, especially so in view of the criticism directed at W. P. A. in other States and other sections of the country. I believe it is a happy custom to throw roses where they are merited.

The following statement, which appeared in a 12-inch 4-column advertisement in the Springfield Register, Springfield, Ill., on June 11, 1939, and attested by 33 business firms in that city, is a source of real gratification and high testimony to Mr. James F. McElwee, the W. P. A. director in that district, and to his staff:

APPRECIATION

We, the undersigned merchants of Monroe Street, between Fourth and Fifth Streets, wish to publicly express our thanks and appreciation to the city officials and officers of the works program—and especially to the hard-working men who labored day and night to finish our street between Fourth and Fifth on Monroe Street in almost incredible time for the benefit of our businesses.

Again we say, W. P. A., you did the job quickly and most efficiently.

Thanks.

In the same issue of the Springfield Register appeared the following editorial, which is worthy of insertion in the RECORD:

LIGHTER VEIN

To smile all day keeps the frowns away

Our motto: Boost and the world smiles with you, knock and you frown alone

SIZZLING IN BLAZING SUN OUR LOCAL W. P. A. WORKERS WIN SMILES OF OBSERVERS

George "Sodie" Nelch is bossing this downtown W. P. A. rail removal project. He and his men are doing a bully good job of it. They are creating smiles of satisfaction, entertaining the crowds, winning public approval, and offseting much of the malicious derision that has been directed at W. P. A.

At Fifth and Monroe, Fifth and Jefferson, and other points, I watched these men at work yesterday. The sun was blazing down upon them. Whites with bronzed arms and walnut backs were carrying brick and lifting huge steel rails. Blacks with bulging muscles and Joe Louis-like power were bending to their tasks in the blazing sun. There was no loafing on the job and no monkey business. It was work, work, work, with wonderful, amazing human endurance and praiseworthy efficiency. Those boys really hit the ball.

I steamed alongside of smiling Charlie Warner, tall, picturesque, snowcapped, sartorial and tonsorial specialist, who shared our admiration of the remarkable human endurance of those W. P. A. workers toiling in that blistering sun. Charlies laughed and said:

"I asked 'Sodie' Nelch if he would give me a job on that W. P. A. project. 'Sodie' looked at me a moment, laughed and exclaimed:

"'Charlie, if I gave you a job of that kind in that hot sun, you wouldn't last as long as the proverbial snowball.'

And, judging from a remark we overheard a perspiring blond drop at Fifth and Monroe, it must have been at least that hot.

So, let's give the W. P. A. boys a hand. Approximately 1,200 of them working day and night in three 8-hour shifts will have removed huge steel rails from, and repaved, 24 blocks in the business area in approximately 20 days. Doesn't that sizzle your smiler?

If you've sneered, and thumbed your noses at W. P. A. you will feel doggone guilty if you go and watch "Sodie" Nelch and his men accomplishing this marvelous piece of work. All along the street we heard people praising the boys. That's why we fire this salvo of smiles in their honor.

Save Agriculture to Save America

EXTENSION OF REMARKS
OF
HON. JOSEPH J. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 19, 1939

RADIO ADDRESS BY FRANK GANNETT

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address made by Frank Gannett, as guest speaker for the National Grange on the Farm and Home Hour, Saturday, June 17, 1939, over N. B. C. network:

To you farmers who are listening to this program, there is nothing more important than the prices you receive for your products. Upon this depends what you can buy for your homes; the kind of education you can give your children. Everyone who tills the soil knows that the farmers' income today is far below normal, is scarcely sufficient to maintain our farm families. As a matter of fact, the national farm income today is about $5,000,000,000 short of the predepression average.

When the farmer, the miner, and the lumberman receive good prices, they are able to buy. Industry then booms; workers have jobs and get good wages. As farm prices fall, industry lags.

Since 1929 farmers have been in their worst depression in history. More than a million and a half farmers have lost their homes, representing savings of a lifetime. Prices were so low that they could not buy what they needed for farm or home.

Last year I wrote 59,000 leaders of cooperatives, farm bureaus, and officers of granges. Their replies tell the story.

The secretary of a western farm bureau says: "In my township 8 out of 46 farm homes have been abandoned since 1929, and more will be abandoned within the next 3 or 4 years."

The secretary of a grange in North Carolina writes: "A fair chance for everybody is all farmers ask. If we could have living conditions even as good as the poorest town people our boys would stay here even if hours are long and work hard. We carry water 200 yards because we have no money to drill a well through rock. Yet we love farm life. It gives us freedom, peace, and contentment found nowhere else."

The wife of a farmer near Gainesville, N. Y., writes: "I pray America will awaken to the farmers' plight soon enough to save our homes, our farms, and our families."

What is the cause of this 10 years' distress for agriculture? Why this great drop in the income of farmers?

The answer is the increase in the value of the gold in our dollar.

We all know and understand the law of supply and demand and its effect upon prices. But we sometimes forget gold is a commodity, just as is silver, copper, lead, wheat, cotton, corn, or timber. The value of any of these products, including gold, is affected by the law of supply and demand. When gold is in high demand, it becomes more valuable and will buy more of any other commodity.

In 1929 world-wide panicky hoarding of gold began. In 3 years its exchange value for farm products increased two and one-half times, because everyone wanted gold.

The farmer, whose prices are set by the gold value of his product in world markets, who had given 20 bushels of wheat for an ounce of gold, now had to give 50 bushels for the same ounce of gold. Wheat fell from a dollar to 40 cents a bushel. Instead of 200 pounds of lard, he had to give 500 pounds for an ounce of gold. Lard fell from 10 to 4 cents a pound. Cotton, instead of 23 cents, brought him only 8 cents a pound. Butter, instead of 35 cents, brought 14 cents.

It wasn't overproduction that did this. We were producing even less than we had produced and consumed in the previous 10 years. The change was in the value of our gold-standard dollar.

From 1923 to 1929 the gross farm national income had averaged $12,000,000,000 a year. In 1932 it had dropped to five and a third billions. In the past 10 years the farmers of the United States, because of depressed prices, received thirty-five and a half billion dollars less than their average predepression income. Producers of other basic commodities lost $15,000,000,000 more, making a total destruction of income and buying power of $50,000,000,000.

Think of it! The farmers in this 10-year period lost almost as much as our total national debt! What an unjust blow to the farmers! What a terrible blow to America's prosperity! All of this happened because our Government refused to heed the fact that gold had become an unstable measure of value, sensitive to panic and war hoarding in Europe.

I doubt if the general public realizes what this great loss in farmers' income means to the farmer and to all of us. Farmers know the facts. But city people should also be concerned.

Ten million men, one-quarter of the gainfully employed, work on farms. Yet after deducting the cost of fertilizer, implements, taxes, and so forth, these owners and hired workers have left an average of only $500 a year. Deducting food consumed on the farm, counted as money, only $1.30 a day in cash wages remains for the average farm owner and his hired man, and nothing for a return on the fifty billions of capital invested in farms—nothing for the unpaid labor of 22,000,000 farm women and children.

How can the farmer, on such an income, buy from city industries? Research shows that among our farmers there is an unlimited market for bathrooms, radios, washing machines, vacuum cleaners, sewing machines, automobiles, trucks, tractors, and farm machinery. If the American farmer had his just income of five or six billion dollars more a year, every farmer would have $800 to $1,000 more a year to spend.

What a market there would then be for the products of our cities! There would be such a demand for these things the farmers need that there would be work for all willing workers. City industries would have to work to capacity to supply the demands. Here is the lost buying power that is prolonging our depression, and was one of its principal causes.

Let me repeat, give the farmer the income that he should have and prosperity will return immediately to our cities and to the country as a whole.

What makes me burn with indignation is the fact that other countries have solved this monetary problem and are enjoying great prosperity while we ignore their experience and remain in deflation and depression.

Every nation that has prosperous farmers, and there are many of them today, has restored farm prices by correcting the injustice in its monetary system. Other nations, wiser in finance than we are, correctly diagnosed the situation as due to the swollen value of gold and have lessened the amount of gold in their currencies. As a result their depression has been cut short, farm prices been restored, and general prosperity followed.

A few years ago I flew to Buenos Aires. While our farmers were compelled to plow under wheat and cotton and kill pigs, I found some South American nations enjoying great prosperity. Farmers down there were receiving in Argentine currency, with which they paid their taxes, interest, and debt, and bought their supplies, prices practically as high as during the predepression period. In Buenos Aires new buildings were being erected at an unprecedented rate. There was confidence in the future and there was no unemployment. These prosperous conditions still prevail there.

The financial leaders of the Argentine recognized that the swollen value of gold was the cause of the collapse in farm and other commodity prices. They advised their government to increase the amount of Argentine pesos into which gold could be converted. That is, the Argentine price of gold has been raised by a percentage that is equivalent to $60 an ounce. In other words, the gold content of the Argentine peso was reduced. Thus the farmers in the Argentine, despite the fact that the world was giving less gold, continued to receive good prices for their products, while the farmers of America, whose products exchanged for the same amount of gold, received low prices because the dollar price of gold has not been changed since it was fixed at $35 an ounce 5½ years ago.

The farmers of the Argentine have been able to pay their debts and taxes, and to have high purchasing power for the things they need, while our prices have bankrupted American farmers.

Australia, New Zealand, Denmark, Brazil, Finland, and a dozen other agricultural nations have done exactly what Argentina has done to help their farmers. They all exchange their products for the same amount of gold that American farmers receive, but on the average when they take their gold back home and convert it into their own currencies they receive 30 percent more than our farmers receive in dollars.

When President Roosevelt took office he did one thing which has been outstanding in his administration. It won for him my enthusiastic support. He took us off the gold standard and the price of gold was raised from $20.67 an ounce to some $30 in midsummer of 1933. Later the price of gold was raised to $35, but since January 1934—for 5½ years—the price of gold has remained at that fixed figure, while other nations have raised it much higher.

While President Roosevelt was putting this monetary policy into effect the United States had the greatest recovery in farm and other commodity prices, the greatest increase in employment, the greatest increase in business activity for any like period in the Nation's history. Nor did the cost of living rise. For while the dollar price of gold was raised 69 percent, and the price of basic commodities and farmers' products rose 67 percent, the cost of living rose only 3 percent. In July 1933, for some reason never explained, this successful policy was abandoned in favor of N. R. A., and a program for restricting and curbing production and labor, for huge Government spending and debt.

This program has failed.

After 6 years of failure, is it not time for us to discard this ruinous policy? Is it not time for us to adopt the policies followed by other nations where farmers are prospering?

What can we do?

The first move to right matters is to demand that Congress take from the President power, as great as any Caesar ever held, to change the value of our dollar and give that power to a monetary authority, set up under a mandate of Congress. Such an authority should be composed of men of standing and integrity, comparable to the members of the Supreme Court. They should be free from financial or political pressure and hold office for life.

The only fair way and safe way to measure values is to take as our base the average of 35 or 40 of our basic commodities—what is known as a price index. When the value of gold gets out of line with this average, the gold content of the dollar could be raised or lowered by this monetary authority, and the average of the farm and other commodity prices maintained at a just and stable level. This would give us an honest dollar, honest to creditor and to debtor alike, would make it possible to control our booms and depressions, restore prosperity to the farmer and to the producer of all basic commodities. Immediately it would bring this country out of its depression.

In conclusion I must say that I am gravely concerned over the present conditions because I know if they are continued much longer our form of government and our system of free enterprise will perish.

America today stands at the crossroads. What happens in the next few months or few years will determine what the future of this country shall be. We can't go on the way we're going, spending and spending more than our income, regulating and controlling everything and everybody from Washington. That policy has failed and will always fail. It is sure to bring disaster.

My call to farmers is use your political power to put through the monetary program on which the great national farm organizations, including the Farm Bureau, the Grange, the National Cooperative Council, have united. Go to the local leader of your organization, tell him to exert his influence. Go to the present leader of your party—tell him that restored farm prices are more important than a fixed price of gold. Write to your Congressmen and to your Senators. Then to the county chairman of your own party, and tell him that in 1940 you will vote only for candidates and a party that pledges action for monetary reform that will give to American agriculture its just income. Use your political power. Save agriculture to save America!

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

RADIO ADDRESS BY HON. JOHN W. BOEHNE, JR., OF INDIANA

Mr. LUDLOW. Mr. Speaker by unanimous consent of the House I present for publication in the RECORD the following radio address delivered by Hon. JOHN W. BOEHNE, Jr., over the red network of the National Broadcasting Co., station WMAL, Washington, D. C., on Friday evening, June 16, 1939:

On June 2, over this network, my Republican colleague from Indiana, Congressman FORREST A. HARNESS, delivered a philippic entitled "Recovery and the Tariff." I am grateful to the National Broadcasting Co. for this opportunity to answer this distinguished gentleman, but without the use of aerial acrobatics.

He opened his address by the use of a most interesting metaphorical expression in which he compared the New Deal to a series of circus performances by stating that the aerial acrobatics had been too much for him to grasp. I quote from his prepared manuscript these words:

"Speaking of circuses, we will probably never use anything under the big top any funnier than a New Dealer trying to act like a conservative."

To paraphrase the words of my distinguished colleague, I would say that there was nothing funnier than an Old Dealer trying to act like a liberal during the week of which he speaks. For several years the country has been bombarded with the theory that government through extravagance must be supplanted by government through economy. To a certain degree I concur in that theory. Today, however, even a politician is required once in a while to practice what he preaches. During the week referred to, those who believed that the time had come to halt unnecessary expenditures had a glorious opportunity to practice consistency. It is not an easy matter to deny Federal funds to any class or to any constituency. It seems difficult, almost impossible, to explain that the Federal Treasury is not a cornucopia; that all moneys expended by the Federal Government must come through taxes imposed upon all the people. During that week the House of Representatives faced squarely and properly a vote on a pension system that would ultimately cost $24,000,000,000 annually. To the State of Indiana, of which both Mr. HARNESS and myself are residents, it would have meant an additional tax cost of $638,000,000 annually. We need only to compare that figure with the total Federal internal revenue in Indiana of $114,000,000 to see the absurdity of attempting to impose this further burden upon our people. He voted for this expenditure. I voted against it.

His vote clearly showed the method used by some in gaining public favor. When we witness the spectacle of an economy-minded individual, who professes to believe thoroughly in the theory of government by economy, and who, suddenly, for reasons best known to himself, supports a stupendous financial program like this, when it is well known that taxes have just about reached the saturation point, then indeed, we are presented with that most unusual picture of an old dealer trying to act like a liberal. Consistency, thou art a jewel, but only when it is practiced by the other fellow.

Congressman HARNESS touched on other points, which are very interesting. In speaking of the Government's trade policy, my colleague from Indiana said, "Let us skip statistics and stick to logic and simple arithmetic." Did he desire to skip statistics because statistics show such favorable results for reciprocal-trade agreements, which as everyone knows, constitute the basic phase of this Government's foreign commercial policy? Could he have wanted to avoid statistics because they show that exports to agreement countries since this law was inaugurated have increased by 60 percent and to nonagreement countries by only 38 percent? Statistics, logic, and simple arithmetic all point to the conclusion that this phase of the administration's recovery program has been thoroughly successful.

Those of us who support the idea that expanding foreign trade is worth while—that we must buy in order to sell—realize that the domestic market is a good and a large market. Some of us even go so far as to agree with former President Hoover when, as Secretary of Commerce, he said that exports were the "balance wheel of prosperity."

In attempting to prove that foreign markets are not important, my colleague stated that the average exports were less than 10 per cent of domestic production. He did not skip statistics then, but he did make a most dangerous, fallacious, and misleading application of statistics. In effect he said that because a thing is comparatively small it is not important. The convenient stock phrase that exports are a small part of our economic activity and not important, so frequently used by our Republican friends, was designed to mislead. In 1938 that proportion of our production which was exported was larger than any year since 1930. In 1938 we exported 50 percent of our phosphate rock, 50 percent of our refined copper, 30 percent of our cotton, and 30 percent of our tobacco.

One might inquire if our exports, because they amount to less than 10 percent of our production, are of no importance to our economy, how is it that a much smaller percentage of imports—more than a billion dollars less in 1938 than our exports—could possibly have such bad effects on our productive capacity as the Republicans allege and complain about, particularly when a careful analysis of imports shows that no more than 15 percent of the total are in fact really competitive with domestic producers?

No one with even a rudimentary knowledge of producing, buying, and selling, and I know the gentleman from Indiana to be a man of particular brilliance and accomplishments, is ignorant of the fact that even a 10-percent surplus of any product over what the market will absorb will force down the price of the whole 100 percent of the production. I am sure that my colleague from Indiana in his college days was taught in his classes in economics, just as I was, the homely philosophy that one automobile, one bushel of wheat over and above the market demand, will cut the price of every machine and every bushel of wheat. Let 10 percent of our industrial or agricultural production back up on a glutted domestic market and the result is stagnation, unemployment, and poverty.

Certainly, it is a real circus performance when a member of a political party which sought markets abroad and at the same time increased tariffs, which inevitably cut those markets off, should raise the point of inconsistency. What is more inconsistent than to demand payments of foreign debts, for example, and at the same time raise tariffs so high that they make it impossible for foreign governments to pay those debts? It makes no difference how hard an attempt is made to explain away such inconsistencies, because the policy was condemned by the American people, and those who support that policy must take the responsibility for such inconsistent action which nearly destroyed our foreign trade between 1930 and 1933. I contend it takes a great deal of "face" for a member of that group to attempt to point out alleged inconsistencies of the present administration in its foreign commercial policy.

Those who condemn the reciprocal trade agreement policy usually weep a few perfunctory tears for the laboring man. They try to make the worker believe that all imports take jobs away from Americans. They do not seem to be concerned for the far greater number of workers who are producing for the export market. They never reveal that these workers receive much higher wages than do the comparatively few workers in industries which demand excessive protective tariffs and use those tariffs to bolster up the prices that American consumers must pay.

They never mention the fact that well over one-third of this country's total imports consist of raw materials, which go into American industries and which cannot be produced in this country. How many American workmen's jobs depend upon imports of rubber? What would be the effect on industry on the great State of Indiana if we excluded imports of rubber, tin, and foreign chemicals? How would the diet of the American workman be affected if we shut out imports of foodstuffs produced only abroad—bananas, coffee, and the like—which make up one-sixth of our total imports?

The principle of tariff protection is not violated by the trade-agreements program. It is still in force to protect the standard of living of American workers, although the experience of 1932 demonstrated very plainly that there are quite definite limitations on how far tariffs can protect the American standard of living. We had the highest tariff protection of all time from 1930 to 1934, and during most of that period the workers' standard of living was the lowest in decades.

Of course, we are all acquainted with the statement made on the floor of the Senate by former Senator James E. Watson, of Indiana. When commenting on the Hawley-Smoot tariff bill, he said that he could guarantee that within 6 months following the passage of that act we would find ourselves in the midst of the greatest era of prosperity we had ever seen. The prophesy came true to the extent that within 6 months we found ourselves in the very bottom of the trough of a depression.

My distinguished colleague further said:

"If you are a farmer, you cannot help feeling rather bitter that America, the greatest agricultural country in the world, has lately become an important importer of farm products."

The opposition frequently alleges that the trade-agreement program was not to the interest of American agriculture, because farm imports increased after the droughts of 1934 and 1936. In spite of much propaganda to the contrary, it has been well established that the principal agricultural items in which imports increased during those years, such as corn, wool, and wheat, paid the full rates provided for in the Hawley-Smoot Act. The program has continued in full effect during the decline in foreign imports that began about the middle of 1937, and if trade agreements were the only, or even a principal cause of farm imports, that decline would not have occurred.

I think a few simple statistics might clarify the issue and we shall not skip statistics, because they do not happen to suit the purpose of the opposition. I note that in 1929, a year generally regarded as prosperous, a year when the Government was in the hands of the political party professed by my distinguished colleague from Indiana, agricultural imports amounted to $2,218,000,000, whereas in 1938 agricultural imports amounted to only $955,000,000. In 1938 the imports were $1,125,000,000 less than in 1929. From the fiscal year 1936, when only three trade agreements were in effect, to 1938 when 16 were operative, the imports of agricultural products from these 16 trade-agreement countries actually decreased by 3 percent, while those from nonagreement countries increased by 4 percent. This does not in any way measure the success of trade agreements, but it does prove that the hue and cry about our foreign-trade program in relationship to agricultural imports is without cause. I know that farmers are capable of ascertaining the facts in this case, and will not be misled by partisans. In analyzing this forward-looking program, I must suggest to my colleague from Indiana that it is impossible to skip statistics, logic, arithmetic, or even common sense.

It is manifestly impossible to answer all of the charges, most of which were political in character, in the address delivered by Congressman HARNESS. I hope that my radio audience agrees with me that it is an excellent idea to stick to facts, and not to rely on meaningless platitudes, particularly when discussing the subjects that are of supreme importance to the American people.

Philippine Independence

EXTENSION OF REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

LETTER FROM C. C. HANSON, SECRETARY OF THE ASSOCIATION OF SOUTHERN COMMISSIONERS OF AGRICULTURE

Mr. MILLS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me and also a statement by Hon. Sergio Osmena, Vice President of the Philippines, made before the House Committee on Insular Affairs:

[Association of Southern Commissioners of Agriculture, 1883 Galloway, Memphis, Tenn.]

WASHINGTON, D. C., *June 17, 1939.*

The Honorable NEWT V. MILLS,
House of Representatives, Washington, D. C.

MY DEAR MR. MILLS: We are addressing you as a Member of Congress from the "cotton South," as well as a member of the House Committee on Insular Affairs. We are writing in behalf of the American cotton and peanut planters, as well as in behalf of the interests which our southern livestock producers have in H. R. 6853, a bill "to amend the Philippine Islands Independence Act."

We would have you believe, with our association, that it is all important to our southern farmers that the House Committee on Insular Affairs hold a public hearing on H. R. 6858 before reporting the same from out of that committee to the Committee of the Whole.

We would have you know, Mr. Mills, that expert, impartial, and distinterested opinion of accredited agricultural authorities actually supports the conviction that the passage of H. R. 6858, as drawn, would have lasting adverse effects upon every cotton and peanut planter, upon every cattle and hog raiser, as well as upon the income of every dairyman in the State of Louisiana. This is the candid opinion of the association of the duly elected State officials charged by the electorate with the administration of agricultural affairs in each of the several cotton-producing States.

Among the commissioners is the Honorable Harry D. Wilson, commissioner of agriculture for the State of Louisiana. This Association of Agricultural Commissioners neither holds nor carries any brief for any interests, nor does it advance any viewpoint whatever except the viewpoint of the actual producers and consumers of America's fats, foods, and fiber.

The association feels that the proposal made in H. R. 6858 to abate the 3-cent excise tax on an annual import quota of 448,000,000 pounds of coconut oil is absolutely "indefensible, special-privilege legislation" conceived wholly in the interests of the American soap industry.

The Association of Southern Commissioners of Agriculture would direct your attention to the fact that this very proposal for abatement of the tax on Philippine coconut oil was argued in the Senate less than 2 weeks ago. The debate on that proposal, as recorded in the CONGRESSIONAL RECORD of May 31, 1939, constituted a veritable arsenal of argument against the enactment of that proposal at that time.

It was pointed out in that debate, and from every angle of economic soundness and justification, that the determination to fix the excise tax of 3 cents per pound on Philippine coconut oil was made at the very time of the enactment of the original independence act. It was enacted into law by the very same session of Congress and almost simultaneously with the passage of the original act.

Incontrovertible proof is available that every justification which gave rise to its enactment at that time is present today. In support of that argument in the recent Senate debate, Senatcr CONNALLY declared:

"Mr. President, the soap people are the only ones who were making this argument. I have here a long printed argument, 'Petition of soap industry to the Committee on Territories and Insular Affairs in support of the amendment of Senator HAYDEN relating to coconut oil. John B. Gordon, Secretary.' I will not read it all as nobody is interested, so far as I can discover, except the soap manufacturers.

"Have they reduced the price of soap? They have not. Will they reduce the price of soap? They will not. We hear statements about lauric acid, it being said that no other oil contains any lauric acid except coconut oil. Very well. This coconut oil is imported in the same volume with the tax or without the tax. If that be true, no one is hurt by the tax except the soap people, who want larger profits."

Now, let us hear further what was said in that debate as to just who the sponsors are of this proposal to do away with a 3-cent excise tax on coconut oil. In discussing that, Senator CONNALLY declared:

"How much was it that Procter & Gamble paid their president last year? There was some testimony before the Committee on Finance as to what they paid the president of the company. I cannot recall the figure now, but I shall check up on it and insert it in the RECORD. I am sure that Procter & Gamble's representative, who is in the gallery, will be glad to tell me about it when the session is over."

Having shown who the proponents of this excise slashing act are, let us now look behind the words of Senator CONNALLY and see exactly who it was that that distinguished exponent of the rights of American agriculture "disclosed" as being opposed to the adoption of any reduction in the excise tax of 3 cents per pound, and why it should not be done in discussing this point. Senator CONNALLY declared:

"Mr. President, the tax has resulted in benefit to domestic vegetable and animal fats. It has convinced the representatives of every farm organization I know of, such as the National Grange and the American Farm Bureau Federation. The dairy representatives are here asking that the tax be retained; the representatives of the fishing industry of the United States, who manufacture fish oil, are here asking that the tax be retained.

"Mr. President, I shall insist on a vote on the point of order on the ground that this is an amendment affecting the revenue, and therefore is not to be considered in the Senate but must originate in the House of Representatives."

And, in response to that motion made by Senator CONNALLY, the Senate, on May 31, 1939, overwhelmingly, by a vote of 54 to 8, defeated the proposal to do away with the excise tax on 448,000,000 pounds of coconut oil annually imported from the Philippines.

And so now the soap industry carries the bill to the House. The Association, Southern Commissioners of Agriculture, are not unmindful of the rights of the American soap industry to equitable treatment in the halls of our National Congress, but, likewise, the Southern Commissioners of Agriculture now ask a "day in court" for the American farmer.

In a letter recently made public, asking that hearing be had, America's oldest and most conservative farm organization, as represented by Mr. Fred Brenckman, Washington representative of the National Grange, demanded to know:

"Are not the American farmers entitled to as much consideration in Congress as the soap industry?"

This association feels confident that the Committee on Insular Affairs should make an affirmative answer to Mr. Brenckman's question. It is for the above, among other reasons, that this Association of Southern Commissioners of Agriculture make request of your personal support in seeing that a full, free, and frank discussion be had at a public hearing before the Committee on Insular Affairs and prior to the time which your committee report to the Committee of the Whole on this piece of legislation which is so threatening to American farm interests.

Very sincerely yours,

ASSOCIATION, SOUTHERN COMMISSIONERS OF AGRICULTURE,
C. C. HANSON, *Secretary*.

STATEMENT OF HON. SERGIO OSMENA, VICE PRESIDENT OF THE PHILIPPINES, ON SPECIAL MISSION TO THE UNITED STATES ON H. R. 6694, SUBMITTED TO THE COMMITTEE ON INSULAR AFFAIRS, HOUSE OF REPRESENTATIVES, ON JUNE 15, 1939

Six years ago the Congress of the United States approved the law which provided "for the complete independence of the Philippine Islands," and "for the adoption of a constitution and a form of government * * * and for other purposes." Pursuant to the provisions of this law, the Philippines has adopted a constitution which merited the approval of the President of the United States and the people of the Philippines through a national plebiscite. It inaugurated the Government of the Commonwealth, which is republican in form; as in the United States, government authority in the Philippines emanates from the people. The new Commonwealth, under the wise and able leadership of President Quezon, has instituted a system of national defense, reorganized the government, strengthened the judiciary and the civil service, expanded public education, adopted a long-range economic program, improved the lot of the masses, extended the system of public health and sanitation, communication, and transportation; in short, it has endeavored to implement the Independence Act and the Philippine Constitution with a view to effecting the necessary adjustments, political, social, and economic, so that the independence which shall climax the years of intimate and cordial association between America and the Philippines may become real, effective, and enduring.

We are thus engaged in a great task of national reconstruction in preparation for the final relinquishment of American authority. But, as the members of the committee are well aware, there are difficulties that lie in the way of adjusting the relations between nations. This is especially true in the economic sphere. Economic readjustment is not easy; nor is it the work of a day. It cannot be accomplished by the Filipinos alone. The assistance of the American Government is essential, particularly because the new policy instituted by the Independence Act is a reversal of America's economic policy in the Philippines which was followed for three decades.

It may not be amiss to recall that the American Government inaugurated the policy of free trade in the Philippines despite the objections on the part of the Filipinos. Such a policy, enforced for a period of years, resulted in the absorption of the Philippine economy into America's economic system. To disentangle the economic threads that have become interwoven is necessarily a long and difficult process, one which demands the patience, the wisdom, and the statesmanship of two peoples working in a spirit of good will and cooperation.

H. R. 6694, now under consideration by this committee, is primarily intended to facilitate the effectuation of the process of adjustment in American-Filipino economic relations without injury to American interests and with the least possible disruption or dislocation in Philippine national economy. I am here on behalf of the government of the Philippines in support of this bill. I urge the passage of the bill, with a slight change in phraseology in section 1, subsection f, subdivision 3. This amendment has been agreed to by Secretary Sayre as chairman of the interdepartmental committee. I ask permission to file as part of my statement a letter I forwarded to Secretary Sayre on this subject.

Having had the good fortune to form a part of a number of Philippine missions sent to the United States, once again I have the privilege of being the bearer of the message of good will and gratitude of the Filipino people to the Government and people of the United States for what they have done for us, for their continued solicitude for our welfare, and for their determination to bring their mission in the Philippines to a successful conclusion. We have long been pleased to recognize America's noble and unselfish purposes, and I can assure you that the presentation of the bill under consideration and the meeting of this committee are new causes for satisfaction and gratitude on our part.

My task is made relatively simple and easy because in this committee we have a chairman, a former chairman, and several members who have visited the Philippines and have first-hand information regarding our country and people. The present members of the committee are informed of America's prime purpose in the Philippines and of the history of our relations. To each and every one I express my deepest appreciation for this new evidence of your interest in our well-being and the cherished hope that your efforts will result in the enactment of a measure that will benefit both peoples.

The bill before the committee is a nonpolitical and a noncontroversial measure. It is, in fact, a legislation of an emergency nature, its basic idea being simply the modification of certain economic provisions of existing law. It is designed to bring some degree of relief to a few Philippine industries which, according to impartial and comprehensive studies made during the last 4 years by both governments, would be destroyed within a short period following the general application of the export taxes on November 15, 1940, provided by the Independence Act. The passage of this remedial legislation would give the coconut oil, the cigar, the embroidery, and the pearl-button industries an opportunity to live longer and will prevent their liquidation before the export taxes will operate next year and thereby forestall widespread unemployment, social unrest, and human suffering.

H. R. 6694 is a nonpolitical measure. It does not reopen the independence issue which was settled by the Independence Act. It is noncontroversial because it merely subjects the industries already mentioned to a diminishing duty-free quota instead of the graduated export taxes in the Independence Act. In other words, instead of levying the export tax of 5 percent at the sixth year of the period of transition, and increasing annually by 5 percent until 1946, you are now by this bill proposing a gradually diminishing quota so that in 1941 there would be 95 percent; in 1942, 90 percent; 1943, 85 percent; 1944, 80 percent; and in 1945, 75 percent.

This bill preserves the original purpose of the system of graduated export taxes, namely, to compel the industries to adjust themselves to the situation created by the advent of complete independence. The requirement to apply the proceeds from the export taxes to the payment of Philippine bonded indebtedness incurred before May 1, 1934, would not be materially affected by this change because, according to computations made by American and Filipino experts, there would be sufficient money to insure full payment of such bonded indebtedness from the export taxes on other Philippine products.

The plan of the diminishing duty-free quota is calculated to cushion the shock to Philippine economy that will ensue from the rigid application of the export taxes prescribed in the Independence Act. It is in no way harmful to America's interests. In fact, it may even prove beneficial to the people of America. By maintaining our purchasing power we shall be able to continue consuming American goods. It should be borne in mind that the population of the Philippines, which was about 8,000,000 in 1903, has now increased to about 18,000,000. It is worthy of note that, according to the trade statistics only recently released by the Department of Commerce of the United States for the 4-month period, January to April, 1939, the Philippines, which has been the eighth customer of the United States, has now risen to fifth place among the leading customers, being outranked only by the United Kingdom, Canada, Japan, and France. For the same period, too, the merchandise trade balance between the two countries is in favor of the United States.

The other provisions of the bill are more or less matters of routine and noncontroversial. Among such provisions are those having to do with allocations of quotas, the manner of paying the bonded indebtedness, the use of the proceeds from excise and import taxes for the adjustment of Philippine economy, the retention or exchange by the United States of properties in the Philippines suitable for diplomatic and consular establishments, and the recognition of the rights and privileges of citizens and corporations of the Philippines similar to that already granted to American citizens and corporations pending the complete withdrawal of the United States from the Philippines.

Since the purpose of this bill is to assist the Philippines to make the necessary adjustments in its economy, it is earnestly hoped that the matter of allocating the quota which by law and equity corresponds to us be left in the hands of the Philippine Government. The independence law and other statutes have recognized the right and authority of the Philippine Government to make the necessary allocation among the different industries and producers of the Philippines. This principle was recognized by another congressional act—Public, No. 137, Seventy-fourth Congress. This power which the Government of the United States rightly vested in the Government of the Philippines in respect to allocation should be preserved.

In one other particular H. R. 6694 amends the Philippine Independence Act. Section 4 reads as follows:

"Section 13 of the said act of March 24, 1934, is hereby amended by striking out the proviso and inserting in lieu thereof the following: '*Provided*, That at least 2 years prior to the date fixed in this act for the independence of the Philippine Islands, there shall be held a conference of representatives of the Government of the United States and the government of the Commonwealth of the Philippine Islands, such representatives, on the part of the United States, to consist of three United States Senators appointed by the President of the Senate, three Members of the House of Representatives appointed by the Speaker of the House, and three persons appointed by the President of the United States, and, on the part of the Philippines, to consist of nine representatives to be appointed by the President of the Commonwealth of the Philippines, with the consent of the Commission on Appointments of the National Assembly, for the purpose of formulating recommendations as to future trade relations between the United States and the independent Philippine Republic, the time, place, and manner of holding such conference to be determined by the President of the United States; but nothing in this proviso shall be construed to modify or affect in any way any provision of this act relating to the procedure leading up to Philippine independence or the date upon which the Philippine Islands shall become independent.

" 'In the event any vacancy occurs in the commission by reason of the death, resignation, or retirement of any member thereof, such vacancy may be filled by the authority appointing the member whose death, resignation, or retirement caused the vacancy.' "

In the Independence Act no specific provision is made as to the membership of the conference, while this measure provides for legislative and executive representation. We endorse this provision favorably in the belief that with congressional representation there will be greater likelihood and promptness in the approval of the pertinent recommendations formulated which may deal with the problems involved in the severance of political ties between the United States and the Philippines. These recommendations will prove vital and important because, according to the provisions of section 2 of the Independence Act, certain provisions do not only have to be embodied in the Constitution of the Philippines, but in a treaty with the United States "by way of further assurance."

Having said these, perhaps I have said practically all that need be stated regarding the purely material phase of this piece of remedial legislation, which, by the way, is in accord with the stand taken by the mission, of which I was a cochairman, in 1932. Before this same committee, the mission then stated: "If an economic readjustment were provided for, we would be more in favor of a restriction of the volume of trade, rather than a progressive imposition of tariff."

May I not be permitted to stress the importance of early action on this emergency legislation? It should be remembered that the export-tax provisions of the Independence Act will commence to operate next year unless amended; that, following congressional approval, the National Assembly of the Philippines has to take action in order to set in motion the machinery to amend our constitution and have the provisions of the act passed by the Congress made a part of the fundamental law of the Philippines.

I wish before closing to advert to the spirit of altruism and benevolence which has always animated America in her dealings with the Philippines from the time of your martyred President McKinley down to the present day. This far-seeing policy bore abundant fruitage in terms of material and spiritual rewards. It hastened the era of conciliation and amity that followed in the wake of misunderstanding and war; it was responsible for the inauguration of civil government as early as 1901; it led to the enactment of the organic law which gave us the first Philippine Assembly; it made possible cordial cooperation between Americans and Filipinos in the development, within the orderly processes of peace, of self-government in the Philippines; it resulted in the enlargement of Philippine autonomy by the passage of the Jones law; it necessarily was followed by the enactment of the independence law; logically and inevitably, it should culminate in the establishment of a free and democratic Philippine Republic on July 4, 1946.

Every act of justice and generosity to the Philippines on the part of America served to deepen the sense of gratitude of the Filipinos. It strengthened America's prestige in our part of the world. Whatever may be the vicissitudes of the future, it will perpetuate the relations of friendliness and trust between the United States and the Philippines; it will fortify the historic attachment of the Filipino people to the conceptions of liberty, culture, and democracy that gave birth to the American Republic.

America has it in her power to dissolve the political ties that bind the Philippines to her; yet it is also within her power, while so doing, to strengthen the cultural and spiritual bonds, and even the economic, since the last have proven mutually beneficial to the two democracies on opposite sides of the vast Pacific. In helping the Philippine Republic to be born and to survive as her daughter republic, America, while conferring a great boon on the Philippines, will have shown to the world that the way of peace and good will is the path to lasting progress and security; to happiness and liberty.

Eighteen million Filipinos, constituting the only Christian nation in the Orient, have implicit faith in American democracy rooted in spirituality. They have faith that, as America has disinterestedly aided them in the past, she cannot but look with benevolent sympathy upon their efforts in the epic task "to establish a government that shall embody their ideals, conserve and develop the patrimony of the nation, promote the general welfare, and secure to themselves and their posterity the blessings of independence under a regime of justice, liberty, and democracy."

OFFICE OF THE VICE PRESIDENT OF THE PHILIPPINES,
THE WILLARD HOTEL,
Washington, D. C., June 12, 1939.

Hon. FRANCIS B. SAYRE,
Assistant Secretary of State and Chairman,
Interdepartmental Committee on Philippine Affairs,
Washington, D. C.

MY DEAR SECRETARY SAYRE: In going over House bill 6694 and after consultation with both Mr. Jacobs and Mr. Hiss and the Government at Manila, I find that the purpose of subsection (f), subdivision (1) providing for the allocation of sugar quotas in the Philippines will be better accomplished if the said subsection is reworded as follows:

"(f) (1) The quotas for sugars other than refined sugars shall be allocated annually to the sugar-producing mills and the

planters supplying such mills proportionately on the basis of the average annual production of such mills during the calendar years 1931, 1932, and 1933. The allocations so made shall be prorated in each year by the Philippine Government, under export permits issued by that Government, between such mills and planters in accordance with their contracts in force on the date of allocation, provided that, upon the expiration of any milling contract, that portion of the national quota so involved shall be prorated, reallocated, or disposed of in such manner as the Philippine Government, within the powers granted to it by the Constitution of the Philippines, may by law prescribe to safeguard the general welfare of the Philippines."

As this language has been endorsed by the Philippine Government and, I understand, will not meet with objection on your part, may I not request you to recommend to Congressman KOCIALKOWSKI that it be incorporated in the bill which he may reintroduce in the House before the meeting of the House Committee on Insular Affairs is called?

Thanking you, I am,

Sincerely yours,

S. OSMENA,
Vice President of the Philippines,
on Special Mission to the United States.

Taxing Policies of the New Deal

EXTENSION OF REMARKS
OF
HON. ALBERT G. RUTHERFORD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. RUTHERFORD. Mr. Speaker, since coming to Congress in 1937, I have received a great many letters from business concerns relative to the effect of the New Deal taxing policies upon their companies. None that I have received have so clearly set out the dire results of those taxing policies as does the following letter which I received from a corporation in my State. It is well worth the attention and study of every Member of Congress.

SPROUT, WALDRON & CO., INC.,
Muncy, Pa., June 15, 1939.

Hon. ALBERT G. RUTHERFORD,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN RUTHERFORD: This letter is direct to you on the subject of taxes. It is an appeal to your better judgment in the interest of this community, the people who live in it, and the employees who work in it.

We do not know what has happened in other industries except by reports and hearsay. We do know what has happened in our business.

As a single case study in Pennsylvania, this may interest you.

Like other companies who were almost ruined as a result of the depression, this company, by strict economy, by sacrifice and the best possible management it was capable of, continued to employ, as the principal employer in this community, as many workers as was possible, regardless of profits or earnings.

Five years ago it set up a program with its objectives: First, to preserve the company as an asset to the community and as a source of income to its employees; second, to retire its accumulated obligations incurred during the stress of the depression years; and, third, if possible, to rebuild it as a source of income for its original stockholders.

Regardless of what any present-day reformers may believe or try to tell you and, while we cannot speak for others, these and these alone, in the order indicated above, were the objectives of our particular program.

A study from the tax angle over these 5 years indicates the following points which we hope will be of definite interest to you as a representative of the people of Pennsylvania.

From 1934 to 1938, inclusive, the 5-year period mentioned:

(1) Our net income before all taxes was $35,832.

(2) We paid taxes of $89,886, or $54,054 more than we earned. This means that in order to pay taxes the assets of the company had to be depleted $54,054.

(3) Our average sales volume per year increased 18.3 percent.

(4) Our average taxes per year increased from $4,268 in 1934 to $22,471 in 1938, an increase of 426 percent.

(5) Our annual pay roll per year was maintained during the 5-year period at an average figure of $280,000, varying in proportion to volume from a low of $250,000 to a high of $326,000. Wage rates were not only maintained but increased to 1929 levels.

(6) Not one single cent of dividends was paid to stockholders during this 5-year period; 1931 was the last year any dividends were paid.

(7) Only one stockholder, who holds less than 6 percent of outstanding stock, received a salary, and it was a modest one, below the average of wages paid for similar services in industry.

(8) Bondholders and noteholders accepted 3-percent interest instead of the 6 percent called for on their holdings during 3 of the 5 years included.

(9) In 1938, although accurate and true accounting indicated an income of the meager sum of $350 before any taxes, a total of $20,385.18 was paid in taxes.

(10) Taxes paid out of each dollar of sales increased from seven-tenths of 1 cent to 3 cents. Based on our average sales volume, this increase of 2.3 cents per sales dollar amounts to over $17,000 annually. This amount, $17,000, if not payable in taxes, would permit either (1) an increase of 6 percent on all wage rates paid; or (2) the additional 3-percent interest which our bondholders and noteholders were promised; or (3) a 5½-percent dividend on all common stock outstanding which has not received a dividend for over 8 years.

(11) All figures are taken from true statements audited by certified public accountants. All figures have been accepted by the Federal tax examiners except those for 1938, which tax reports have not been examined.

From the above facts can it not be logically concluded that the company, its stockholders, its security holders, its management, all of them, contributed toward preserving the company as a source of employment and income for its employees, and made concessions and sacrifices in order to do so?

On the other hand, the Government, through its taxing agencies, not only did not assist in this effort, but by imposition of ever-increasing taxes, did retard the company's progress in this program, and, indeed, actually caused a depletion of its assets—the very assets it is endeavoring to use to provide employment and increase purchasing power.

The result is nothing less than confiscation of property just as surely as the Mexican Government confiscated American-owned property in that country. We condemn the latter. We do not, for some reason, recognize the former which is going on right in our own country.

In the name of common fairness and of that common sense which guided those men who made States like Pennsylvania great industrial Commonwealths, is this not a time to take seriously the question of reducing and not increasing or even maintaining tax burdens?

Is not the problem one of reducing Government expenditures instead of increasing tax income?

Industries such as ours have had to reduce their expenditures, have had to leave undone the repairs, the improvements needed, have had to hold up and pass up its opportunities for expansion.

These very improvements and expansions, if possible, could solve the unemployment problem faster than any other single factor. But, how can we improve, how can we expand, while our assets are being depleted to pay taxes?

Our employees, for the most part homeowners, not one a floater, and all of them good citizens, do not want doles or relief. They do not want W. P. A. or P. W. A. jobs. They do not want to wait for unemployment insurance. They do want the right to work, to earn, at that work they know how to do best, a fair income. They want economic security rather than so-called social security.

How can we, as employers, give them this economic security when our Government representatives seem to be guided by false economic principles in relation to industries; when as a result, this Government, and seemingly, it alone, is hindering industry rather than aiding it in these efforts by ever increasing taxes, increased Government spending and ill-advised Government regulation of business and industry?

How long can this go on without a collapse of our industrial structure?

Again we repeat: We are speaking for no one but ourselves and our employees; we do not know other companies' problems; we do know our own; we live, work, and struggle with them.

This letter is not part of any organized propaganda or associated activity.

It is the simple, sincere appeal of one relatively small company for assistance and relief—not in any efforts to pay dividends, not in any efforts to accumulate great reserves, not even in any effort to expand, however justified and helpful such ambitions may be, but simply in its efforts to conserve and preserve its resources as a source of employment, income, and purchasing power for several hundred ordinary human beings who try to take pride in their citizenship in the United States.

Can we count on your serious interest and assistance?

Sincerely,

SPROUT, WALDRON & CO.,
IRVING A. BERNDT,
Vice President and Controller.

Mr. Speaker, for the past 6 years the new dealers have tried every scheme and experiment that has come to their brain in an attempt to bring about prosperity, but they have failed miserably. There are a lot of new dealers who do not want prosperity because they claim that the capitalistic system has failed and they would like to take us into a planned economy. However, the people of this country are not ready for any planned economy. The great majority still believe that the system that made our country the greatest in the world is still workable if allowed to

work. When you want to get your teeth fixed you do not go to a plumber. When you want your watch fixed you do not take it to a carpenter. When you are sick and need the services of a doctor you do not call in a banker no matter how high his standing may be in the community. So, when we want to make business work, instead of calling in a lot of professors and experimenters, who never had a bit of business experience, let the President call in men who have made a success of business and take their advice and it will only be a short time before the wheels of industry will be going and men will be returning to work.

Mr. Speaker, we have often heard the statement, "The power to tax is the power to destroy." We have sufficient proof of the truth of that statement when we see what the New Deal tax poliices have done to business. We see how the New Deal tax policies affected the corporation writing the letter set forth above. There are thousands of such corporations throughout the country that have been affected in the same manner and who were not able to make the grade. Mr. Speaker, if we ever expect to get back prosperity, we must rearrange our taxing of corporations. We have tried and taken the advice of everybody except businessmen on the matter of business taxation for the past 6 years, with the result that business has not been helped a bit but has steadily grown worse. Let us now give the businessmen of the country a chance to work out their own salvation by giving them a taxing system that will allow them to expand and grow. I believe, if we do that, prosperity will return shortly.

Last Week and This

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. HOFFMAN. Mr. Speaker, a 14-hour continuous session, ending at 1 o'clock Saturday morning, gave the country the best relief bill to date, but it is by no means as good as it should be. Those who say we accomplish nothing by fighting continuously against the New Deal are sadly mistaken. Republicans, joining Representative WOODRUM of Virginia and his economy-minded associates, fought back successfully all but one of the New Deal attempts to add to the present relief bill. Better yet, they threw out the theater project which has been the sponsor for plays bearing, among others, the following titles: The Mayor and the Manicure, A New Kind of Love, Up in Mabel's Room, Be Sure Your Sex Will Find You Out, A Boudoir Diplomat, Companionate Maggie, Go Easy Mabel, Just a Love Nest, Lend Me Your Husband, Love 'Em and Leave 'Em, Mary's Other Husband.

What do you, as decent, home-loving Americans, think of such trash, put out and paid for by your tax money? There were many more like these. This was the project where a Workers' Alliance W. P. A. supervisor, according to sworn testimony, advised the white actresses to go out socially with Negroes and vice versa.

Several other constructive, money-saving, efficiency-producing provisions were embodied in this bill, which were in none of the others. Today, Representative WOODRUM is the outstanding Democrat in the House and undoubtedly when opportunity offers, if alive, will represent Virginia in the Senate, a worthy successor to CARTER GLASS when his services are ended.

THE FIGHT MUST GO ON

Only by talking and voting against such measures as are offered and which can be made better will we make progress and personally I hope that soon relief will be turned back to the States and local municipalities, with Federal contributions as needed.

NEUTRALITY

The battle to give the President additional power in foreign affairs is on. He may win but only after a vigorous fight. Your Representative will not vote to give him more power which might be used to involve us in foreign war. I think we should keep our nose out of other nations' business. There is plenty of housecleaning to be done at home before we start sailing the seas looking for trouble.

AGRICULTURE AND TRADE POLICIES

Secretary of State Hull, long an advocate of reciprocal-trade treaties, sees his entire program threatened with destruction by Secretary of Agriculture Wallace who is advocating subsidies on exportation of farm products, which means, according to Hull, retaliation by foreign governments and, as everyone knows, the furnishing to foreign manufacturers of cheaper raw material and, under the trade pacts, return of the manufactured product to our shores at less than it can be manufactured for here. In this connection, note that on relief supplies sent by your tax money to the Virgin Islands, a Danish corporation charges us 6 cents a cubic foot dockage. We feed them, but we have to pay to do it. Some system.

LABOR

The word has gone out that there will be no amendments to the Wagner law at this session. On the other hand, do not be surprised if the coming week sees a resolution offered in and passed by the House to investigate the National Labor Relations Board and kindred activities.

The demands for a $13, 7-hour day, 80 cents an hour for common labor, 90 cents an hour for semiskilled labor, is threatening construction here in Washington, union contractors insisting that costs are going so high that building will cease. In this connection, read the article by Flynn in last week's Collier's on the same subject. He explains how excessive costs for labor and material once before curtailed the building industry.

TAXATION

Taxation will be up for discussion the coming week. Put this in your book: Federal taxes are twice as high as they were in 1929, and, to top it, we are spending three times as much as we did then, which means that, where in 1929 you paid $1 to the Federal Government, you now pay $2, and, in addition, the Government borrows another dollar which you have to repay, and spends it. But do not worry, says the President, you owe it to yourself. It is a good thing you do not owe it to your wife. She might make you pay it. As I wrote once before, your children will not be paying this debt, with interest, to themselves; they will be paying it to the holders of the tax-exempt bonds.

A THIRD TERM

Instead of a third term for President Roosevelt, Frank Gannett, New York newspaper publisher, calls upon him to resign, characterizing Harold Ickes' agitation for a third term as "senseless"; calling attention to the fact that everyone now conceded that the President's spending program had been a failure; that his promise to economize was nothing more than a political maneuver; that by stirring up class hatred he had continued to foster discontent; that we have had more than 6 years of waste, unprecedented expenditures, of failure to bring recovery.

He might well have added that, since President Roosevelt for many months has permitted John L. Lewis, whose United Mine Workers contributed $470,000 toward the New Deal campaign fund, to fasten himself and his organization like some great bloodsucker upon the American workingmen, demanding that all and each contribute a membership fee and dues to Lewis' organization before they may go to work, the President is betraying us into the hands of a labor dictator.

In city after city and industry after industry strikes are being called for the purpose of forcing all workers to join Lewis' organizations, the employers to submit to a closed shop, and to deduct from the employees' pay envelope a fee to be paid to Lewis or his organization.

That procedure is a betrayal of the American people, of the American worker, and it should end.

Tolerance for Communism Invites Destruction

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. THORKELSON. Mr. Speaker, communism or supersocialism is an insidious disease nourished by hatreds in the minds of those who subscribe to it. It is an Asiatic philosophy diametrically opposed to Christian principles and all that Christianity has accomplished in the past 2,000 years. Communism thrives on immorality and corruption, and is destructive to the family, social, and political life of all people, and to the Nation.

It is international in scope, and directed by an invisible government whose insane desire is the control of gold and the power it wields. The first objective is now a reality, for they have the gold, and the Gold Reserve Act of 1934 gave the power of control and ownership to the invisible government.

This objective is partly accomplished but much is yet to be done to make the American people swallow this bitter pill. It is quite possible that there are too many good, sound and sensible Americans left, who will in no uncertain manner voice their objections to regimentation by Asiatic Communists.

The first step in this conversion, namely, the transfer in ownership of gold, was brought about by servile Members of Congress. It was accomplished by hypnotized Congressmen who enacted communistic legislation.

The second stage, that of control and placing of more Communists in strategic positions, will be attempted by legislation now in force, by appointments, or by contemplated legislation. In this category, I refer to the Wagner Health Act and the Binderup-Voorhis Monetary Control Act, both of which are communistic in principle and in fact.

I have spoken very plainly, with one purpose in mind, which is to inform the American people about actual conditions that should be discussed in our newspapers. I do not believe that any red-blooded patriotic citizen would sit idly by and wait to be enchained by a few communistic supercriminals, whose agents may be found in many of our cities today. It would also be interesting for Congress to know the identity and affiliations of those who are constantly being placed in key positions in our own Government. What is the purpose of these changes, and why is it necessary to reorganize the Government without decreasing personnel or the cost of the pay roll? We are so far on the road of collectivism that little or no regard is given to the fundamental principles of our Government and the rights of the States.

This attempted conversion of our Republic is aided and abetted by radicals in society and in educational institutions. These radicals, "parlor pinks," and "reds" are dangerous because they are long on conversation and short on common sense. As a matter of fact, they are irresponsible. Other groups of radicals are comprised of those who become dupes of the money power and willing servants enslaved by gratuities, such as memberships in pretended humanitarian or charitable organizations, which are in reality fronts to shield the Communists and their activities in the invisible government. Many pawns of communism unfortunately do not understand and are incapable of analyzing the mind of an Asiatic. An understanding of it is necessary in order to deal intelligently with its peculiar oriental psychology.

These subservient pawns to the invisible government do not realize that they are used as stooges and, when no longer useful, will be left along the road of oriental intrigue, victims of their own follies. The truth of these statements is evident in the treatment accorded to those who fought for the "red" government in Spain. Many of them are now stranded in France, rejected and ignored by the Russian Government they fought for. While in the "red" army they killed and destroyed with Asiatic abandon, and now they are left, as I said before, unsung and unclaimed.

Returning again to discuss the dupes of the Communists, I cannot refrain from calling attention to those Members of Congress who are obsessed with the idea of making democracy work. For 10 years they have been willing tools of the invisible government; they have enacted Communist-prepared legislation, which has delegated more and more power to centralized control of the Government. I believe many were involved innocently, yet such ignorance is not an excuse for their actions, because they have sworn to preserve, protect, and defend the Constitution of the United States, an obligation which they have ignored. There is nothing wrong with our Government except that we have not adhered to its cardinal principles, and in such deviation we have brought about rapid deterioration.

No doubt many Members of the House will vote for further extension of the now chronic emergency and monetary power to the President and to the Secretary of the Treasury, a power absolutely unnecessary except as it may be used by the invisible government to destroy American liberties and rights. This, of course, should be voted down by all those who have the slightest spark of patriotism and interest of the people at heart.

Other dupes of the invisible government are those in the ranks of labor who are dominated by recognized and self-acclaimed Communists. This was clearly stated on the floor of the House on June 14 by the gentleman from Virginia [Mr. WOODRUM]. He showed clearly that all Federal unionized activities, such as the Workers Alliance, Federal Art Projects, and so forth, are practically exclusively communistic. This, of course, is generally known, yet no effort has been made by the Federal Government either to investigate or to check this deplorable state of affairs.

These are the same organizations that call the President Comrade Roosevelt, and here one may find a most unusual situation, in which attempts are made to destroy the Constitution instead of adhering to it. This is particularly true when we analyze those who are directing all subversive activities in the ranks of labor. Are they good Americans or are they better Communists? I am inclined to believe the latter, and I am firmly convinced that everyone will agree with me after close investigation of those who are now directing communistic activities in the United States.

When I was a union man, we worked in the interests of our employer because we considered ourselves a part of the industrial machine in which we were employed. Today, labor is in reality working under direction of the invisible government for destruction of industry and business, and for Federal ownership and control of the Nation's industries. This, of course, is diametrically opposed to the principles of our Government, in which all people reserve the rights to themselves to be free, not only in operation of business but in their private lives as well.

It occurs to me that the general run of workingmen is not aware of the fact that they are used as tools of the very people they belabor in their union halls, that is, the capitalists. It is most extraordinary that the laboring man is allowing himself to be used by the very group he criticizes, to bring about his own destruction. It is not my desire to discuss this further, but I shall instead proceed in the discussion of communism itself, its object, and what is expected of those now engaged in and plotting further communistic activities.

Let us now admit that nearly all the European governments are socialistic, and that they are autocratic or totalitarian in form. I am not concerned with those, but shall proceed to discuss communism as propounded by Heinrich Mordecai, alias Karl Marx. His slogan was, "Whatever is, is worth destroying." And he must be credited with being open and fearless in destruction. This techique has been refined today. The Communist now promises something

which seems perfectly obvious and right, but he does exactly the opposite, as was done with the promises made in the 1932 platform of Roosevelt. For example, I see in the papers, the group now meeting in Washington expresses itself firmly against communism, and yet they know, as well as we do, that there are Communists among them who hide their activities under such expression.

I shall name a few of those who have been leaders in communism so that the American people may visualize who their rulers will be when the zero hour arrives.

Heinrich Mordecai advocated class hatreds, riots, and strikes, and states in his Communist Manifesto:

> The Communists refrain from keeping their views and intentions secret. They openly declare that their goal can only be achieved by a forcible destruction of all existing orders of society. The ruling classes shall tremble before the Communist revolution.

This should be plain to all of us and compared with what has taken place for the past 10 years. For you see "it can happen here."

We have been treated with an appeal to the masses. For what purpose? To gain control, and after having acquired such control, to rule and destroy. We have been treated to propaganda of class hatreds between the have's and the have nots, hatreds in business, and hatreds and dissension in the ranks of labor. Business is gradually being destroyed by Federal invasion and industries are now dormant or idle. Greater power has been delegated by Congress to the President in accord with the communistic plan. What is required now? To shift and place in key positions those in sympathy with communism, who can be trusted to carry out the communistic plan when the time comes.

Heinrich Mordecai was not only a Communist, but he was also an anarchist. He lived and thrived upon all things contrary to Christian doctrines. Destruction of life meant nothing to him, as long as his own kind was not destroyed. He was the promoter of the First Internationale, in 1864. He laughed when his dupes became entangled with the law, and he jeered at suffering and poverty. Death and destruction meant nothing to him, for he lived on the suffering of others. Such is the record of the progenitor of communism.

Chaim Goldman, or "Vladimir Ulyanov," alias Lenin, was the next prominent disciple of Heinrich Mordecai-Marx, and it was he who embraced the communistic doctrines to be used for destruction of the Czarist government. He did this as thoroughly as his predecessor in communism, and drenched Russia with innocent and defenseless people's blood. He also used willing dupes to attain power, and after having reached the objective, he, like others, destroyed those who had befriended and helped him. He was a human being without humanity.

I cannot forego mentioning the name of Benjamin Cohen (Bela Kuhn) who was sent to Hungary by Chaim Goldman (Lenin). In 1919, he is accredited with the killing of 120,000 innocent Christian people, 30,000 of whom were murdered within 3 months. Later, after returning to Russia, 40,000 white Russians were killed in the vicinity of the Crimean Peninsula.

Records of this are authenticated by various investigating committees; but if anyone should be interested in refreshing his memory with additional information, he might procure the book The World Hoax, by Ernest F. Elmhurst, published in 1938.

There is, of course, voluminous evidence to be had dealing with mass murders in Russia and adjoining countries by the disciples of these same communistic philosophies under the control of the same leaders.

I have been informed that there are rumors that this same Bela Kuhn is in Chicago at the present time, no doubt preparing for an American communistic revolution.

One of the most famous disciples of communism, our neighbor now living in Mexico, is Laiber Davidovitch Bronstein, alias Leon Trotsky. I shall not discuss his history, because it is still in the making and no doubt will include leaves from communistic happenings in the United States. This gentleman visits New York at times, which is the headquarters of proletarian communism and those who are by choice disciples of this most un-Christian philosophy. It is people of this type who are now attempting to rule the United States, first, by money, and, secondly, by destruction of all those things we hold dear to us and which have built our country into a prosperous nation for the past 151 years. They are exactly the same kind and type who are now ruling in Russia; and if there is any difference, it is in refinement in the method of procedure. This refinement is evidenced in the manner in which avenues of communication are controlled by the invisible government. As to learning the actual truth, we are no better off than we were before we had the telephone, telegraph, radio, and high-speed presses, for today we are allowed to read and hear only those things which are prepared for us by the subsidized power now in control.

I want the people to know that the acquisition of all this property and power has been accomplished by the use of the people's money and not in any sense exclusively by the use of private capital. It is this power which is destroying us today, and it is dangerous in the hands in which it now rests.

In Russia the Communist comprises 1⅞ percent of 170,000,000 people, which they are able to rule by sheer force and ruthlessness. That can also happen in the United States if we go to sleep. In this communistic rise to power millions and millions of lives have been sacrificed, and despots have been seated on the ruins of human liberties and rights. Washington warned us of this danger, but here we are confronted with deliberate attempts to destroy the Government.

It will begin by strikes, local strife, gradually increasing under well-placed and well-directed leadership of known Communists now in command of proletarian communistic parties. The expense will be paid by those who financed revolutions in Europe and are now seeking power here. The money which is used is the people's credit, now lying idle in various banks, as it has been used in the past 7 years in destroying industry and business.

Do you want that? Or do you want to retain the republican form of government that you have always had and which guarantees freedom to all people, no matter what race, creed, or color?

Is there any necessity for the prevailing conditions within the United States? The answer is, emphatically, "No." The present condition has been brought about by those now in control of national and international gold and credit. This is a far-reaching attempt by them, a little hurried at the present time, but definitely an attempt to take charge of the United States. And history itself will complete the chapter.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

ARTICLE FROM THE BALTIMORE EVENING SUN OF MAY 24, 1939

Mr. D'ALESANDRO. Mr. Speaker, in view of the enormous reduction made by the Appropriations Committee for the National Youth Administration, I desire to call your attention to certain facts that I feel you should know. The Budget recommended $123,000,000 for this agency and the Appropriations Committee reduced this estimate to $81,000,000. There are approximately 3,000,000 young people eligible for school-aid work and the funds submitted by the Budget estimate would have given work aid to nearly 1,000,000 of

these. I hope the amendment increasing this amount to the Budget recommendation passes.

[From the Baltimore Evening Sun of May 24, 1939]

N. Y. A. BUILDS PLAYGROUNDS FOR WESTERN MARYLAND—YOUTHS USE MATERIAL FROM ABANDONED STRUCTURES IN PLYING NEWLY LEARNED VOCATIONS AS STONE CUTTERS, MASONS, CARPENTERS, ELECTRICIANS

(By Lee McCardell)

Behind the swimming pool of a municipal park under construction in Hagerstown stands a new white shingle and gray-stone building. Cut in its foundation cornerstone are the words:

"City of Hagerstown Recreation Center, 1938. Constructed with the aid of National Youth Administration."

Stuck up on the brick front of an old factory in Lonaconing is one of those familiar red-white-and-blue U. S. A. Work Program posters of the N. Y. A. It says: "Handicrafts Training Center. Sponsored by the Board of County Commissioners."

THIRD A FEW BLOCKS AWAY

A few blocks away is another N. Y. A. poster, this one on the shell of an old stone stable. It reads: "Resident training center, sponsored by mayor and city council."

The rebuilt house across the street from the Oakland High School has neither a poster nor a cornerstone. Neither has the wooden shed housing a carpenter and paint shop behind the high school. But these, too, are work projects of the National administration in Maryland.

JUST BACK FROM TOUR

Ryland N. Dempster, State director of the N. Y. A., has just returned from an inspection of these projects, probably the most ambitious efforts in Maryland of the National Youth Administration to provide work and training for young people, both boys and girls, not in school or college.

During the past year the N. Y. A. has provided $208,900 for student aid in Maryland. This money was doled out to 3,862 boys and girls, white and colored, between the ages of 16 and 24, who could not meet school or college expenses without assistance. Applications for help had to be approved, of course, by their schools as well as by the N. Y. A.

In return for N. Y. A. allowances, limited to maximums of $6 a month for students in secondary schools and $20 a month for undergraduate college students, these benficiaries did part-time work around their schools as clerks, messengers, librarians, gardeners, janitors, and assistants in laboratories, cafeterias, and laundries.

ONE THOUSAND SIX HUNDRED GIVEN WORK

Another sum of $268,885 was laid out for N. Y. A. work projects employing about 1,600 young people, white and colored, between the ages of 16 and 24, who were out of school without jobs and whose family heads were eligible for public relief. Generally speaking, they earned from 25 to 48 cents an hour for 50 to 56 hours of work per week.

The girls sewed garments for welfare agencies, worked as nursery school assistants, maids, clerks, and office helpers. The boys were given jobs as carpenters, painters, cleaners, orderlies, helpers under trained supervision. All work was in connection with schools, libraries, hospitals, or other public institutions, and care was taken not to interfere with established jobs.

Most of these N. Y. A. proteges were without vocational training. Many had never held a job. They didn't know what they wanted to do or what they could do best; and in the counties, where there are no vocational schools as known in the city, and where opportunities for diversified work and training are limited, the N. Y. A. was up against a problem.

PROJECTS SOLVE PROBLEM

This has been solved, to some extent, by such work projects as construction of the Hagerstown recreation center, and by the Lonaconing training centers. The N. Y. A. also operates a camp at Avalon where facilities to provide training in carpentry, motor repair, and conservation are being expanded to include other shops.

Paul E. Welsh, an N. Y. A. assistant, went along with Mr. Dempster on the director's inspection trip through western Maryland. They drove directly to Hagerstown, where the N. Y. A. maintains a one-room regional office for a district designated "Area No. 2." No. 2 includes all western shore counties except Baltimore and Harford.

At Hagerstown they looked over the park recreational center, a good-sized one-story building now complete except for doors, plumbing, spouting, and a little interior trim. Plans for the building were prepared by a professional architect and construction was supervised by John Jones, a Hagerstown contractor.

HIGH STONE BASEMENT

The building's high stone basement practically makes it a two-story structure. It contains showers, two large assembly halls, meeting rooms, dressing rooms, and a kitchen. The lay-out, like the general design, is in accord with specifications fixed by the city, which provided some of the materials.

Stone for the building was quarried on city property, hauled to the building site in rough state, dressed by N. Y. A. boys trained on the job as stonecutters, and laid by other N. Y. A. boys trained on the job as stonemasons. They built the foundation, two chimneys, two big fireplaces, and a stone front porch.

Most of the wood used in building came from an abandoned C. C. C. camp at Fort Frederick. The buildings were taken down and the wood hauled to the park by the N. Y. A. All the woodwork on the new building—floors, walls, roof, interior paneling and trim—was done by N. Y. A. boys learning the carpenter's trade from one or two instructors as they put the building up. Other boys wired the building for electric light.

CONTRACTOR GIVEN CREDIT

It was a long-drawn-out operation. Mr. Dempster says its success is due, to a large extent, to the patience of Contractor Jones. All the workmanship is not perfect. But considering that reclaimed materials were used throughout the building and that none of the boys was a skilled workman, the job appears to have been unusually well done.

Supervised N. Y. A. workers are now installing heating and plumbing fixtures. N. Y. A. laborers are landscaping the grounds around the building. The boys have already fixed up the grounds nearest the swimming pool, building stone revetments along the bank of a small stream and ornamental stone foot-bridges across the stream.

Mr. Dempster called on Carlton Schuler, project supervisor for area No. 2, at his office on Hagerstown's public square. Mr. Schuler loaded a bundle of ax handles and 150 pounds of stone cutters' tools into the back of Mr. Dempster's car—tools needed at Lonaconing—and the State director and Mr. Welsh were off for Allegany County.

TYPICAL MINING TOWN

Lonaconing is a typical mining town of about 2,500 population in the Georges Creek Valley, 15 miles southwest of Cumberland. Steep hills, laced with railroad tracks and pitted with drift mine shafts, encroach upon the town which lies in the bottom of the valley along the shallow creek whose stones have been washed yellow with iron oxide.

The N. Y. A. handicraft training center in operation at Lonaconing is located in the cutting shop of what used to be a glass factory, a large brick building of warehouse proportions at the foot of a side street overlooking the creek. This project gives employment to 40 girls and 50 boys.

The boys work in a wood shop which occupies the greater part of the building making and repairing furniture for the Allegheny County public schools. Their shop is pretty well equipped with tools, carpenter benches, and several light pieces of power machinery, including a lathe, a planer, a drill, and a band saw.

WORKSHOP FOR GIRLS

Beyond a partition at one end of the building is another workshop for the girls. They paint, varnish, and rub down the furniture repaired by the boys. A few of the girls are learning to cane chairs. They all sew, making garments, rag rugs, and quilts which are turned over to the county welfare board for distribution among needy families.

When this training center was opened only a few of these boys and girls could have qualified even as semiskilled workers. The boys were taught woodwork by E. Price Steiding, the young project supervisor, and an assistant, Benjamin McDowell. Another assistant, a former schoolteacher, Mrs. Rella McNamara, taught the girls to sew, weave, and paint.

Eventually these shop activities will be transferred to a community house being built by the N. Y. A. This establishment, sponsored by town authorities, will contain workshops, a community recreation hall, a library, a health clinic, a nursery school, a model apartment and dormitories where girls from rural districts may live while being trained in child care and homemaking.

PRESENT FACILITIES ARE FEW

Lonaconing is greatly interested in this new building, which promises to be the finest public structure in town. The community has no permanent health clinic, no nursery school now. Its library, established 4 years ago by the W. P. A. and operated largely by N. Y. A. workers, is housed temporarily above a downtown grocery store. The only other public recreational facilities in Lonaconing are a moving-picture theater and a few taverns.

The new building will stand beside the elementary school on a hillside overlooking Lonaconing. Here the mayor and the city council have bought an old stone barn, once used as a stable for horses and mules that pulled the coal cars in a mine farther up the hill. The thick, substantial old stone walls of the barn will be incorporated in the new building.

Fifty N. Y. A. boys are building the new community house. Harvey Boward, a stone mason, is teaching some of them to dress and lay stone. Others, trained in carpentry at the handicraft shop, will do the woodwork. William Schramm, a professional contractor, is overseeing the whole job.

GARAGE BEING BUILT

The boys have already stripped the old stable to its walls, dug out part of a new basement, laid footings for new walls. They are building a wooden garage to house and repair N. Y. A. trucks being used to haul building materials—stone from old bridge piers, wood from the dismantled barracks of a C. C. C. camp on Backbone Mountain.

Other youths are being trained to service and repair the trucks. Down in the handicraft shop a few untrained metal workers, who have been learning to make tin waste baskets for the schools, have turned out a set of metal funnels for the garage crew. In a construction shanty by the old barn other boys are working at a forge, sharpening stone cutters' tools.

Mr. Dempster figures that it will take at least a year to build the community house. The surrounding property will be graded and terraced to conform with the adjoining school yard. Behind the barn is a mountain spring, famous for an inexhaustible water supply in Lonaconing, which suffers frequently from summer drought. This spring is to be cleaned out, walled up and included in the landscaping plan.

PLAYGROUNDS SCARCE

After looking over the Lonaconing projects Mr. Dempster and Mr. Welsh drove on to Oakland by way of Westernport, where the N. Y. A. recently completed a school playground, the only one in that town. Playgrounds are few and far between in the cramped, crowded mining towns of western Maryland.

Across the street from the Oakland High School stands a six- or eight-room dwelling that looks like new. High school girls use it as a home-economics practice house. This house was a ruin, partly destroyed by fire, when the school board bought it some months ago. N. Y. A. labor, supervised by two carpenters, rebuilt it.

Another group of N. Y. A. boys are at work in a big two-story wooden shed behind the school. They are making desks for teachers, repairing chairs, student desks, and other school furniture. These boys have built about 250 wooden bus shelters for the Garrett County school board. They have repainted almost every public-school building in the county.

SCHOOL HEAD IMPRESSED

Franklin Rathbun, Garrett County superintendent of schools, says he is so impressed by the training received and the work done by N. Y. A. boys that he intends to put all the Oakland High School boys through a similar course, substituting practical work for the instruction they now receive in manual training.

Cost of Sugar Protection

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

EDITORIAL FROM THE DES MOINES REGISTER

Mr. HARRINGTON. Mr. Speaker, under leave to revise and extend my remarks I include an editorial and chart from the Des Moines Register showing the net gain or loss sustained by States as a result of our present policy of sugar tariff protection:

[From the Des Moines Register, May 26, 1939]

WHOM PROTECTION DOES NOT PROTECT

The Register has repeatedly pointed out that in all the limitless talk about high tariff "protection" there is virtually complete silence about who pays the bill and what the real effect of the tariff subsidies is on our Nation as a whole.

Plenty is said and endless statistics are quoted to show what horrible effects any lessening of high tariffs would have on certain specific interests—the favored beneficiaries.

It is always the special interest that is put forward, never the general interest. This is true whether it is a purely industrial group that is getting the "pap," as for the most part is the case, or whether it is a certain segment of labor that happens to be employed in a "protected" industry, or whether it is a particular part of agriculture that looks strictly to its own short-term interest and not to the long-term interest of agriculture as a whole.

The powerful disinclination of any of the tariff subsidy-getters to permit discussion even to turn seriously toward the consumer side of the picture has been illustrated again and again.

A year or two ago the Register commented on the fact that when the issue of processing taxes in connection with a farm program was up, and when a clique in Congress was making a drive for "exposing" the hidden costs of such taxes to consumers, all that was necessary in order to stop the drive in its tracks was to couple with it a proposal to "expose" through a similar study the "hidden costs" of high tariffs.

The entrenched tariff beneficiaries wanted none of that.

The Canadian Government a few years ago, through an official commission, made a most interesting study of "price spreads" in that Dominion, and what the study showed as to the penalizing of consumers through the years by protective tariffs was enough to make eyebrows lift until they merged with the hair on the back of one's neck.

We desperately need a study like that in these United States.

Just to give a hint of what the total picture would be, let us note here a few facts that have come to our attention about sugar. We are not "picking on" sugar. It just happens to be an immediately available illustration. It also happens to be a timely one because of the new drive in Congress for still more protection in the form of quotas for our domestic sugar interests.

We consumed in the United States in 1938 12,500,000,000 pounds of sugar, or 96.11 pounds for every man, woman, and child. Concealed in our national sugar bill is more than $325,000,000 which as consumers we had to pay, above the world sugar price, as a subsidy to our domestic sugar producers.

Philadelphia is one of our great sugar-refining centers. At the very time, recently, when a Philadelphia refiner was quoting sugar at a net price of $4.214 per 100-pound bag for domestic use, the refiner was quoting, for sugar identically packaged but made from unsubsidized raw sugar, the net price of $1.60 for export. The difference between the domestic and export prices represents the total of the various protections given domestic sugar producers. Subtracting the world price at which sugar is sold for export (in the quoted case $1.60) from the "loaded" price that we pay as American consumers (in the same case $4.414), we arrive at the hidden cost of protection to consumers (in this case $2.614 per 100-pound bag).

"Protection," very obviously, is anything but protection for the American family that buys sugar.

Figuring out per capita sugar consumption at the 1938 rate of 96.11 pounds, which happens to be below the figure for normal years, not above it, and figuring our population at 130,000,000, the cost of sugar protection to all of us as consumers reaches $326,000,000 on last year's consumption of refined sugar. Actually, this should be translated into "raw value equivalent," which raises the figure to $346,000,000, or over $11 per family. Even after deducting from the above total the tariff revenue of about $40,000,000, which goes to the Federal Treasury, there is left plenty that comes out of consumer pockets as a tax, not for Government, but for our protected sugar interests.

The purpose, of course, is to permit a small percentage of our mainland producers to produce sugar beets and cane in competition with the natural cane-sugar production of the tropics. Last year this mainland production was the equivalent of 41,296,000 100-pound bags of refined sugar with a gross value of approximately $175,000,000. In spite of all the protection and hot-housing that has made even this production possible, it amounted to less than 30 percent of America's sugar consumption needs.

In other words, to protect a crop with a gross value of $175,000,000, the American people are required to pay in excess of world sugar prices, nearly $2 in cost to themselves for every $1 of subsidy to a small American segment.

This is merely an "Exhibit A" of what "protective" subsidies of this sort long have meant to American consumers.

Since the great bulk of effective "protection" has been on things that farmers buy and not on things they sell, the American farmer has been the chief "goat" of the whole long process.

It is the inevitable discrimination of this tariff-subsidy grabbing, more than any other single factor, that has forced American agriculture into complicated and difficult "defense programs"—programs that, ironically enough, the great majority of tariff pap-suckers get red in the neck about.

[From the Des Moines Register of May 26, 1939]

COST OF SUGAR PROTECTION BY STATES

The table below is a break-down by States of the hidden costs of one part of our high protective tariff policies. It amplifies the discussion in the editorial on the same subject that appears today at the left of this page.

It should be noted that totals in this table may vary somewhat from those used in the editorial, for the reason that the table is based on the 1930 census (the latest for which official population figures for the various States are available) and on the 1938–39 sugar crop reports. The population of the country in 1930 was only 122,775,046, whereas now it is 130,000,000.

It should also be noted that only the hidden or excess protective cost is given. The actual cost of the sugar consumed by the several States is of course very much higher.

State	What the farmers of the State got for the sugar they produced	What the people paid in hidden costs for the sugar they ate	Net gain or loss to the people through these hidden costs
Alabama		$6,642,082.48	−$6,642,082.48
Arizona		1,093,288.23	−1,093,288.23
Arkansas		4,654,749.82	−4,654,749.82
California	$23,975,759.49	14,249,909.01	+9,725,850.48
Colorado	25,519,613.17	2,599,835.41	+22,919,777.76
Connecticut		4,033,336.53	−4,033,336.53
Delaware		598,353.80	−598,353.80
District of Columbia		1,222,041.54	−1,222,041.54
Florida	4,487,910.00	3,685,209.61	+802,700.39
Georgia		7,300,350.06	−7,300,350.06
Idaho	8,430,355.63	1,117,030.32	+7,313,325.31
Illinois		19,152,941.54	−19,152,941.54
Indiana	791,229.07	8,128,642.53	−7,337,413.46

Farm Groups Entitled to Open Hearings on New Philippine Legislation

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

LETTER FROM THE ASSOCIATION, SOUTHERN COMMISSIONERS OF AGRICULTURE

Mr. CRAWFORD. Mr. Speaker, as a member of the Insular Affairs Committee, I have received a communication from the Association, Southern Commissioners of Agriculture, containing some very excellent reasons why open hearings should be held on H. R. 6858, being a bill to amend the Philippine Island Independence Act.

The farm organizations of the United States are vitally interested in this legislation—and justly so. In view of that great interest they are entitled to the opportunity of expressing their views in open hearings. They are surely as much entitled to that right as the representatives of the Philippine Government are entitled to the right to express their views in a closed hearing. I do not see how we can deny them a hearing.

The Philippine people will soon leave our household. They are to have their independence. American farmers are a part of our flesh and blood. They are struggling for their independence too—economic independence.

With unanimous consent privilege having been granted me by the House, I submit the following letter setting forth the views of the southern commissioners of agriculture on the matter of open hearings. The letter follows:

ASSOCIATION, THE SOUTHERN
COMMISSIONERS OF AGRICULTURE,
Washington, D. C., June 17, 1939.

The Honorable FRED L. CRAWFORD,
House of Representatives, Washington, D. C.

MY DEAR MR. CRAWFORD: The Association, Southern Commissioners of Agriculture, are a part of the National Association of Agricultural Commissioners, Directors, and Secretaries. The national association is a nonprofit organization. It has no members except the duly elected or appointed commissioners or directors of the 48 States.

The economic principles and policies of the parent body and the Southern Association of Commissioners are identical as to the policy of opposing the importation of all foreign-produced substitutes for domestically produced agricultural oils and fats.

We are addressing you specifically in behalf of the American dairy industry, our peanut, corn, and cotton planters, as well as our livestock producers, to advise you of the interests which these agricultural groups have in H. R. 6858, a bill to amend the Philippine Island Independence Act.

We would have you believe, with our association, that it is highly important to American agriculture that the Committee on Insular Affairs hold a public hearing on H. R. 6858, particularly on that part of the bill which has to do with a change in our agricultural economy and, more particularly important, would be the holding of this hearing if the committee contemplates reporting this bill favorably from the Committee on Insular Affairs to the Committee of the Whole.

We would have you know, Mr. CRAWFORD, that expert, impartial and disinterested opinion of highly accredited agricultural authorities, after research studies, have made report that the passage of H. R. 6858, as drawn, would have a lasting adverse effect, not alone upon every cotton and peanut planter, but upon every cattle and hog raiser, as well as upon the income of every dairyman in the United States.

As a result of these studies, we submit that, as the opinion of the association of duly elected State officials charged by the electorate of their several States with the administration of agricultural affairs, that among the members of the national association is the Honorable Elmer Beamer, the commissioner of agriculture of Michigan. May we take this opportunity of saying that this association of agricultural commissioners neither holds nor carries any brief for any interest, nor does it advance any viewpoint whatever nor address itself to any questions except those of vital import to the actual producers and consumers of America's fats, foods, and fiber.

The association feels that the proposal made in H. R. 6858, to abate the 3-cent-per-pound excise tax on an annual quota of 448,000,000 pounds of coconut oil is absolutely nothing short of * * * indefensible, special-privilege legislation * * * conceived wholly in the interests of the American soap industry.

The Association, Southern Commissioners of Agriculture would direct your attention to the fact that an identical proposal for the abatement of this tax was argued in the Senate less than 2 weeks ago. The debate on that proposal, as recorded in the CONGRESSIONAL RECORD of May 31, 1939, constitutes a veritable arsenal or argument against the enactment of that proposal at this time.

It was established in that debate, and from every angle of economic soundness and justification, that the determination to fix the excise tax of 3 cents per pound on Philippine coconut oil was made at the very time of the enactment of the original Independence Act. It was enacted into law by the very same session of Congress and almost simultaneously with the passage of the original act.

Every economic justification which gave rise to the tax enactment at that time, is present today. In support of that argument in the recent Senate debate, Senator CONNALLY declared:

"Mr. President, the soap people are the ones who were making this argument. I have here a long printed argument, 'Petition of soap industry to the Committee on Territories and Insular Affairs in support of the amendment by Senator HAYDEN relating to coconut oil. John B. Gordon, Secretary.' I will not read it all. Nobody is interested, so far as I can discover, except the soap manufacturers.

"Have they reduced the price of soap? They have not. Will they reduce the price of soap? They will not. We hear statements about lauric acid, it being said that no other oil contains any lauric acid except coconut oil. Very well. This coconut oil is imported in the same volume with the tax or without the tax. If that be true, no one is hurt by the tax except the soap people, who want larger profits."

Let us now see whether or not the Procter & Gamble Co. actually are in need of governmental subsidy in order to support the earning of that tremendous corporate structure. In discussing the need of such subsidy, Senator CONNALLY declared:

"How much was it that Procter & Gamble paid their president last year? There was some testimony before the Committee on Finance as to what they paid the president of the company. I cannot recall the figure now, but I shall check up on it and insert it in the RECORD. I am sure that Procter & Gamble's representative, who is in the gallery, will be glad to tell me about it when the session is over."

Now let us hear further what was spoken in the Senate as to just who the sponsors are of this proposal to do away with a 3-cent excise tax on coconut oil. In discussing that, Senator CONNALLY declared:

"Mr. Procter and Mr. Gamble are the chief advocates of the repeal of this tax, because they have been before the Finance Committee, as will be testified by other members, repeatedly, not once but at many sessions of the Congress. They have made a regular groove in the marble floors in the Senate Office Building by walking back and forth to the Finance Committee."

Let us now look behind the words of Senator CONNALLY and see exactly who it was that that distinguished exponent of the rights of American agriculture disclosed as being opposed to the adoption of any reduction in the excise tax of 3 cents per pound, and why they are opposing it. In discussing that question, Senator CONNALLY declared:

"Mr. President, the tax has resulted in benefit to domestic vegetable and animal fats. At least it has convinced the representatives of every farm organization I know of, such as the Grange

and the American Farm Bureau Federation. The dairy representatives are here asking that the tax be retained; the representatives of the fishing industry of the United States, who manufacture fish oil, are here asking that the tax be retained.

"Mr. President, I shall insist on a vote on the point of order on the ground that this is an amendment affecting the revenue, and therefore is not to be considered in the Senate, but must originate in the House of Representatives."

And in response to that motion made by Senator CONNALLY, the Senate, on May 31, 1939, overwhelmingly, by a vote of 54 to 8, defeated the proposal to do away with the 3-cents-per-pound excise tax on the future import of 448,000,000 pounds of coconut oil from the Philippines duty free and tax free.

The Association, Southern Commissioners of Agriculture are not unmindful of the rights of the American soap industry to equitable treatment in the halls of our National Congress, but, likewise, the Southern Commissioners of Agriculture now ask a "day in court" for the American farmer.

In a letter recently made public asking that hearing be had on this proposal, America's oldest and most conservative farm organization, represented by Mr. Fred Brenckman, Washington representative of the National Grange, demanded to know:

"Are not the American farmers entitled to as much consideration in Congress as the soap industry?"

This association feels confident that the Committee on Insular Affairs should make affirmative answer to Mr. Brenckman's question.

Therefore it is for the above, among other reasons, that this association, Southern Commissioners of Agriculture, make request of your personal support in seeing that a full, free, and frank discussion be had at a public hearing before the Committee on Insular Affairs, and prior to the time which your committee report to the Committee of the Whole on this piece of legislation which is so threatening to American farm interests.

Thanking you for your every help and courtesy in this matter.

Respectfully yours,

ASSOCIATION, SOUTHERN COMMISSIONERS OF AGRICULTURE,
C. C. HANSON, *Secretary*.

T. V. A.

EXTENSION OF REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

ADDRESS BY HON. CHESTER H. GROSS, OF PENNSYLVANIA, APRIL 7, 1939

Mr. GROSS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by me on April 7, 1939, before the Kiwanis Club, York, Pa.:

The Tennessee River is perhaps the most remarkable river in the United States—flowing through an area that has 50 inches of rainfall; starting in the northeast part of Tennessee and flowing south into Alabama and north into Kentucky, and joining the Ohio at a point farther north even than its source. It is a much bigger river than most people realize, having a length of more than 1,000 miles and having a 1,000-foot fall in 800 miles. It furnishes probably more water power than any other river its size or volume in the world. It is the only river in the United States flowing through 3 States and draining 48.

There are more dams constructed and under construction in the Tennessee River Valley than in any other river valley in the world of similar area.

The Government's activity in the Tennessee River Valley began during the World War with the development of Muscle Shoals. The development has steadily gone forward until the Roosevelt administration came into power, when the T. V. A. was organized and a great system of dams for power and flood control was set up. Ofttimes we have been misled and confused in referring to dams, and claims have been made from time to time to sell the Authority that they could furnish vast amounts of power and still serve to control floods. It is now well established that a dam to control floods cannot yield a great deal of power, since a power dam has got to be kept full of water, while a dam to control floods must be empty when the floods come.

Beginning at the mouth of the river and naming the large dams on the river we can start in Kentucky. The first one is the Gilbertsville Dam, which is authorized; the Pickwick Dam, completed in 1938; the Guntersville Dam to be completed in 1940; the Wilson Dam completed; The Wheeler Dam completed; The Halls Bar Dam privately owned; the Chickamauga Dam to be completed in 1940; the Watts Bar Dam proposed; the Coulter Shoals Dam proposed; and the Norris Dam completed. There are many other small, privately owned dams on this river most of which have been purchased by the Federal Government. So that now practically everything on the river is Government owned.

The most justifiable criticism against the Tennessee Valley development is that it is a far departure from methods of development in other parts of the Nation.

The average man still believes that development of this type should be financed by private industry, and one can rightfully ask whether other sections of the Nation are being fairly treated when huge appropriations from the Federal Treasury are being used to develop sections such as this when there is nothing in sight that indicates that the money will ever be paid back or that the investment will ever be able to carry itself.

Right now some of these cities in the Tennessee Valley Authority, which received a great deal of their tax money from the privately owned utilities, now taken over by the Federal Government which pays no taxes, find themselves unable to balance their budgets, and are asking the Federal Government to pay their local taxes. One city has now presented a bill for $3,000,000 of local taxes to be made up or paid by the Federal Treasury. In other words, people all over the country are going to be asked to contribute to the local taxes under the T. V. A.

When we carefully study the map covered by the Tennessee Valley Authority we find that it covers practically the entire area known as the old South, and that it is claimed by many who are well acquainted with the Authority that it is literally creating an empire, with Government-owned utilities, within our empire.

The natural resources of this section of the country are immense, although in many cases undeveloped. This section is rich in coal, iron, lumber, and has in fact everything that Pennsylvania has except anthracite coal. In this area are the Federal Government's vaults with two-thirds of the world's gold supply buried in them, as well as the greatest suppressed minority in the United States, the colored folk—9,000,000 of them.

It would be a long story to go into any great detail to describe the Authority, so we will just touch on some of the more important items. The Authority has purchased the Commonwealth & Southern Utility Co. holdings at a cost of $78,600,000. In the present budget of the T. V. A. we find an appropriation of $30,748,000 for transmission and construction, $6,140,000 for fertilizer-manufacturing plant, $80,000 credited to national defense, for operation $2,000,000, or a total of $41,400,000. The claim that it will ever be self-sustaining so far seems foolish. Every project so far has been running in the red, and in order to discourage Government ownership of all major industries in the country it may be well if it continues to operate in the red.

The Tennessee Valley Authority is engaged in many enterprises other than power. I call your attention to an agricultural project, the products of which are put through a quick-freezing machine developed at the Tennessee Engineering Experiment Station and now operated on an increasingly large scale. During 1937 they have grown 53,000 pounds of strawberries, 54,000 pounds of young berries, and 8,300 pounds of peaches that were quick frozen. And in 1938 a much larger quantity of these berries were grown and quick frozen and transported to St. Louis on a Government-owned refrigerated barge equipped for zero storage of frozen fruits, with a capacity of 350,000 pounds. This fruit cost the Federal Government 27 cents per pound delivered to St. Louis, where it was sold for 7 cents a pound.

The complete development of the T. V. A. will mean the annihilation of the coal industry east of the Mississippi River and throw out of employment 1,500,000 wage earners with their families, who are now dependent on mining and transporting coal. The loss annually of 375,000,000 man-days of labor in the coal industry will have to be charged up to the T. V. A.

The Government is operating a number of villages under the Authority, and after collecting the rent in the Muscle Shoals village they still had to have $126,000 out of the Federal Treasury to balance the town budget. At the Norris Dam they needed $73,000 to balance the budget. One of the items of expenses for the Tennessee Valley Authority last year was $316,000 for making maps. Last year $40,000 was spent of the taxpayers' money to audit the account, and the legal department cost $240,000.

To get an idea of the immensity of the Tennessee Valley project let us just analyze one or two of the dams more in detail. The Gilbertsville Dam, for instance: The dam area will take in 400,000 acres of the finest and richest soil in America.

In addition, it will destroy 69 miles of standard-gage railroad with 3 large bridges. It will cover up 137 miles of hard-surfaced highway with three large bridges. It will cause the relocating of 35,000 people and 2,500 dead bodies now sleeping in their graves. Its estimated cost will be over $200,000,000. The dam will be 8,600 feet long and 150 feet high. The water surface at the top of the spillway will cover 256,000 acres.

The Dog Island Dam, estimated cost of $392,000,000, will submerge 1,000,000 acres of soil—650,000 acres valuable for cultivation; 33 towns with a population of 27,000 will have to be relocated, 13 additional towns will be partly submerged, and 18 others will require protection. The population of the submerged area is about 200,000 and the property cost estimated at $25,000,000; 275 miles of surfaced highway will be abandoned and 159 miles will be relocated, 194 miles of railroad will be submerged, and 81 miles relocated, and 49 miles will be raised at a total cost of $36,500,000. Unmined coal submerged, approximately 4,800,000,000 tons.

The Tennessee Valley Authority employs 4,500 people with salaries averaging $2,600 per year—total cost of $11,700,000 for the

white-collar workers. Labor is being paid 47½ cents per hour. It may be of interest to know that the Government is operating a dairy farm at the Norris Dam and that they have paid as much as $900 per head for cows and that the dairy farm is now in the red $29,939.29.

On July 1 the Secretary of the Treasury will close the books for the fiscal year of 1939. The national debt will stand somewhere in excess of $44,000,000,000. This means an equivalent of $100,000,000 for each one of the 435 Members of Congress. The deficit for the fiscal year of 1939 will be in excess of $4,000,000,000. Congress will have appropriated about $10,000,000 more than we have taken in for each of the 435 Members.

A Grand Old Man From the West

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, we have been told that today Congressman TAYLOR of Colorado, chairman of the House Appropriations Committee, is celebrating his eighty-first birthday. As we see him here this afternoon, seated beside his colleagues, or notice him hurrying here and there to attend meetings of his many subcommittees, it does not seem possible that our colleague from western Colorado has reach that advanced age. I have seen many men 20 years younger whom I would have taken to be older than this active westerner.

We younger men, who can scarcely keep up with our Congressional duties, are especially appreciative of the manner in which he turns out more work and shoulders far more responsibility than any of us have to bear, and he does it better than some of us who are only half his age.

As a western man I feel a special interest in Chairman TAYLOR and rejoice that he has served so long in such a strategic post as that which he occupies. Too often we feel that the far West is not sufficiently known here at Washington, and sometimes its needs are not sufficiently considered and taken care of. Many times of late I have told my constituents in Arizona, where mining is vital, reclamation is important, and the proper handling of the public domain needs to be done, that we are indeed fortunate in having in both branches of Congress men from the West who occupy key positions, and who understand the needs of the West so thoroughly. Chief among such leading men is Chairman EDWARD T. TAYLOR, of the House Appropriations Committee. May he continue long to serve his country with distinction and to increase the pride which his State and the whole great West have in him.

Future Farmers of America

EXTENSION OF REMARKS

OF

HON. JOHN E. MILLER

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 20 (legislative day of Thursday, June 15), 1939

ADDRESS BY HON. JAMES A. FARLEY

Mr. MILLER. Mr. President, on June 3, 1939, the Postmaster General, Hon. James A. Farley, delivered an address to the Arkansas division of the Future Farmers of America, a State organization in Arkansas, at Camp Couchdale, Ark.

Mr. VANDENBERG. Mr. President, I did not catch the name of the orator.

Mr. MILLER. The oration was delivered by Hon. James A. Farley. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to be here at Camp Couchdale today to talk to you "future farmers" of Arkansas and to your parents and friends. I want to congratulate you on your fine camp, which I understand you own and operate yourselves. You are indeed fortunate in having such a fine place for recreation. I am told that this land was presented to you by my friend, Harvey Couch. I am sure he could have performed no finer service for the outstanding young men of the farms in this State.

There was a time not so far back in the history of this country when the services of the United States Post Office Department came no closer to the farm home than the nearest town post office. Getting the mail was just one of the errands a farmer had to remember when he went to town. Your fathers and mothers remember that historic event in 1896—the beginning of farm mail delivery. In Arkansas the first route was started at Clarksville, and it was one of the first in the country. Seventeen years later, in 1913, it became possible through the parcel-post system for people living on farms to send and receive packages without making a trip to town.

I am proud of the part the Post Office Department has been able to play in helping farm people to keep themselves as well informed as city people. I am proud of the part I have been able to play in this service. But my interest in farm people goes beyond the services of the Post Office Department. I am interested in agriculture in a broad sense and in the important part it plays in our national life. I welcome the opportunity to speak to a farm audience.

There is no audience to which I would rather talk than one made up of young men of today, who will be leaders of tomorrow. And if there is one quality above all other that characterizes the Future Farmers of America it is the quality of leadership.

Where in this country could we find so many young men so well qualified for leadership as among the 200,000 students of vocational agriculture who are members of the 6,000 local chapters of the Future Farmers? Where in this State could we find so many young men so well prepared for leadership as among the 7,000 Future Farmers in Arkansas?

I wish there were more organizations of young people in this country with the same major objectives as the Future Farmers—the development of leadership, cooperation, and citizenship. These are the attributes most needed for the prosperity and progress of the Nation.

In pioneer days individuals largely determined their own destiny. They had to rely almost entirely on their own energy and initiative and the cultivation of the land. As long as there was a frontier, they could move to new land when erosion and overcropping had taken too great toll of soil and fertility. Their needs were few. They asked little of society and in return contributed little to society.

Arkansas became a State more than 100 years ago, but Arkansas still had frontier land for many years after it was first settled. Now, however, the frontier is gone in Arkansas, as it is in the rest of the country. The disappearance of the land frontier has resulted in the necessity for a new kind of farm living. Your farm production will have to be continued largely on the land now under cultivation. Modern agricultural conditions demand that farmers work and plan together in a spirit of cooperation.

You are training yourselves for leadership in the fields of greatest significance today. Your group efforts have produced outstandingly successful cooperative projects. Not only your cooperative buying and selling, but cooperative school improvement and other community improvement projects have attracted wide attention. Just as cooperation in your own projects has opened up greater opportunities for you, cooperation among farmers generally is securing greater equality of opportunity for the agriculture of the entire Nation. This important objective of the "future farmers" has become a necessity for all farmers. Those of you who become farmers will find your present experience in cooperation of great benefit both to you and to your neighbors. The farmers of this country are going to continue to cooperate in their own enterprises locally and in their own programs nationally. Through the national farm program they have been proving that they can cooperate with each other, and with the Government, to deal with their problems effectively. They are proving it this year to a greater degree than ever before, with more than three-fourths of all the farmers in this country cooperating in the administration's farm program. There will be a continuing and increasing need for your leadership in the field of cooperation.

Through your experience in the art of working together for the common good, you are training yourselves in the most important attribute of good citizenship. Moreover, your interest and achievements in improving the communities in which you live provide an example and a challenge to others. There never was a period in the history of this country when the responsibilities of leaders or the opportunities for service were greater.

Through your experience in the art of conducting group discussion, you are training yourselves in the fundamentals of true democracy. Your training and experience in citizenship is guided

by the ideals that have preserved our democratic form of government and our freedom as individuals.

Those of you who make farming your life work will be particularly well fitted to serve the interests of agriculture. Leadership and cooperation are essential to agricultural welfare today as never before. Leadership of farmers themselves is fundamental to the success of the national programs for agriculture and will continue to be necessary to the success of any national farm program. One of the important reasons for the success of the farm program is that farmers have guided the application of its principles and have administered its provisions. Through Nation-wide cooperation farmers can deal with their national and international problems while, at the same time, through local administration, they can make their program apply most effectively on individual farms.

We can be sure that farmers will continue to work together to protect their incomes and conserve their soil. That fact will mean much to your opportunity for success in agriculture. In your individual farming programs you want to produce efficiently and economically, and you have achieved outstanding success in this respect. But you also want to market your products efficiently and profitably.

You realize that in order to produce efficiently you have to use the best farming methods that you have to protect your land against erosion and keep up its fertility. The income from your projects depends in part on production costs and in part on supplies and prices at the time you sell. Supplies and prices depend to an important degree upon the policies being followed by all producers of a commodity.

Whether you are producing livestock, or grain, or cotton, your most difficult problems in individual farming projects are directly related to national agricultural problems. They are much the same as the problems facing farmers throughout the country. Men who have made a study of farm problems have pointed out that since the World War farmers have suffered from chronic surpluses that have ruined prices and made farming unprofitable. They have been financially unable to take proper care of their soil. They have had increasing difficulty in selling export crops on the world markets. They have been overburdened with debt. Many thousands of them lost their land and were set adrift without means of supporting their families. It is important to you that farmers now have the power through national legislation to deal with these problems.

Production and marketing of farm products have been stabilized at more profitable levels and farm income has been protected and has nearly doubled in the last 6 years. Cash farm income in Arkansas has increased 80 percent. Soil-conservation practices are being followed on 80 percent of all the farm land and on 70 percent of all the privately owned range land in the United States. Measures have been taken to assure American farmers their fair share of the world market.

In the efforts to conserve soil resources Arkansas has been particularly outstanding. Thirteen soil-conservation districts, covering more than 5,000,000 acres of land, have been organized under State law by Arkansas farmers. For 12 of these 13 districts there are now working agreements with the United States Department of Agriculture. Among all the States of the Union, Arkansas stands second in the number of soil-conservation districts.

I am told that farmers in Arkansas are taking full advantage of the opportunity to improve their situation through the farm program. I recently saw a report quoting an estimate by J. B. Daniels, your State Triple A administrator, that approximately 219,000 of the 230,000 farms in Arkansas will participate in the Triple A program. Participation in the cotton program is expected to be 99 percent, and in the general crops program 90 percent. If all farmers in the United States show the same universal spirit of cooperation as farmers in Arkansas, the farm program cannot avoid being successful.

One of the first measures taken to assist farmers in 1933 was to expand and liberalize credit facilities through the Farm Credit Administration. Federal credit facilities have prevented foreclosure of farms by the thousands, have lightened debt and interest loads, and have made capital available for production and for cooperative organization of farmers.

The reciprocal trade agreement programs have helped to undo the damage done to agriculture by increased tariffs and other obstructions in the path of world trade. The Rural Electrification Administration has worked to extend the benefits of electricity to more and more farms. The Farm Security Administration program has provided opportunity for thousands of displaced farmers to get a new start and again become self-supporting. Many are being assisted in the purchase of land of their own. By the end of this fiscal year 437 loans will have been made to Arkansas tenants and farm laborers for the purchase of farms. The amount of these loans will total more than one and one-half million dollars.

Rehabilitation borrowers in Arkansas have been making outstanding progress. I am informed by the Department of Agriculture that the Farm Security Administration has made loans to more than 30,000 farmers in this State. These loans from emergency relief funds have totaled nearly $8,000,000, and more than a third of this money has been repaid, although much of it will not be due for 4 or 5 years. An even better indication of progress is the increase in net worth of these rehabilitation borrowers. A survey of 11,119 families showed that they had increased their net worth an average of $259 per family, adding a total of nearly $3,000,000 to the wealth of their communities.

In an effort to help both farmers overburdened with surpluses, and city people who are unable to buy enough food, the Department of Agriculture, through the Federal Surplus Commodities Corporation, has purchased and distributed billions of pounds of surplus farm products for needy families. At present, through the experimental food-stamp plan, the Department of Agriculture is seeking more effective methods of getting the abundance of the farms into the hands of the underfed in the cities. All America is in sympathy with this splendid effort.

During the last 6 years, farmers have made greater gains in obtaining the powers necessary to give them greater equality of opportunity than in any like period in the history of this Nation. City people, too, have gained from the efforts to improve conditions for the people on the land. Improved and stabilized income has made farmers better customers for the goods and services produced in the cities. The whole country benefits from the accomplishments in conserving soil resources.

The national recognition gained by agriculture and the methods farmers now have available to protect their incomes, their soil, and their homes makes the future more promising for farmers. It is encouraging to those who are now farming, and to those who are preparing to become farmers.

If I were a young man living on a farm, I would consider it a great privilege to be a member of your organization. You have opportunities not available to thousands of young men like yourselves who live in cities. You have greater opportunity to train yourselves in the qualities and abilities that are useful now and that will continue to be most useful in adult life. You are taking advantage of your opportunity to be self-reliant and self-supporting. You know how to stand on your own feet.

The Nation needs young men trained in leadership—men who can serve their fellow men not only as leaders in agriculture but in education, in business, and in political life. The Nation needs more of the type of leaders who are being developed in your organization to serve in adult organizations as legislative leaders, as business leaders, as leaders in their own communities, the State, and the Nation.

May I, in conclusion, wish you the best of luck and the blessing of heaven in your splendid patriotic enterprise.

The Third-Term Tradition

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, June 20 (legislative day of Thursday, June 15), 1939

RADIO ADDRESS BY HON. EDWARD R. BURKE, OF NEBRASKA, JUNE 19, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the distinguished Senator from Nebraska [Mr. BURKE] during the national radio forum arranged by the Washington Star and broadcast over the National Broadcasting Co. network on June 19, 1939. The subject of the address is The Third-Term Tradition.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"I want President Roosevelt to run for a third time," declares the Honorable Harold Ickes, who for 6 years has sat at the Cabinet table by the President's choice. The tradition against a third term is "political humbug," says he. Neither the Secretary nor the President could have underestimated the significance that the country would attach to such statements considering how close the ties that bind the two in personal friendship and mutually sympathetic understanding.

Is adherence to the two-term limitation "political humbug" or is it a tradition the maintenance of which is vital if we are to escape entanglement in world currents which have swept democracies to destruction and in their place enthroned dictatorships? That is the question that now absorbs the attention of the country. For that reason I deeply appreciate the invitation to discuss the matter before the National Radio Forum. In seeking an answer I propose to turn back the pages of history in order that we may trace the development of this tradition which some would now brush lightly aside.

May I state first my own firm conviction formed as a result of such a study? I believe that the tradition should be maintained inviolate. First of all, because it typifies that fundamental of American democracy that ours is a government of laws and not of men; that our strength rests upon principles rather than upon individuals. Even better than a limitation by tradition to two terms would be a longer single term, say, 6 years. That would require a constitutional amendment. Such a change would unquestionably improve the administration of the laws generally and

would increase the nonpartisan and businesslike efficiency of the executive department. It would remove much of the inducement to the building up of a political machine, lessen the possibility of attempted "purges," increase the probability that appointments would be made for other than partisan or selfish political purposes. It would be a long step toward making the President the Chief Executive of the whole people and not the leader of a mere faction or the head of a political party. The example of totalitarian states should be sufficient to put on guard even the most unsuspecting. For the mortality table of democracies discloses not so many sudden deaths as the gradual sapping away of the liberties of the people until only the shell is left.

May I further say by way of introduction that as a lifelong adherent to the political philosophy of Jefferson and Jackson I am proud that the Democratic Party up to this day has given no countenance to the sporadic attempts to overthrow the tradition against any person serving more than two terms as Chief Executive? If now our party is to follow after false gods, it is fitting that it should be under the leadership of those not long imbued with Jeffersonian or Jacksonian ideals of democracy.

To appreciate the full significance of this tradition we must trace its development through the 150 years since our fathers rebelled against the tyrannies of autocracy and with remarkable foresight fashioned a republican form of government through which democratic principles might be forever applied. Of all the problems confronting the Constitutional Convention none was more troublesome than that with respect to the selection and powers of the Presito a monarchy or depositism, but the members of the Convention, to a monarchy or despotism, but the members of the convention, without precedent to guide them, were often sorely perplexed.

Although the first vote was for the election of a President by Congress for a single 7-year term, the members of the Convention, beset as they were by all sorts of uncertainties and difficulties, do not appear to have given much thought to the danger of not placing a limit upon the terms of office of a President elected otherwise than by Congress. Not so with Thomas Jefferson. Unable to be present because of his service in France, he at once realized that this defect might prove to be the Achilles heel of the Republic. In a letter to Washington from Paris, Jefferson said:

"However, I shall hope that before there is danger of this change taking place in the office of President, the good sense and free spirit of our countrymen will make the changes necessary to prevent it."

At that time Jefferson preferred a single term of 7 years. Later on he felt that it was better to have a shorter term with eligibility for a single reelection. He was content with the realization that through his efforts a definite tradition against a third Presidential term had been established. Credit is given to Washington for laying the foundation for that, although it is undoubtedly true that he was not impressed as was Jefferson with the danger resulting from the lack of a limitation as to the tenure of office of President. However, he did insist upon retiring at the end of two terms. Stress as you may his personal reasons for unwillingness to continue longer in office. His action, nevertheless, paved the way for the definite establishment by Jefferson of a tradition against a third term.

We turn to the letter of Jefferson to a State legislature written during his second term. He removed every shadow of doubt that he would consider a third term. His words in part were:

"That I should lay down my charge at a proper period is as much a duty as to have borne it faithfully. If some termination to the services of the Chief Magistrate be not fixed by the Constitution, or supplied by practice, his office, nominally 4 years, will in fact become for life, and history shows how easily that degenerates into an inheritance. Believing that a representative government, responsible at short periods of election, is that which produces the greatest sum of happiness to mankind, I feel it a duty to do no act which shall essentially impair that principle, and I should unwillingly be the person who, disregarding the sound precedent set by an illustrious predecessor, should furnish the first example of prolongation beyond a second term of office."

Before his death Jefferson believed that the third-term tradition was as definitely established as if it had been written into the Constitution. In his autobiography, written shortly before his death during the administration of John Quincy Adams, he said:

"My wish was that the President should be elected for 7 years and be ineligible afterward. But the practice adopted, I think, is better, allowing his continuance for 8 years, with a liability to be dropped at half-way of the term, making that a period of probation. Though this amendment has not been made in form, yet practice seems to have established it. The example of four Presidents voluntarily retiring at the end of their eighth year, and the progress of public opinion that the principle is salutary, have given it in practice the form of precedent and usage; insomuch that should a President consent to be a candidate for a third election, I trust he would be rejected on this demonstration of ambitious views."

So spoke the patron saint of the Democratic Party. Those who count themselves disciples of Jefferson will know what answer to make to the claim that what seemed so important to that great statesman is "political humbug." Let an attempt be made, now or ever, to violate this salutary principle and a vast host of followers of Jefferson will rise up to reject such "demonstration of ambitious views."

We proceed. In 1829, the year of Jackson's first inauguration, James Buchanan, a Member of the House from Pennsylvania and later elected on the Democratic ticket as President of the United States, spoke in opposition to a constitutional amendment limiting service as President to a single term. Explaining his views, he said:

"The example of Washington, which has been followed by Jefferson, Madison, and Monroe, has forever determined that no President shall be more than once reelected. This principle is now as sacred as if it were written in the Constitution. I would incline to leave it to the people of the United States, without incorporating it in the Constitution, to decide whether a President shall serve longer than one term."

Buchanan was willing to leave it to the good sense of the people to determine whether a President should be once reelected. He knew that there was no danger of going beyond that because the tradition against a third term had become "as sacred as if it were written in the Constitution." I hesitate to draw what seems the necessary conclusion that in the eyes of those who now would disregard this tradition it may be that the Constitution itself is "political humbug."

Andrew Jackson, who perpetuated Jeffersonian principles, had a conspicuous part in making the idea of a limitation of the service of the President a basic principle of the Democratic Party. In his first annual message to Congress he recommended a constitutional amendment limiting the tenure of office of President to a single term of either 4 or 6 years. He made a similar recommendation in each of his five succeeding annual messages. I quote from Jackson's second message:

"It was a leading object with the framers of the Constitution to keep as separate as possible the action of the legislative and executive branches of the Government. To secure this object nothing is more essential than to preserve the former from all temptations of private interest, and therefore so to direct the patronage of the latter as not to permit such temptations to be offered. Experience abundantly demonstrates that every precaution in this respect is a valuable safeguard of liberty, and one which my reflections upon the tendencies of the system incline me to think should be made still stronger. It was for this reason that, in connection with an amendment to the Constitution removing all intermediate agency in the choice of the President, I recommended some restrictions upon the reeligibility of that officer * * *. The reason still exists, and I renew the recommendation with an increased confidence that its adoption will strengthen those checks by which the Constitution designed to secure the independence of each department of the Government and promote the healthful and equitable administration of all the trusts which it has created. The agent most likely to contravene this design of the Constitution is the Chief Magistrate. In order, particularly, that his appointment may, as far as possible, be placed beyond the reach of any improper influences, in order that he may approach the solemn responsibilities of the highest office in the gift of a free people uncommitted to any other course than the strict line of constitutional duty, and that the securities for this independence may be rendered as strong as the nature of power and the weakness of its possessor will admit, I cannot too earnestly invite your attention to the propriety of promoting such an amendment of the Constitution as will render him ineligible after one term of service."

Jackson was unwilling that any person should be eligible for reelection as President at all. Those who now sanction not only one reelection but advocate a second cannot claim to do so under the banner of democracy raised by Andrew Jackson. Their course is a direct and positive repudiation of the firmly held convictions of Jefferson, of Buchanan, and of Jackson. Nor is that all.

William Henry Harrison announced that under no circumstances would he accept a second term. He advocated a constitutional amendment for a single Presidential term.

When the Republican State convention of Pennsylvania, during Grant's second administration, adopted a resolution expressing unalterable opposition to the election of any person to the Presidency for a third term, Grant disclaimed any desire to run but indicated that he would accept a nomination if "it should come under such circumstances as to make it an imperative duty—circumstances not likely to arise," he said. The issue was then raised in numerous Republican State conventions.

New York: "We declare our unalterable opposition to the election of any President for a third term."

Massachusetts: "Sound reason as well as the wise and unbroken usage of the Republic requires that the term of the Chief Magistrate of the United States shall not exceed the second term."

Ohio: "The observance of Washington's example in retiring at the close of the second Presidential term will be in the future, as it has been in the past, regarded as a fundamental rule in the unwritten law of the Republic."

The movement for Grant's renomination continued to be agitated by some of his friends and many officeholders. It was cut short when the House of Representatives on December 15, 1875, adopted by the overwhelming vote of 233 to 18 the following resolution offered by Representative Springer, of Illinois, a Democrat:

"*Resolved*, That, in the opinion of this House, the precedent established by Washington and other Presidents of the United States, in retiring from the Presidential office after their second term, has become, by universal concurrence, a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions."

Four years after Grant's retirement from the Presidency a new movement developed for his nomination for a third time. Since it was not a successive term the question was raised whether his

nomination and election would constitute a violation of the third-term tradition. Even under such circumstances the national convention was unwilling to attempt a violation of the settled principle that no man should serve more than two terms as President of this Republic. Grant was defeated for the nomination.

Since the time of Grant until the present day the third-term issue has been raised seriously in connection only with two Presidents, Theodore Roosevelt and Coolidge. Each of them succeeded a President who died in office and each, therefore, served a period less than two full terms. Roosevelt recognized the force of the third-term tradition when, after his reelection in 1904, he announced that under no circumstances would he be a candidate for or accept another nomination. He stated that he regarded the 3½ years of his first administration as his first term, and said "the wise custom which limits the President to two terms regards the substance and not the form." Following the Taft administration, Roosevelt saw fit to seek a third term. He was defeated in his party convention. He was again defeated by the Democratic candidate when he ran under a new party by label.

Toward the end of his second term, Coolidge issued his cryptic "I do not choose to run" statement. This failed to head off agitation for a third term. But the Senate put a quietus on the movement on February 10, 1928, by adopting the La Follette resolution similar to that of the House of Representatives during the Grant administration. The vote was 56 to 26. In the affirmative were 37 Democrats, 16 Republicans, 1 Progressive, 1 member of the Farmer-Labor Party, and 1 Independent. The negative consisted of 22 Republicans and 4 Democrats. Of those who voted for the resolution, 24 are still Members of the Senate, 16 of them being Democrats. Those Senators are thus on record as believing that the third-term tradition has become by universal concurrence a part of our system of government and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions. In any test of sentiment they would be joined by many Senators who have entered since that time and who do not hold the view that the third-term tradition is "political humbug."

The Democratic Party up to this time has been faithful to the tradition, although its members have not always been agreed as to the desirability of a constitutional limitation. The Democratic platform of 1896 declared it to be "the unwritten law of the Republic, established by custom and usage of 100 years, and sanctioned by the examples of the greatest and wisest of those who founded and have maintained our Government, that no man should be eligible for a third term of the Presidential office." The Democratic platform of 1912 favored a constitutional amendment for a single Presidential term. In keeping with that plank the Senate on February 1, 1913, adopted a constitutional amendment for a single term of 6 years. The amendment was not acted upon in the House, although favorably reported by the Committee on the Judiciary. A prophecy contained in that report is worth repeating—

"Doubtless it is true that even without any positive law on the subject—that is, without any amendment of the Constitution—no man will ever be called to be Chief Magistrate for the third time."

While the Democratic Party has a special responsibility for the maintenance of the third-term tradition, the issue cannot be considered a partisan one. The Republicans for the most part have cherished the tradition equally with the Democrats. President Taft in a lecture after his service in the White House said that he was "strongly inclined to the view that it would have been a wiser provision, as it was at one time voted in the convention, to make the term of the President 7 years and render him ineligible thereafter." Mr. Taft added, "Such a change would give to the Executive greater courage and independence in the discharge of his duties. The absorbing and diverting interest in the reelection of the incumbent taken by these Federal civil servants who regard their own tenure as dependent upon his would disappear and the efficiency of administration in the last year of a term would be maintained."

My personal preference is for a constitutional limitation upon the tenure of office of the President. There is pending before the Senate Committee on the Judiciary a joint resolution which I have introduced proposing an amendment to the Constitution to limit the service of a President to a single term of 6 years.

The reasons existing in the days of Jefferson and Jackson for a limitation upon the service of a President are now multiplied manyfold. Conditions are, of course, vastly different, but nevertheless there are similarities. Jefferson was fearful of a reversion to a monarchy. Today there is a world trend toward autocracy in the form of dictatorships. Because of our present highly developed industrial economy, as well as because of economic dislocations which have arisen since the World War, unemployment on a large scale has become a menace in all leading countries. In their frantic search for a solution of their individual problems, people everywhere have shown a willingness to sacrifice liberties for the promise, even though oftentimes false, of security. As a means of securing jobs, people have been content to forego the right to exercise their individual initiative in industry or agriculture. The trust of a distressed peoples in strong personalities who have assumed the role of dictators in European countries is quite understandable. The European dictatorships are frankly governments by men rather than by law.

In the United States we have seen during the present administration a rapid development toward a centralization of power not only in the Federal Government at the expense of the States and of individual liberties but in the executive branch at the expense of the legislative and the judicial branches.

The specter of unemployment in industry and of ruinous prices in agriculture has made our people more ready to accept schemes for regimentation and control of industry and agriculture than would have been true a generation ago. When these schemes have failed, it has not been easy to retrace our steps toward a properly supervised but uncontrolled system of free enterprise which is a fundamental feature of our constitutional system. Each failure has been followed by demands for greater powers for the Federal Government. In the effort to make the control effective, our system of separation of powers and checks and balances has been gradually broken down. The Executive has usurped legislative powers and has even sought to encroach upon the powers of the judiciary. The effect of the trend of recent years has been to move away from a government of laws toward one of men and to subordinate principles to the discretion and whims of individuals.

The temptation toward a perpetuation of the power of an existing administration never was so great as at present. Never has a comparable bureaucracy existed or its members had more reason to pull political wires to insure the security of their jobs. At no time in our history has an administration had such tremendous political powers through the distribution of public works, agricultural and other benefits, and jobs. No political organization likes to relinquish power.

In the light of prevailing trends, should the third-term tradition be broken in 1940, no man can safely predict the fate of our form of government.

My proposal for a single 6-year term would allow sufficient time for a President to work out his program, would eliminate to some extent the disturbing influence of more frequent elections upon business conditions, would enable an administration to maintain full efficiency throughout its term without being distracted by a campaign for reelection; would minimize the evils of a political bureaucracy, and would check the trend toward a centralization of power and a consequent weakening of our form of government.

Whether or not a constitutional limitation is considered desirable by Congress and by the States, I have faith that the people of our country will not jeopardize the preservation of our institutions by violation of the time-hallowed tradition against a third term.

Relief Appropriations

EXTENSION OF REMARKS
OF
HON. JOSEPH E. CASEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

Mr. CASEY of Massachusetts. Mr. Speaker, I am prompted to extend my remarks because of the fact that it had been stated previously during the debate over the W. P. A. appropriation that my bill was endorsed by the C. I. O. and Workers Alliance. The implication was that these were the only people who had endorsed the Casey bill. This is not the case. I welcomed the endorsement of any group for the Casey bill, which I believe to be the real solution of our relief problem.

In the State of Massachusetts the Casey bill has been endorsed by:

Thirty-four mayors of Massachusetts cities, including Boston, Worcester, Salem, Somerville, Peabody, Fall River, New Bedford, Holyoke, Northampton, Lowell, Lawrence, Taunton, Brockton, and so forth, besides smaller places, such as Marlboro, Everett, and so forth.

Ninety-five labor unions and allied organizations, including such powerful groups as the Central Labor Union of Boston, Labor's Non-Partisan League of Massachusetts, Brotherhood of Shoe and Allied Crafts, regional councils and central bodies of both A. F. of L. and C. I. O., totaling in voting strength at least a quarter of a million persons.

A sponsoring body of 200 religious, civic, political, and social leaders, whose names have been transmitted to you in earlier letters, and who make up, with the mayors already mentioned, 28 city and regional subcommittees of the Massachusetts Committee for Defense of W. P. A. This organization will be permanent until the problem of unemployment has been finally solved.

Mr. Speaker, 15,000 individual citizens have signed petitions circulated by this committee throughout the Commonwealth during the past fortnight. Less than 10 percent of these are W. P. A. workers.

The Casey bill has also been endorsed by the Cambridge Union of University Teachers, Cambridge, Mass., whose letter follows:

Representative CASEY,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN CASEY: The executive council of this local at its meeting of June 2 unanimously adopted the following resolution:

"Whereas business conditions are still on a level with those of June 1933; and

"Whereas 20 percent of the State is now drawing some form of municipal relief; and

"Whereas some 50 of our municipalities are facing bankruptcy: Therefore be it

"*Resolved*, That the Massachusetts congressional delegation support H. R. 6470, Work and Security Act."

Yours very truly,

ARNOLD ISENBERG, *Secretary*.

I wish to thank the 76 Democrats and the 6 Republicans who voted for this bill, and I firmly believe that their judgment was correct.

Ghost Writing, Its Origin and Development

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 20 (legislative day of Thursday, June 15), 1939

ARTICLE BY HON. HENRY F. ASHURST, OF ARIZONA

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by myself entitled "Ghost Writing, Its Origin and Development."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By HENRY FOUNTAIN ASHURST, United States Senator from Arizona)

Fortunately it is not always absolutely essential, although it is always desirable, to define words and terms with precision otherwise, notwithstanding the richness of the English language in synonyms, it would be difficult to define "ghost writing" although that term is now an accepted locution. Usage has given it a standing over any protest etymology may make.

"Ghost writing" may be said to be a speech, address, or article written by one person but delivered or signed by another.

When we say "the ghost talks today," we do not mean that some wraith, without a body, is squeaking and gibbering, but we do mean that some person is delivering a speech or is "by-lining" an article written by some person other than the one by whom authorship is impliedly asserted. In many, if not most, "ghost speeches" and "ghost articles" the ghost's style of expression betrays his anonymity.

When we say "the ghost walks today," we refer to a declaration that has come down to us by tradition from the times in London when Shakespeare, who often played the part of the ghost in his tragedy Hamlet, was also paymaster to the players. Thus the saying whereby early English actors linked salaries with ghosts came to mean "pay day," and this same saying is today frequently heard in the House of Thespis and in the House of Printing and means pay day.

Recently an article appeared in a current magazine which went on to say that ghost writing had its origin about the beginning of the twentieth century, but the fact is that ghost writing has been practiced for many centuries.

It was among the Greeks that public speaking as an art had its development. In its flower, it produced the models of eloquence for all succeeding orators.

In the days of remote antiquity the theory prevailed that every citizen should be his own advocate in settling his disputes. The theory seemed to be sound, but, like many theories, it was difficult of practical application inasmuch as many citizens who were drawn into litigation had justice on their side but lacked the knowledge, ability, or the voice to defend their causes.

For this reason one Corax, in the Greek city of Syracuse in the fifth century B. C., set up a school to instruct or coach private citizens how to urge their rights and claims before magistrates and juries and thus assist those persons lacking in forensic skill.

It is interesting to observe that the principles of oratory enunciated by this pioneer instructor Corax have prevailed in one form or another in all forensic oratory; that is to say, beginning, narrative, argument, subsidiary remarks, and peroration.

Through all the subsequent and troubled centuries, embracing the rise and decline of the Greek culture, the Athenian cities, the Roman and Byzantine empires, down to this day, the principles of oratory as taught by Corax have guided many, if not most, of the world's greatest orators.

After Corax there flourished in Athens a speech writer, one Lysias, who adapted his compositions to the character and station in life of the man or client who was to deliver them, and he wrote the speeches according to the terminology required by the particular nature of each case.

Then came Isocrates, who, unfitted by weakness of voice to speak in public, devoted his talent for eloquence to instructing pupils who came to his school at Athens. He did not to any great extent write speeches for others; his school trained his pupils to write their own speeches. Isocrates earned enormous sums of money; some authorities declare that his earnings were to the money value of about $50,000 a year from tuition paid to him by students.

It was from this group, or from this school, rather, sprang Demosthenes, born 384 B. C., died 322 B. C., in whom was combined all that was excellent in the grand art of public discourse.

Demosthenes' father, who was well-to-do, in fact opulent, was a manufacturer of cutlery and furniture and died when Demosthenes was 6 years old, leaving to his son what then was an enormous estate.

It would seem that young Demosthenes received shabby treatment from his guardians, for when he attained his majority, which was at the age of 16 years, he found that the greater part of his inheritance had been wasted or stolen by his guardians and he brought suit against them and obtained a verdict, but it is not known whether the money was ever paid to him. At least he secured more reputation than money out of his lawsuit.

He had, however, been carefully educated for the profession of rhetorician or, as we would say, advocate, and in not a few instances this literary training in preparing speeches for others was worth more to him than the inheritance he should have received. Demosthenes managed, notwithstanding a weak voice, delicate constitution, and a defective articulation, to build up a renown as the most famous orator of antiquity.

The important duty of the Athenian advocate was to prepare pleas for his client who would commit the plea to memory and deliver it to the jury.

The usual membership of an Athenian jury was 500 citizens, and some juries were composed of 1,500 citizens. A skillful rhetorician or advocate would prepare a plea so that it might be supposed to come from the client himself. There are extant about 30 pleas of this sort written by Demosthenes, and from them we may learn some of the lights and shadows of life in the Athens of that day.

Among the Greeks eloquence was an end in itself, but among the Romans eloquence took a more practical turn. Gaius Gracchus, whose eloquence was much praised by the ancients, was charged by his opponent as having employed a ghost writer to compose his speeches.

It seems to be definitely established that the speeches delivered by the Roman Emperor Nero were written by his Prime Minister, Seneca.

Dr. Samuel Johnson contributed nine lines to Oliver Goldsmith's poem The Traveller and contributed four lines to Goldsmith's poem The Deserted Village.

Senator Arthur H. Vandenberg, an authentic historian, is of opinion that Alexander Hamilton wrote all but four lines of General Washington's Farewell Address.

Daniel Webster prepared an inaugural address to be read by William Henry Harrison when General Harrison was inaugurated as President, but General Harrison disregarded the ghost speech and preferred his own composition.

One of the most tragic eposides flowing from ghost writing in the United States occurred when a ghost writer who was employed to write a farewell address for Hon. John White, Speaker of the House of Representatives in the Twenty-seventh Congress, in preparing the address for Speaker White, copied copiously from the language of the farewell address delivered by Vice President Aaron Burr to the United States Senate in 1805. Speaker White delivered the address as it was written for him and when it was discovered that much of the address was from that of Vice President Burr, Mr. White being unable to laugh at the comic position into which the ghost writer had placed him, was on the contrary so overcome with mortification and disgust that he committed suicide.

Abraham Lincoln, after composing alone and unaided at Springfield his inaugural address containing the closing passages of exquisite grace and tenderness, forwarded a copy to Senator William H. Seward, his intended Secretary of State, inviting Senator Seward's comments and Seward smoothed out a few quaint phrases.

President Andrew Johnson's first message to Congress was a masterpiece of statesmanship and literature and notwithstanding the fact that President Johnson possessed a lofty range of statesmanlike talents and was a skillful rhetorician, James G. Blaine refused to give Johnson credit for its authorship and declared that Seward had written it, but Blaine was wrong, for Johnson indeed wrote it, and George Bancroft's pen—not Seward's—gave the message its high-grade, literary polish.

Press dispatches have just announced the discovery of the tomb of great Caesar's ghost writer, one Aulus Hirtius, who was born 90 B. C. and died 43 B. C. and who throughout his entire lifetime was the personal and political friend of Julius Caesar. Hirtius, although politically opposed to Cicero, took lessons in oratory

from Cicero and in return Hirtius, who was a capable cook, imparted to the famous orator's household lessons in preparing delights of the table. Hirtius was a distinguished historian and, while it cannot be affirmed with absolute certainty, it is more than probable that Hirtius wrote some portion of Caesar's Commentaries, dividing with Oppius, another ghost writer of that day, the credit for authorship of the eighth book of the Gallic Wars.

Hirtius was killed at the Battle of Mutina while leading an assault against the enemy. The body of Hirtius, together with the bodies of some of his comrades slain in the same battle, was sent to Rome with a large escort, where with highest honor it was buried in the Field of Mars. Hirtius was held in such great esteem and was so generally respected for his valor, scholarship, and genius as a ghost writer that the mortician refused to accept compensation for the interment of Hirtius' body.

These recent press dispatches further announce that his tomb will be restored to its ancient grandeur, and it is the opinion of this writer that unless the beautiful flower of gratitude has withered and perished the American ghost writers of the present day, who are "thick as autumnal leaves that strow the brooks in Vallombrosa," will remember Hirtius' name with thankfulness for having modestly furnished so excellent a pattern of ghost writing. Moreover, it is reasonably certain that ghost writers in the days that are to come, with a friendly sentiment for his memory, will take care that the restored tomb shall not fall into obscurity and decay.

The Farmer and His Newspaper

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 20 (legislative day of Thursday, June 15), 1939

ADDRESS BY HON. HENRY A. WALLACE, SECRETARY OF AGRICULTURE, JUNE 19, 1939

Mr. HILL. Mr. President, on last evening the Alabama Society of Washington entertained the Alabama Press Association at a banquet at the Willard Hotel. The Secretary of Agriculture, Mr. Wallace, delivered the principal address. It is a very thoughtful and able address. I ask unanimous consent to place it in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It gives me great pleasure to talk with the members of the Alabama Press Association and the Alabama Society of Washington this evening. I frequently have contact with Senator BANKHEAD, Speaker BANKHEAD, Senator HILL, and the other members of the Alabama delegation in Congress, but I would ordinarily have to make a trip to Alabama to meet so many distinguished citizens of your State. This evening I can greet all of you right here without leaving Washington.

I am especially happy to be present at this dinner given in honor of the publishers and editors of Alabama's newspapers. This dinner is in itself a recognition of the part you play in the life of Alabama.

I understand that some of the newspapers in Alabama were among the earliest in the United States and that the Huntsville Mercury and Community Builder, established in 1816, still is being published. The Tuscaloosa News, the Mobile Press, and the Selma Times Journal, I am told, all date back to that same period.

Whenever I find myself in the company of a group of editors I feel perfectly at home, because from 1910 to 1933 I spent most of my time—when I wasn't experimenting with the breeding of corn—in reading copy, picking up stories out in the field, and writing farm paper editorials.

The job of editing or publishing a newspaper or magazine is in some ways peculiarly satisfying. Newspapers have many opportunities to be of influence and to give service to the public. Along with these opportunities they have certain responsibilities.

The newspaper is not fully a public institution and not fully a private one. The part played by newspapers in contributing to the public welfare was recognized nearly 150 years ago when the Bill of Rights in our Constitution specifically sought to safeguard the freedom of the press.

Ever since that Bill of Rights was adopted we have cherished the freedom of the press, along with freedom of speech, as one of our most sacred liberties. We recognize, of course, that our newspapers have faults. But probably never since the birth of our Nation have we appreciated the freedom of our press so much as in the last few years, when we have seen the press in country after country lose its freedom and become the mouthpiece of a single all-powerful individual. Never since the birth of our Nation have we realized so keenly how much we would lose if the calamity that has befallen several countries in Europe should be duplicated in the United States. Publishers and editors and writers have a special urge to be vigilant, but every American ought to stand unceasingly on guard to see that such a calamity does not happen here.

Tonight I want to talk for a few minutes about newspapers in relation to the general public interest, and then I want to talk for a few minutes about newspapers in the rural areas in relation to the interests of agriculture.

The kind of newspaper which the founding fathers were so zealous to protect was a comparatively simple institution. But even in that day its important place in a democracy was clearly recognized. Thomas Jefferson insisted that freedom of the press should be included among the guaranties in the Bill of Rights. Alexander Hamilton had defended the omission of such a safeguard from the original Constitution, but Jefferson said:

"The basis of our Government being the opinion of the people, the very first object should be to keep that right, and were it left to me to decide whether we should have a Government without newspapers or newspapers without Government, I should not hesitate a moment to prefer the latter."

Few men in public life have been so bitterly attacked as Jefferson, and the newspapers joined in the attack in the violently personal manner which was the custom of that day. The upheaval of the American and French Revolutions had made battle flags out of class issues. As we know from our own experience of the present time, the response to such issues is deeply emotional, often unreasonable, and sometimes violent. And yet Jefferson was big enough to see that democracy could not continue without a medium for spreading information among the masses. Even though newspapers were sometimes the instruments of unfair and even vicious political attack, Jefferson thought of them as the school of the people.

The modern newspaper is a far more elaborate institution than the kind of newspaper Jefferson fought so hard to protect. In Jefferson's time a newspaper gave freeholding citizens the facts they needed and also guidance for their opinions in exercising their rights of citizenship. But the modern newspaper has added entirely new functions. It is in some ways a medium of entertainment and in its advertising pages it helps to make possible the mass distribution without which our modern mass production would be of no use.

The American newspaper of today is generally conceded to be the best as well as the freest in the world. And yet the American newspaper of today is often severely criticized. Why is this?

William Allen White, in a remarkable address in April of 1938 before the American Society of Newspaper Editors, of which he was then president, discussed the criticism of the press. He concluded that accusations against newspapers would bring a verdict of acquittal on every count save one.

"But our adversaries," Mr. White declared, "and the jury of public opinion might vote guilty on the count which charges us with a strong and poisonous bias in favor of the status quo as it affects the right of property."

Whether justly or not, many newspaper readers of today have the impression that some newspapers not only express their views in their editorial columns, but also color the news in the news columns so as to influence readers.

They also believe that some newspapers distort news, blacklist men or movements, or even suppress news. No one can deny that too many newspapers have been guilty of these offenses against the principles that the press must follow if it is to merit freedom. Editors and publishers have counted off the sins of their erring brothers at their business and professional meetings and urged the sinners to get the religion of a truly free and decent journalism.

In considering these widespread public reactions it may be worth while to look at the events of the last few years. That may help us to see why there is such a gulf between the point of view of some newspaper publishers and the point of view of a substantial part of the public. Some newspaper publishers, like plenty of other people, were taken aback by the sudden changes that seemed to be happening to our economy. They saw the changes without seeing the reasons for those changes. They did not take into account the crisis which prevailed and the necessity of adapting our system to changed economic circumstances if that system was to survive at all. Some of them did not see the resistless forces which brought an inevitable choice between change or chaos.

In agriculture, for example, there was a period of near hysteria when the farmers' efforts were subjected to misrepresentation and ridicule. Stories concerning the farm program which had no more basis in fact than many of the atrocity stories of the World War were circulated from mouth to mouth, and some of these found their way into print. There was the familiar hoax about the widow woman up in Maine, or perhaps in Pennsylvania, or in Alabama, who never had grown any hogs but who nevertheless received a Government check for reducing her hog production. These atrocity stories took many forms, and actually were believed by thousands of city people who did not have access to the facts.

Since I wrote the foregoing I happened to pass through Chicago and noticed in the Chicago Tribune an especially flagrant example of the kind of misrepresentation I have in mind. This paper contained an editorial entitled "America's Bread," which states: "This country isn't going to raise enough wheat this year to feed the American people," goes on to declare there is danger of a wheat shortage, and then says: "If war is threatened we ought to be harvesting at least an average crop this year instead of facing dependence upon foreign sources for our bread."

If the people of Chicago have no other way of finding out what is going on in the world than by reading the Chicago Tribune, they

are led to believe that a situation exists which is the direct opposite of the true situation. Instead of facing a wheat shortage, this country is gradually working out from under one of the greatest wheat surpluses it ever faced.

Yesterday in Chicago reputable grain men gave me as their estimate that the wheat crop will be seven hundred to seven hundred and ten million bushels this year. This is one hundred and fifty to two hundred million bushels in excess of human consumption in this country and more than sufficient to cover needs for human consumption, customary livestock use, and seed. Furthermore, in 1938 we harvested 930,000,000 bushels, or 250,000,000 bushels in excess of domestic consumption. In 1937 we harvested 882,000,000 bushels, or 200,000,000 bushels in excess of domestic consumption. In the 4 years 1933 to 1936, inclusive, if there had been normal yields on the planted acres, we would have harvested an average of 140,000,000 bushels annually in excess of domestic consumption.

On the basis of the 700,000,000-bushel estimate for 1939, this year's prospective crop, plus the carry-over, will make a total supply on July 1 this year of 965,000,000 bushels. This is 450,000,000 bushels more than will be needed for human consumption by the American people during the next 12 months; in other words, there will be nearly twice as much wheat on hand as the American people can eat in a whole year.

I realize that the Chicago Tribune has lost the respect of newspapers generally, but nevertheless when a formerly reputable newspaper engages in such notorious misrepresentation, it harms the profession as a whole.

I am glad to say that this sort of thing is becoming more and more rare. In common with a lot of us, newspapers are getting a better perspective on the whole world picture. Nevertheless, one general criticism of newspapers during the last few years surely has been justified. It is that their discussion of fundamentals has not been broad enough or deep enough. There are many exceptions to this rule. But too many newspapers have dealt with the programs attempted by this administration without regard to the economic background which made these programs absolutely necessary.

Some newspapers have consistently deplored the farmers' programs as being in violation of what they have called the "natural operation of economic law." But the "natural operation of economic law" was smashed to smithereens throughout the rest of our economy years ago by tariffs, monopolies, corporation and immigration laws, and many other kinds of artificial interferences with the free flow of trade. To many of us, therefore—and I have no doubt to many of you here tonight—it seems unrealistic in the highest degree to expect agriculture alone to live in a world of competition unrestrained. If competition really did prevail throughout our economy, agriculture could take its chances with the rest. But it is not fair to give places at the table of protection to everyone else and to expect the farmer to scramble on the floor for the crumbs.

A great deal of this type of criticism of the farmers' programs results from the fact that many newspapermen were born and raised in cities. And yet, in spite of this, I believe the newspapers have been doing an increasingly competent job in telling city readers about farm problems and the farmers' efforts to solve those problems. This is evidenced by the Gallup polls, which show an increasing degree of understanding of farm affairs by the 90,000,000 people who do not live on farms.

One big reason why the general public has a better understanding of what the farmers are doing is the high-caliber work of members of the Washington press gallery. It is generally acknowledged that the press gallery here includes some of the ablest journalists in the world, and not the least able among them are the men writing on agricultural subjects or for newspapers published in agricultural areas.

I know from personal observation that many newspapermen refuse to take a flippant or joking remark uttered by a public man in informal conversation and pass it along to the public as if it had been made seriously. In general, they treat public men with dignity and refrain from personal attacks. I am told that a British newspaperman who visited this country a few years ago expressed surprise at the informality with which members of the press were received by men in public office, and the freedom from personal attacks on such men in the press. In some countries of Europe, he pointed out, it is just the reverse. Newspapermen there are almost obsequious in the presence of public officials, but they often subject these officials to extreme abuse in their articles.

Just as newspapers have the right to criticize public officials, so public officials have the right to criticize newspapers. But we in the Government ought always to remember that it is the failures and the controversies that naturally make news. We ought to realize also that unfortunate or inaccurate news stories are sometimes due to lack of frankness on the part of officialdom. We in official life cannot always be frank but the press is not to blame for that.

Newspapers discharge an important responsibility when they keep a watchful eye on government and call attention to any instances of loose or lax administration. They not only perform an important public service but also a valuable service to those men in office who are conscientious in carrying out their responsibility for the administration of public affairs. Often a newspaper story calls the attention of a public administrator to a bad situation and enables him to clean it up. You may remember a case of that sort in Alabama just recently.

In sizing up the work of the press as a medium for informing the public, we must not forget that a newspaper cannot keep its readers if it bores them. There is tremendous competition among newspapers and other publications for reader interest. Sometimes newspapermen seem to give bias to their stories, not because they want to hurt somebody but simply in the competition to be interesting.

While competition among writers and editors occasionally brings inaccuracies and unfortunate interpretations, nevertheless it is that very competition which is so much worth preserving. In fields like agriculture the harsh effects of competition need to be softened. But there is one field in which competition is more precious than it is in any other field, and that is the field of ideas. We don't want people's intellects to be chained or their imaginations to be enslaved or halters placed on their thoughts. To Americans, one of the most horrible things about Nazi-ism is that people are not free to express themselves. And so we ought to welcome competition in the newspaper field, in the magazines, the movies, and the radio—competition in the field of ideas. There is an eternal value in that kind of competition. It is a bulark of democracy.

All of us who have been writers and editors know that we all make mistakes. But we know also that critics of the press expect newspapers to reach a higher standard than that attained by almost any other business or professional group. The shortcomings of newspapers, unlike the shortcomings of doctors or lawyers or businessmen or officeholders, are displayed for all to see. Newspaper people may not like to have such exacting standards applied to them, and yet it is true that the public welfare depends upon our newspapers more than upon any other one group. Since that is true, a close watch on the newspapers by the public is a fine thing.

So accustomed has the American public become to the good job of reporting done by American newspapers that their generally high standard is taken for granted. The public, of course, does not stop to consider what a marvelous mechanism is required for the gathering and dissemination of news and how much chaff must be thrown away for the comparatively few grains of wheat that are gathered.

Just the same, the fact that we have the world's best newspapers does not mean that they should not be expected to maintain still higher standards. Granting that the vitality of democracy depends heavily upon the excellence of its press, we must seek continually for more objective reporting and responsible leadership from the press.

The very fact that the American public still believes in its newspapers puts a special responsibility on the newspapers to justify continuance of that faith. When any newspaper is inaccurate or unfair it hurts the standing of all newspapers. The best protection against careless or unscrupulous journalistic methods would be a protection which the newspapers themselves might establish.

For example, it might be a splendid thing if the newspaper publishers and the editorial workers would carry out a suggestion which I have heard discussed. This would be the establishment of a board or agency of their own to pass judgment on the accuracy or ethical handling of news accounts or editorial comments.

Such a board or agency need not have and probably should not have the sweeping power now exercised by the "czar of the movies" or the "czar of baseball." The volume of work handled by any practicing newspaperman is so great that under any kind of outside supervision, except that imposed by the newspaper itself and its executives, with its own standards, he would feel uncomfortable if he thought anyone was going to censor the material that went into his paper. Therefore any kind of board or agency set up by the newspapers might well confine itself to those few cases which were the subject of great controversy, with charges of unfairness, inaccuracy, injury to the public interest, or injury to innocent persons.

For such glaring cases, especially since it is these cases which have so much effect on the public's trust in the press, the suggestion is that newspapermen might establish—of themselves, for themselves, and by themselves—a board or agency to pass judgment. What has been suggested is at the opposite extreme from Government supervision of the press. What has been suggested is simply that the press itself take steps to strengthen public confidence in the press and increase the service that the press can render.

In a more positive way it might be possible to stimulate progress toward ever-higher standards by some kind of system of awards of distinction for newspaper service, notably honest, objective, and devoted to the public interest. It would be well, it seems to me, somehow to organize the competitive rivalry for recognition of superior newspaper virtue.

Occasions arise when any publication has to choose, in mapping its editorial policy, whether to take a position that is most popular with its readers, or most popular with its advertisers, or that disregards both of these points of view and simply reflects the personal attitude of the publisher. There have been some outstanding examples of newspaper enterprises which have gone on the rocks because the publisher disregarded both his readers and his advertisers and followed his own whims.

Newspapers have a duty to the people that is greater than their duty to any existing group in power, and they have a duty to the people that is greater than their duty to any class. They have admitted this responsibility to the public interest in accepting second-class mailing privileges.

In the long run it is good business for a newspaper to take its stand in behalf of the interests of its readers. Temporarily, when

the interest of readers appears to the advertisers to run counter to their own, the newspaper may lose favor with a few of its advertisers. But a paper which fails to serve its readers' interests first will eventually lose circulation and finally will lose advertising. In the long run the advertisers are going to advertise in the paper that has the strongest hold on its readers. Fidelity to the readers and to the public welfare is bound to pay in the end.

Publications in general find their prosperity goes up or down with national prosperity.

Consumer incomes in the urban areas appear to govern the volume of general advertising. Between the first quarter of 1933 and the middle of 1937 nonagricultural income increased about 60 percent and general advertising also increased about 60 percent. At present both nonagricultural income and general advertising are approximately 40 percent above that of the first quarter of 1933.

Newspapers published in rural areas—and this applies to both dailies and weeklies—derive their prosperity largely from the farms. It is a striking fact that more than 64,000,000 people, or half of the population of the United States, live on farms or in towns of less than 10,000. Towns of this size are usually trading centers and service stations for the open country. When the farmers are broke these towns are broke. When the farmers have money to spend that money soon finds its way to these towns.

When farm cash income had reached a point during the middle of 1937 approximately 120 percent greater than at the beginning of 1933, advertising in farm papers had increased in practically the same proportion. At present both farm income and advertising in farm papers are approximately 90 percent greater than in the first quarter of 1933. This close correlation shows the vital importance of farm buying power to all publications numbering farmers among their readers.

As you see, the gain in farm-paper advertising since 1933 is even more striking than the gain in general advertising; one reason, of course, being the fact that farm income and the advertising revenue of farm papers had fallen much further from the 1929 level than had nonfarm income and general advertising. Even with the gains agricultural income and agricultural advertising have made, they are still in an unfavorable position compared with nonfarm income and general advertising.

A moment ago I cited the fact that half of our people live on farms or in towns of less than 10,000. In contrast to this is the fact that only 17 percent live in cities of 500,000 and over. Because of the preponderance of population in the small towns and on the farms, the small dailies and country weeklies may be said to be more representative of the general public than the big metropolitan papers published in the large centers. I do not mean to cast any reflection on these larger papers, but simply want to point out that even though they are published in the largest centers of the country they are not the whole country.

This point is especially significant for agriculture, because necessarily most of the papers published in the larger centers have not had an opportunity to come into contact with agricultural problems.

But the farmer does expect the newspaper published in the rural area—which derives its living from the prosperity of that area—to show some understanding of rural problems. Surprisingly, sometimes, the business office realizes the paper's dependence on farm prosperity more keenly than the editorial office.

This fact was brought out somewhat comically by Editor and Publisher last fall. At the very time when many papers were telling their readers in their news and editorial columns that the farm program had failed some of these same papers, in articles contributed to a special agricultural supplement issued by Editor and Publisher, painted a glowing picture of the farm prosperity in their trading areas. I think you and I can agree that in publishing at least it is well for the right hand to know what the left hand doeth.

Hundreds of papers published in rural areas have made a splendid record in the last few years, not only in taking an intelligent position in support of the farmers' welfare but also in publishing informative material of interest to farmers. This has been particularly true in the South. Some daily papers are serving farmers' interests by running a weekly farm page. Many weeklies are better edited and contain more material of real value to farmers than ever before.

Where the local papers take an intelligent and friendly attitude toward the farmers, the same is very likely to be true of the local businessmen. More and more, I believe, both the newspapers and the businessmen in the agricultural centers are coming to look to the farmers for guidance in the stand they take on farm questions, and less and less are they taking their cue from the metropolitan journals or the big city financial magnates. Both the newspapers and the businessmen, if they want the farmers trade, will have to treat the farmers as their friends.

That does not mean, of course, that they should try to help agriculture get more than its fair share of the national income. But there is a difference between pressure groups asking for powers or subsidies that will give an unfair advantage and in asking for powers or subsidies that will help give equality. As long as agriculture does not have its historic share of the national income, and as long as other groups are using tariffs, the corporate form of organization, and various kinds of subsidies to bolster their economic position, no one can justly blame the farmers, through their legitimate farm organizations, for doing what they can to attain equality.

Pressure groups in themselves are not necessarily bad. They are natural in a democracy. We need to make sure that the net result of all the pressures is the good of the whole. But the general welfare means nothing at all if it does not include the welfare of the particular groups that make up that whole.

Part of the service that can be performed by a free press in a democracy is to encourage those policies which give equal rights and equal advantages to the various groups and at the same time aid the welfare of all groups.

Our country, with its wealth of natural resources, with its ingenuity and mechanical skill, ought to have and can have a national income of $100,000,000,000. But such an income cannot be attained without teamwork among all our great groups, without mutual understanding among agriculture, labor, and industry. Such an income cannot be attained if any two of these groups gang up on the third. If agriculture and labor gang up on business, or labor and business gang up on agriculture, or agriculture and business gang up on labor, the whole country will suffer.

Newspapers can do a great deal to build up among their readers a concept of the general welfare which transcends the welfare of any individual or any group. As I have shown, the pressures on a newspaper are mostly in the direction of favoring the interests of business. Corresponding pressures on behalf of labor and agriculture do not always make themselves felt in the editorial room of the average newspaper. For that reason it is especially important for those who determine the arrangement and content of the editorial and news pages of our newspapers to strive to hold the scales level between these three great groups. Newspapers might well strive to reach the ideal carved in stone above the doorway of our Supreme Court Building—"Equal justice under law."

Progress toward such an ideal ought to be the aim of a free press in exercising its responsibility toward the public.

Enlightened self-interest as well as service of the public welfare ought to give the press a deep interest in the preservation of democracy. If our system should some day break down and be replaced by a dictatorship of either the right or the left, the press would be the first to lose its freedom.

There is no question that a free press does play a vital role in a democracy. The success of democracy depends on the people having the facts, and their ability to formulate wise policies in the light of those facts. Newspapers are in position to get the facts to the people, and to help the people interpret those facts so that they can map out a practical course.

That is the responsibility which rests on your shoulders and the shoulders of your fellow editors and publishers. That is the duty which, by entering the publishing field, you have undertaken to fulfill.

I do not exaggerate when I say that democracy hangs in the balance in the world today. We in the Government have a duty to perform. The farmers have their duty, and the rank and file of other citizens have theirs. I am sure you will be faithful in doing the duty that is yours.

Significance of the Word "Cash" in Cash-and-Carry Neutrality

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 20 (legislative day of Thursday, June 15), 1939

ANALYSIS BY WILLIAM F. HAUHART

Mr. REYNOLDS. Mr. President, I ask unanimous consent to insert into the RECORD a very able analysis of the meaning of the word "cash" as it relates to the cash-and-carry principle of neutrality, prepared by William F. Hauhart, director of the School of Commerce of that great Texas educational institution, Southern Methodist University, at Dallas, Tex.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

Considerable pressure is being brought to bear on Congress to alter the neutrality law which, as it stands at present, provides for an arms embargo in case of a foreign war. Those in favor of eliminating this embargo clause are willing to admit that our munitions sales helped to involve us in the World War but argue that the same results would not necessarily follow in the future, provided our sales of munitions and sinews of war were kept on a strictly cash-and-carry basis.

It is here proposed to analyze the question of the effectiveness of this cash-and-carry clause so far as the significance of the word "cash" is concerned. The aim of this clause is to lessen the danger of getting the United States entangled in European affairs. It is my purpose to examine the economic implications of the word

"cash" in international trade. My general conclusion is that over an extended period of time involving a lengthy war, the provision for payment in cash would break down. Even over a shorter period it is not clear that payments in cash would be economically advantageous to us, if these cash payments were made with gold or out of the proceeds of the liquidation of foreign investments in American businesses.

International trade is carried on mostly on the basis of bills of exchange. Under normal conditions the exports from a country will tend to equal the imports. In other words, the bills of exchange which have been created by the exports tend approximately to cancel the bills of exchange which have been created by the imports. In the last analysis, accordingly, the payments are made in terms of goods and services. A cash payment could be made on this basis only whenever a country was producing a sufficient amount of goods to reimburse the other country, let us say, the United States, immediately for the goods and services which had been received.

There are two other ways in which the requirement of cash payments could be satisfied. One is by the shipment of gold to the United States and the other would follow as the result of the liquidation of investment securities in American business which are held by nationals of those foreign countries which might wish to buy munitions and foodstuffs from the United States. If Great Britain, for example, would be involved in a war, she would be compelled to use her productive ability largely for the creation of sinews of war at home. As a consequence, she would have little productive energy left for the making of goods that might be desired by the United States. Therefore, she would soon turn to the shipment of gold, as long as that would last and we were willing to receive it. Finally there would remain the liquidation of the securities in American business enterprises which are held by her own people.

The question arises whether the rather rapid liquidation of these securities would have an adverse effect upon our exchanges in the United States. If this were the case, her attempt to pay us "cash" in that way might be economically disadvantageous to us. This question was uppermost in the recent conference held by Government officials (when war appeared to be threatening) concerning the possible absorption in the United States of foreign-owned American securities.

Apparently it was suggested at this conference that the Reconstruction Finance Corporation or some other agency should step in when this liquidation of securities would begin, in order to prevent the exchanges from recording a precipitate fall in the price of the securities. The intervention of the Reconstruction Finance Corporation would in such a case probably have to take the form of a purchase of a portion of the incoming securities at a fixed price. It is clear that this group of officials was, at that time at least, thinking more particularly of the natural flow of securities to the United States which would follow the outbreak of a European war. However, the same principle would prevail in case European countries were liquidating American securities in order to meet the letter of the law which called for "cash" whenever they imported American goods.

It was claimed by some, when this group of Government officials suggested intervention of the Reconstruction Finance Corporation, that this would mean simply a circumvention of the law to pay "cash," since the Reconstruction Finance Corporation in that case would be supplying the credit which was involved in the value of the securities that could not be liquidated without a break in the market. It may be argued, to be sure, that this would be only a temporary intervention of the Reconstruction Finance Corporation and that later on when these securities could be liquidated in an orderly manner the Reconstruction Finance Corporation could be fully reimbursed for its outlay of cash when it assisted in the liquidation of the securities.

We have gone far enough with the analysis to show that the concept of payment in "cash" is not as simple as would appear at first blush. There is no such thing as payment to us in "cash," excepting to the extent that we would get immediate possession of goods or gold from European countries. To this must be added the limited amount of European investments in the United States which could be liquidated and paid for by shipment of munitions or other goods which were desired by the European countries. This, to be sure, disregards the adverse effects upon our exchanges and general economic conditions in the United States which might be brought about by the liquidation of these securities. It also leaves out of consideration the undesirability of larger gold accumulations in the United States.

It is estimated that European nationals hold about $8,000,000,000 of investments in the United States. These are composed of common and preferred stocks, bonds, direct investments in industrial enterprises, short-term bank balances, and earmarked gold. This figure, however, applies to all European countries and a conservative estimate would allocate about one-half of this amount to England and France.

Summarizing, we may say that the term "cash" in its ultimate significance could be applied to those purchases from the United States which would be covered immediately by the production of goods which we were willing to import for our use from belligerent countries. Then would follow the small amounts of gold which these countries could muster, together with the earmarked gold which they already have in the United States. And finally there would be the credit which could be made available in the United States from the liquidation of approximately $4,000,000,000 worth of securities. This figure is used on the supposition that France and England would be involved.

It is important to consider at the present time the limited significance of the precautionary clause, which is referred to as the "cash and carry" provision of the proposed amended Neutrality Act. For, once we begin to send munitions and other sinews of war to European belligerents, the chances are that it will be extremely difficult to stop, even though we have stated all along that the materials must be sold only on a "cash" basis. When the limit of these "cash" payments would be reached, considerable pressure might be brought to bear on us again to grant credits to the belligerent nations with the same result which followed our loans during the last European war. This pressure would come not only from the belligerents but also from our own munition manufacturers.

I am not arguing the question whether we should take this chance and responsibility or not. I merely wish to emphasize that we should be fully aware of this possible outcome before entering upon the venture.

Works Progress Administration

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 20 (legislative day of Thursday, June 15), 1939

ARTICLES FROM WEST VIRGINIA NEWSPAPERS

Mr. HOLT. Mr. President, as an evidence of the great interest of the people of West Virginia in the move to clean up W. P. A., I ask to have inserted in the Appendix of the RECORD certain articles from West Virginia newspapers—Democratic, Republican, and independent—about a meeting held Saturday, June 17, 1939, in Ripley, W. Va., a community of less than 700 population. Ripley is the county seat of Jackson County, a county of 17,000 residents.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Martinsburg (W. Va.) Journal of June 19, 1939]

THREE THOUSAND APPLAUD HOLT WHEN HE BACKS UP HIS ATTACKS ON W. P. A.—JUNIOR SENATOR, PRESUMABLY OPENING CAMPAIGN FOR REELECTION, OFFERS STATISTICS—NEWSPAPER EDITOR WHO QUESTIONED HOLT'S CHARGES ABSENT FROM MEETING SATURDAY

(By Calvert L. Estill)

RIPLEY, June 19.—Interrupted by the plaudits of 3,000 perspiring people who sweltered in the courtroom and on the lawn here Saturday afternoon, Senator RUSH D. HOLT burned the tar on the backs of W. P. A. bosses and administrators, sending the political temperature well above the readings on local thermometers, high though they were.

Blood pressure was high, too, as he read photoprint copies of the W. P. A. pay rolls secured from the Federal authorities, showing the high pay the "white collar" workers have received and the increases in pay they have gotten in the last year or two.

Naming names and listing salaries, particularly of many resident political favorites of Jackson County, HOLT brought forth round after round of applause from his audience, said to be the largest political gathering ever staged here.

ACCUSER NOT PRESENT

Among those absent was Fred Wolfe, editor of the local weekly Democratic paper. It was reported and verified that he had left town early in the morning, and was said to have been headed for Charleston. While there were hundreds of Republicans in the crowd that filled the courtroom and packed the lawn, where a public address system had been installed, it was estimated by informed residents that fully 50 percent of the county's leading Democrats were there.

Faces well known in higher administration circles at the statehouse were noted in the throng, chiefly officeholders who are known to be not overfond of Senator NEELY. State senators, of the Democratic persuasion, at least one of whom was a recent statehouse candidate in a municipal election (but was defeated), came to hear about the evils that pervade the W. P. A.

W. P. A. workers themselves had either been ordered to work or had been warned not to attend the meeting. For the first time, too, in many moons, the State road commission crews were at work on Saturday. But the crowd, large enough to satisfy any political speaker, gathered just the same. Prevalent all over the place was the sight of men in C. C. C. uniforms. And there was a sprinkling of Federal workers, present apparently to make first-hand reports of all that happened.

JESSE JAMES VERSUS W. P. A.

HOLT was introduced by O. V. Powell, of Ravenswood, who said that "either Jesse James was born too soon or the W. P. A. was born too late," and that the speaker would enlarge on this subject. He did.

The junior Senator stated that he did not come to Jackson County as a member of any political party but as a citizen interested in the State and the welfare of its people, ready to help clean up corruption wherever it exists. For an hour he gave details of what is wrong with the W. P. A., citing official facts and figures to support every statement he made.

Although the ostensible purpose in coming here to make the address was to answer an attack made upon him by Editor Wolfe, which the Senator characterized as libelous, HOLT used the occasion to carry on the fight he began in 1936 when he alone, of all those in high public office, demanded that corrupt conditions in W. P. A. be corrected.

SARCASM PERVADES ADDRESS

From start to finish, sarcasm furnished an undertone for his address. Harping on the "humanitarian" attitude of the national administration, he pointed out that in West Virginia the workers have been dropped by the thousands, while the bosses have gotten huge pay increases. And after each such statement of facts and figures, revealing what the pay rolls show, he repeated his theme: "And they tell you how much they love the W. P. A. worker."

Thirty times in the course of his hour's address the speaker was interrupted by wholehearted applause and cheering. No attempts were made to heckle him. There was only one interruption of an unpleasant nature. One anti-Holt enthusiast tried to fasten down the button of his automobile horn; but the determined disapproval of the scores who gathered quickly around his car convinced him he had come to the wrong place to stage a counterdemonstration.

Time after time he sent his audience into a dither of whispering and shaking of heads as he read out from the official records salaries being paid to residents of the county. He had stated that when he asked the W. P. A. officials for the pay rolls, his request had been refused on the ground that if they were made public "the neighbors would gossip about them." Well, they have plenty to gossip about here tonight, and from the way chins wagged and heads nodded during the address, the gossip has already gotten a good start.

IT PAYS TO BE A BOSS

Again and again, HOLT sang his refrain, "It pays to be a boss." He did not confine his remarks to Jackson County, but told of those who ride the "gravy train" in Roane and Wood and Putnam and Mason. He paid special attention to Kanawha, and he had a special introduction for that county.

"If there's corruption anywhere in West Virginia," he declared, "You'll find it in Kanawha County." He then repeated his charge that more than 160 bosses there who drew salaries above $1,000. He said he had discovered 107 persons whose salaries had been raised by amounts from $60 to $240; 70 whose pay had increased by from $300 to $600; 20 by from $600 to $900; and 10 by from $1,000 up. "Those are increases," he emphasized, "which were granted the bosses while W. P. A. workers, those actually in need, were fired and told there were no funds with which to pay them."

Senator HOLT dwelt heavily on the increase of pay of the State administrator, Joseph N. Alderson. He showed that Mr. Alderson, who has denied having received a pay increase, used to work for the W. P. A. for $3,200 a year which, HOLT said, "is plenty for him, far more than he received or is worth from a private concern." Alderson now gets $6,000, which is an increase of $2,800.

PRESENTS INCONTROVERTIBLE FACTS

HOLT's entire address was filled with facts and figures taken from the official records and from committee investigation hearings at Washington. Much of the information has already been widely published in the State, but the exhibit of photoprints of the actual pay rolls was a new feature, and one which attracted much attention.

That this was the opening gun in HOLT's campaign for reelection was evident when he told his hearers that he would be back with them from time to time to discuss W. P. A. and other matters of national interest. The crowd was interested, enthusiastic, and friendly; and was drawn from every county surrounding Jackson.

[Nancy Wamsley in her column in the Parkersburg Sentinel]

There can be no doubt about the attitude in Jackson County anyway. Not many people are going to stand in the sun on as hot a day as it was Saturday to hear sentiments with which they are not in agreement. And if the presence of some 3,000 men and women on the courthouse lawn was not in itself sufficient proof, there was plenty of vocal expression from them. They didn't wait for HOLT to pause in order to cheer. They interrupted him time and again.

From the balcony I looked down upon the hot throng. Tanned and sunburned, they appeared to be mostly farmers and laborers to me. The men smoked pipes, chewed cigars, or rolled their own cigarettes. A number of mustached old grandfathers leaned on canes, and at least one stood on crutches throughout the speech. Among them darted barefoot kids in knickers and shirt sleeves, detained and silenced from time to time by their young fathers who mopped hot brows with bandanna handkerchiefs. Lots of people sat in old cars with roofs almost worn out, eating ice cream cones. But despite extraneous activity, they were all intent upon the words which issued from the loudspeaker. Inside the courtroom which seats only a few hundred there were dozens of men and women standing. They ranged themselves all the way up the center aisle to the speaker's platform. Some had their backs turned with apparent indifference and were gazing out the door. But the minute one of the Senator's many witticisms issued forth, these indifferent ones slapped their legs and roared along with the rest.

[Bill Blake, in his column "West Virginia in Passing"]

W. P. A. projects put on extra steam and worked a full day, a point which brought the comment from HOLT that W. P. A. workers always work when he comes around to make a speech. The State road commission put in their first full day of work in some time and nowhere in evidence was the uniform of a State trooper, although the spacious courthouse lawn was dotted with C. C. C. uniforms, undoubtedly from the veterans' camp near the Jackson countyseat.

* * * * * * *

The crowd that jammed the courthouse to the rafters and sweltered in the hottest day of the season on the streets and lawn around the Jackson County courthouse may not have reached the record set in Ripley at the last public hanging in West Virginia, but oldtimers that fanned themselves and sought the shade, the storekeepers and businessmen all agreed that the young Senator had addressed the largest political gathering ever assembled there and cast their civic pride aside to say that the crowd rivaled those in attendance at the local county fair.

[From the Charleston (W. Va.) Daily Mail of June 18, 1939]

HOLT HITS W. P. A. SLASHES, PAY HOISTS FOR BOSSES—CROWD OF 3,000 AT RIPLEY HEARS SENATOR'S DATA ON PAY AND JOBS

RIPLEY, June 17.—United States Senator RUSH D. HOLT personally brought to Ripley his fight against what he termed "corruption in the W. P. A." in a speech this afternoon in which he presented what he described as proof of earlier allegations that 18 individuals on Jackson County W. P. A. pay rolls were receiving salaries in excess of $1,000 per year.

More than 500 residents of this agricultural region jammed the county courthouse to hear the Senator, while outside in the shaded courthouse yard loudspeakers carried his voice to at least 2,500 others.

One Prosperous City

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 20 (legislative day of Thursday, June 15), 1939

ADDRESS BY HON. CLYDE M. REED, OF KANSAS, JUNE 18, 1939

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered on June 18 by the junior Senator from Kansas [Mr. REED] on the subject of One Prosperous City. I wish to say that I am in hearty accord with the statements and conclusions of the address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The stock market crashed in 1929, almost 10 years ago. That was a speculator's panic, the end of a frenzied era in which a lot of people thought they were making money by selling each other pieces of paper. It was the beginning of the period that we have come to call the depression, although probably the severity of industrial unemployment did not become acute until 1931. Using the latter year as the beginning of the depression period, we have been going through the longest period of bad business, diminished production, low farm prices, and great unemployment that this country has ever known.

Look at your own town, or any other town with which you are familiar, as an example. There are fewer men working, fewer stores doing business, because many have failed or have closed up because of lack of trade; wages, generally speaking, are lower; fewer houses have been built, and, again speaking generally, more houses are empty; foreclosures of mortgages have increased; rental values are down to a point where it is not profitable to own rental property; farm prices have been lower; and more farms have been taken over by insurance companies and loan companies than ever before.

This picture is not confined to any one section of the country. It is general and spreads from the Atlantic to the Pacific and from Canada to the Gulf of Mexico, with one exception.

In this period of unemployment and depressed business, there is one outstanding exception to the general picture—that is the city

of Washington, home of the Government of the United States. In this 6-year period, Washington has grown.

There are more people here now than ever before. More new building. Where other towns have universally reported a lack of either home or factory construction, Washington has expanded in every direction. It used to be that practically all those credited with working in Washington lived in the District of Columbia, which is only about 8 miles square. There were a few suburbs in Maryland and Virginia, but they were not important. It is different now. Drive out of Washington in any direction—and I have driven in all directions on main and secondary highways—and one will see new buildings, new houses, and new real-estate developments, not equaled relatively even by Los Angeles in its prime. This growth and development extends far beyond the limits of the District of Columbia. Washington has increased in population. Where other cities have been shrinking, employment decreasing, and pay rolls contracting, Washington has had exactly the opposite experience.

There is a reason. It is the New Deal. Whatever the New Deal may have done to the country as a whole—and there is much argument on this point—it has been "God's gift" to Washington and the surrounding territory. This city and this territory has experienced the greatest boom, the greatest prosperity, it has ever known. More money has been spent, including being wasted; unbelievable extravagance is visible, even though the country is experiencing misery and want. Let us examine some of the ascertainable facts, as well as observe the visible manifestations.

The New Deal came into power in 1933. In that year there were 65,437 people employed in Washington by the Government. The country is familiar with the tremendous expansion of bureaus, boards, commissions. I have discussed that expansion in previous radio talks. The effect of these expansions, or this expansion, is that on April 30, this year, there were 121,933 people employed in Washington by the Government. That is an increase of 56,496, or 85 percent. In 6 years the number of Government employees in Washington has almost doubled. No wonder the city has spilled over the boundary of the District of Columbia into the adjoining States of Maryland and Virginia.

Let me state the situation in another way.

On December 31, 1933, the monthly pay roll of the Government in Washington was $11,103,449. On April 30, 1939, it was $21,458,816. In less than 6 years the Government pay roll here had increased $10,355,367, or an increase of more than 93 percent (93.26 percent).

Not only had the number of employees vastly increased, but the average salaries paid per employee had increased while the average salary and wage in the country was decreasing.

No wonder Washington is exceptional—most exceptional if you please—among the cities of the United States during this period. Whatever disaster the New Deal has brought upon the country as a whole it has been a Santa Claus to Washington.

To those of us who live among and belong to the average people of the country and fix our ideas upon the depressing and dispiriting average conditions Washington is a fairyland or a nightmare as one may view it of extravagance and waste. The credit or the discredit as one may chose to term it goes to the New Deal.

The New Deal has wholly lost its sense of proportion in the spending of money. It used to be the rule of the individual, the ordinary business concern, the city, the county, and the State to get as much value for the money spent as possible. It may be granted that there was some waste and extravagance here and there in government but, generally speaking, what I have said was the aim of private individuals and business institutions. Political candidates always promised economy even if they broke the promise after election. The New Deal has reversed this rule. Its principal aim is to spend all the money it can possibly spend, on any project of any kind or sort, and the New Deal official who can spend the most money and obtain the least results is the "fair-haired child" of this national administration.

I could not possibly list the number of new buildings constructed in Washington to house the newly created alphabetical agencies, as well as the older established bureaus and departments of the Government. To do so would require more time than is available in the limit of a talk of this kind. I have called them buildings. As a matter of fact, they are palaces, not only in outside appearance, but in inside furnishings. The splendor of the Roman Empire in the palmy days before its fall, is not to be compared with the extravagant spending in providing palatial quarters for New Deal officials. The splendor which surrounds them appalls, as well as depresses a simple citizen of Kansas, even though he has been Governor of his State and has occupied the beautiful, but plain, suite of offices provided for the chief executive. The Arabian Nights stories have nothing on New Deal ideas. I can make an even better comparison. The Senate Office Building, in which I occupy quarters, was erected before New Deal days. It was regarded as a fine example of building in that period, and possibly, was regarded as a bit extravagant. The quarters which I, as well as every other Senator, occupy in this building are spacious and comfortable and compare about equally with business offices, we will say in Kansas City and Chicago. Perhaps they are a little better than the average business office in Kansas City, and not quite so good as the average in Chicago.

But when I or any other Senator go to call on a New Deal official housed in one of the palaces built in the last 6 years, we feel like a poor relation calling upon the rich family of our clan. The plain, practical furniture in our quarters looks like articles rescued from the junk pile when contrasted with the elegance that surrounds bureau chiefs, not to mention department heads, in any New Deal institution. No wonder the New Deal officials are happy and satisfied with themselves and want to hold their positions. Why wouldn't they?

I told you early in this talk that the average salary had increased more than average employment in Washington. The New Deal has lost its sense of proportion in payment of salaries to its specially selected appointees, as well as in every other way involving the spending of money. The result is that the average income per individual in the District of Columbia is the highest of any political unit in the United States. In 1937 the per capita income for the entire United States was $547. For Kansas it was $435. For the District of Columbia it was $1,259. But these averages did not tell the whole story. The New Deal heads of divisions and bureaus would feel insulted if they were paid less than $5,000 a year, and most of them are paid $7,000 to $9,000 per year or more.

Kansas is not an unimportant political unit of the United States, but, if my memory serves me, there is but one person employed by the State of Kansas who receives $10,000 a year. In the statehouse in Topeka, the supreme court judges get $6,000 per annum. The Governor gets $5,000, and most of the important subordinates get from $3,000 to $4,000. Those salaries would look beggarly in Washington. The average clerical help employed by the State of Kansas receives from $75 to $150 per month, and there are more in the lower brackets than in the higher. The lowest paid clerks in Government service in Washington receive $1,400 per year, and this amount grades up to from $3,000 to $5,000 per annum for those important clerks and heads of divisions in bureaus and departments. That is why the average income in the District of Columbia is more than double the average income in the United States and nearly three times as much as the average income of all the people in Kansas. That is why Washington is the most extravagant city in the United States, why the cost of living is high. Rents in this city are out of sight. No wonder real-estate men in Washington are numerous and prosperous. No wonder the Washington Board of Trade boasts of the increase of retail sales while other cities are way below normal. No wonder the number of telephones in use, the number of radios in homes, consumption of electricity, and all of the indices used by research agencies show the scale of living of Washington to be in a class by itself.

The end is not yet. On every side in Washington one observes the spending of money in every possible way.

In the making of business improvements as well as in private building the New Deal seeks ways and means of spending money and more money because its present entire philosophy is based upon spending, and more spending, regardless of the results obtained. No wonder people who live here lose their sense of proportion when it comes to matters of this kind. They live in the most beautiful and most extravagant city in the world, and, so far as they are concerned, money grows on trees instead of coming out of the pockets of taxpayers whose annual income is only a fraction of the annual income in Washington.

I have been familiar with Washington for 40 years. It has always been a beautiful city, even if it does have a rotten climate, but the old Washington I knew was a simple village as compared with the oriental splendor with which the New Deal has invested the Washington of today, and the end is not yet! Notwithstanding the fact that the New Deal has occupied every foot of available space in town, including the scores of palaces erected for New Deal officials, the other day they let the contract for two new buildings. One was for the Social Security Administration, and the other to house the Railroad Retirement Board.

One contract was made for these two buildings, and was in the amount of $14,250,000. A new building for the War Department has been authorized at the cost of $10,815,000. To print all the New Deal propaganda, an annex is necessary for the Government Printing Office. An annex, I said, not the main building. This annex, which we might call a "lean-to," is estimated to cost $6,200,000. I could cite such examples indefinitely. To house the horde of new employees being taken on by the New Deal, permits for new family houses, including apartment buildings, were issued during the first 5 months of this year aggregating $11,400,000.

Unless the people of the United States come to their senses and turn the New Deal out in 1940, this country is headed straight into bankruptcy. We are the strongest nation the world has ever known, but no nation, however strong, can go on, even a few years more, at the rate of wasteful and extravagant expenditure which the New Deal has followed during the last 6 years. This waste and extravagance is not confined to Washington, but it is more evident here than any other place because it is centralized and easily visible.

A Senator of the United States, as important as you and he may think he is, gets a chance only occasionally to vote directly on these expenditures. I use my vote on these rare occasions on the side of the least expenditure. That vote is usually on the losing side, but I am going to continue to cast my vote that way and hope it suits the people of Kansas for me to do so. I am going to do it anyway, so there is no use criticizing me for voting to hold down expenses of the Government. We will either reduce these expenses to a normal sum or this Nation will go into a "tail spin" of bankruptcy from which it will emerge with a dictator and a Fascist or Communist form of government.

Having lived with the plain and simple average of the people of Kansas for a lifetime, my opinions on this subject are all "screwy" from a New Deal standpoint. But after all, they are

my opinions; I do resent the extravagance; I do abhor the waste; I do think the New Deal is pursuing an impossible fiscal policy, and in the years of my service as a Representative of the people of Kansas I am going to use the vote they have given me to change this waste back to something like the simple life we used to know, if that be possible.

Monetary Use of Silver

EXTENSION OF REMARKS

OF

HON. WILLIAM E. BORAH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, June 20 (legislative day of Thursday, June 15), 1939

STATEMENT BY CHARLES W. BEALE

Mr. BORAH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a discussion on silver by Hon. Charles W. Beale, of Wallace, Idaho.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

I desire to submit for your consideration three resolutions that occur to me:

First. We favor an act of the Congress authorizing the free and unlimited coinage of silver and gold at a fixed ratio without awaiting similar action by any foreign government.

Second. We favor the issuance and circulation of non-interest-bearing, legal-tender silver certificates and gold certificates, backed by the silver and gold stocks in the Treasury of the United States.

Third. Should such silver and gold coins and certificates be insufficient to meet the requirements of the people and the necessities of their business, trade, and commerce, we favor the issuance and circulation of non-interest-bearing, legal-tender United States notes to satisfy such requirements and necessities.

In my judgment, those resolutions provide a monetary system for this country that would give greater prosperity to the people of this Nation than they have heretofore enjoyed.

Money is the creature of law.

That substance which by act of Congress exists as money today, tomorrow by act of Congress may be demonetized.

The term "legal tender" represents the quality given by law to a material thing that changes it into a medium of exchange for the payment of all debts and dues, both public and private.

By joint resolution of the Senate and the House of Representatives, approved June 5, 1933, all the different kinds of money in this country were made legal tender.

Governments cannot function, business cannot be transacted, and man cannot exist in a civilized state without money.

Business, industry, trade, and commerce are based on money.

The volume of money fixes the prices of commodities and the wages of workers.

Increasing the volume of money increases the prices of commodities and the wages of workers.

Decreasing the volume of money decreases the prices of commodities and the wages of workers.

Increased prices and wages result in increased production and employment.

Decreased prices and wages result in decreased production and unemployment.

The employed consume the produce of the farm and the products of the factory and create prosperity.

Unemployment causes business depression, poverty, and suffering.

Decreased prices force the debtor to pay his debt in dollars of increased purchasing power over the dollars borrowed—to the gain of the creditor and the loss of the debtor.

For example: A farmer, having contracted a debt when his wheat sold for $1 a bushel, must expend three times as much effort and market three times as much produce to obtain the dollars with which to pay his debt when his wheat sells for only one-third of a dollar a bushel.

Much has been said and published about the banks in the United States bulging with money available for investments, while the fact is those banks are swollen with debts. The attention of those who claim the existence of vast unemployed money reserves is invited to the Abstract of Reports of Condition of National Banks of the date of November 21, 1938, issued by the Treasury Department, in which it will be found that on September 28, 1938, the 5,245 national banks reporting to the Comptroller had deposits of $27,103,881,000, and that the cash in their vaults amounted to $571,644,000, which being translated into plain language means that those banks had in cash money only 2 cents and 1 mill with which to pay each dollar of their deposits. True those banks had other reserves in the nature of bonds, stocks, and securities, but which one of you upon making a demand for cash on your deposit would be willing to accept a State or Federal bond or the promissory note of an individual or corporation? It is no disparagement of bankers to state that they constitute a class of businessmen who do business almost entirely on the credits of their depositors; in other words, on their own debts.

Legislation for the expansion of credit, which is not available to the unemployed, to bankrupt farmers and failing merchants, who have no collateral upon which to secure loans, should be supplemented by an act of Congress authorizing free and unlimited coinage of Nature's silver deposits into a circulating medium for use in payment for services, farm produce, and factory products, thereby changing the status of many in this country from idle, dependent, unfortunate recipients of charity into active, self-respecting, independent American citizens. Credit is not money. Credit creates debts. The people of this Nation need more silver dollars—not more debts.

Refined silver and gold are known as pure silver and pure gold, but when mixed with alloys they are called standard silver and standard gold.

For more than a century prior to the organization and establishment of our Government the average annual commercial value of silver compared to that of gold did not exceed the ratio of 15 to 1. That historic fact furnished the Congress with a guide for fixing the proportional monetary value of silver to gold at the ratio of 15 parts of pure silver to 1 part of pure gold, and, upon that ratio, for making all silver and gold coins of equal value in all payments.

The monetary system enacted by Congress in 1792 authorized the free and unlimited coinage of silver and gold at the ratio of 15 to 1, and also made the silver dollar, containing 371¼ grains of pure silver and 416 grains of standard silver, the unit of value upon which all values, including the value of the gold dollar, were computed and fixed.

The silver dollar containing 371¼ grains of pure silver continued to be the unit of value until 1873, when Congress demonetized silver.

During the time between 1792 and 1873 the number of grains of pure silver in the silver dollar was not changed; and the number of grains of standard silver therein remained unchanged until 1837, when the 416 grains of standard silver were reduced to 412½ grains; and they still constitute the standard silver dollar.

Based upon the provisions of the Coinage Act of 1792, the gold dollar contained 24.75 grains of pure gold and 27 grains of standard gold; and that dollar so remained until 1834, when the grains therein were reduced, respectively, to 23.2 and 25.8. In 1837 the 23.2 grains of pure gold were changed to 23.22. Thereafter the weight of the gold dollar continued to be 25.8 grains of gold nine-tenths fine until the 31st day of January 1934, at which time by Presidential proclamation it was reduced to 15$\frac{5}{21}$ grains nine-tenths fine.

The ratio of silver to gold in their free and unlimited coinage, originally established in 1792, was changed by the Congress in 1834 from 15 to 1 to 15.998 to 1, usually referred to as 16 to 1.

The history of the use of silver and gold as money in other countries as well as our own, while there existed therein the free and unlimited coinage of those metals, discloses only a slight and insignificant variation between their monetary and commodity values. Nor were those values affected by any difference in the ratio of production of silver and gold during those years of free and unlimited coinage.

From a long time antedating the Christian era silver has been used as money.

More than 1,800 years before Christ, Abraham purchased from Ephron the burying place of his dead wife, Sarah, for which he paid 400 shekels of silver, "current money with the merchant." (Genesis 23:16.)

From 1792 to 1873, a period of 81 years, there existed in this country the free and unlimited coinage of silver and gold. Today standard silver dollars and subsidiary silver coins constitute the only money of intrinsic value now coined or issued under the laws of the United States.

Supported by that monetary record extending from antiquity to the present time, it is thought that the members of this committee are justified in urging the Congress to authorize the free and unlimited coinage of silver at a fixed ratio with gold.

The absorbing problem of the restoration of silver and gold as money will never be solved in the United States until it has been solved rightly; and it never will be rightly solved until there has been a return to bimetallism—to the unrestricted and uncontrolled use of silver and gold, such as existed in this country for a period of 81 years—from 1792, when bimetallism was established, to 1873, when silver was demonetized.

Prolonged and intensive investigation will not disclose any criticism of or objection to the coinage of silver and gold during that period by leading statesmen or by any of the Presidents from the administration of Washington down to the administration of Grant.

Senator LODGE, in his biography of Daniel Webster, the great supporter and expounder of the Constitution, in referring to the opposition of Mr. Webster, when in Congress, to the enactment of a statute for the creation of paper-money banks, used this language: "He showed that the currency of the United States was sound because it was gold and silver."

Furthermore, silver and gold coins were accepted by the people as authorized by the founders of our Government and provided for in the National Constitution. Neither silver dollars nor gold dollars were regarded by them as unsound, cheap, or bad dollars. They circulated on a parity and had equal purchasing power. During that period there was practically no difference between the monetary value and the commercial value of the silver in the silver

dollar and the monetary value and the commercial value of the gold in the gold dollar.

The suggestion that Congress should defer action until foreign parliaments are willing to take similar action is unworthy of consideration. Why should those in authority here in Washington accept instruction or take dictation from those in authority in any foreign country as to what should constitute the monetary policy or system of the United States? Our Government is sufficiently rich, powerful, and resourceful to act independently.

For decades the enemies of American remonetization have proposed in its stead international bimetallism, which they believed would never be secured. The records of past monetary conferences do not inspire any hope for action or relief in any future international monetary agreement.

While the delegates to the Republican National Convention who nominated William McKinley declared in the party platform adopted by them for bimetallism to be secured by international agreement, such agreement was never made; and although President McKinley, in April 1897, appointed a commission known as the Wolcott Commission to negotiate for an international conference on bimetallism, that commission spent 6 months in Europe without accomplishing anything.

These are historic facts which it may be well to keep in mind and which support the belief that any proposal for an international conference on the subject of bimetallism is a subterfuge and is made for the purpose of postponing the day of free and unlimited coinage of silver and gold at a fixed ratio.

The restoration of silver and gold as money by our Congress would force similar action by foreign nations. It is action upon the part of our Government rather than proposal to foreign governments which compels them to act.

Remonetization in our country would not deluge our mints with foreign silver and gold, or jeopardize the silver and gold stocks in the National Treasury, nor would it disrupt business or industry, or incite dangerous inflation.

The amount of our national debt is about double the amount of all the money in the United States. All the silver in the world outside of the United States together with all the money in the United States would not pay our national debt. All the gold in the world outside of the United States together with all the money in the United States would not pay our national debt. All the silver and gold in the world outside the United States would not pay our national debt.

With free and unlimited coinage in this country, the foreigner could take his silver and gold to our mints, and there have them coined into silver and gold dollars, which would circulate here on a parity and have an equal purchasing power. He would have his money in the United States where he could spend it in the purchase of our surplus farm produce and factory products, and would not be inclined to spend it in his own or any foreign country where it would not have such equal purchasing power.

Remonetization by Congress would not only stimulate business and industry in the United States, but would enable the American people to capture the markets of the world.

At the present time the coinage of gold is prohibited by the provisions of the Gold Reserve Act of 1934; and the coinage of silver is neither free nor unlimited. Its purchase by the Government is under Presidential proclamation and, by the terms of the Silver Purchase Act of 1934, at such rates, times, and upon such terms and conditions as the Secretary of the Treasury deems reasonable and most advantageous to the public interest.

In the place of our present monetary system, the following is submitted as a monetary system for the United States:

(1) The free and unlimited coinage of silver and gold at a fixed ratio.

(2) The issuance and circulation of non-interest-bearing legal-tender silver certificates and gold certificates backed by the silver and gold stocks in the Treasury of the United States.

(3) Should such silver and gold coins and certificates be insufficient to meet the requirements of the people and the necessities of their business, trade, and commerce, the issuance and circulation of non-interest-bearing legal-tender United States notes to satisfy such requirements and necessities.

Such silver and gold coins and silver and gold certificates would constitute money, than which there never existed during the entire history of civilized man any better, safer, or sounder money.

Such non-interest bearing legal tender United States notes would be backed by the credit of our Government and the wealth of our Nation, and would not be a burden upon the people already bending under the load of taxation; while interest bearing Government bonds sold to Federal Reserve banks and used as a deposit for the issuance of Federal Reserve notes now constitute a most grievous burden upon the people, who are taxed to pay the principal and interest of such Government bonds, which are no safer or sounder, or better secured than the noninterest bearing legal tender United States notes. On such Government bonds the Federal Reserve banks collect interest, also on the loans of Federal Reserve notes backed by such Government bonds.

In the event there is issued and exchanged for Federal Reserve notes by the Treasury Department Government bonds of the principal value of a billion dollars, having a 3-percent interest rate and due in 40 years, the American taxpayers of this and succeeding generations will be called upon to pay annually $30,000,000 in interest thereon and in the course of time $1,000,000,000 in principal and a billion, two hundred million dollars in interest, aggregating $2,200,000,000.

Whether backed by interest-bearing Government bonds or the promissory notes of individuals and corporations, or by both, Federal Reserve notes are not and cannot be better, safer, or sounder than non-interest-bearing legal-tender United States notes.

It is inconceivable that the people of this Nation, when fully advised of the operations under, and the consequences of, their present monetary system, will continue to submit to it, and they will demand from their national legislators a monetary system that will meet their requirements and necessities and promote their welfare, happiness, and prosperity.

That will not be communism, socialism, fascism, nazi-ism, or bolshevism—just simple, honest, natural Americanism.

Furthermore, it is not believed that the people would have adopted the Constitution in its original form if they had understood that the power granted therein to the Congress in respect to the creation and issuance of money would be delegated in so great a measure to seven men composing the Board of Governors of the Federal Reserve System, who control the issuance of Federal Reserve notes.

The extent of the domination of the Federal Reserve System will be found in the Circulation Statement of United States Money of the date of March 31, 1939, published by the Treasury Department, in which it appears that of the $12,626,768,983 of gold certificates issued against the $15,258,246,947 of gold in the Treasury, $9,737,877,564 thereof are held therein for Federal Reserve banks and agents, $2,815,444,500 thereof are held by Federal Reserve banks and agents, and only $73,446,919 thereof are in circulation, and that of the $6,817,124,386 in circulation $4,350,242,168 are Federal Reserve notes and $26,595,425 are Federal Reserve bank notes.

When it is remembered that the estimated indebtedness in the United States is hundreds of billions of dollars, about $45,000,000,000 thereof being natıcnal debt, it is an insult to human intelligence to contend that the $6,817,124,386 in circulation is a sufficient supply of money to carry that indebtedness, provide for the needs of business and industry, reduce the ranks of unemployed, lessen the legions of dependents, and to restore prosperity.

Since under the law Federal Reserve banks are not required to maintain a reserve in gold certificates of more than 40 percent of the Federal Reserve notes in actual circulation, to wit, $1,740,096,867 (being 40 percent of the circulation of Federal Reserve notes on March 31, 1939), what possible excuse can be offered for permitting such banks to control $12,553,322,064 of the $12,626,768,983 of the gold certificates issued against the gold stock in the Treasury?

Keeping in mind at this time national-bank associations are no longer issuing national-bank notes, and those heretofore issued are being withdrawn from circulation, the people are confronted with a situation where, under the law, seven men composing the Board of Governors of the Federal Reserve System, who on February 1, 1936, supplanted eight original members of the Federal Reserve Board, have and possess the absolute power over the issuance of Federal Reserve notes, it is thought by those who have given that matter consideration that such grant of power is altogether too great and exclusive, especially in view of the fact that at the present time, outside of silver certificates, Federal Reserve notes constitute the only paper currency now being issued and circulated under the laws of the United States.

It would surely be to the advantage, benefit and relief of the overburdened taxpayers of this country to have legal-tender silver certificates and gold certificates, backed by the silver and gold stocks hoarded in the Treasury, placed in circulation rather than money borrowed on Government bonds which they would ultimately have to pay. Such silver and gold certificates, issued on those silver and gold stocks, would be as sound money as silver and gold coins coined from those silver and gold stocks.

Approached from every angle silver dollars will stand the test of a comparison with Federal Reserve notes. By virtue of an act of Congress and a joint congressional resolution a $100 Federal Reserve note has a monetary value and a debt-paying quality of $100. But without such act and resolution that note would be a worthless piece of paper, not having any intrinsic or commercial value.

One hundred silver dollars under the same act and resolution have a monetary value and debt-paying quality of $100; but upon the elimination of that act and resolution the silver dollars would not be worthless but would have an intrinsic, commercial value of $34.71, estimated upon a world market price of silver of 44½ cents an ounce.

There is no economic principle, basic fact, or valid reason to justify or support editorial writers, economists, financiers, bank officials, or college professors in characterizing and denouncing silver dollars as unsound, dishonest, debased, 50-cent, bad dollars. The only thing bad about silver dollars is that it is just too bad the people do not have more of them.

The people should not be denied the advantage of the remonetization of silver simply because the use of that metal as a circulating medium will tend to increase the price which the silver mine owners will receive for it, since the prosperity that would come to the producers of silver by its free coinage into money would be accompanied by the greater prosperity that such free coinage would bring to the workers, the producers, and the owners of property not connected with the silver-mining industry.

If I thought the remonetization of silver would result solely in profit to the owners of mines, I would not advocate it. On the 13th day of April 1892 I first stepped on the soil of the County of Shoshone, in northern Idaho, a mineralized region known as the Coeur d'Alenes, at that time in its pioneer stage. During the 47 years between then and now I have watched that territory

develop into one of the most important and productive mining districts in the United States; yes, in the world.

Nor is that exaggerated or extravagant language when it is remembered that heretofore there have been mined and milled in the Coeur d'Alenes metals of a value in excess of $1,000,000,000, which were launched in the channels of trade and commerce for the use, benefit, and enrichment of humanity. Surely that industry, of such far-reaching and universal beneficence, is entitled to recognition, aid, and support of local, State, and Federal Governments and should not be harassed, crippled, or ruined by governmental activities nor ignored by governmental neglect.

It is doubtless known to some, and it should be known to all, that the Government in its purchase of silver under Presidential proclamations, the President's nationalization order, and the Silver Purchase Act of 1934, has made an enormous profit of more than $800,000,000, the difference between the purchase price and the monetary value of the silver purchase. There is no other industry in this country that contributes so liberally to the enrichment of the National Treasury for the privilege of having a market for its product as the mining industry.

Communism in Our Merchant Marine

REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

LETTER FROM RALPH EMERSON

Mr. O'BRIEN. Mr. Speaker, ladies and gentlemen of the House, as a member of the Merchant Marine and Fisheries Committee my attention has been called to the startling fact that certain subversive activities are now being perpetrated by well-known communistic leaders conspicuously identified with the National Maritime Union and our water transportation industry.

We who abhor the word purge have been brought to the full realization that the Communists in these organizations are now purging our American-born seamen and our American-born officials of the maritime unions.

If this continues, and un-American purge is not checked, it will assume such gigantic proportions it will be imperative for the Congress of these United States to enact drastic legislation so we might, and in fact we will, preserve our merchant marine and our American institutions in such a manner they will not be literally scuttled.

WASHINGTON, D. C., *June 17, 1939.*

AN OPEN LETTER TO THE MEMBERSHIP OF THE NATIONAL MARITIME UNION

DEAR BROTHERS: As you all know by now, I have recently become the object of a vicious slandering campaign instigated by those officials of our union who are either outright Communists or who are pro-Communist. This campaign has culminated in my being accused openly of conspiring with persons within the union to sabotage and wreck the administration of the union's affairs on behalf of the shipping interests. Finally, I was suspended from office about 4 weeks ago by those members of our national council who are in control at New York headquarters. It is peculiar to note in this instance that the two members of the national council from the Gulf district were unaware of my suspension until after I had been out of office for over 2 weeks. As I write this I have before me a notice from some purported trial committee at N. M. U. headquarters in New York advising me to the effect that my trial will begin on Monday, June 19. No copy of any charges accompanied this letter. When suspended by the national council I was accused of "alleged activities detrimental to union." That is all I have been given to prepare my defense on, although all kinds of unofficial rumors have been circulated at all ports along the Atlantic and Gulf coasts intimating that I am a "shipowner's stooge," "labor spy," "reactionary," etc. These rumors have even been circulated here in Washington but I am happy to state that due to my past record here on behalf of maritime labor I have found no one to date who considers them to be more than just what they are—vicious attempts at slander from persons who disagree with me regarding my political views.

Now, I have absolutely no intention of capitulating to the whims and desires of the Communist group within the N. M. U. any more than I would capitulate to any other minority group within our ranks. Therefore, they can go ahead and hold all the trials and investigations of me that they wish. The only sensible thing for me to do when I am summoned to appear before a trial committee selected from any minority faction is to ignore any such mock procedure and stay home here in Washington or spend the day peacefully fishing in Chesapeake Bay. For it is a well-known fact that, regardless of what the personal opinion of any ordinary member of the Communist Party who might be on my trial committee may be, that personal opinion has to be subjugated in favor of decisions handed down from the leaders of the party—so no doubt my fate has already been decided. Therefore, why waste a day going to New York and why waste the union's funds for the trip?

Insofar as my case is concerned, there is not one shred of evidence of any nature to substantiate the so-called charges that have been brought against me. It is very noticeable that no reflection has for the past 2½ years on behalf of the maritime workers. In this respect I would like to leave one thought for the consideration of the seamen. Is it not peculiar that I should be charged with having been connected with any group on the water front who were supposed to have received a few paltry dollars from the shipping interests, when at the same time I have successfully defended the seamen against major attacks on the legislative front here in Washington?

If I were in the pay of the shipping interests, then why did I carry on a successful fight in Washington against compulsory arbitration laws for maritime workers? Why did I lead and win the fight here against the continuous discharge book for seamen? Why did I fight and succeed in having the rules for the Government training schools for merchant seamen changed so that organized maritime labor would not suffer as a result? Why have I spent months in attempting to have social security extended to seamen? The amendment to include seamen just recently passed the House and is now before the Senate Finance Committee. Here are items that are vital and will cost the shipping interests plenty of money. I do not want to give the impression that I alone was responsible for the success we have obtained in Washington, as at all times the membership of the union have given me every bit of support possible; but it is the Washington representative that has to shoulder the responsibility of the success or failure of the legislative program in the final analysis, and it is upon his shoulders that the major portion of the detailed work rests, and he could certainly do plenty of damage to any Washington program if he were a traitor to those who have put their trust in him. Therefore I would urge that the membership of the N. M. U. think this over carefully and see for yourselves if all is as Joe Curran and others at N. M. U. headquarters would have you believe. As for Curran himself, I have only one thing to say—in my opinion he has sunk below the level of the cheapest labor fakir.

In regard to the recent "trial" of Jerome King, national secretary-treasurer, I was in New York during the period in which the so-called trial committee was summing up the case and I wish to state here that I have never seen such an outright farce in all my life. Regardless of whether there was any foundation for the charges or not King never had a chance to get a fair and impartial hearing and the "cards were stacked" against him. History will bear this out. The report made by the members of his trial committee from the Gulf district on their return to New Orleans shows clearly the unfairness of the whole procedure from the start.

Now, I have never had any trouble before with the Communist Party, although I have always known that quite a number of our union officials were members of that political party, but if the tactics which have recently been employed by their water-front section in conducting this "mass purge" of non-Communist officials reflects the general policy of the Communist Party as a whole, then I say it is high time that the Communist Party was completely divorced from the American labor movement. For this purging policy which they are now following in the maritime industry is one of destruction and the majority of the seamen on the ships are not going to submit to it as chaos will surely result in our maritime unions. The final result will be that the employer interests will take complete advantage of this confusion and collective-bargaining rights of employees will suffer and the seamen will return to the days of starvation wages and foul living conditions. Therefore if this present policy of the Communist Party in the maritime industry is not the general policy of that party on a national scale it would be well for the leaders in that party to do a little "purging" within their own ranks before they bring on their own self-destruction.

I have always been and will continue to be an ardent believer in the Roosevelt administration and the C. I. O., but the time has now come when the administration and the C. I. O. will have to curb the "screwballs" who attempt to hang on to the outer fringe of the New Deal with the one hand, whilst with the other hand they try to tear down every constructive attempt to better the conditions of the working-class people in order to further their own political aims.

Finally I wish it understood that, in view of the disruptive and filthy, slanderous policy now being followed out by the present officials in power in the N. M. U., it would be impossible for me to represent this policy. I therefore cheerfully accept the dismissal of my services as legislative representative as made by Joseph Curran at the recent conference of port agents, where he stated before witnesses that "Emerson is suspended and is going to stay suspended."

I now close with the sincere hope that the near future will find us attaining those objectives for which we have so long fought, and that out of our present difficulties will emerge a stronger and more united National Maritime Union.

Fraternally yours,

RALPH EMERSON,
Book No. 614, Stewards Division, N. M. U.

The Relief Bill

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 16, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a speech I had prepared for delivery in this House on the day we were considering the relief bill. As the rules limiting debate, adopted by the House that day, did not allow its presentation, I am using this opportunity of expressing my views on the subject. It will be noted that it was my purpose to give this while the body was considering the amendment to do away with the 60-day furlough without pay.

Mr. Speaker, if this committee had deliberately tried to bring out a bill whose purpose was to insult the unfortunate people of the country, slap labor in the face, wreck both the W. P. A. and P. W. A., retard recovery, and tend to discredit the policies of our great President, it could not have produced a more appropriate measure.

One might think that this "hymn of hate" had been composed by the brain of a Republican leadership, aided and abetted by the desire for revenge of a few tweedledums in the Democratic ranks, who have been invited to conform with party principles or take a walk—this without regard for the welfare of its innocent victims. Let us hope this is not the case. I prefer to believe that the committee is really trying to solve this problem without any partisan or other ulterior motives.

Let us look at this thing in a practical common-sense way.

It always becomes a great body like this one, to first examine itself and see whether or not we might have a beam in our own eye before we begin looking for a "mote" of "crimson" hue in the other fellow's eye.

This crisis, and I use the word advisedly, has been with this Congress ever since 1929, and its rumblings were even audible before that time, had this body cared to listen. What have we done to solve the problem? Reluctantly adopted a series of hand-to-mouth measures while we wistfully hoped for some kind Providence to bring about a cure to this sick economic system of ours.

Now, because of our own blunders of 10 years standing we kick the man in the face that is already down. Of all the vicious provisions in this measure, outside of its inadequate money supply, the worst is that which provides for eating and starving by shifts. First we pauperize our unfortunate citizens, making them use up any little saving they may have been able to accumulate, even to the "hocking" of bits of jewelry, then we pay them merely a subsistence wage. After keeping their families alive on this for a time we throw them out to starve for 60 days, who, because industry and business have had no jobs to offer during that period.

In the face of this, the proponents of this have the audacity to draw the red herring across the relief trail.

What a fertile seedbed we are preparing for un-American weed seed. What man of us who had seen his children grow thinner for 18 months while he was desperately trying to make both ends meet during that time, who suddenly seeing even that meager pittance taken from him, would not be tempted to turn an attentive ear to the siren song of a promised Utopia? After all, you know, the drowning man will grasp at straws, and the sailor on the tempest-tossed ship will seek any old port in a storm.

The excuse for this 30-day furlough is that these people refuse to accept private employment; that they are lazy and shiftless. This I emphatically deny. I know many of these people in my district, and there are none of these who have boycotted industry. They knock and they continue to knock at its door only to be turned away onto a cruel, pitiless charity. My needy people are red-blooded Americans asking but an opportunity to make a living in an American way and to rear their families into decent, law-abiding citizens. I resent these charges and those of un-Americanism. They are set up merely as an excuse to whittle away the already miserable pittance received by these fine people. All this in order that the exploiting few may escape their just burden of taxation.

Let us build real Americans by amending this measure into an act of which we may be proud. As a further step toward this let us remove this dastardly provision whereby we ask our people to eat and starve by shifts.

Nonpartisanship and Neutrality

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 19, 1939

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the New York Herald Tribune of June 18, 1939:

[From the New York Herald Tribune of June 18, 1939]

NONPARTISANSHIP AND NEUTRALITY

It would be highly unfortunate if the fight over the neutrality legislation in Congress should be determined by votes cast upon a purely party basis. Neutrality is not in any sense a partisan question. The problem is not one of upholding Secretary Hull and President Roosevelt as members of the Democratic Party, but rather of deciding whether the measure which these gentlemen urge is soundly based. Such opposition as has been voiced to date has come almost exclusively from Republican sources. The minority report of the House committee is signed by 9 out of the 10 Republicans on the House Foreign Affairs Committee. The tenth abstained from voting and has failed to sign any report, thus suggesting that he is sitting on the highest fence available.

What most disturbs the signatories of the minority report is that the Bloom resolution "omits any provisions for an arms embargo." Yet this elimination is one of the chief reasons why the resolution is held by most persons familiar with neutrality problems to be better than the rules now in existence. The other chief objection which the minority members make to the new bill is that it gives the President "additional powers to be unneutral." Their obvious fear is that an evil-minded President would be able to drag us into war, against the wishes of the people as a whole.

As has been repeatedly pointed out in these columns, and as every student of the Constitution has recognized, a President with evil intent can almost always force this Nation into a war whatever the wording of a congressional joint resolution. The power to do so is inherent in his executive post. But to assume that because any President can do so, Mr. Roosevelt or his successors will do so is to take an unrealistic view of political forces in this country and to ignore the teachings of history. In our two major foreign wars since the Revolution, the War of 1812 and the World War, American Presidents had for years prior to our participation done everything possible to keep us out. They took decisive action only when the clamor of public opinion in response to foreign insults proved irresistible.

We do not question the intellectual integrity of these isolationists. We share their eagerness to see the United States kept out of another war. Where we differ with them is in believing that the flexibility of action which the President possesses by virtue of his office, and which the isolationists so deplore, can be so confined and restrained as to keep us out of war. Such a course is a dangerous one. If skillfully pursued it can, indeed, be a factor for peace; but a neutrality policy based on a rigid embargo may not only entangle us in war but may well make it hard for the American Government to preserve the interests of the United States in so doing.

The Bloom resolution is by no means 100 percent perfect. It deserves the most thorough consideration and discussion. But the discussion should center not on how President Roosevelt might misuse the powers to be granted but on whether the Bloom method is likely to make it easier for the United States to keep the peace. So long as the division is on purely party lines it will get nowhere—other than to strengthen the hands of the New Deal and to give the President political arguments to use in the coming campaign. This is an unworthy basis on which to discuss such an all-important subject as the exact status of the United States Government in the event of another war.

An Army Officer Speaks His Mind

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

ADDRESS BY COL. F. C. HARRINGTON, WORKS PROGRESS ADMINISTRATOR

Mr. COFFEE of Washington. Mr. Speaker, one of the public officials of the United States Government who is entitled to the respect and admiration of citizens generally is Col. F. C. Harrington, National Administrator of the W. P. A. Mr. Harrington, despite tremendous odds and notwithstanding obstacles in the form of "red" baiting, ridicule, and downright bias, has demonstrated his aptitude for a tremendous job, beyond peradventure. I admire Colonel Harrington for his courage. He is an example of traditional American virility. He expresses his opinion aggressively regardless of those upon whose toes his statements may trod. Whoever occupies the difficult portfolio of administering the public employment of millions of needy fellow citizens has an almost insuperable task cut out for him. We should give this agency cooperation and friendly assistance. The following address is an interesting discussion of the problems of public employment with particular reference to the W. P. A.:

It is a pleasure as well as an honor to appear before the United States Conference of Mayors. And it is for me a pleasure as well as a duty to talk about the Works Progress Administration.

In discussing our work program, I shall bear in mind that you gentlemen know more than I do about the specific situation in your respective cities, and I shall confine myself to the general or total situation throughout the Nation. The city governments which you represent, and the Federal agency which I represent have now been working together for almost 4 years, and I think that by this time we understand one another pretty well. The work which we have been doing together is to my mind a remarkable example of cooperation. I think it can truthfully be described as not only the largest and most successful achievement in peacetime cooperation in the history of our Nation, but one of the greatest in the history of the world

I am very proud of my connection, past and present, with this great collaboration between the Federal Government and local governments in providing work for the needy unemployed and in providing municipalities with needed improvements and services. And I am in a position to know that it is because of the administrative diligence and skill of the officials of local governments that this gigantic and complex collaboration has been so successful.

It is inevitable that in carrying out such a program there should be differences of emphasis. I am aware that we in Washington and you in your various localities do not always see eye to eye in regard to particular details of W. P. A. and policy. But I shall not attempt to anticipate any criticisms that you may wish to make. If you have questions to ask me at the end of these remarks, I shall answer them frankly to the best of my ability. What I propose to do now is to take up several aspects of the W. P. A. program that seem to me most important at the present juncture, and comment on them briefly.

The first thing I feel obliged to mention is one that concerns the degree of adequacy of our employment program. W. P. A. national employment stands for the moment—as of May 8—at 2,600,000. This figure does not represent the extent of the current need. It is simply the number of jobs that the W. P. A. can provide with the funds appropriated to us by Congress. We know that there are additional large numbers of men and women certified by local governments as able to work and in need—who are not being provided with W. P. A. employment. The cooperation of the W. P. A. with communities in dealing with such needs is necessarily limited by the funds available for wages.

All of us have had to make up our minds as citizens upon what to do about unemployment. And once it was decided that Government had an obligation in that direction, there has been little doubt that it should take two distinct forms—one toward needy unemployable people, and another toward needy employable people. The first large group is now being given Federal and State assistance, where the proper cooperation is forthcoming, through Social Security benefits, or through local direct relief. Most of the other group is being provided with work on public projects. This is being done by our States and localities with the help of the Federal Government. I think you will agree with me in saying that our public-work program is now under the effective control of the States and localities in the respects in which such control is desirable and practicable.

It is the broad general policy that your local government relief agencies shall determine what workers are in need of W. P. A. work, and that your local governments shall plan and initiate projects. Since you help pay for them, it is to be presumed that you are getting what you want.

The President's message to Congress on April 27 supported our present arrangement as to sharing the costs of projects between the Federal and local governments. The rightful amount of the sponsor's contribution has, naturally, been a subject of frequent dispute between us in Washington and you in your localities. We have often thought that you should contribute somewhat more, while you have often thought that you should contribute less. But we have usually been able to come to a satisfactory understanding. That was possible because we on our part had no arbitrarily fixed requirements, except the very reasonable one set by Congress in 1938, which limits the expenditure of Federal funds for other-than-labor costs to a maximum of $7 per month per worker in any State.

It is my opinion that this type of control—namely the limitation of Federal nonlabor funds in terms of dollars—is far more advantageous than any limitation in percentage of total cost. We have thus been able to meet, far better than would otherwise have been possible, the varying needs and capacities of local sponsors. I think you will agree that to set up arbitrary, unalterable percentage requirements for sponsors' contributions at the present time would not only make it quite impossible for many of your communities to continue various projects of undoubted value, but would go far to cripple the work program as a whole.

Fundamentally we have to choose between continuing our work program along its present lines, and abandoning it in favor of the dole. The latter, in my opinion, would be a mistake of the most unfortunate kind. The President's message of April 27 contained these words: "I firmly believe that the advantages which accrue from the maintenance of the morale and self-respect of the worker and the creation of permanent public assets fully justify this increased cost, and that the adoption of the dole as the solution of this problem would be disastrous."

The vague phrase, "return relief to the States," is often heard these days. This ambiguous slogan covers the proposal to turn Federal work-relief funds over to the States and let them decide whether to use those funds in conducting a work program, or, if they prefer, to stop providing work and merely distribute Federal funds as a dole to the able-bodied unemployed. The significance of the whole proposal seems to lie in the latter alternative—the prospective abandonment and destruction of the work program within the various States.

The present method of Federal, State, and local collaboration on a public-work program, though doubtless capable of improvement, seems to me worth preserving and defending.

And this brings me to another matter, the question of how to increase W. P. A. efficiency. In comparing the efficiency of W. P. A. workers with those in private industry, it is customary for many of our critics to overlook several important aspects of the situations they are comparing. We are sometimes criticized for making less use of labor-saving machinery and equipment than does private industry. This criticism ignores the fact that the purchase or rental of machinery and equipment costs money, and that Federal work-relief funds have to be expended chiefly in the payment of wages to the project workers. I know that we in Washington have no objection to you in your localities providing all the labor-saving machinery you may wish on W. P. A. projects—the more the better. And if anyone should propose that special and separate Federal funds should be appropriated to provide W. P. A. workers with the most modern machine equipment on every project, I am sure that neither you in your localities nor we in Washington will have any objection to that.

In the meantime it is difficult to compare the efficiency of W. P. A. workers with those in private industry. In some instances that are directly comparable, W. P. A. projects have cost less money than contract work would have cost, with equally good results. But we all know that these projects are exceptional. We know the reasons why W. P. A. workers do not, by and large, produce as much results per man-hour as those in private industry. The weather is one of those reasons. Unemployment tends to be greatest in winter, the most unfavorable season for nearly every kind of outdoor work. Private construction can pick and choose its weather for working, and the W. P. A. cannot.

Another reason is the fact that we cannot hold on to our best workers by offering them higher wages. We have to let them go—in fact, we make them go—when they have a chance to get a private job. And, contrary to what some people think, our workers do leave W. P A. projects for private jobs, sometimes at the rate of several hundred thousand a month. Their places are taken by other needy unemployed workers, who have been waiting on your local relief rolls for a W. P. A. vacancy. No work organization can attain a maximum efficiency with a high labor turn-over. And our high turn-over is one of the things that we must put up with and welcome, as an essential part of the whole scheme of emergency work relief.

A third reason is the different number of hours of work put in by various W. P. A. workers as the result of our combining a limited security wage per month with prevailing rates of pay per hour. This compromise between two different types of wage system, which in some instances results in unskilled and semi-

skilled workers putting in more than twice as many hours as skilled workers on the same project, does not make for efficiency.

There are other difficulties, and I am not going to discuss them all. The point is that some of these matters can be improved, while others are part and parcel of emergency work relief. You on your part, in your localities, have been very patient and have learned how to get valuable results out of W. P. A. projects in spite of all these difficulties. And we on our part owe it to you to minimize these difficulties as far as possible.

The W P. A is often judged by isolated projects and often these criticisms turn out to be ill-founded. Sometimes they are based on complete misrepresentation of the project. The famous "marble dog pound" at Memphis is a good example of what might be called mythological criticism. A more recent example is the so-called "$100,000 beauty parlor project" in Cleveland.

Let me say a few words about this particular project. It was initiated by the Cleveland Hospital for the Insane. It involved the employment of 130 persons, all but two of whom were on the relief rolls. The opinion of the sponsor of this project was expressed in the following telegram which appears in the CONGRESSIONAL RECORD of March 31, 1939. I quote: "Recent allegations referring to unwise use of Federal funds in Cleveland State Hospital project absolutely false. Actual expenditure for beauty operators less than $2,000 a year. Newspaper reports erroneous. The therapeutic projects in welfare institutions are much needed and show a wise and careful expenditure of money. J. Fremont Bateman, commissioner of mental diseases, department of public welfare, State of Ohio." The whole story, as it is now going the rounds of unfriendly newspapers, is a $100,000 fairy story.

Another W. P. A. project recently criticized is the North Beach Airport project in New York City. This project is being attacked on two grounds: First, that the Federal Government is spending too much money; and, second, that W. P. A. workers are receiving too much of the money spent.

It is true that the W. P. A. is spending a great deal of money on this project. It is, in fact, the largest project the W. P. A. has so far undertaken. Some $14,000,000 of Federal funds already have been spent by the W. P. A. on this project. But—and this is a fact seldom included—the city of New York has spent almost as much of its own money to date.

This is not a new type of W. P. A. project. The W. P. A., as you know, has been working on airport projects for years. Hundreds of airports and landing fields were completed before the North Beach airport was begun. North Beach is simply the latest, the largest, and the most costly. It is a necessary addition to our network of airports and airways, not only commercially but also as a part of our system of national defense.

We are accused of paying high rates to skilled workers on this project. The fact is, we pay merely the prevailing rates in New York City, as required by Congress. We also are accused of working W. P. A. workers full time, 5 days a week, every week.

Gentlemen, I wish it were possible for me to admit the truth of this charge not only for the North Beach airport but for every other W. P. A. project in the whole country. But the truth is that those regular 5-day-a-week workers at North Beach are not W. P. A. workers, but contract workers whose wages are paid entirely by the city of New York.

And, finally, as to the number of W. P. A. workers on this project, if they were not working here they would be working on some other project. They have been certified to the W. P. A. by the relief agency of the city of New York as in need and capable of work. The W. P. A. puts them on one project or another project. Why not on this airport project? The quota for New York remains the same.

In short, what is the point of these criticisms? In part they are not true, and as a whole they are irrelevant. The North Beach airport project is one of about 35,000 W. P. A. projects scattered all over the United States. It should be judged in the light of the purpose of the whole program. This purpose, I repeat, is to set the needy unemployed at suitable public work for the benefit of the communities in which they live. Undoubtedly these projects are of varying degrees of social value, and certainly they are conducted with varying degrees of efficiency. Criticism along these lines would be useful. But our current critics do not seem concerned with whether we do our job well or badly. Their grievance appears to be that we are doing our job at all—that we actually are providing public work for the unemployed, and actually are helping to create civic improvements and services. If that is a crime, we are certainly guilty of it.

I have been frankly disappointed at the apparent motivation of the investigators who have been sent out by the congressional committee now investigating the W. P. A. These investigators seem entirely absorbed in hunting things to criticize. So far as I can learn, not one of them has yet told the committee anything about the accomplishments of this program, or the good it has done the unemployed. Small faults have been magnified and great virtues entirely omitted.

The true and the fair story of the W. P. A. is to be had from thousands of sources, merely for the asking. Several of your own membership gave very effective parts of it to the congressional committee on May 8 and 9—testimony in strange contrast to that the investigators are bringing in.

Your conference, also, is one of 11 national organizations which have just completed a Nation-wide survey of the W. P. A., gathering independent testimony from 8,000 local officials in 42 States. Your president was chairman of a committee which took this report to the White House about a week ago.

This survey contains knocks as well as boosts, and plenty of frank talk. I do not wish to go into great detail about it, but the overwhelming endorsement of the W. P. A. which came from these thousands of mayors and county officials and educators and engineers ought, somehow, to be made known to the American people.

More than 90 percent of these reports stated that their W. P. A. projects were badly needed, of benefit to the communities, and of permanent value. Over 80 percent of them said W. P. A. workmanship has been good, and that the work has maintained the skill and the employability of the workers.

I want to express our gratitude to your conference and the other agencies which helped carry out this appraisal. You have erected an enduring monument upon which the actual public opinion of the Nation's communities is inscribed, to inform those who are uninformed, and to confute those who misrepresent.

I should like to say a word about the white-collar projects of the W. P. A. Here are the four questions and answers concerning them in the appraisal:

"Have the educational activities of the W. P. A. been worth while?" Over 95 percent of the answers were "Yes."

"Have the public-health activities of the W. P. A. been worth while?" Over 95 percent of the answers were "Yes."

"Have the public recreation activities of the W. P. A. been worth while?" Over 91 percent of the answers were "Yes."

"Have the other nonconstruction activities of the W. P. A. been worth while?" Over 95 percent of the answers were "Yes."

It is hardly necessary to say that all these white collar, the nonconstruction projects of the W. P. A., stand upon the same footing as our construction projects. Unemployment is not confined to manual workers, nor is it confined to men. Employment on public works should include work for white-collar workers and women workers. These account for at least 20 percent of the Nation's total unemployment, and it is only just that they should receive about 20 percent of the jobs in our work program.

This has been the policy of the work program from the beginning, and nothing has occurred to change our view as to the justice and practical necessity of providing work for needy unemployed white-collar workers and women.

In this matter we have the reassurance given by the President in his recent message, when he said:

"I wish to state with emphasis, since the opposite view is frequently expressed, that the Works Progress Administration should, as at present, include some projects of the nonconstruction type to meet the needs of those unemployed workers whose training is such that they are not adapted to employment on construction projects. This provision of work for those people at occupations that will conserve their skills is of prime importance, and the emphasis placed on construction projects should not obscure the necessity for this portion of the program."

Many "white-collar" projects are concerned with the preservation of important cultural values of our civilization—whether they are education projects, music projects, art projects, or historical record survey projects. If we really respect civilization and really believe in it, we will welcome and encourage the projects which use the special training and preserve the special values that represent the flowering of long ages of cultural effort in the past.

If we care nothing for either the past or the future, we will set our artists to digging ditches and think nothing of it. But I am deeply convinced that we do care culturally for the world's past and for our American future.

If there were time, I should like to discuss the problems of community planning. We in America, with our vast resources, have done too little planning in the past. We are only just beginning as a Nation to realize the necessity for planning. You have made a beginning in the communities that you represent. I am glad to know that the W. P. A. has been of assistance to you in carrying out your plans. I know, however, that we have not been of as much help as we might have been, because of the emergency character of our own work, and the impossibility of counting upon us for longer than the end of any current fiscal year. Both your special interest in providing community improvements, and our special interest in meeting the unemployment situation in a constructive way, have been severely hampered by the lack of any long-term basis for our joint efforts. As to the future, that will depend on a fuller recognition by the American people of the fact that unemployment is a long-term problem. I know of no better brief statement of the need for facing the facts than that made by the President in his recent message.

I wish to quote that passage from his message, and with it I will conclude my remarks, except for answers to any questions which those here may wish to ask me.

Said the President: "In any consideration of the problem of unemployment relief, it must be borne in mind that the program adopted to meet it must be envisioned to extend over a considerable period of time. The reason for this is that this Nation, in common with the entire world, is undergoing a process of readjustment, particularly in connection with the production and distribution of goods. Until our American machinery can be realined to meet present-day conditions, the problem of unemployment will persist, and the measures adopted to deal with it must, therefore, be carefully thought out and their operation planned to extend well into the future."

I thank you for your attention.

The Railroad Lobby

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 20, 1939

Mr. RANKIN. Mr. Speaker, in line with the statement made a few minutes ago by the gentleman from North Carolina [Mr. WARREN] I wish to say that I know something of the superrrailroad lobby that has been going on around Washington for a long time.

If any of you Members do not know that there is a railroad lobby here trying to put over this legislation to strangle and destroy water transportation in this country and to paralyze motor transportation, it is time you wake up and find out what is going on around this Capitol.

As an expression of the feelings of the farmers of this country, I have here a statement by Mr. Fred Brenckman, representative of the Farmers' National Grange here in Washington, outlining and pointing out the destructive effect that this legislation would have upon the agricultural people, the farmers of the Nation, the producers of this land, if this proposed measure were to become law in its present form.

Mr. Speaker, I ask unanimous consent that I may insert Mr. Brenckman's statement as a part of my remarks and print both my remarks and Mr. Brenckman's statement in the Appendix of the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi [Mr. RANKIN]?

There was no objection.

The statement referred to follows:

There is genuine dissatisfaction throughout the country with various phases of the Wheeler-Truman bill, S. 2009, recodifying and amending various acts with reference to the regulation of interstate commerce.

This bill, which is intended primarily to help the railroads, has already passed the Senate and is now in the hands of the House Committee on Interstate and Foreign Commerce, headed by Congressman CLARENCE F. LEA, of California.

Among other things, the Wheeler-Truman bill places the carriers upon our inland waterways and in the coastal service under the Interstate Commerce Commission.

There are only two legitimate grounds upon which the Government could justify itself in attempting to regulate water transportation. One of these grounds would be in the interest of safety, and the other, to protect the public against monopolistic rates and practices.

So far as safety is concerned, the Bureau of Marine Inspection and Navigation, coming under the Department of Commerce, already looks after that. And when it comes to protecting the public against monopolistic rates and practices, the truth is that no monopoly exists among the carriers on our inland waterways or in the coastwise trade. The rivers, the lakes, and the oceans are open to all. These are highways that were created by nature herself.

So far from breaking up any monopoly among water carriers, which in reality does not exist, the Senate bill takes a long step toward creating monopoly.

Carriers that are now operating would be permitted to continue, subject to rules and regulations laid down by the Interstate Commerce Commission, but before it would be possible to establish any new service it would be necessary to secure from the Interstate Commerce Commission a certificate of public convenience and necessity.

During the course of the debate on this bill in the Senate it was argued that the United States was committed to a policy calling for the regulation of transportation. Starting from this premise, it was, therefore, argued that water carriers should be subject to regulation just as well as the railroads.

But who would go so far as to say that everything should be regulated, whether it was necessary or not?

In many quarters there is a feeling that the sole purpose in regulating water carriers is to bring water rates up to the same level as rail rates, and to establish a monopoly of transportation.

The provisions contained in S. 2009 authorizing the Interstate Commerce Commission to regulate private motortrucks engaged in interstate commerce in the interest of safety appears to be entirely superfluous. The Federal Motor Carriers Act of 1935 contained a clause directing the Interstate Commerce Commission to investigate and report to Congress regarding the necessity of Federal regulation of private motor carriers.

While regional hearings in this connection have been held throughout the country during recent months, the Interstate Commerce Commission has not made any report to Congress regarding the matter. Nevertheless, if S. 2009 should be enacted in its present form, the Commission could proceed to regulate private motor carriers engaged in interstate commerce without asking any further permission from Congress.

According to the findings of a recent survey, not 1 private truck in 10 ever crosses a State line, and these trucks are now subject to the rules and regulations that are in effect in the several States. In view of all this, the National Grange and the National Council of Private Motor Truck Owners on June 7 addressed a letter to Congressman LEA, chairman of the House Committee, suggesting the propriety of eliminating from the bill all reference to the Federal regulation of private motor trucks. The concluding paragraphs of this letter, which was signed by Fred Brenckman, Washington representative of the Grange, and by Arthur Butler, managing director of the National Council of Private Motor Truck Owners, were as follows:

"There is no legitimate excuse whatsoever for making private motor carriers subject to Federal regulation. No good purpose would be served by taking such a step. Private carriers are now subject to State regulation and control, and the States are footing the bill. Why should Federal control and regulations be superimposed upon State control and regulations? With the Federal Government collecting $6,000,000,000 a year in taxes and spending about ten billion, why should this expense be duplicated?

"When hearings were held on S. 2009 April 11–13, representatives of agriculture and industry having membership in the National Council of Private Motor Truck Owners were in Washington, and through the council requested a hearing before the Senate committee. They did not get it, but were allowed to file a statement before the committee.

"There are about 2,600,000 motor trucks owned and operated by industry in the distribution of its products, and there are some 1,000,000 trucks in operation on 900,000 farms. These vehicles are not common or contract carriers but are used in the distribution of products of the owner.

"At least until they have had a hearing we forcefully urge that they be not subjected to such regulation as is proposed in S. 2009.

"The wording of the bill makes it clear that there is no intent to impose regulations upon the working hours of the owner-driver. Our surveys indicate that over 2,000,000 of the private trucks are individually owned, and largely individually operated. Who could reasonably and fairly fix the hours of labor of the farmer gathering and transporting to market his perishable products? But the bill does propose to fix the hours of service of the farmer's employees if he has any.

"It is estimated that of the 1,000,000 trucks used on farms, about half are operated by the hired man or son or other member of the family standing in a legal relationship of employee driver rather than owner-driver.

"Both the present law and the proposed legislation show a clear intent by Congress to preserve intact the police power of the States in many situations and in broad terms. Their police power with respect to safety on the highway should, with equal clearness, be preserved.

"The House knows that the Interstate Commerce Commission has no force with which to enforce any regulation it may attempt to impose; that if there be regulation, to be at all effective it must be enforced and that to enforce it will require further appropriations probably approximating the more than $25,000,000 that the 48 States are appropriating and spending to enforce their own safety rules, regulations, and statutes. Of necessity, the Federal Government will have to rely upon the State enforcement agencies for the enforcement of the Federal laws and regulations. But these are not and will not be the same as the State laws. So there will be conflict and confusion.

"That is not the only consideration involved. For many years the Federal Government has been steadily encroaching upon the rights and prerogatives of the States. Unless a halt be called upon this un-American tendency, the result inevitably will be the destruction of our dual system of government."

National Youth Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 20, 1939

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the RECORD I include herein the following telegrams which I received from distinguished citizens of

Michigan who advocates the National Youth Administration in my district:

EAST LANSING, MICH., *June 15.*

Congressman WILLIAM W. BLACKNEY,
House of Representatives, Washington, D. C.:

We have received valuable benefits from N. Y. A. for various State police posts and State police headquarters at East Lansing.

OSCAR G. OLANDER,
Commissioner, Michigan State Police.

LANSING, MICH., *June 15.*

Hon. WILLIAM W. BLACKNEY,
House of Representatives, Washington, D. C.:

If we are to expect results from the youth of this country they must be guided by adults. N. Y. A. has been doing this splendid job. Without it may be the beginning of unfavorable outburst. Let's keep up the appropriation at least until we are out of the woods.

J. K. COSGROVE,
Superintendent, Everett Public Schools.

LANSING, MICH., *June 15.*

Congressman WILLIAM BLACKNEY,
House of Representatives, Washington, D. C.:

Please support and vote for amount, $123,000,000, requested in H. R. 326 for N. Y. A.

JOHN REID,
Secretary-Treasurer, Michigan Federation of Labor.

LANSING, MICH., *June 15.*

The Honorable WILLIAM BLACKNEY,
Michigan Sixth District, House of Representatives,
Washington, D. C.:

Problems of youth not political. N. Y. A. has done splendid work in Michigan. Suggest you hold for original figure.

JAY H. FRENCH.

I also received many letters from distinguished educators in the Sixth District of Michigan, including a letter from President R. S. Shaw, of the Michigan State College at East Lansing, all strongly advocating the continuance of the National Youth Administration. In President Shaw's letter he makes the following pertinent statement:

> At this college alone no less than 500 young men and young women are employed for a few hours per week for which they are paid from N. Y. A. funds. The amount received by each is, of course, very small, but it means that the students are enabled to continue their college education which would be impossible without this aid. They all render a suitable and satisfactory service and are young people of promise.

When House Joint Resolution 326, a joint resolution making appropriation for work relief, relief, and to increase employment by providing loans and grants for public projects for the fiscal year ending June 30, 1940, was being considered by the House last week, I was particularly interested in the National Youth Administration appropriation as passed by that bill.

The amount recommended in the joint resolution was $81,000,000, but the bill, as passed, increased this amount to $100,000,000. According to the Budget estimate, it contemplated aid to 460,000 students and the employment of 350,000 youths on projects, making a total of 810,000.

Certainly the greatest single resource of this country today is its youth, and no progressive government can afford to ignore the need of its future citizens for adequate schooling and for that useful work which establishes them as a part of its economy. Since the establishment of the National Youth Administration on June 26, 1935, estimates indicate that 950,000 school and college students have been assisted in continuing their studies in schools and colleges; 750,000 out-of-school unemployed young people have received work experience and training under the work program. This makes a total of 1,700,000 young persons.

I certainly favor any reasonable appropriation for the protection of the youth of the land. Anything that can be done to further the educational advantages of youth or to give them opportunities for work will not only protect them, but will be added insurance for the Nation, as the young people of today are the citizens of tomorrow.

Explanation of Proposed Appropriation for the Department of Agriculture for Work in Latin America

---

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

Mr. LEAVY. Mr. Speaker, when we were considering the agricultural appropriation bill, I offered an amendment proposing a restoration to the bill of the $250,000 item for foreign agricultural service. This amendment had the approval of the majority of the committee in charge of the bill, but due to the limited time we had for consideration and debate, thus resulting in a misunderstanding of the objective and purposes of this appropriation, the amendment was defeated.

It is my understanding that the agricultural appropriation bill, as it has gone to conference from the Senate, recognizes the significance of this item and that provision was made for it; but not being one of the conferees, I do not know what has taken place there; however, I am hopeful that the item will be provided for in the conference report, and if it is I want the membership of the House to be better informed as to the results we might hope to obtain by making this appropriation. It is for that reason that I am making the statement that I do today.

The proposed increase of $250,000 for the foreign agricultural service is an integral part of a general program of the United States Government looking toward the strengthening of relations between this country and Latin America. The program is based on the belief that through cooperative action it will be possible greatly to improve economic and political relations in the Western Hemisphere and at the same time to check the penetration of European and Asiatic dictatorships in this part of the world.

FUNDAMENTAL BASIS OF THE PROGRAM

This Latin American program is being developed in the light of the following facts: (1) the extremely unsettled political conditions in Europe and Asia and the building up of closed economies in those parts of the world with a resultant serious decline in our trade with them, and (2) the economic and political penetration of Latin America by the dictatorship countries which is seriously jeopardizing, from the long-time point of view, the political security of these countries and even of the United States.

Germany's share in the imports of all of Latin America rose from 11 percent in 1929 to over 15 percent in 1937. In the same period the share of the United States declined from 39 percent to less than 35 percent.

PART TO BE PLAYED BY THE DEPARTMENT OF AGRICULTURE

The economies of all Latin American countries are based on agriculture. Any practical program of cooperation with Latin America must take this fundamental fact into account.

It is also true that the greater part of Latin American agriculture is, or should be, of a tropical character of a kind designed to complement the agricultural resources of the United States.

In the last few years, however, there has been an increasing tendency in tropical Latin America in the direction of stimulating the production of crops, such as wheat, rice, and cotton, which are of a competitive nature and of which the world is already producing excess supplies.

The fundamental purpose, therefore, of the agricultural part of the Government's program in Latin America is to do everything possible to divert agricultural production in Latin America away from competitive crops and toward

such noncompetitive products as rubber, quinine, tropical hardwoods, and various tropical medicinal and insecticidal plants, which the United States now has to import from distant parts of the world.

LARGER MARKET FOR AMERICAN AGRICULTURAL AND INDUSTRIAL PRODUCTS

In view of our declining markets in Europe and Asia it is essential that new foreign markets be developed elsewhere. The most logical region for such development is Latin America.

So far as agricultural products are concerned, the United States has in the past shipped large quantities of such products as wheat flour, lard, apples, dairy products, and canned goods to Latin America. These exports declined in the face of the world depression and the tendency toward increased self-sufficiency in Latin American countries. It is important that this trend be reversed. It can be reversed, it is believed, if these countries can be shown how to produce greater quantities of the kinds of products not produced in but greatly needed by the United States.

An excellent example of complementary trade that could be developed to great advantage by all concerned: Wheat flour from the Pacific Northwest to Central America and western South America in exchange for rubber, coffee, cacao, quinine, and so forth. These countries cannot produce wheat economically but they are stimulating domestic production through high tariffs, experiment stations, and so forth, because of the lack of alternative crops.

Latin American countries offer great possibilities also as markets for our industrial exports, which, if developed, would expand industrial activity in this country and thus improve the domestic demand for our agricultural products.

Facing Neutrality Facts

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 19, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial, which appeared in the Washington Evening Star of June 19, 1939:

[From the Washington Star of June 19, 1939]

FACING NEUTRALITY FACTS

More than a score of Senators have signed a round robin and a minority of Republican members of the House Foreign Affairs Committee have signed a report opposing repeal of the existing ban on sale of arms to nations engaged in warfare. This embargo provision, with several less important provisions, is all that remains of the controversial 1937 Neutrality Act. The part of that act which held the greatest promise as a bulwark against entanglements that make for war—the "cash and carry" section—was allowed to expire on May 1 last. That section authorized the President to prohibit shipment of supplies of any kind to belligerents unless divested of American ownership and shipped in foreign bottoms. Demise of that section lifted all restrictions on American trade in war zones, except with respect to arms and other actual implements of war.

Chairman PITTMAN, of the Senate Foreign Relations Committee, has propounded to the signers of the round robin a very proper, though perhaps embarrassing, question. Referring to a statement criticizing "talk about detesting war while at the same time scheming to get profit from the wars of other nations," Senator PITTMAN wants to know if the signers of the round robin are sincere enough to carry their philosophy to the logical conclusion—extension of the embargo to such other necessities of war as cotton, oil, copper, steel, scrap iron, and the sundry other materials without which a warring nation cannot carry on its fight. Are the Senators and Representatives who demand retention and tightening of the automatic arms embargo ready to face the economic disturbances which would result from logical inclusion in the ban of cotton, oil, steel, and the other war essentials?

They will have opportunity to ponder upon all aspects of inflexible, mandatory embargoes during consideration of the administration's sensible compromise proposals, embodied in the Bloom bill. Without questioning the lofty ideals of the isolationists, they should recognize the fact that America cannot escape every conceivable type of international storm by hiding its head in the sand. In lieu of such a policy Secretary Hull proposes that America should face the problem of our foreign relations squarely, free to adapt ourselves to every changing condition and unhampered in meeting the particular exigencies of each new crisis.

The clamping of a mandatory embargo on arms to Great Britain and Germany, if they went to war this summer, would have the effect of alining us on Germany's side, as she is better prepared for war than England, who would need to buy materials from us. The Hull bill would open our arms and other trade to both sides—but only England, through her control of the seas, would be in a position to avail herself of the opportunity. This trade, through operation of provisions similar to "cash and carry" of the 1937 act, could be carried on with a minimum risk of commercial or financial involvement of the type that helped to draw us into the World War. There is no absolute guaranty against war in law or diplomacy, but the Hull program comes closer to the goal than any proposal so far advanced by the so-called mandatory neutrality bloc.

Sale of Electric Energy

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

LETTER AND RESOLUTION OF THE BOARD OF SUPERVISORS OF THE CITY AND COUNTY OF SAN FRANCISCO

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution adopted by the Board of Supervisors of the city and county of San Francisco:

CITY AND COUNTY OF SAN FRANCISCO, *June 15, 1939.*

Senator HIRAM W. JOHNSON.
Senator SHERIDAN DOWNEY.
Representative RICHARD J. WELCH.
Representative FRANCK HAVENNER.
CHIEF CLERK, UNITED STATES CONGRESS.

HONORABLE SIRS: Enclosed herewith please find copy of Resolution No. 351, adopted by the Board of Supervisors of the city and county of San Francisco on June 5, 1939, in which the Congress of the United States is memorialized to amend section 6 of the Raker Act to the end that electric energy generated on the Hetch Hetchy project may be disposed of as determined by the local officers of the city and county of San Francisco.

Respectfully,

DAVID A. BARRY,
Clerk, Board of Supervisors.

PROPOSED AMENDMENT OF RAKER ACT RE SALE OF ELECTRIC ENERGY

Resolution No. 351:

Whereas the United States Government has brought suit in the United States district court against the city and county of San Francisco to enjoin it from disposing of electric energy developed on the Hetch Hetchy project through an agency contract with the Pacific Gas & Electric Co., on the ground that such distribution is in violation of section 6 of the act of Congress approved December 19, 1913, known as the Raker Act; and

Whereas the city and county of San Francisco, through the operation of said agency contract, has received the total sum of $28,570,015.46 up to December 31, 1938, from said distribution of Hetch Hetchy power, or an average of $2,116,000 per year since July 1,

1925, and the latter sum represents a saving to the taxpayers of San Francisco of 26 cents annually in the tax rate; and

Whereas as shown by the report of the public utilities commission upon its plan 8, the city would be required to make an initial expenditure of $55,000,000 to provide even a partial and incomplete electrical system with the certainty that many more millions would later have to be voted by the people of San Francisco for completion and extensions; and

Whereas the voters of San Francisco having on six previous occasions defeated similar proposals, at a special election held on May 19, 1939, voted 123,118 "no" to 50,283 "yes" against the authorization of $55,000,000 revenue bonds to embark the city upon a plan of municipal distribution of Hetch Hetchy power, and at said election every voting district of the city returned a large majority against said measure, as shown by the tabulation of the returns of said election attached hereto and marked "Exhibit A"; and

Whereas San Francisco is faced with the urgent necessity of finding a solution of its transportation and traffic-control problems at a cost of many millions of dollars that can be financed only by increased bonded indebtedness, and it is well recognized that our citizens in the recent election indicated their determination not to authorize further indebtedness or municipal budget increases except for imperative city needs; and

Whereas in recognition of sound economic practice which under many conditions requires governmental agencies producing power as incidental to or a byproduct of water development to dispose of such power through existing agencies or facilities, acts of Congress of the United States have in recent years authorized the disposition of such power by sale to individuals, industrial corporations, and the public utilities where it is to the greater economic advantage of the particular project, as at the Bonneville Dam on the Columbia River in Oregon, at Boulder Dam, and on the Tennessee Valley projects, on the Grand Coulee project in Washington, and on the Fort Peck project on the Missouri River in Montana; and furthermore, the East Bay Municipal Utility District, which provides water to Oakland, Berkeley, and other cities and towns in Alameda County across the bay from San Francisco, sells to the Pacific Gas & Electric Co. hydroelectric power developed upon lands on the Mokelumne River granted to it by act of Congress dated April 27, 1934, and furthermore, the Department of the Interior for several years has been disposing of surplus power from its Yosemite Valley generating plant to the San Joaquin Light & Power Co., which was formerly a subsidiary of and is now a part of the Pacific Gas & Electric Co., and the Turlock and Modesto irrigation districts now sell to the Pacific Gas & Electric Co., or its subsidiaries, power generated by the very same Tuolumne River water that is stored and used for the generation of Hetch Hetchy power; and

Whereas about 76 civic and improvement clubs and organizations representing every section of the city have filed with this board of supervisors resolutions endorsing the proposal to memorialize Congress for an amendment of the Raker Act, a list of which organizations so endorsing this proposal is attached hereto as exhibit "B"; and

Whereas the mayor and the board of supervisors of the city and county of San Francisco and our citizenship are confident that the Congress of the United States will deal fairly with San Francisco and will not arbitrarily refuse its reasonable request for economic freedom of action in the matter of the distribution of Hetch Hetchy power, but will recognize the practical economic problems involved by granting to San Francisco the right, enjoyed by the Federal projects and municipal agencies as above set forth, to decide as a matter of sound financial and governmental policy how Hetch Hetchy power should be disposed of to the best advantage of the city: Now, therefore, be it

Resolved, That it is the sense of the board of supervisors of the city and county of San Francisco that the act of Congress, approved on December 19, 1913, and commonly known as the Raker Act, should be amended by amending section 6 thereof so that any ambiguity contained in said section 6 restricting the city and county of San Francisco from selling its electric energy generated on the Hetch Hetchy project should be amended to the end that the city and county of San Francisco may sell and dispose of its electric energy as may be determined by its local officers; provided that all other conditions of the act remain unchanged; and be it further

Resolved, That this board of supervisors memorialize the Congress of the United States to so amend said Raker Act.

Adopted: Board of supervisors, San Francisco, June 5, 1939.

Ayes: Supervisors Brown, McGowan, McSheehy, Meyer, Roncovieri, Schmidt, Uhl.

No: Supervisor Mead.

Absent: Supervisors Colman, Ratto, Shannon.

I hereby certify that the foregoing resolution was adopted by the board of supervisors of the city and county of San Francisco.

DAVID A. BERRY, *Clerk.*

Approved.

SAN FRANCISCO, *June 13, 1939.*

ANGELO J. ROSSI, *Mayor.*

Water Transportation Should Not Be Under Interstate Commerce Commission

EXTENSION OF REMARKS

OF

HON. LINDSAY C. WARREN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

LETTER FROM THE SECRETARY OF WAR

Mr. WARREN. Mr. Speaker, some 2 months ago Chairman LEA, of the Committee on Interstate and Foreign Commerce of this House, called upon the Secretary of War to present the views of his Department on legislation which proposes to place the regulation and control of all water carriers into the hands of the Interstate Commerce Commission. On the 7th of this month the Secretary made reply to Mr. LEA and his committee. It is a frank, forceful, merciless analysis of the transportation bill H. R. 4862. The Department's letter literally blasts the fallacies of the arguments of those who would raise freight rates and deprive the people of this country of the savings and economies of low-cost water services.

Mr. Speaker, I regard this letter as such a valuable contribution to the public interest that I ask unanimous consent to have it printed in the CONGRESSIONAL RECORD.

Pursuant to the permission of the House, the letter follows:

WAR DEPARTMENT,
Washington, June 7, 1939.

Hon. CLARENCE F. LEA,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D. C.

MY DEAR MR. LEA: Your letter of April 8, 1939, requesting the views of this Department on the provisions of the transportation bill (H. R. 4862) has been received.

The opportunity thus afforded to comment on proposed legislation to relieve the railroad situation is appreciated. The War Department, in the exercise of its principal functions, is vitally concerned not only with the section regarding bridges to which special attention was called, but with all measures designed to promote adequate and efficient transportation for the country and its industries. I am glad to assure you that the genuinely constructive purposes of the committee, as given public expression by yourself from time to time, and as declared to be your policy in the preamble to this bill, have the unqualified support of every branch and bureau of this Department.

In addition to its general interest, as you know, the Department is charged with a particular responsibility in the protection and preservation of the value of the country's investment in its system of seacoast harbors and inland waterways. It has been impossible, in the few days available, to prepare a report embodying our mature consideration of the effect on that investment of the changes and omissions proposed in this bill. In fact, while some progress was made in analyzing the original bill, H. R. 2531, prepared under your guidance, the Department has been not a little confused by the introduction, at a very late stage in the hearings, of H. R. 4862, a measure undertaking to codify and completely supersede the entire Interstate Commerce Act. In view of your initial declaration of policy it is hoped that your committee does not intend to report the objectionable features favorably, and that the results of experience and investigation of transportation problems by this Department will be found useful in your study of the proposed legislation.

These investigations unmistakably reveal a present surplus of transportation facilities and a scarcity of freight tonnage throughout the country, and a consequently unhealthy condition of the less wisely located and overobligated carriers. Approximately one-third of the rail mileage of the country seems to be in bankruptcy; there are probably improved highways whose maintenance is no longer warranted, just as there are some unprofitable water projects whose abandonment has been recommended to the Congress by this Department. In the present situation it is believed that the value of the various transportation units—their right to live and function—must properly be measured by the service they are able to render, rather than by the amount of money they may have attracted and absorbed in their creation. Some properties never have paid and never will pay operating expenses and their maxi-

mum value may be found in their salvage value as junk. On the other hand, the majority of carriers by rail, highway, and water are in remarkably sound condition when contrasted to business in general, and it may be that the abandonment of the unnecessary surplus will prove the wisest, if not the only practical solution, in the end, for the transportation problem. Certainly it would not seem the part of wisdom to sacrifice the usefulness of soundly conceived public improvements and leave them unproductive in order to prop up the weak financial structure of unsound private transportation ventures, as appears to be contemplated in sections 30, 49, and 301 of the bill.

Inherent divergencies in the character and functions of the several modes of transport require altogether different treatment. Inland water service, for instance, is slow, limited of access, unadapted to high-class commodity movements, and subject to occasional interruptions from fog, ice, and flood conditions. To offset these disadvantages, it enjoys flexibility of routes and schedules to meet the varying demands of consumers without infringing the rights of others, and the cost of operation is extremely low. It plays an essential part in certain basic industries of the country. In particular, it neither occupies nor needs exclusive right-of-way in order to function and therefore is not liable to taxation on that score. H. R. 4862, however, threatens to nullify these inherent advantages by imposing taxes and restrictions which will, in the opinion of this Department, unwarrantably sacrifice the public stake in low-cost transportation without any compensating benefits whatever.

On the face of it there could be no valid grounds for objection to the regulation of waterways and water carriers "so administered" (in the words of the "Declaration of Policy") "as to recognize and preserve their inherent advantages."

If these objectives were faithfully carried out by an agency of the Federal Government familiar with their special limitations and potentialities, a far greater volume of water-borne tonnage would develop than has been permitted to seek the waterways under the present competitive system. The question which causes this Department deep concern is whether "equal" regulation as proposed in the bill will recognize and allow for these inherent differences. Under the guise of equality, it is quite possible that rules and restrictions applicable to railroads could be given literal application to waterways with completely destructive effect. This Department labors under no delusion as to what would happen to inland waterways under a system of tolls gaged to make them self-liquidating as proposed in title III. It can readily surmise what would happen with rail competition freed altogether from the restraints of the long-and-short-haul clause, as likewise proposed.

The large preponderance of rail freight, by reason of its character or location is not open to water competition, and this noncompetitive traffic can be and is taxed by the railroads under the existing system by means of high rail rates in order to maintain low rail rates between river ports. These water-competitive rates do not bear a full share of the cost of rail service, nor in many instances, of even the operating costs. They are defended and sanctioned on the much abused out-of-pocket-cost theory, though this practice has become the rule and will work only as the exception. This business is of no profit to the rail carriers, except insofar as it deprives competing waterways of tonnage which they could profitably handle. The water carriers have no back-log of noncompetitive tonnage upon which to shift the burden, all of their traffic being equally adapted to rail transport except in the ability to bear the high rate. Their only salvation lies in their genuinely low operating costs. Even so, if the campaign could be continued long enough by the rail carriers, without bankrupting themselves or their shippers, the water lines could eventually be starved out of business, and the rail monopoly restored. Apparently the intent of the Congress to protect legitimate water traffic from raids of this character was expressed in the long-and-short-haul clause of the existing law, but relief from its restrictions is now freely granted by existing regulatory agencies, wherever waterways enter the picture. The shipping public is thus led to forego the real economic savings provided by the waterways at public expense, and to accept as a substitute a commensurate sacrifice of railroad earnings which are sorely needed to keep these lines solvent. The very questionable advantage which the rail carriers derive from the practice is a depletion of waterway tonnage, a consequently misleading rise in waterways costs per ton-mile, and the discrediting of the really sound policy of river improvement by the Federal Government.

The War Department is convinced that the above-described practices, and not the comparatively small volume of tonnage actually moved by water, are largely responsible for the plight of most of these railroads. Commissioner Eastman summed up the situation last year in his concurring opinion in the Fifteen Percent Rate case as follows:

"Since 1922, however, there have been no general changes in rates, except for the emergency charges. We have made many readjustments of particular kinds or classes of rates, some upward and some downward. Possibly the latter have somewhat predominated, but certainly nothing that we have done has accounted for the drop in average ton-mile revenue from 1.116 cents in 1923 to 0.974 cent in 1936. Without doubt that has been caused in very large part by reductions in rates made voluntarily by the railroads to meet motortruck or water-carrier competition, and to a lesser degree by an increase in average length of haul and changes in the relative amounts of the various kinds of traffic, likewise the result of competition."

The Interstate Commerce Commission also very aptly described the situation thus in Ex parte 115—some 2 years ago:

"In their need for increased revenues, applicants [the railroads] have been careful to avoid proposing any increases in rates which have been published to meet the competition of other forms of transportation, although these are the depressed rates which are so largely responsible for their financial troubles."

With the foregoing evidence that existing regulatory agencies are aware of both the objectives and the consequences of the practices thus sanctioned, this Department is justified in entertaining the gravest apprehension for the future of inland waterways if placed still further under the control of these outside agencies.

As far as this Department is aware, there is no dissatisfaction on the part of the public with the transportation service afforded on the inland waterways; charges are fully compensatory and there is no distructive rate warfare as between carriers. It seems to be generally accepted that the need for rehabilitation of the insolvent railroads has been brought about in large part by certain well known fiscal and operating practices and conditions within that industry, itself, and it would naturally be expected that remedial legislation would direct itself in the main toward the correction of those unwholesome conditions. Much undoubtedly could be done in the way of reducing unnecessary and wasteful duplication of rail terminal and interchange facilities and operations which the Federal Coordinator of Transportation found to be "one of the greatest item of railroad expense and probably accounting for more than 50 percent of the total expense." (See Commissioner Eastman's testimony on this bill.)

Excessive fixed charges could be readjusted, and expenses involved in traffic solicitation and in endless legal controversies carried on for the purpose of harassing and exhausting the resources of competitors, could be reduced. Yet it has not been possible to find in the 243 pages of this bill a single proposal that the railroads do anything whatever toward the amelioration or improvement of their own situation. All the provisions seem designed to free them from restraints and obligations while imposing prohibitive tolls and restrictions on their water competitors, and making it more expensive for the public to move freight. Under these provisions inland water carriers can easily be regulated and taxed out of existence, without the recapture of enough tonnage to affect railroad earnings appreciably. In fact, surveys by this Department indicate that the consequent rise in the cost of service would be calculated to discourage the movement of freight which requires cheap transportation.

Contrary to the impression created by witnesses before your committee, investigations conducted by the Army engineers are not limited to the structural feasibility of proposed improvements. For many years the Chief of Engineers has built up and maintained a technical staff of transportation and traffic specialists familiar with all types of carriers, whose function includes not only the thorough study of the economic phases of each proposed river and harbor improvement and the effect on existing transportation agencies, but also the conduct of economic analyses of going waterway projects and their effect on the movement of traffic. They have gathered representative data and have developed satisfactorily consistent unit costs covering the movement of freight by rail and water under a wide variety of conditions. It would otherwise be impossible for this Department to render the detailed and comprehensive reports on river and harbor improvements required by the Congress.

It has also been found impossible to render sound and balanced reports as to the merits of proposed improvements without coordinating these economic studies with field surveys showing the physical limitations as to size, type, capacity, and cost of navigation facilities in their relation to the comprehensive plan of development. No difficulty is encountered in cooperating with other Government departments in the public interest wherever responsibilities or jurisdiction overlap, but this Department is at a loss to account for the theory that the grouping of all transportation investigations exclusively under one agency or board would guarantee more complete impartiality or efficiency, or would compensate for divorcing cost estimates from the corresponding appraisals of benefits. The attention of your committee is thus invited to the very real difficulties which would confront this Department in meeting the responsibilities placed upon it by Congress and attempting to conform to the provisions of section 50, prescribing conflicting duties of the Secretary of War with relation to an independent transportation board. An illuminating sidelight on the attitude of the authors of this bill is the provision that while the proposed transportation board may "serve" a copy of its adverse report on the Secretary of War to any favorable recommendation before he is allowed to submit it to the Congress, the board is neither required nor permitted to review or report on any recommendation unfavorable to a proposed improvement.

The overwhelming preponderance of testimony on these questions is partisan in character, and while there is nothing unnatural in the antagonism of rail and water operators or rail and water shippers toward each other, their interests being primarily involved in their own profitable operations, it is recognized that these interests cannot be expected to coincide with each other nor with the interest of the country at large. For that reason it is particularly difficult to sift the testimony for facts bearing on the distribution of savings in transportation charges. This Department has made extended investigations in an attempt to trace the benefits of low cost water transportation to determine whether it would be possible to assess these savings to the ultimate beneficiary and whether it would be possible to collect a tax commensurate with the benefit received. These studies have convinced the Department of the utter futility of trying to trace the benefits or to show where they stop, and the conclusion is that savings on inland-water transportation are satisfactorily general and widely enough distributed to be counted as a public benefit more than commensurate with the carrying charges of the improvements. The Department's interest has rather been concentrated on determining in each case whether there is an actual net economic benefit to be distributed, before making recommendations.

This conclusion is at variance with certain popular conceptions with particular respect to shipments of petroleum products, steel, and grain by water in large volume. It is contended by many that the consumer pays the same price (and in the case of grain, that the farmer receives the same price) whether the commodity moves cheaply by waterway or expensively by rail. Investigation by this Department tends to confirm the literal truth of that claim, but disproves the further claim that the difference is "pocketed" by the middleman and not passed on. With the sharp competitive conditions and narrow margins of profit under which business is conducted today, it is absolutely impossible to "pocket" any savings permanently. It requires only the most elementary economics to show that they are either reflected directly in the base price of the commodity, or at the worst are "put back into the business" to increase production, to extend the market, or to reduce the cost of manufacture. The aggregate freight bill paid in the distribution of steel both by rail and by water, is one of the elements of production, and in the measure that it is made less costly by water transportation, its base price all over the country is reduced. This basic fact results in the uniform distribution of the benefits of water transportation throughout the land instead of permitting only the consumer who is located at a river port to benefit. Additional light was inadvertently thrown on this question by the witness for the Association of American Railroads when he testified in behalf of limiting the period of reparations for over and under charges on freight bills, as follows:

"Here is a man who is a merchant and he is a jobber and he sells his product to a retail merchant, and he ships to him a carload of any commodity, and he pays, of course, the current rate, and the whole transaction is on the basis of the current rate, whatever it may be.

"Now, the man who is the wholesaler in the jobbing center has paid the rate, and he has passed it on to the retailer, the man at the point of destination. The retailer has taken that rate into consideration in pricing his product. The real chap who has suffered is the consumer. He is the man who had to bear the burden. The wholesale merchant has not lost a nickel. He has just added the freight to his price."

The fact that this witness was referring to high rates rather than the low rates applicable to water movement, merely confirms the principle found by this Department to hold good in general, i. e., that the consumer pays the transportation bill and that he suffers when it is high and benefits when it is low. In view of the overwhelming evidence to that effect, this Department opposes, both in theory and in practice, the proposal to recover from the users of waterways the value of the benefits received by attempting to exact tolls.

The establishment of a tolls system would be a reversal of a long-established national policy regarding navigable waters as highways open to all without restrictions in the form of charges for use. The great preponderance of freight transported on inland waterways is composed of bulky, low-grade commodities that would not move in volume if low-cost transportation were not available. Any influence, therefore, that resulted in an increased transportation cost would be reflected in a decreased movement of freight. Without entering into a discussion of the serious disturbances to centers of production and consumption and the threat of economic stagnation of inland regions, it is believed that the imposition of a tolls system would, at this stage of waterway development, almost certainly defeat its primary purpose. Faced with ever lessening traffic requiring ever increasing tolls per ton to meet the requirements of this bill, the situation would progress toward a total absence of tonnage, an impossible tolls charge, and a complete break-down of the waterway transportation system.

In the hearings before your committee there have been repeated assurances, both official and otherwise, that regulation of all forms of transportation by the same agency would insure "equal" treatment and that the natural advantages of each form would not be nullified. It is felt that the committee is entitled to the experience of this Department with respect to such regulation as applies under existing statutes. Although the Department has recommended unfavorably on the majority of proposed improvements, the district officers and the Board of Engineers, after thorough study of the engineering and economic aspects of a waterway project, have frequently found and so reported that the prospective savings to the public in cost of transportation so far outweighed the cost of improvement that the improvement was justified.

In many such cases it has happened that after the completion of the project, the prospective water-borne tonnage has not developed or its development has been unduly retarded, because the competing rail carriers have been granted relief from the long-and-short-haul clause, and have thus been permitted to establish rates on the competitive traffic below the cost of transporting it by rail, while maintaining disproportionately high rates on the rail traffic not affected. Also, where the anticipated traffic has been of the combined rail-water character, thus putting the joint rates directly under rail regulation, the water portion of the rates has been set by the regulatory commission, not on a basis related to the economies of the water service, but on a fixed differential of from 10 to 20 percent below the rail rate between ports. This manner and basis of regulation has apparently prevented the formation of common-carrier barge lines; has prevented the interior shippers from realizing the full economies for which the waterways were provided. It has also undoubtedly prevented a large volume of tonnage from seeking the waterways, which could use them to the real profit and advantage of both shipper and carrier. This experience with regulation by agencies not directly concerned with waterway problems causes apprehension on the part of the Department that the further extension of regulatory powers in this bill will prove disastrous to the public's investment.

BRIDGES

Title VI, that portion of the bill relating to bridges over navigable waters, provides for apportionment of the cost of changes or alterations to such bridges between the United States and the owner or owners thereof, authorizes the appropriation of funds for such purposes and repeals existing laws inconsistent therewith.

Under the provisions of section 18 of the River and Harbor Act of March 3, 1899, the Secretary of War, after first giving interested parties a reasonable opportunity to be heard, is empowered to give notices to persons or corporations owning or controlling any bridge which is an unreasonable obstruction to the free navigation of the navigable waters of the United States, to alter the same in such manner as to render navigation through or under it reasonably free, easy, and unobstructed. The provisions of section 603 of title VI of the bill in which it is stated that the Secretary of War in his determination of the need for alteration or changes shall have due regard also for the necessities of rail or highway traffic would establish no new policy or principle. Under existing law the alteration of a bridge cannot be required unless there is an unreasonable obstruction to navigation and such unreasonableness cannot be established except by a sensible weighing of the needs of land transportation against those of water-borne commerce.

Under the provisions of title VI of this bill the United States would bear the cost of all alterations of all bridges over the navigable waters of the United States insofar as the cost of such alterations or changes could be attributed to the necessities of navigation. The assumption of such responsibility by the United States would be far-reaching. The Supreme Court has repeatedly held that where a bridge is an unreasonable obstruction to navigation the removal of such obstruction may be required without compensation from the United States, and such removal cannot be regarded as a taking of private property within the meaning of the Constitution. It is the view of the Department that when Congress has authorized the improvement of a navigable stream and any existing bridge interferes with the use of the project, the United States may require its alteration to conform to new conditions without liability for the cost of alteration.

After due consideration the Department can perceive no grounds to warrant the assumption by the Federal Government of the expenditures proposed, and is not aware of any circumstances which would justify the favorable consideration by Congress of those sections under title VI of H. R. 4862.

It is fully realized that the need for improving the transportation situation is acute, and that there is no simple solution for the problem ready to hand. Any progress that is made will require on the part of the Congress, a high order of statesmanship, and on the part of the several conflicting interests, the genuine will to cooperate, to surrender special advantages, to accept compromises and to give any promising solution a fair trial. This Department is eager to cooperate and to contribute the benefit of its special experience, knowledge, and technique in dealing with waterway transportation acquired over a period of 100 years.

It is essential to realize that water transportation is unlike all other forms of carriage. It is the aggregate of thousands of small, independent operators on the inland waterways which gives the character, furnishes the natural regulation, and automatically enforces the fair practices required in this type of transport. But it cannot sustain for long the concerted attack of powerful competitors, not because it is not basically sound, but because every resource of a powerful adversary has been brought to bear to prevent its becoming established on a normal basis. The remarkable fact is not that there is so little water-borne tonnage, but that so large a volume actually seeks the waterways in the face of the most determined efforts to prevent it.

There is nothing particularly new in the present attack. The fact seems to be that maintenance of competitive rates below cost by the railroads has proven more disastrous for them than for their competitors, and now they seek to have such unsound business judgment transformed into wisdom by legislation. However sincerely the Committee of Six may have tried to be fair, this bill as drafted directs the Federal regulatory bodies to take control of of the supply of water transportation and to administer this control in the interests of the railroads, both the strong and the weak. It demands that the interests of the labor employed in waterway transportation be sacrificed to the interests of the railroad organizations. The regulation provided in sections 8, 30, 43, 44, and 45, or in any one of them, could be employed so as to paralyze inland waterways and the industries dependent upon them. The only disinterested testimony before your committee stressed the unsoundness of relating water rates to the present illogical and inconsistent rail-rate structure and thus depriving the public of such economies as are made possible through the use of waterways.

It insisted on the soundness of regulating water rates to the needs and the potentialities of water transportation, altogether independent of other forms. The advantage of making water transportation still further dependent upon the arbitrary regulation of an outside agency is not apparent. This Department recommends that the revenues scales of the rail carriers be restored to normal levels, with the large bulk of the country's traffic continuing to travel by rail, but at profitable rates, and that the free flow of specially adapted tonnage be permitted to reach and use the waterways unhampered to the end that commerce may be stimulated to move in increased volume at the lowest possible cost. It is believed that such steps would be in the interests of the taxpayers, the shippers, and the carriers themselves.

A supplemental report on those features of the bill other than those pertaining to rivers and harbors and affecting the War Department will be submitted in a separate communication.

This proposed report was submitted to the Bureau of the Budget which advises that there would be no objection to its submission to the committee.

Sincerely yours,

HARRY H. WOODRING,
Secretary of War.

Neutrality in Congress

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 20, 1939

EDITORIAL FROM THE NORTHERN VIRGINIA DAILY OF JUNE 19, 1939

Mr. KEE. Mr. Speaker, under leave to extend my remarks, I am including herewith an editorial upon the subject of neutrality appearing in the Northern Virginia Daily of June 19, 1939:

[From the Northern Virginia Daily of June 19, 1939]

NEUTRALITY IN CONGRESS

Among the controversial measures scheduled to enliven the House sessions perhaps late this week is the administration bill to repeal the arms embargo of the present neutrality law. The repeal measure was offered by Representative SOL BLOOM, of New York, and is designed to untie the hands of the administration with respect to the shipment of war materials to belligerents in the event of hostilities abroad. It specifies that all such shipments shall be on a cash-and-carry basis.

The neutrality law was passed at the behest of a group of hysterical peace advocates, who set up a clamor throughout the Nation for legislation which would serve to isolate this country from the strife and war-scare of Europe and Asia. Experience has demonstrated that instead of operating to insure our neutrality, it really served to make us the allies of nations who were fighting to destroy the world's democracy, including the democracy we enjoy in this country.

By the simple expedient of fighting an undeclared war, a nation can have free access to our war supplies without running afoul of this foolish law. Thus we have supplied a large part of the munitions with which Japan has been conducting its cruel war in China. We helped Franco to defeat government Spain. And in spite of our horror over Italy's seizures of Ethiopia and Germany's rape of Czechoslovakia, we helped them to destroy these friendly little nations.

Our present neutrality law renders us impotent in world affairs without serving to make us neutral. We are not neutral. We are not neutral in our minds (thank God) and we are not very apt to be neutral in our dealings. What is more, we can be a far more powerful factor for peace in the world if left unhampered than we can possibly be when bound by a foolish restricting law. It is a good policy not to meddle in other people's fighting, but it is also vitally important to leave one's hands unbound.

There can be scarcely any doubt that Hitler, Mussolini, and the Japanese military authorities have been led to pursue their reckless conquests to amazing lengths because they felt that we were indubitably and unqualifiedly neutral. Perhaps we are in a national sense. Perhaps we ought to be. But why give them the free rein and the comfort they derive from knowing that we couldn't fight if we wanted to? That seems unnecessary and unwise.

The framers of our Constitution placed the conduct of the Nation's foreign affairs in the hands of the Executive because it was the only safe place to put it. And it is the only safe place to put it today. Congress is a deliberative body influenced by politics. The electorate can be inflamed by propaganda or be stirred by demagogues. In time of world stress or national peril, it is important to have a Chief Executive clothed with full power to act for the Nation.

We are far from being disposed to advocate broader powers for the present administration. We would much prefer to see its present powers drastically curtailed. But we are convinced that the Nation would derive no benefit, and perhaps would sustain serious harm, by seeking to deprive the President of powers which by all means should remain vested in the Executive. And much as we disagree with Mr. Roosevelt's domestic policies, his foreign policies in general have impressed us as being sound.

Alien Ownership of American Securities

EXTENSION OF REMARKS
OF
HON. LYLE H. BOREN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 20, 1939

EDITORIAL FROM THE BALTIMORE SUN OF JUNE 20, 1939

Mr. BOREN. Mr. Speaker, I present here an editorial from the Baltimore Sun of June 20 for the thoughtful consideration of the Congress.

I respectfully call this editorial to the attention of the very able and learned chairman of the securities subcommittee of the Interstate and Foreign Commerce Committee, Mr. COLE of Maryland. And in connection with this informative editorial I call attention to my bill requiring the disclosure of beneficial ownership of American securities held by nonresident aliens and request active consideration of that measure.

[From the Baltimore Sun of June 20, 1939]

FOREIGN INVESTMENTS

The Department of Commerce has just made public its report on foreign investments in the United States during 1938. The year showed another considerable increase in the value of these investments, which now strike a total of $7,883,000,000. The record for the past 5 years, which probably reflects in large part the growing disturbance in European economic and political conditions, is a striking one. In 1934 foreign long- and short-term investments stood at $4,971,000,000. In 1935 they rose to $6,329,000,000, and in 1936 to $7,633,000,000. There was a slight decline in 1937, when the total dropped to $7,036,000,000, but the increase of $847,000,000 last year jumped 1938 up above even the 1936 figure. A part of the recent increase is explicable in terms of the 24-percent rise in the market values of common stocks held by foreign investors.

Of the full sum, long-term investments represented $5,690,000,000. It is especially interesting to note that while the long-term investments have increased since 1935 by $587,000,000, the short-term funds have increased by $973,000,000. In 1935 these short-term holdings comprised about 19 percent of the total, while in 1938 they rose to about 25 percent of the total.

During the twenties this country was a net exporter of investment capital, but since 1931 it has become an importer, with the inflow of repatriated American funds and of foreign investments becoming substantially greater with every year since Hitler's rise to power in Germany produced a state of chronic political crisis on the Continent. Naturally this condition has given rise to many questions, and the one most frequently asked is what would happen if there was some sudden withdrawal of foreign funds. Obviously, if any large part of alien capital, now amounting to nearly eight billions, were withdrawn the credit structure and business

activity of the country would experience a shock of major proportions. But this sharp withdrawal would be likely to occur only in the event of a sudden and complete restoration of confidence all over Europe—a contingency which at this moment does not seem probable in any degree; or in the event of a war. And while memories of the rush of European investors in 1914 to liquidate their American holdings are still fresh, there is no reason to suppose that another general war in a world so different politically, economically, and technically from the world of 1914 would exactly repeat that experience any more than it would exactly repeat the diplomatic and military experiences of a quarter of a century ago. There is no doubt that the increasing flight of foreign capital to America, either out of fear of European insecurity or out of hope of profiting by industrial expansion here, creates problems which will become more pressing as—and if—the process continues. But these problems seem at present to relate more to the effects of the influx than results of a hypothetical full-scale liquidation.

The Proposed John Muir-Kings Canyon National Park—Its Critics Answered!

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

Mr. GEARHART. Mr. Speaker, in the high Sierras which rim on the east the great San Joaquin Valley of California lies one of the greatest scenic regions. Its majestic grandeur is not exceeded in magnificence anywhere else on earth. On every side are to be observed towering snow-capped mountains, precipitous granite cliffs, peaceful meadows, mirror-like pools, gigantic trees of great antiquity, some of them over 2,000 years old when the Christ was born 20 centuries ago. One stands appalled when he contemplates the wonder of it all.

In order that the beauties of the high mountains might be made accessible to the restless, wandering, pleasure-seeking people of the world under the most attractive and alluring circumstances; in order that this wondrous region of scenic marvels may be preserved in its natural wilderness state by those most skilled in mountain recreational management, I have introduced a bill to create in honor of the father of all national parks a new national park, to be known as the John Muir-Kings Canyon National Park—a park that will include the wondrous mountain area that I have just described.

There is not one who has been so fortunate as to have visited this incomparable wilderness but who is free to admit that the region is of national-park caliber. No one has arisen among us to question the beauties of its meadows and the awe-inspiring character of its towering granite cliffs. But, strange as it may seem, a few, for reasons which surpass understanding, are constrained to oppose the conference of national-park status upon this admittedly marvelous scenic area. In their zeal to prevent this progressive step from being taken, arguments have been advanced by these unreasoning recalcitrants which are quite unworthy of serious consideration, arguments which fool none but the uninformed.

Because there may be some that are not fully informed in respect to the provisions of the bill for the creation of the John Muir-Kings Canyon National Park, or in respect to the facts surrounding this legislative proposal, some who might have become confused by the fallacies that have been uttered, by the absurdities that have been paraded, I will, with the indulgence of the Chair, address myself for the next few moments to a few of them in order that the petty character of the fight against the passage of this most beneficent legislation may be made manifest.

PARK CREATION WILL NOT LOCK UP ANYTHING

The argument that is most frequently used against the creation of the John Muir-Kings Canyon National Park is that the legislation "will lock up for all time to come" natural resources of great value to the people. In the light of demonstrable facts, nothing could be further from the truth.

A complete answer to this ridiculous and oft-repeated ground of objection can be found in two examples to the contrary effect.

The Yosemite National Park was created by law many, many years ago. Just a few years ago the people of the city of San Francisco began to feel the need of new sources of water and power. Investigation developed that the best place in the State of California where water could be stored and power developed to supply the municipal needs of that great metropolis was at Hetch Hetchy, a dam site entirely within the boundaries of the Yosemite National Park.

So the Congress, at the behest of the people of San Francisco, promptly enacted legislation authorizing the construction of the Hetch Hetchy Dam, the creation of Hetch Hetchy Lake, the installation of power-generating machinery, and the building of aqueducts and transmission lines, all within the boundaries of Yosemite National Park.

Hetch Hetchy had not been locked up by the creation of Yosemite National Park.

As an indication that the policy of the Congress has not changed in years more recent, only last year legislation was enacted which authorized the construction within the Rocky Mountain National Park of a great irrigation and reclamation project.

The reclamation and irrigation resources of the State of Colorado were not "locked up" by the previous legislation authorizing the creation of the Rocky Mountain National Park.

These two instances will be sufficient to satisfy the minds of everybody save those blinded by prejudice that the creation of national parks does not permanently "lock up" any natural resources or prevent the same or any succeeding Congress from directing their development in subsequent legislation.

The argument is simply absurd.

FINANCIAL LOSS TO COUNTIES INSIGNIFICANT

Because existing laws of the United States require the National Forest Service, the governmental agency now in charge of the area embraced within the proposed park boundaries, to remit 25 percent of all of the moneys collected from persons allowed to exploit public lands administered by the Forest Service, the air is filled with the alarming news that Fresno and Tulare Counties, the counties in this instance entitled to share therein, will lose a tidy sum if the administration of the proposed park area is transferred to the National Park Service.

The already overburdened taxpayer naturally lends an attentive ear to charges of this kind. So the charge has been iterated and reiterated until it palls on the ear. Even the nights have been made hideous by this play on our fears.

But Chief Forester F. A. Silcox, while appearing as a witness in support of the bill to create the John Muir-Kings Canyon National Park, debunked the whole idea with one fell swoop.

According to the testimony of the Chief Forester, the total collections from the area included in the proposed John Muir-Kings Canyon National Park boundaries is less than $1,100 per year.

It follows as the night the day that if the proportion due the counties entitled to participate therein is divided equally, Fresno and Tulare Counties, two of the richest agricultural counties in the United States, will each stand to lose about $125 per year if national-park status is conferred upon the area under discussion.

If we tighten our belts, Mr. Speaker, we ought to be able to stand that. Especially so, if we will but bear in mind that the loss will be offset by hundreds of thousands of dollars in tourist money, money that will be attracted to the area by reason of the added prestige which national-park status confers.

Well, another mighty argument is exploded.

LIVESTOCK GRAZERS PROTECTED

Everyone recognizes the importance of the livestock industry. No one would knowingly do anything which would

unnecessarily harm or even restrict the opportunities of anyone who might be interested in following this important calling.

As will be hereafter pointed out, the grazers who have been in the habit of grazing their cattle and sheep within the proposed park area are what may be termed, relatively speaking, small operators. The number of heads that they have grazed in the area has been very few in recent years.

But the Government is just as interested in protecting the investments of small operators as it is the great operators. A provision has been inserted in the proposed park bill which will authorize the grazing permittees to continue to graze within the new park as long as they desire to renew their permits—for life, if that is their wish.

So no livestock grazer, be he cattleman or sheepman, will lose anything which he now enjoys by reason of the creation of the proposed park "for the enjoyment of all of the people."

On the contrary, they will become vested with life permits, a special privilege that is enjoyed by few, if by any others at all. Instead of being hurt, the grazers are tremendously benefited.

Another terrifying argument is blasted. The grazers will not lose anything.

NOT AN IMPORTANT GRAZING AREA

This area to be embraced within the proposed John Muir-Kings Canyon National Park is not regarded as a commercially usable livestock-grazing region. But a hasty consideration of the topography of this rugged, mountainous area reveals but a succession of narrow valleys and precipitous mountain cliffs. These circumstances, coupled with the difficulties incident to ingression and egression, has discouraged the periodic attempts of the distant yesteryears to exploit this highly inaccessible region, to the end that today the use of the area for grazing purposes has dwindled into insignificance.

Yet the objectors to the creation of the park scream to the heavens that a great grazing area will be forever locked up. Let us turn the searchlight of truth upon this absurd pretension.

In order that the utter unimportance of the proposed park area may be emphasized consideration should be given to the facts and figures which the grazing history of the region reveals. These facts and figures disclose that the average number of sheep that have been grazed in the proposed park area during the last 3 years is 300. Three million sheep were slaughtered in California in 1938.

The average number of cattle that were grazed in the proposed park area during the last 3 years is 987. Over 1,250,000 head of cattle were slaughtered in California last year.

The importance of the John Muir-Kings Canyon proposed park area as a sheep-grazing area is to be measured in the relation of 300 sheep grazed in the proposed park area to 3,000,000 sheep slaughtered in the State during the same period of time.

The importance of the John Muir-Kings Canyon proposed park area as a grazing ground for cattle is to be measured in the relation of 987 head grazed in the proposed park area to 1,250,000 head slaughtered in the State last year.

With the rights of the grazers of the 300 sheep and the 987 cattle to continue to graze their cattle and sheep in the area for the period of their natural lives protected and preserved, how unpersuasive seems the frantic cry that valuable grazing rights are about to be locked up. How absurd the fear.

Another untenable argument is shattered.

FISHING OPPORTUNITIES WILL BE PROMOTED

In order to gain support for their unreasoning campaign of obstruction, the opponents of the proposal to create a national park in the Kings Canyon area have conducted an insideous and sustained campaign to instill fear in the stout hearts of the knights of the rod and reel. Into the ears of the fishermen they constantly whisper that someway, somehow something will be taken from them if the bill creating the new park becomes a law though what that something is is never quite fully explained.

So absurd is the suggestion that the fishermen stand to lose something by the creation of the John Muir-Kings Canyon National Park that little time need be expended upon this phase of the instant legislative controversy.

Bluntly the answer to this shameless canard can be stated.

Instead of restricting the privileges and opportunities of fishermen, the National Park Service lends its every effort to the promotion and improvement of the conditions under which the followers of old Izaak Walton pursue their piscatorial endeavors.

Fishing is not only permitted in national parks but it is encouraged in every possible way.

So absurdly untrue is the whispered suggestion that the privileges of the fishermen will be in some way, somehow restricted that concerning it nothing further need be said.

Such arguments blast themselves.

HUNTING CONDITIONS WILL BE IMPROVED

In their frantic efforts to arouse further opposition to the creation of the John Muir-Kings Canyon National Park opponents of this legislative program whisper excitedly into our ears that a most enticing and very promising deer-shooting area will be forever closed to the sportsmen.

Well, Mr. Speaker, just how enticing a shooting area is this Kings Canyon country?

The average kill of deer for the last 3 years has been less than 160 deer per year—159, to be exact.

During the same years an average of 2,800 have been killed in the region immediately surrounding the proposed park area.

During the same period of time an average of 55,000 deer have been killed in the State at large.

The importance of the area as a deer-hunting region is to be measured in the relation of 159 killed in the proposed park area to 2,800 killed in the adjacent Sequoia and Sierra National Forests.

The importance of the new park area as a deer-hunting region is to be measured in the relation of 159 killed in the proposed park area to 55,000 killed in the State at large.

The reason for the light kill in the proposed park area ought to be apparent on first consideration. The reason is the same one which prevents the region from being used for grazing. The topography of this rugged, mountainous area simply does not lend itself to the hunting of the deer. To shoot a deer on the floor of a valley and recover the carcass three or five thousand feet up on the side of a mountainous cliff is just a little too strenuous an activity for the man who journeys from his city desk in search of sport. There are too many other much more enticing happy hunting grounds within almost a stone's throw of the difficult Kings Canyon region.

And those that would shoot in this most rugged and inaccessible area must be able to pay well for their sport. It has been estimated that deer cannot be taken out of this area for less than $200 per deer. Yes; it might be termed a shooting area, Mr. Speaker, but only for the very well-to-do. For the silk-stockinged hunter, with his entourage of packers, cooks, camp builders, valets, and errand boys, it is indeed a hunter's paradise.

But for the ordinary fellow who loves the chase it is no go.

But notwithstanding the small kill, the area is nevertheless of great value to the deer hunter. If national-park status is conferred upon the region, it will become of still greater value to those who find happiness in this particular sport. As a breeding sanctuary, the John Muir-Kings Canyon National Park will provide for the areas just beyond its boundaries, where shooting is practical, many more deer than can now be hunted there.

If the sportsmen were thinking of promoting their hunting opportunities, they would be for the creating of the proposed park. It is on that side of the issue where their real interests lie.

But, Mr. Speaker, the irony of it all is to be found in the very definite fact that, whether the area becomes a national park or whether it remains in the national forest, shooting must necessarily be curtailed in this region in the very near future. The conservation of human life will compel the

promulgation of regulations against shooting in a region to which thousands upon thousands of men, women, and children are bound to make resort in the days shortly to come.

With the opening to the public of the new State prisoner-built road into and upon the floor of the Kings Canyon, whether we will it or not, millions of sightseers will be lured into this marvelous scenic area its wonderous attractions to behold. Not all of them will be mighty hunters or famed mountain climbers. Most of them will be just ordinary folks like ourselves, not even sturdy athletes. Many of them will be invalids, sick people seeking a return of the health they have lost or the health that they have never known.

It is not a park for just the few who find their happiness alone in the kill that we would create, but a public park, as the bill specifically provides, for the benefit and enjoyment of all of the people. Would the deer hunters withhold from them this small area?

In the light of the millions upon millions of surrounding acres upon which hunting with rifles will neither be curtailed or interfered with even in the slightest degree the asserting of this objection to the creation of the John Muir-Kings Canyon National Park by those who pride themselves in their sportsmanship seems to the casual observer just a wee bit unsportsmanlike.

At the most, it is unworthy of protracted consideration.

PLENTY OF NATIONAL-FOREST LANDS LEFT

The gross area of the national forests in California amounts to 25,042,762 acres, a tremendous area, indeed.

The John Muir-Kings Canyon National Park, if created, will take from this colossal national-forest empire the comparatively inconsequential area of 454,600 acres, no more.

But a hastily penciled calculation discloses that the entire area of the proposed John Muir-Kings Canyon National Park, including the present-day General Grant National Park, represents no more than 1⅔ percent of the gross national-forest area of California.

In the face of these undeniable figures, it brings, sad as it is to relate, to the eyes of even those of stony hearts, tears when one hears some of the objectors to the national-park program passionately bewail the impending loss of the privilege to camp, fish, hunt, and gambol on the green with their gun and dog under the conditions to be found only, so they weepingly proclaim, within the confines of the national forests of this great Western State.

With 24,588,162 acres of national-forest lands remaining to their use if the national park is created upon which to satiate in the fullest their hankering for the open air, it would seem to the prosaic and dispassionately practical that these apprehensive protestors will not be compelled to give up vacationing in the wilderness of our California mountains, even if the worst come to the worst.

With so many, many acres of national-forest land unaffected by the bill to create the John Muir-Kings Canyon National Park, why all these wails, why all these tears?

THE ARGUMENTS ARE SHEER BUNCOMBE

So, Mr. Speaker, we find that the wilderness will be protected, no natural resources will be locked up, the financial loss to the two richest agricultural counties in California is insignificant, the livestock grazers are protected, the opportunities of fishermen are promoted, hunting conditions are improved, and that only 1⅔ percent of the national-forest acreage in California will be transferred to the National Park Service for administrative care and mountain management.

Fine arguments, indeed, are these. They are so inconsequential, so devoid of merit, Mr. Speaker, that I am hopeful that in the face of them we may look forward to the passage of the bill for the creation of the John Muir-Kings Canyon National Park with the practically unanimous vote of the membership of this honorable body.

The bill should pass.

The Federal Theater Projects

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

Tuesday, June 20, 1939

ARTICLE BY HEYWOOD BROUN

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include herewith Heywood Broun's column from the Philadelphia Record for June 20, 1939:

IT SEEMS TO ME

(By Heywood Broun)

By a large vote the House of Representatives of the United States has voted to end all the Federal theater projects immediately and to apply the same harsh treatment to the other art projects within a few weeks.

When the British burned part of the Capitol in 1812 it was called by us an act of vandalism, and if some foreigner in the future rained bombs upon our museums and libraries we would again cry out that this was a war on culture. But, seemingly, men elected and supposedly responsible to the people of the United States are willing to go on record as being cruelly contemptuous of the aspirations of unrecognized talent in this country.

Any Congressman can move his colleagues to tears by talking of the slaughter of little pigs under the New Deal, but all eyes were dry as the vote rolled through to let the undiscovered writers, actors, playwrights, and painters starve quietly and make no fuss about it.

ATTENTIVE TO SUCCESS

Seemingly, the fat cats of the House regard the artist as somebody deserving no consideration here unless he is in the dough. Politicians will fawn on successful authors and players and encumber them with compliments, but not until they have swum the rapids and clambered safely on the shore. That point of view may be the product of nothing more than the traditional stupidity of the peanut vendors who get themselves sent to Washington.

But it is sheer prevarication for Representative WOODRUM of Virginia, the same State which sired Jefferson, to maintain that professional people themselves have looked upon the Government's experiments with coolness and suspicion.

Practically all the book publishers have gone on record as expressing their admiration of the results achieved by the writers' projects. The newspaper dramatic critics are almost a unit in their praise for both the intentions and the achievements of the Federal theater. And allied with the reviewers are many managers, such as Lee Shubert, Sam H. Harris, and George Abbott. Equity protests against this cut. Famous names of radio, screen, and stage, like those of Helen Hayes and Eddie Cantor, join in. Now is the time for the men and women of the amusement world to come to the aid of their cause.

ARISE AND PROTEST

In every crisis of America they are called upon to contribute their services. They should be heard now. The venom and envy of short-weight politicians ought to be smothered by the volume of protest of those who have come up the ranks and know the hardships as well as the fair rewards of the theater. Before the Senate comes to vote on this death-sentence bill for American culture, the allied spokesmen of the arts ought to gather in Washington and make themselves heard.

No more vicious and deceptive and underhand campaign of destruction has been staged in our National Legislature. It has been camouflaged as a drive on communism in spite of the fact that possibly the most successful of all the Federal projects was Prologue to Glory, an excellent chronicle about the life of young Lincoln. And there was as well the superb Negro cast in the "swing" Mikado.

"EDUCATING" CONGRESS

It is not impossible that some of the gentlemen in Washington have been so busy mending fences that they may actually go along with CLIFTON A. WOODRUM. It is not beyond conception that a few are under the impression that Gilbert and Sullivan were induced to kid the divinity of the Japanese Emperor through the Soviet suggestion that it might be well to make a flank attack upon the Fascist axis. The task of educating Congressmen is not to be

done in a day or a week. But at least a committee of such outstanding names could be mustered that even the most blatant of the men with dirks could be made to listen.

It is time for another Marc Antony to show just where the envious daggers were thrust. The United States is just as strong as its strongest links. When people like Cantor and Helen Hayes and George Abbott and Ethel Waters demand a right to be heard, it is time for Members of the House of Representatives to listen to their betters. Who do these men of brief authority think they are? It is true they were elected, but only as representatives of the people and not as owners and landlords of this country.

Taxing Uncle Sam

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

EDITORIAL FROM THE DULUTH NEWS-TRIBUNE OF JUNE 5, 1939

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Duluth News-Tribune of June 5, 1939, on the subject of taxing Uncle Sam:

[From the Duluth News-Tribune of June 5, 1939]

TAXING UNCLE SAM

Uncle Sam is a big landowner, but he is not a big taxpayer. Government-owned lands are not subject to taxation. When the Federal Government acquires, say, a third of the land in a county, the owners of the other two-thirds of the land must bear the cost of local and county government and their share of State government. This has caused a serious situation in many parts of the country.

All residents of northern Minnesota, northern Wisconsin, and upper Michigan, taxpayers especially, should be interested in the Colmer-Harrison bills now before Congress. These are designed to cope with this problem by providing for payment of Federal money to counties to compensate, in part at least, for their loss of tax revenues through Federal ownership of lands. Representative PITTENGER has given these bills persistent support.

Under the present laws counties get 25 percent of the gross receipts from timber and other assets sold by the Forest Service from these lands. In another generation this will be ample compensation, but just now it is a small sum in most counties.

The Colmer-Harrison bills would guarantee to the counties payment by the Federal Government each year of 3 percent of the purchase price of Federal lands within the counties. In time the sale of timber and other things will supply a big part of this, but for the present this help is needed to compensate the counties for their loss of taxes.

In this country there are 100 congressional districts which would be affected by this. More than a third of the gross acres in those districts are now owned by the Federal Government. The counties in which this land is located would be guaranteed about $1,870,000 a year, Federal money making up the balance between timber sales and other receipts and this figure.

Under this plan four counties in the Eighth District of Minnesota would get about $84,000 a year where the four—Cook, Lake, St. Louis, and Itasca—now get about $7,000 a year. The Twelfth Congressional District in Michigan, six counties participating, would divide about $63,500 a year. The Tenth Wisconsin District would split about $43,500 and the Eighth Wisconsin District about $35,445 a year.

Federal forests are naturally in sections where the land is not very valuable. As a result, under the present conditions, the taxpayers in the poorest counties in many States are expected to pay an important part of the bill for a Federal-forest program which will benefit the whole country. The Colmer-Harrison bills would correct that bit of injustice. These bills would also be a protection for those who live in thinly settled sections of the country, or depend upon property there for their living. People who live in great cities are likely to favor all sorts of restrictions upon the development of land and the acquisition of vast areas by the Government but to be less enthusiastic about paying their share of the cost of maintaining local government in such localities. These bills are designed to spread the burden fairly.

Canal from Beaver, Pa., to Lake Erie

EXTENSION OF REMARKS

OF

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

RESOLUTION OF THE PITCAIRN (PA.) BOARD OF TRADE

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

THE PITCAIRN BOARD OF TRADE,
Pitcairn, Pa., June 13, 1939.

RESOLUTION OF THE PITCAIRN BOARD OF TRADE

Whereas the proposed construction of a canal from Beaver, Pa., to Lake Erie is an unsound business proposition because there is not a definite need for it;

Whereas the tax-constructed and tax-maintained canal would be unfair competition with the present tax-paying private enterprise;

Whereas $240,000,000 of an expenditure of the people's money is excessive because the canal would serve only a few industries;

Whereas the canal would be inoperative during the winter months;

Whereas the construction of the canal would eliminate some 8,000 to 10,000 railroad employees in Allegheny County: Therefore be it

Resolved by the Pitcairn Board of Trade through its board of directors and officers, That they go on record as unanimously opposing the construction of the proposed canal from Beaver, Pa., to Lake Erie, in whole or in part, and that copies of this resolution be sent to Hon. JAMES J. DAVIS, Senator from Pennsylvania in United States Congress, and Hon JOHN McDOWELL, Representative in United States Congress.

Respectfully submitted.

E. K. LANG,
Chairman of Committee.
WM. SKILES.
CHARLES R. DECKER.

The American Market

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

RADIO ADDRESS BY HON. CHARLES HAWKS, JR., OF WISCONSIN

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio at Madison, Wis.:

Wisconsin farmers, workers, businessmen, and manufacturers are today deeply concerned over the foreign-trade policy of our country. During this session of Congress much has been said, pro and con, regarding the reciprocal-trade agreements of the Roosevelt administration, and much emphasis has been placed on the effect of these trade agreements on the American standard of living.

It isn't very difficult to recall the days when the policy of the United States in regard to foreign trade was one of protection. I believe it is a perfectly honest statement to say that our country became wealthy and powerful under a system of protection which dates back to the days of Alexander Hamilton. As compared to the few periods of free trade, the days when our markets were protected, when our labor standards were reaching new heights, and we had a steady industrial growth, the days of protection stand out as a shining example of the course we should follow in the future.

However, in the few minutes I have today I would like to point out that tied up with the success of a policy of protection during those years of prograss was the fact that we had the largest

free-trade area in the world in which to develop industrial and economic efficiency right within our own borders.

To quote Governor Cochran:

"As a result of the removal of the barriers to the free flow of commerce among the States by virtue of adoption of the Federal Constitution, the United States became the greatest free-trade area in the world. It was this advantage which permitted the rapid settlement and development of the country. * * * As a matter of fact, the absence of internal-trade restrictions has been one of the greatest factors in making America great."

During those days we did not have barriers between States; and the absence in the past of restrictive laws between States enabled the great industries of our country to develop mass-production technique, which has builded a tremendous market within our own boundaries. The existence of this market has justified the huge expenditures for capital and plant necessary to bring about economies in production such as to give many common laborers an automobile in which to drive to work. The existence of these free markets within our own country has made possible the employment of labor at wages unparalleled in the world.

It has been pointed out that in recent years over 1,000 State laws have been passed that deny complete freedom of trade between the States. These laws are trade barriers. They fall under various classifications, such as licenses, taxes, quarantine regulations, ports of entry, restrictions on movements of people, restrictions on the practice of certain trades and professions, and restrictions on purchase, sale, transportation, and use of commodities and services. No State can enact restrictive laws and regulations, whether direct or indirect, aimed at its sister States without incurring almost certain reprisals.

In order to obtain the benefit of a full and free exchange of commodities between States these State laws must be repealed. It isn't difficult to see how contradictory we have been during these later years. The Federal Government, particularly the present administration, has developed the principle of free trade under reciprocal agreements to a point never before dreamed of in this country. During the period that this free trade between nations has been developing, our own States have gone into a program of restricted trade between themselves that is destroying our home market.

I believe that this interstate restrictive policy has been developed as a blind defense against the much broader free-trade policy of the administration. We have adopted a good-neighbor policy between nations, but have at the same time become anything but good neighbors among ourselves. As I have previously pointed out, a good-neighbor policy should work both ways. If we neglect to be good neighbors to our own people we cannot be successful as good neighbors to the rest of the world.

I am not going to bore you with a lot of figures, because those of you who wish to study more closely the import and export position of our country today can obtain this information by writing to me in Washington.

I merely want to point out that since January 1 of this year imports of foreign agricultural products have increased by leaps and bounds over the same period 1 year ago.

The sad story of reciprocity as administered by the New Deal is too deeply impressed upon the minds and hearts of every Wisconsin citizen for me to find it necessary to go into further detail. The farm program of this administration is not a program at all, but a terrible experiment with human and property values. Those agricultural activities which have received the greatest benefits of Federal patronage and Federal subsidy during the past 6 years are in a most deplorable condition. In order that the administration may completely pauperize agriculture they are constantly making attempts to subsidize other fields of agricultural activity. If our farmers know anything, they know that the Triple A cannot succeed and that they can't ever again be prosperous until this huge experiment has been junked and we have returned to sound agriculture and sound economic policies.

If I were to develop a farm program for the United States, I would start out, first, by canceling the so-called good-neighbor reciprocal-trade agreements. I would next break up the Triple A and return farm administration to the farm, instead of having it here in Washington under a bunch of crackpot theorists.

Through the full force of farm and business organizations I would make the politicians in the various States repeal the laws that are restricting free trade between our States. I would immediately set up foreign trade barriers to protect the farmer, the worker, and the businessman, and give each and every one of them a chance to make a living on the American standard, the greatest standard of living in the world.

By initiating a program of this kind we would almost immediately increase the purchasing power within our own boundaries, thereby tremendously increasing the demand for cheese, butter, corn, and wheat, and other American products. We would again put into the hands of the greatest purchasing power in this country, the American farmer, his buying power, from whence all prosperity in this country must begin.

It seems to me that we have had about all of the experimental programs that we can stand for at least another generation, and I am sure you will agree with me that the protection of the American market for the American people is a pretty sound policy on which to begin our road back to recovery and prosperity.

To follow the pattern of the New Deal during the last 6 years is to watch the development of one experiment after another. And today the Congress of the United States, in which I am your elected representative, is being presented with even more ridiculous schemes and experiments than we have ever had in the past.

Because of the failure of their ill-thought-out legislation of the past 6 years, and because conditions in this country today are almost at an all-time low, New Deal spokesmen are now talking about changing the monetary policy of our country. They want to start printing money; they want to repudiate debts; and they are trying to kid the great American public into believing that they can spend themselves out of debt and into prosperity. Can a drunken man drink himself sober?

For 6 long years their only program has been one of spending, hoping against hope that huge appropriations of Federal funds would start the wheels of industry and business turning. They know from experience that this won't work; but for lack of a sound program and because they haven't got what it takes to live within their income, the New Dealers in 1939, prodded on by a determined administration, continue to spend and spend and spend.

The President and his spokesmen have intimated that the debt of this country is nothing for us to worry about. They have the unmitigated gall to imply in their fireside chats and through other publicity mediums that we will never be forced to pay our debts. What a fine commentary upon the moral standards they have sunk to!

I do not believe that the American public is going to permit such a rotten philosophy of government to continue much longer. The countries that have repudiated their debts in the past have not only lost their credit standing in the world but have lost the respect of other nations.

We cannot continue these experiments of the New Deal and maintain our self-respect. We are a nation of free people and have reached these heights because we have been free.

We should start in immediately on a good-neighbor program that is an honest program. We must stop playing politics with our economics as well as with our citizens. We should have less government in business and more business in government. We should all assume our normal responsibilities toward our Government and make the principles of the Golden Rule work toward the development of our physical, moral, and spiritual values.

Proposed Expansion of Military Air Force

EXTENSION OF REMARKS

OF

HON. CHESTER C. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

Mr. BOLTON. Mr. Speaker, I desire to comment rather briefly upon the supplemental military appropriation bill for 1940, which measure has been reported to the House and which primarily is for the purpose of carrying out the recommendation of the Chief Executive sent to Congress some months ago calling for an augmentation or expansion of our Air Corps.

While there is included in the measure appropriations for increase of our garrison and seacoast defenses in Panama, as well as funds for educational orders with industry, the bulk of the appropriations carry out the authorization made by Congress during this session for an increase in the aviation forces of our Army. The measure appropriates funds not only for the purchase of an increased number of planes, bringing up our strength of military planes to 5,500, but also calls for an increase in personnel, matériel, and equipment, air bases, and quarters necessary for this increased program. The total cost of this expansion of the Air Corps is estimated at $300,000,000, of which $50,000,000 has already been appropriated in the Regular Army appropriation bill for 1940. The program as submitted, as stated by the Chief of Staff and others in authority, would be a well-balanced program covering this activity, but as might be expected, such increase will amount to an increased annual maintenance charge in the future for the Air Corps alone of from $250,000,000 to $300,000,000, and further will bring our total appropriations during the present session of Congress for national defense, including both the Army and Navy, up to the appalling figure of nearly $2,000,000,000.

The reasons given for this expansion program are primarily because of the political unrest existing throughout the world today and the avowed policy of our administration of protecting the Western Hemisphere; or, in other words, a reiteration of our time-honored Monroe Doctrine and the increased development and use of aircraft in military activities.

Undoubtedly these reasons are fundamentally and basically correct, but there are certain objections to the program as submitted, which I think should be carefully considered before the plan is adopted.

We all realize that the production of aircraft cannot be accomplished in a short time, but, according to experience and testimony given our committee, takes from 18 to 24 months, depending somewhat on the type and size of orders given industry. Today industry is suffering from lack of orders, and consequently the production which might be desired or is essential in time of emergency is dependent in part upon the condition in industry and its ability through its trained personnel and understanding of requirements to promptly meet specifications and plans submitted.

Testimony submitted by both industrial and military experts to the subcommittee studying this program leaves no doubt that the United States has lost its proud position as leader in aircraft development which it held up to a few years ago. These experts agree that we are from 3 to 5 years behind foreign powers in the field of aircraft development and production. In other words, what we term up-to-date planes today are much inferior to those of foreign make from a military standpoint. Throughout the hearings before our committee great emphasis was placed on the fact that our efforts should be in the direction of development of quality instead of quantity production. Only through increased research and development activities can we hope to regain the position we formerly held in the air and to successfully cope with the planes of foreign nations.

To meet this situation we have during the current session of Congress appropriated, and with action on this present measure will have appropriated, a sum total of $10,000,000 for research and development by the Air Corps. In addition, through the educational orders, there has been provided an item for aircraft manufacturers. In other words, your committee is taking steps toward stimulating research not only by governmental agencies but among industry itself.

Keeping in mind the fact that foreign nations are far ahead of us in the development of military planes and that we are endeavoring through research and development to match their pace, the question arises as to whether we ought to plunge into wholesale purchase of planes based on our present inferior designs in order to bring the number of planes up to our full quota of 5,500 or whether it is not more logical and more practical, as well as less expensive, to produce a certain number of planes per year. The latter plan would give us the benefit of improvements each year, would allow manufacturers to proceed on a fairly even keel, and without necessity of expansion one year and no contracts the following year. Anyone who has had experience in industry knows that with a wide fluctuation of production it means carrying facilities required in heavy years over the lean years and is expensive to the manufacturer, who must write some of this increased cost into his prices to the Government.

Apparently influenced by a desire to spend immediately, and in keeping with the present "spending for recovery" program, recommendations have been made to Congress by the Chief Executive and the Budget Director for immediate expansion through purchase of a sufficient number of military planes to bring our full quota up to 5,500 during the next 2 years. This means placing orders in the near future for approximately 3,000 planes to be delivered during the next 2 years. Upon delivery we will find ourselves equipped with numbers of planes, but very inferior in performance and design. If we are building on solid ground, we will not overlook quality for quantity. Merely the mention that we have our full complement of planes will not awe those nations already in possession of the knowledge that their planes can outmaneuver our best planes and that their equipment is fast enough to strike and get away. Performance is the key to successful combat.

I wish to go on record as strenuously opposed to the wholesale ordering of inferior planes merely for the purpose of reaching our quota. We must become practical if we are to keep peace with the rest of the world. We ought above all things to stagger our purchases of planes over the next 3 or 4 years, during which time we will be able to take advantage of such developments as will result from an expanded research program. By this method we will in a year or two additional time have reached our full complement of planes, and they should be equal, if not superior, to the aircraft of other nations. The benefit of such a program is apparent, not only from a development and efficiency standpoint, but because, through staggering procurement, we will have a more balanced production program on which the aircraft industry will be continually working due to necessary replacements.

One of the reasons for our present economic situation is that the requirements upon industry are such that for self-preservation it must operate on a day-to-day basis with wide fluctuation of production and improvements dependent entirely upon current orders. The plan for wholesale purchase of inferior planes during the next 2 years is the result of the same reasoning which today is holding back industry in general. It will lessen the efficiency of the aircraft industry and the Government will be paying more for planes than would be the case if we proceeded along practical lines and purchased approximately 1,000 to 1,500 planes per year, through which method we could continually reestablish the superiority of our air force by taking advantage of the latest developments.

I want to call your attention particularly to the fact that this bill appropriates sufficient funds to bring the number of planes up to the full quota of 5,500. At the same time the bill provides that a sufficient number of planes shall be purchased to bring the total up to approximately 4,300, and that decision as to contracting for the additional 1,200 planes to complete the authorized quota be entirely in the hands of the President, dependent upon his judgment as to military necessity. This provision can only be accepted as a subterfuge. It is absolutely meaningless inasmuch as the President has already recommended that we immediately enter contracts to complete the full quota of 5,500 planes.

It is estimated that by the end of the fiscal year of 1940 we will have the full complement of 2,320 military planes, as called for by the Baker Board. It would certainly be preferable under existing conditions to authorize the purchase of from 1,000 to 1,500 planes per year during the next 4 years, gradually building to our full quota and taking care of replacements. The proposed program of the Air Corps calls for 3,300 planes of military value with a rotating reserve of 40 percent. Heretofore the Air Corps has operated on a 12½-percent reserve.

At the time Congress enacted the legislation authorizing this increased program, the suggestion of spreading purchases over 3 or 4 years was made but rejected. I believe it would be wise for Congress to reconsider its action and substitute an expansion and procurement program through which we will attain greater efficiency at considerable saving to the Nation. Why should we go ahead and purchase a full complement of planes immediately, when we know that from the moment they are delivered, so far as efficiency and performance are concerned, they will be inferior by several years to the planes of other nations and in a short time considered as obsolete?

Tax-Exempt Securities

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

ARTICLE FROM FORTUNE

Mr. O'CONNOR. Mr. Speaker, in connection with my bill, H. R. 5632, providing for the taxation of tax-exempt securities, I ask unanimous consent to extend my own remarks in

the RECORD and include therein a brief statement based on the area of agreement at the second Fortune magazine round table dealing with taxation and recovery. The article is a reprint from the May issue of Fortune magazine:

When large incomes are encouraged to take refuge in tax-exempt securities another blow to venture capital is given. Today it is more profitable for a wealthy man liable to heavy surtaxes to accept a small rate of interest from a tax-exempt security, involving virtually no risk, than to invest in taxable enterprises holding out the hope of a far greater return. This advantage, however, does not extend to people of small means. For example, to a married man with a net income of $5,000 a 3-percent tax-exempt security will yield the equivalent of only a 3.12-percent taxed security. But to a man with an income of $500,000 a year a 3-percent municipal bond upon which he pays no taxes is equal in value to a taxable security yielding 10.7 percent. Why should a wealthy man take a risk on investments holding out the dubious hope of an 11-percent yield when he can find an equivalent net return in tax-exempt securities that involve no risk at all?

At present there are more than $19,000,000,000 worth of State and local tax-exempt securities outstanding. A large part of these securities is still held by institutions that do not profit from tax exemption but that do insist on safety, but nearly half of such securities are also held by individuals. Following the reduction of surtaxes in 1925, the ratio of tax-exempt interest to the total of millionaire incomes dropped from 8.41 percent to 2.98 percent, but following the reimposition of high surtaxes in 1932 the percentage of income from this source rose to 6.4 percent in 1933 and 18.43 percent in 1934. That these figures are not conclusive is indicated by the fact that in 1935 the percentage of income from tax-exempts fell to 6.5 percent. This may have been due to the fact that with recovery income from stocks increased, while tax-exempt income remained constant. Nevertheless, we are of the opinion that when the higher surtaxes are raised there is an inevitable tendency on the part of those subject to such surtaxes to increase their holdings of tax-exempt securities.

We all believe that these tax exemptions should be discontinued. Coupled with high surtaxes the present policy of tax exemption is a positive discouragement to risk taking on the part of those most able to afford it. The States and municipalities complain that termination of tax exemption would increase their cost of borrowing. But in the last analysis the same taxpayer foots the bills for the Federal, State, and municipal Governments. He should look with favor upon a tax system that promotes rather than hinders the development of new enterprise and employment.

Although the round table is unanimous as to the desirability of ending tax-exempt securities for the future, differences arise as to the best means of bringing this about. We cannot enter upon a discussion of whether Congress has the constitutional authority to tax State securities. Nevertheless, a majority of us believe that Congress should pass a law ending the exemption of all such securities issued in the future, leaving to the Supreme Court the task of deciding whether such a statute would be valid. We favor this course because it is doubtful whether three-fourths of the State legislatures in any foreseeable period would approve an amendment authorizing Congress to tax their securities unless Congress gave something to the States in return.

Certain of our colleagues do not go along with us here. They express the view that should the Supreme Court decide that Congress by ordinary statute could tax future State securities, it would follow that Congress had the power to tax existing securities. Investors, whether individual or institutional, have bought tax-exempt securities to the amount of more than $19,000,000,000 in reliance upon tax immunity. It would be unwise for Congress to give the Court an opportunity to reverse a long-settled doctrine, affecting the value of such a vast quantity of outstanding securities. They believe that a constitutional amendment should limit the termination of tax exemption to securities issued in future.

The majority of us do not fear that simply because Congress may have the power to tax tax-exempt securities, whether outstanding or to be issued, it follows that Congress would exercise this power retroactively. Congress and the President could make it clear that they have no such intention; and even though any commitment on their part would not bind future administrations, it would have great moral weight.

Airplanes and National Defense

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

EXCERPTS FROM HEARINGS ON H. R. 6791

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting excerpts of the hearings on the supplemental military appropriation bill for 1940, H. R. 6791.

We had before our committee many of the military experts, and it has been suggested to me by some of my colleagues that I insert certain statements from these experts that I think are essential in interpreting our national-defense needs.

On page 273 of the hearings you will find the statement of Hon. Harry H. Woodring, Secretary of War. I am inserting some of the questions asked Mr. Woodring and his answers to same:

Mr. SNYDER. Mr. Secretary, we have asked you to come down to close our hearings on the last increment of the President's national-defense program, presented in his message of January 12, 1939. We had hearings on the first increment in connection with the regular 1940 appropriation bill, which included $50,000,000 for 565 airplanes, and later on the second increment—the $110,000,000 "critical items" phase—and now we have this last increment dealing with Air Corps expansion, expansion of the garrison in Panama, and educational orders.

It seemed to us that it was only fitting and proper that you should come up and give us the benefit of your views before we proceeded to draft the bill which we shall present to the House. We should be glad to have you proceed, Mr. Secretary.

Secretary WOODRING. Most of the members of this committee know that for the past several months the world has trembled in fear and apprehension of the approach of another harrowing major conflict. Kaleidoscopic changes in the status of peoples and nations have been almost continuous. The schoolboy finds his geography book of yesterday out of date today. These international circumstances, or, you might say, world conditions, of course, have directed consideration to the defensive requirements of the United States. * * * An antiquated Army can serve only as a millstone upon the back of the taxpaying public. All of the millions of dollars that this committee has appropriated since I have known it would be worth very little unless augmented by increased appropriations to modernize and to keep that investment that we have already made, to keep it in the position where military experts tell me that it is necessary to keep it, to extend, to expand, and to modernize, so that we can give you military assurance that our defense is equal to the modernization and the improvements that have gone forward in other countries of the world.

I am firm in my belief that final enactment of President Roosevelt's program for vitalization and further strengthening of our defenses will go far toward complete assurance of peace and security—assurance that the sons of the veterans of the 1917–18 world conflict will not be called upon to assume the wartime responsibilities and burdens which devolved upon their fathers.

AIR CORPS EXPANSION PROGRAM

The Chief of Staff, General Craig, and other War Department officials have already appeared before this committee and afforded its members a rather detailed explanation of the items under consideration, particularly of those pertaining to the expansion of the Air Corps. I wish to emphasize that the Air Corps expansion program is not designed to meet any definitely foreseen emergency, nor is any item in the whole defense program. The program is a measure of preparedness against any eventuality, a well-rounded defense program that permits America to speak with authority for peace and should be authorized and started immediately.

Please let me discuss the genesis of the proposed airplane program, which has been discussed in many circles. Studies are continuously in progress in the War Department on the varied requirements for national defense and on the means for meeting the different requirements occasioned by the changing factors upon which they depend. Not only the state of political tension throughout the world which has obtained in recent months but the extremely rapid development in aviation and the consequent emphasis being placed upon aerial warfare demanded reorientation of aviation requirements. Studies under way last fall concerned not only the possible M day requirements but subsequent requirements. As a basis for computation of costs and for an examination of the capacity of the airplane industry, various programs were set up. Some extravagant statements were made by some extravagant public speakers, but finally close appraisal of all tentative studies led the way to a modest, balanced program based alone on the defense of this Nation. My assumption is that out of that came a well-balanced, modest program. The balanced program finally adopted called for 5,500 planes. All experience indicates that a balanced program demands excess planes over your initial defense program. An excess over initial requirements of combat planes will be necessary in the early stages of an emergency to replace the wastages of war until industry can absorb the production load; an excess over initial requirements of training planes will be required because of the increased training requirements in an emergency. Provision for excess training planes now will permit industry to concentrate on production of combat airplanes should a major emergency arise.

* * * * * * *

EXPANSION OF PANAMA GARRISON

Let me turn to the requirements for the defense of the Panama Canal. Assurance of the impregnability of that interoceanic

waterway is absolutely vital to the military security of the United States, a nation which places its initial defense reliance upon its naval forces. The Navy must at all times be assured of rapid and safe transit of the Canal from one ocean to another. The defense of that waterway is a responsibility of the Army. It is essential, therefore, that the personnel of the now undermanned coast-artillery installations, particularly those of the antiaircraft-artillery units, be augmented at the earliest practicable moment. It is essential, too, that the aviation elements in the Canal Zone be increased. The day has passed when the seacoast-defense guns on the Atlantic and Pacific sides of the Canal provide the primary defense of that waterway. It is with the defense of the Canal in mind that we recently have ordered the creation of the Puerto Rican Department with its projected air base. The defense of the Canal likewise enters into the considerations governing the establishment of air bases in the southern part of the continental United States. Augmentation of the aviation elements in the Hawaiian Islands will also give added security to the Canal against attack from the Pacific. As a matter of fact, assurance of the impregnability of the Panama Canal alone justifies practically all of the Air Corps expansion program. * * * I consider the President's program exceedingly conservative and modest. Did not a single war cloud hover in the skies, scientific technical developments in the means of warfare still would demand reorientation of our defensive requirements.

Excerpts from Col. Charles A. Lindbergh's testimony before the committee:

Mr. SNYDER. Colonel, you have laid particular emphasis upon the matter of quality. Would you care to express yourself upon the quantity phase. The estimates pending before us call for 2,467 additional airplanes, of which a considerable number will be in a rotating reserve. Would that seem to you to be an unreasonable measure of air-defense preparation?

Colonel LINDBERGH. I do not believe it is either practicable or advisable for this country to attempt to compete with Europe in the quantity production of military aircraft under present conditions. On the other hand we should certainly increase the strength of our Air Corps and I believe the present plans are very conservative in this respect. It would, in my opinion, be an error to reduce the number of planes called for in the expansion program of the Army Air Corps, unless it is necessary to make a slight reduction in quantity in order to obtain an improvement in quality.

Mr. SNYDER (following discussion off the record). Speaking for the committee, Colonel Lindbergh, we appreciate more than we can say in words your coming up here and talking to us so frankly and informatively.

Colonel LINDBERGH. I wish I could have given you more information on the subject.

Excerpts from testimony of Hon. Louis Johnson, Assistant Secretary of War:

Mr. SNYDER. The authorization act contemplated the expenditure of some of this money during the fiscal year 1941. Why are you asking for the entire amount now?

Colonel RUTHERFORD. The program is so important that we want to get it out just as rapidly as possible. It is a very difficult matter to say how much will actually be withdrawn from the Treasury in the first year or in the second year, and we would like to get as much as possible accomplished in the first year. Certainly the program will run into the second year, but to be entirely safe and to leave our hands completely free we felt that the total amount in cash would be the best thing that we could ask for.

Mr. SNYDER. You have some reason, economic or otherwise, for making the statement that you would like to get most of it the first year?

Colonel RUTHERFORD. It is such an important element of preparedness that we want to get the program completed just as quickly as possible.

Mr. SNYDER. Would there be any financial advantage in having it available for expenditure the first year?

Mr. JOHNSON. I propose to let the whole business the first year or as soon as possible, after they have shown satisfactory qualifications as bidders.

Mr. COLLINS. Why as soon as possible? You folks are alarming me with all of this "as soon as possible" stuff.

Mr. JOHNSON. No; not in that sense, Mr. COLLINS, but in the sense of getting it started.

Mr. BOLTON. Is it not better, Mr. COLLINS, to be prepared industrially than it is to spend all of these millions of dollars for troops and, so forth, as we are doing today, and not have the material to fight with?

Excerpt from testimony of Gen. Malin Craig, Chief of Staff:

Mr. COLLINS. Did you initially recommend 5,500 or 6,000 planes or any such program as that?

General CRAIG. This 5,500-airplane program, as I have stated before, has now and always has had my unqualified approval.

Neutrality

EXTENSION OF REMARKS
OF
HON. W. O. BURGIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 20, 1939

EDITORIAL FROM THE GREENSBORO (N. C.) DAILY NEWS

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which was published in the Greensboro Daily News of June 15:

[From the Greensboro (N. C.) Daily News of June 15, 1939]

NEUTRALITY ARGUMENT

One of the strongest arguments that the Daily News has encountered for passage of the administration sponsored Neutrality Act, insofar as our own reaction is concerned, inheres in the oppositional statement of Representative HAMILTON FISH to the legislation in question.

The New York Republican has declared that lifting of the arms embargo, as proposed in the discretionary power given the President under the pending measure, would be helping Great Britain. While Mr. FISH did not say so, the inference, in clear apposition to his statement, is that failure to lift it would mean helping Germany. Between these alternatives the overwhelming majority of the American people will have no difficulty whatever in arriving at a quick and abiding decision.

There is between these two extremes, moreover, a middle ground which presses for consideration. Under a rigid bill, where this or that step is mandatory if any foreign nation takes certain action, determination of American foreign policy, regardless of our own interests and necessities, is left to outside forces, the very nations whose policies may be inimical to our own programs and ideals.

Instead of accepting or rejecting a measure because it may help Germany or even Great Britain, to whom our sympathies and manifold ties naturally bind us, "it might occur to the American people," as the Lynchburg News summarizes, "that the best plan would be to leave ourselves free to help whom we please at the time it pleases us." That, according to the Daily News' understanding, is precisely what the pending measure, embodying the view recently expressed by Secretary of State Hull after prolonged study and deliberation, would do. Nothing, it seems to us, could be more dangerous, amidst prevailing uncertainties and the obvious ascendance of balance-of-power international politics, than to tie our Government's hands or commit it in advance to a rigid course which some other power, by deliberate action, would call into force.

The Public Interest Demands a System of Transportation Which Insures to the Producer and the Consumer the Inherent Economies of Each Form of Transport Service

EXTENSION OF REMARKS
OF
HON. LINDSAY C. WARREN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 20, 1939

STATEMENT BY SEVERAL REPRESENTATIVES

Mr. WARREN. Mr. Speaker, a bill placing all water carriers in this country under the control and regulation of the Interstate Commerce Commission will soon be up for consideration on the floor of the House. A number of Members of the House feel this legislation is of deep concern to the country. These House Members feel that this proposed legislation should not pass. They have selected a steering committee and in a statement addressed to the House Members they have pointed out a number of the objectionable and dangerous features in the legislation.

Mr. Speaker, I ask unanimous consent to have this statement printed in the CONGRESSIONAL RECORD.

The statement is as follows:

DEAR COLLEAGUE: The Wheeler-Lea regulation bills present a problem of vital concern to the Members of the House and to the country. This proposed legislation will soon be up for consideration upon the floor of the House. We are presenting you some facts which we believe of the highest importance and sincerely hope that you will read and consider them.

All the important agencies of the Government charged with dealing with the transportation problem have been called upon to give their views regarding this legislation. These agencies consist of the War Department, which includes the Corps of Army Engineers, the Maritime Commission, and Mr. Eastman, the chairman of the legislative committee of the Interstate Commerce Commission. The facts they present are pertinent and important. We present them to you and urge that you study and weigh them.

WAR DEPARTMENT

The Secretary of War is especially fortunate in having under his direction and control the Corps of Engineers of the United States Army. There is no force of Government officials who are more competent or more devoted to the public interest than the Army engineers. Under the direction of Congress, they have expended hundreds of millions of dollars in the development of facilities for low-cost water service. Every dollar has been honestly and economically expended. Their duties require them to be familiar with the economies and public benefits of these services before undertaking the improvements.

Chairman LEA, of the Interstate and Foreign Commerce Committee of the House, on April 8, acting in the public interest, called upon the Secretary of War for the views of his Department regarding the provisions of House bill 4862, known as the Lea bill. In due course the Secretary replied to Chairman LEA, giving the views of that Department regarding the proposed legislation. These views are most instructive and should be very helpful to Members of Congress. In discussing the waterway features of the regulation bill, the Secretary said:

"As far as this Department is aware, there is no dissatisfaction on the part of the public with the transportation service afforded on the inland waterways; charges are fully compensatory and there is no destructive rate warfare as between carriers."

Dealing further with the dangers of regulation to low-cost water services, the Secretary states:

"It has not been possible to find in the 243 pages of this bill a single proposal that the railroads do anything whatever toward the amelioration or improvement of their own situation. All the provisions seem designed to free them from restraints and obligations, while imposing prohibitive tolls and restrictions on their water competitors and making it more expensive for the public to move freight. Under these provisions inland water carriers can easily be regulated and taxed out of existence without the recapture of enough tonnage to effect railroad earnings appreciably."

The Secretary, in his letter to Chairman LEA, also makes the following instructive and helpful statement:

"It is essential to realize that water transportation is unlike all other forms of carriage. It is the aggregate of thousands of small, independent operators on the inland waterways which gives the character, furnishes the natural regulation, and automatically enforces the fair practices required in this type of transport. But it cannot sustain for long the concerted attack of powerful competitors, not because it is not basically sound but because every resource of a powerful adversary has been brought to bear to prevent its becoming established on a normal basis. The remarkable fact is, not that there is so little water-borne tonnage, but that so large a volume actually seeks the waterways in the face of the most determined efforts to prevent it."

We do not believe there is any agency of the Government which enjoys more completely the confidence of the Members of Congress than the Corps of Engineers of the Army, and the services of this corps are at the command of the Secretary of War. We quite agree with the statement of the War Department that there is no dissatisfaction on the part of the public with the transportation services afforded on our waterways, and insofar as we have been able to learn, freight charges on these waterways are fully compensatory and there is no destructive warfare between the carriers.

We are impressed with the statement that while vast abuses are possible under the bill, it is not possible to find in the 243 pages of the bill a single proposal that the railroads do anything whatever toward the amelioration or improvement of their own situation. We are also impressed with the conclusion of the Department that the very nature of the services upon the waterways gives character, furnishes natural regulation, and automatically enforces the fair practices required in this type of transport. We fully recognize the unselfish public interest of the War Department.

MARITIME COMMISSION

The views of the Maritime Commission, as expressed by Chairman Land, are clearly opposed to the regulation of water services by the Interstate Commerce Commission. (See p. 6078, CONGRESSIONAL RECORD of May 24, 1939.) Congress has placed under the charge of the Maritime Commission all the water-carrier regulation which it has thus far seen fit to authorize. With reference to the provisions of the Wheeler bill, Admiral Land said:

"It proposes to expand and change the method of regulation of water transportation, not on the theory that the public using the water carriers demands or would be benefited by such regulation but on the theory that the present economic situation of the railroads require the form of regulation of water carriers provided for in this bill. I think that from your own experience in Congress you will arrive at the conclusion that there is no demand for the enactment of the present bill on the part of shippers or the general public.

"As a matter of fact, farm organizations, shippers, and their trade associations are alarmed at the proposals which the bill contains and sincerely believe that its passage would be detrimental to their interests. The farmers and other shippers in particular are convinced that the effect of the present bill would be to force water transportation rates to levels closely approximating those of rail rates and higher than necessary to reflect the reasonable cost of water transportation, and that they, the users of water transportation, would be footing the bill for the sole benefit of the railroads."

In discussing the interest of the railroads in this proposed legislation, Admiral Land had the following to say:

"The seven principal western railroads carried 208,000,000 short tons of revenue freight in 1936 whereas both the common and the contract intercoastal carriers by water together carried 7,500,000 short tons. If this water traffic had moved by these western railroads, it would have increased their revenue tonnage by only 3.6 percent, and by reason of the low rates applicable to most of the commodities their revenues would be increased by an even smaller percentage."

The attitude of the Maritime Commission toward the transportation problem and toward the general public, as well, is clearly indicated in the following language used by Admiral Land:

"It is to be kept in mind that the primary purpose of the Congress in fostering our domestic commerce is to provide transportation at reasonable costs, to be fair to the carriers in the trade but not at the expense of the shipping public. It is particularly important that this congressional purpose be adhered to at the present time in the interest of our national economy in order to promote the use of these facilities in the solution of one of our major economic problems, that is, the greater distribution of farm products and other basic commodities. As an illustration, water rates on the principal commodities moving in the intercoastal trade, range from about 30 to 80 percent of rail rates and on the average are about one-half of the comparable rail rates."

We are profoundly impressed by the statement of Admiral Land regarding the savings to the public, in the intercoastal use of water transportation. Our information convinces us that water-carrier services are being rendered upon the lakes and upon our inland rivers at much greater differentials under the rail rates than the savings shown by Admiral Land in the intercoastal trade. How long do you think these economies will continue, if Congress permits these water-carrier rates to be fixed by the Interstate Commerce Commission?

Joint rail and water rates on our inland rivers have been under the control of the Interstate Commerce Commission for approximately 20 years, and those rates, fixed by the Commission, range from 80 to 95 percent of all the rail rates, while the unregulated port-to-port rates on our inland rivers range from one-fifth to one-half of all rail rates. Under the regulation of the Interstate Commerce Commission, truck and bus rates are now approaching rail rates throughout the country.

It is perfectly apparent that regulation such as this is not in the public interest. Referring to the proposal of the Wheeler bill that Congress place water services under the Interstate Commerce Commission, Admiral Land makes the following pertinent observation:

"Congress has previously rejected all requests of the railroads or the Interstate Commerce Commission to place the regulation of water carriers under that Federal agency. It has very recently reaffirmed its position that regulation of rail carriers and water carriers should be kept distinct.

"The Merchant Marine Act, 1936, contained a provision authorizing the President, after 2 years, to transfer the regulatory powers of the Maritime Commission over water carriers to the Interstate Commerce Commission. On the basis of a careful study of this problem, the Congress saw fit in the last session to withdraw this authority for transfer by Executive action."

Like the Corps of Army Engineers, Admiral Land was schooled in patriotism. He has rendered valuable services in the defense of his country. He is rendering a useful service in his efforts to build an American-flag merchant marine. His experience and judgment in dealing with water-transport services is well worthy of the sympathetic consideration of Congress.

INTERSTATE COMMERCE COMMISSION

Commissioner Joseph B. Eastman, chairman of the legislative committee of the Interstate Commerce Commission, appeared before the Wheeler committee on April 13 and 14 last to voice opposition to the Wheeler bill. He pointed out many serious objections. He especially objected to the provision to virtually codify the entire Interstate Commerce Act. He conceives no need for such a codification and feels that the time is too short to determine all the dangers in such far-reaching legislation. The following is an extract from Commissioner Eastman's testimony:

"In the first place, it seems to me that every major objective of the bill can be accomplished, and readily, without such a codification.

"In the second place, it seems to me that there is no real demand for it.

"In the third place, I think that it would be a better plan to continue to have a separate part for motor carriers and a separate part for water carriers. * * *

"As a matter of fact, I do not personally anticipate that the regulation of water carriers will be of any great benefit to the railroads. * * *

"Fourth, if there were need for such codification, a public body should do the work and make a report of what it has done before the matter comes up for consideration (1). * * *

"I mean a public body as distinguished from a committee of railroad executives and railroad employees, a body that looks at this matter from the standpoint of the public interest, and then makes a report in which it shows just what it has done, what it proposes to do, and what the reasons are. * * *

"If you are going to undertake such an important job as the codification of the Interstate Commerce Act, I think, as a matter of procedure, the initial work should be done by a body representing the public and that body should make a report which will disclose what it has done and the reasons for it, so that those who are directly interested and concerned can have full notice of what is being proposed, instead of being asked in the middle of a session to consider, without any such report, a bill of 183 pages, or two-hundred-odd pages, and be asked to look that through and to find out, at their peril, in what way it may affect them. I do not believe that is proper procedure."

There is no mistaking the views of Mr. Eastman as to the dangers incident to rushing this far-reaching and little understood legislation through Congress. We may not always agree with Mr. Eastman's views, he is, however, the best recognized authority on transportation in America and no man can question his ability, his integrity, or his patriotism. When Mr. Eastman sounds a warning, such as we have heard, it is time that Congress should heed it.

AGRICULTURE

No industry is so much concerned about low-cost transportation as agriculture. Farms are located far in the interior and nothing will do more to solve the agricultural problem than low-cost transportation in the agricultural area. Industry in the midst of agriculture is a great benefit to the farmer. Industry cannot thrive where freight rates are high. You can move your factory to the seashore where freight rates are lower but you cannot move your farm.

Factories have been developing and population has been increasing around the seashore until now 57 percent of our population live within 50 miles of the deep-water rim of the country. Agricultural States are suffering, their populations are not keeping pace, and their representation in Congress is declining. The agricultural belt in the upper Mississippi Valley lost 17 seats in Congress during the 20 years preceding the last census. Missouri lost 3 seats, Kansas lost 2 seats, Nebraska lost 2 seats, and Iowa lost 2 seats.

Agricultural groups have repeatedly appeared before committees in Congress favoring low-cost water services upon our inland rivers as an aid to agriculture. In recent years every farm organization, including the National Grange, the American Farm Bureau, and the Farmers' Union, have appeared to support these low-cost water services, and no farm representative has ever appeared to oppose them.

The hope of the farmer has been growing brighter. Waterway projects penetrating the great agricultural area are nearing completion. Low-cost water services shortening the distance between the farm and the market and between factory and the farm are soon to be available. And now, with this bright prospect ahead, this threat of I. C. C. regulation came to endanger the economical water services for which the farmer has waited so long. Every true friend of the farmer should do his utmost to defeat those Wheeler-Lea bills.

LABOR

As we have already stated, there is no public demand for this legislation. No one who pays the freight has appeared before either committee in Congress supporting it. No one has appeared in the name of the producing and consuming public. The shippers are not for it, numerous representatives of agriculture have recently appeared to oppose it, and none have favored it.

We are advised that large groups of water-carrier workers, realizing that their jobs are being jeopardized, are exerting themselves to defeat this legislation.

A large portion of the railway workers do not favor the Wheeler-Lea bills. To illustrate, Mr. A. F. Whitney, president of the Brotherhood of Railway Trainmen, in an address in Cleveland on May 11, 1939 (see the Railroad Trainman, June 1939) had the following to say:

"Today another serious fight is in progress in Congress, having to do with the railroad problem. This struggle revolves about the Lea bill, which was introduced early in the present session. That bill was drafted by Wall Street bankers and by members of the Committee of Six, and favors, of course, the banking interests, which eternally have come in for first consideration as against the rights of labor. We are not being fooled by some of the stuff which is being proposed. It looks innocent enough on the face, but when you dig into it you will find that it carries "teeth" for the purpose of biting into organized labor.

This Lea bill would like to leave the door open for reorganizations and consolidations of railroads, which, if carried into effect, would make great inroads into the ranks of labor. But I have taken the position, and expect to maintain it, that if there is to be a liquidation of any sort, it shall be a liquidation of the false capital structures which our bankers have fixed on the railroads rather than a liquidation of labor. Our jobs are vastly more important than the job of the "coupon clipper."

Thus we have the opposition of the War Department, the opposition of the Maritime Department, of Mr. Eastman, our best informed and greatest expert on transportation, the opposition of agriculture, of maritime labor, and a large block of railway labor. We have the opposition of industry, which must bear the burden and pay the freight.

In the face of such fears, anxiety, and warnings, does not sound public policy demand that action on this proposed legislation be delayed until the Congress and the country can find out what the Wheeler-Lea bills really mean and what their effect would be upon agriculture, commerce, and industry, as well as their effect upon the general welfare of the Nation as a whole? We sincerely hope that you will give this matter your serious and sympathetic consideration.

Respectfully submitted.

Lindsay C. Warren, North Carolina; Francis D. Culkin, New York; J. J. Mansfield, Texas; S. O. Bland, Virginia; Wesley E. Disney, Oklahoma; R. M. Kleberg, Texas; Vincent F. Harrington, Iowa; James C. Oliver, Maine; W. A. Pittenger, Minnesota; William M. Whittington, Mississippi, steering committee.

Wildlife Conservation

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. ROBERTSON. Mr. Speaker, the House leaders had planned tentatively to take up the conference report on the Department of Agriculture appropriation bill tomorrow, but the morning papers indicate that perhaps the report will not be ready.

One item in dispute is the grant-in-aid to the States for wildlife conservation under the so-called Pittman-Robertson Act. The House appropriated $1,500,000 for this purpose, and the Senate increased the item to $2,000,000, and the matter is still in dispute.

Last year the 10-percent excise tax on sporting arms and ammunition amounted to two million eight hundred-and-some thousand dollars, and we appropriated $1,000,000.

In the Senate hearings, at pages 460 and 461, is a letter from the Treasury Department stating that for the first 8 months of this year the collection under that excise tax amounts to $2,211,980.90. I will insert a table showing what the respective States will get under an appropriation of $1,500,000 and what they will get under a $2,000,000 appropriation.

I hope the conferees on the part of the House will agree to the Senate item of $2,000,000; but if that should be brought back in the report as an item still in disagreement between the two Houses, I hope the House will recede and concur in the Senate amendment. We are dealing with an earmarked fund which can be used for no other purpose, and the amount of which will far exceed—as shown by the excerpt from the Treasury Department letter I am inserting—the proposed $2,000,000 appropriation for the next fiscal year. On last Monday the House voted not only to continue the excise tax on sporting arms and ammunition but to make that tax permanent. And as to making that tax permanent there was complete agreement, because the money to be thus collected from the sportsmen of the country was to be used for their benefit.

The Treasury letter and tables of State allotments are as follows:

TREASURY DEPARTMENT,
Washington, March 27, 1939.

During the fiscal year 1938, there was collected, under the foregoing section, $2,826,973.06, which was credited to the general fund as internal-revenue collections, and is included in the general-fund balance. As indicated above, beginning July 1, 1938, the receipts have been credited to a separate general fund receipt account, "Tax on firearms, shells, and cartridges, section 610, Revenue Act of 1932," but such receipts are not specifically earmarked for "Federal aid to wildlife restoration" until further action is taken by the Congress.

Firearms, shells, cartridges, etc.—Collections under sec. 610, title IV, Revenue Act of 1932 (1933 to Feb. 28, 1939, inclusive)

Fiscal year:	
1933	$896,833.02
1934	2,410,989.81
1935	2,143,007.67
1936	2,494,574.54
1937	3,234,357.22
1938	2,826,973.06
Total	14,006,735.32
1939 (8 months)	2,211,988.90
Grand total	16,218,724.22

TABLE 1.—*Apportionment of funds to States for use in Federal aid in wildlife restoration projects for the fiscal year ending June 30, 1940, pursuant to sec. 5 of act approved Sept. 2, 1937 (50 Stat. 917), based on an appropriation of $1,500,000*

State	Area in acres	Apportionment on basis of area	Paid license holders, fiscal year 1938	Apportionment on basis of license holders	Total Federal apportionment	State contribution	Grand total for projects
Alabama	33,278,720	$11,853.97	88,786	$8,943.27	$20,797.24	$6,932.41	$27,729.65
Arizona	72,931,840	25,978.51	28,592	2,880.03	28,858.54	9,619.51	38,478.05
Arkansas	24,134,400	12,158.76	36,419	3,668.43	15,827.19	5,275.73	21,102.92
California	101,310,080	36,086.91	215,435	21,700.42	57,787.33	19,262.44	77,049.77
Colorado	66,526,720	23,696.99	110,151	11,095.33	34,792.32	11,597.44	46,389.76

The Revenue Bill

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. ANGELL. Mr. Speaker, revamping the tax structure is one of the most important problems that confronts us at this session of Congress. I supported H. R. 6851, the revenue bill which we considered this week. It has defects and needs amendments which I hope the Senate will make. It is the first forward step taken by this Congress for the purpose of modifying existing taxes, which have been strong business deterrents. It is a real victory for those of us on the Republican side who have been advocating such a step not only throughout this session but long before the Congress convened. Briefly, the bill yields $1,644,000,000 total, an estimated $15,000,000 less than current revenue.

Eliminates the 2½-percent remnant of the old undivided-profits tax, effective next year.

Substitutes 18-percent flat corporate tax on firms earning more than $25,000 and continues present 12½ to 16-percent graduated rates on companies earning less than $25,000.

Extends for 2 years $544,300,000 in temporary "nuisance" taxes and continues the $100,000,000 emergency 3-cent rate on nonlocal first-class mail. Both otherwise would expire June 30.

Permits corporations to carry over net operating losses for 2 years, deducting losses of a bad year from profits in a good one in computing taxes.

Allows corporations to increase their capital stock valuations for each of the 2 years, 1939 and 1940, providing a buffer against steep excess-profits taxes. Present law barred revaluation up or down until 1941.

It is unfortunate that the majority party could not be brought to the Republican viewpoint that these concessions to business be repealed and modifying tax rates be made effective at once so as to cover the year 1939 instead of postponing the effective date until 1940. If these amendments are good in 1940 they are good in 1939. If American industry needs encouragement in 1940 it certainly needs it now. The repeal of the undistributed-profits tax should have taken place a long time ago; in fact, it should never have been enacted, and the provisions effecting its repeal should be made effective at once. The same is true with reference to the provisions for carrying over of net business losses. Under the bill as it passed the House the present undistributed-profits tax will continue in effect through the calendar year 1939, when it expires automatically under the existing law.

The substitution of a flat corporate income tax on corporations now subject to the undistributed-profits levy will not take place until 1940. It is my belief that this substitution should be made effective as of January of this year so as to have eliminated the havoc of the undistributed-profits tax which should never have been enacted. This bill will now permit the privilege of carrying forward net business losses of 1 year to be applied against gains in the 2 succeeding taxable years, which is a commendable provision. As it passed the House it does not permit losses incurred last year to be set over against 1939 income, the tax on which becomes due next March. It does permit the 1939 corporate losses to be carried forward and applied to 1940 incomes. It is apparent this will afford no relief to distressed business concerns which are now in such great need of relief until their 1940 taxes are paid in March of 1941. Business is in dire distress and needs a tonic immediately. The good of the country and the impetus to restoration of employment depends on business recovery. If this program of tax appeasement is justified at all, it should be made effective at once and not postponed for another year. This same argument applies to the 18-percent flat rate for corporations with net incomes of over $25,000. I trust the Senate in its wisdom will make these amendments to this bill.

For 7 years now the present administration has been wrestling with the problem of unemployment and industrial stagnation. In considering this tax bill, which is the first ray of hope that there may be a modification of the program which has wrought havoc in our country, it is well to recall just what has been done by our Government in the last 7 years. At the end of this session of Congress we will have appropriated for the 7 fiscal years of this administration over sixty-five and one-half billion dollars, which equals 48.5 percent of the assessed value of all real and personal property on the assessment rolls of the 48 States of the Union. These appropriations, by years, are as follows:

72d Cong., 2d sess., and 73d Cong., 1st sess.; fiscal year 1934 and prior years	$7,692,447,339.17
73d Cong., 2d sess., fiscal year 1935 and prior years	7,527,559,327.66
74th Cong., 1st sess., fiscal year 1936 and prior years	9,579,757,330.31
74th Cong., 2d sess., fiscal year 1937 and prior years	10,336,399,272.65
75th Cong., 1st sess., fiscal year 1938 and prior years	9,356,174,982.92

75th Cong., 3d sess., fiscal year 1939 and prior years	$10,928,609,972.02
76th Cong., 1st sess., fiscal year 1940 and prior years (estimated)	10,190,311,483.23
Total appropriated for last 7 fiscal years, including 1940	65,611,259,707.96

The United States Treasury reported on February 28, 1933, the last report prior to the beginning of the present administration, that the national debt was $20,934,729,209.68. The gross debt of the United States on June 15, 1939, was $40,349,773,482, or an increase during that period of $19,415,440,273. In addition, there are contingent liabilities guaranteed by the United States which will bring the national debt to the staggering sum of $44,457,845,210 by June 30, 1940. It is interesting to compare the receipts or taxes and fees received by the United States Government, the balance or deficit, and the national debt from 1931 to and including the estimated amounts for the year 1940. These are as follows:

Receipts, deficit, and national debt for 1931–40, inclusive

Year ended June 30—	Receipts or taxes and fees paid to Government	Deficit	National debt
1931	$3,189,638,632	$901,959,080	$16,801,485,143
1932	2,005,725,437	2,942,051,451	19,487,009,766
1933	2,079,696,742	2,245,452,980	22,533,672,164
1934	3,115,554,050	3,255,393,297	27,053,085,988
1935	3,800,467,202	3,782,966,360	28,701,167,092
1936	4,115,956,615	4,952,928,957	33,545,384,622
1937	5,293,840,237	3,252,539,719	36,427,091,021
1938	6,241,631,227	4,702,165,600	37,167,487,461
1939[1]	5,520,100,000	4,072,229,000	41,131,502,010
1940[1]	5,669,300,000	3,426,363,200	44,457,845,210

[1] Estimated.

A comparison of the receipts and disbursements discloses that these enormous and abnormal deficits are due not to the impoverished condition of the country by reason of the depression through which we have been passing and therefore a dearth of tax revenues, but to an inordinate orgy of spending. Thus in 1932 and 1933 our tax receipts were little in excess of $2,000,000,000, whereas for 1937, 1938, 1939, and 1940 they will average approximately five and one-half billion dollars per year, between two and three times the amount collected during earlier years. In 1938 the total tax bill of America, national, State and local, amounted to nearly 25 percent of the income produced during the year, and the American people will have paid during the period from February 28, 1933, to June 30, 1940, approximately $34,000,000,000 in Federal taxes alone. Our President when a candidate for the high office he now holds, in October 1932, said:

> Taxes are paid in the sweat of every man who labors because they are a burden on production and can be paid only by production. If excessive, they are reflected in idle factories, tax-sold farms, and hence in hordes of the hungry tramping the streets and seeking jobs in vain. Our workers may never see a tax bill, but they pay in deductions from wages, in increased cost of what they buy, or (as now) in broad cessation of employment. There is not an unemployed man—there is not a struggling farmer—whose interest in this subject is not direct and vital.

Mr. Roosevelt also said in Sioux City, September 29, 1932:

> And on my part, I ask you very simply, to assign to me the task of reducing the annual operating expenses of your National Government.

The March American Federationist's preliminary figures show that in January 1939 there were 11,523,031 unemployed. After taxing, borrowing, and appropriating more than $65,000,000,000 and going in debt over $24,000,000,000 since March 4, 1933, we have approximately the same number of unemployed and a great many more people on relief than we had when we started this program. In considering these startling statistics, is there any reason why industry is discouraged and has lost faith in this program, and that fear dominates the businessman and the investor today? Sensible folks can only see one answer to this whole social, political, and economic muddle which threatens to wipe out the American system of private enterprise. If the incomes of all who receive $150,000 or more were divided equally among the American citizens, each would get only 15 cents, and the incomes above $5,000 if equally divided would only furnish $2.32 per capita. Million-dollar incomes are now taxed 84 percent, and hundred-thousand-dollar incomes 40 percent. No; the answer is not a socialistic division of wealth but the restoration of American industry to a normal basis, permitting a fair profit to industrial enterprise and thus restoring to private pay rolls the great army of unemployed. The old folks of America, 60 years of age or over, who have been cast off by industry must be cared for. Industry which has put them aside must assume the responsibility for their keep, and in so doing contribute materially toward industrial recovery.

For over 7 years now we in America have been laboring in the throes of this crushing depression. As shown by the report of the League of Nations, of the 17 leading nations of the world, we are at the bottom in recovery. We are the only one of the great family of nations of the world that has not been able to throw off the depression, and we are the only one that has piled up an immense public debt in an endeavor to beat the depression. We are the only one that has attempted to borrow and spend ourselves into prosperity. We are the only one that has attempted, by the doctrine of scarcity, to supply the needs of a hungry Nation. As I have heretofore pointed out, during the last 7 years the revenue of the Federal Government has increased from $2,079,696,742 to approximately $5,669,300,000 in the current year. During that time the public debt has doubled, and the Federal appropriations have increased from $7,692,447,339 in 1934 to approximately $10,928,399,272 in 1939. The deficit during this period amounted to $20,889,000,000, which added to the public debt has reached the grand total of over $41,000,000,000. In addition, too, the Federal Government is liable on contingent liabilities guaranteed as to principal and interest in the sum of approximately $5,500,000,000. The per capita public debt has increased from $131 in 1931 to $305 in 1939. The interest on this public debt is over $1,000,000,000 a year, more than the total cost of government a few years ago. In 1913 only 6.4 percent of the total national income was required for Federal, State, and local taxes. In 1930, 14.2 percent was required for such taxes, and in 1938, 23.6 percent of the total income of the American people was handed over to the tax collectors. Approximately one-fourth of the time of everyone who labors in the United States is spent in working for the tax collectors. In 1913, 1.9 percent of the national income went for Federal taxes. In 1930, 4.8 percent was required, but in 1938 it had increased to 10.9 percent. State and local taxes in 1938 had increased to 12.7 percent.

It is obvious that the policy we have been pursuing for 7 years of attempting to borrow and spend ourselves into prosperity has failed miserably. It has only succeeded in piling up an immense Federal debt and in trebling the tax burden and keeping out of employment some 12,000,000 of our people. Is it not time that those in charge of the Government put into operation some plan which will solve these problems and save our country? Are we American citizens speaking out of turn when we suggest that the plan which has brought us to such a predicament be abandoned? Well may we ask, Why is it that America, with the greatest resources of any nation, with two-thirds of the world's gold, and one-half of the world's wealth, is on its knees and starving with 12,000,000 of its workers unemployed, apparently permanently resigned to idleness, poverty, misery, and a Government pittance for bare existence? Must America continue to live on relief and charity? Must the millions of young Americans released from our colleges and schools face idleness and uncertainty, with only the hope of a W. P. A. job?

Surveys recently made disclose that the underprivileged group numbering 12,500,000 families, which include nearly 50,000,000 people, or almost half the population, exists on incomes of less than $605 per year. The next group of 10,938,000 families, of about 40,000,000 souls, receive an average of $1,411.

Our President has said that one-third of our people are underfed, poorly clad, and poorly housed. It is true that a million new homes are needed in America every year, and only 300,000 were built last year. This building program alone should absorb 2,000,000 men. Over 30 percent of our railroads are insolvent, and the whole railroad system needs rehabilitation. A million men could be profitably employed in restoring our railroad system to full efficiency. Public utilities are in need of modernization and expansion. One billion dollars could be expended profitably in this endeavor alone, giving employment to another million men. The durable-goods industry has been allowed to deteriorate with practically no plant betterments, extensions, or repairs. A million men could profitably be employed in this industrial activity. The National Bureau of Economic Research shows that expenditures for durable goods and for private construction dropped from $14,500,000,000 in 1929 to $3,500,000,000 in 1933, and had increased to only $6,000,000,000 in 1935 with 2 years of heavy Government spending. To provide the necessities of life, clothing, food, and shelter for the lower one-third of which the President spoke would require the services of several millions of laborers in the factories, the fields, the shops, the mines, the forests, and the transportation systems.

The industrial machine of America, the finest and best on earth, manned with the most efficient and intelligent workmen, is idle. It is ready to start production; it only needs the green light to go ahead. Our whole economic and social structure is bogged down and is not functioning. Our national house is out of order. Our emergency measures, adopted to meet the situation, have apparently become permanent and the crisis chronic. Spending has depleted the Treasury and has frozen unemployment into our industrial structure. All we are given in answer to our cries of distress is more borrowing and spending. The only result of the whole miserable vicious circle is the ever-increasing tax burden, greater public debts, mounting deficits, increased unemployment, stagnation of business, and loss of confidence in our Government and its ability to bring order and normal industrial activity out of the whole sordid mess in which we are wallowing.

In the campaign, on July 30, 1932, Mr. Roosevelt gave this ominous warning:

> Any government, like any family, can, for a year, spend a little more than it earns, but you and I know that a continuation of that habit means the poorhouse.

We have continued in this wild, uncontrolled spree of spending now for 7 years, throughout the entire present administration, and have accumulated the largest debt in our history; and if we are to avoid the poorhouse, as suggested by Mr. Roosevelt, we must mend our ways. Mr. Roosevelt again said, on March 10, 1933:

> Most liberal governments are wrecked on the rocks of loose fiscal policy; and we must avoid this danger.

I most heartily agree that we are heading direct for the poorhouse and if we are to avoid the danger of being wrecked on the rocks of loose fiscal policy we must immediately change our existing policy of reckless spending and take steps to put our house in order.

In the same address Mr. Roosevelt said:

> For 3 years the Federal Government has been on the road toward bankruptcy.

And on July 30, 1932, he said:

> Let us have the courage to stop borrowing to meet continuing deficits. Stop the deficits.

If these admonitions were true when they were pronounced by Mr. Roosevelt in 1932 and 1933, how much more omnious are they today, with the huge public debt and deficits piled up in the meantime, the total public debt now aggregating approximately forty-five billions.

Uncle Sam should rightabout-face in this whole crackpot effort to bring recovery by regimented scarcity and to borrow and spend himself into prosperity. He should return to a pay-as-you-go program, reduce the back-breaking tax burden now killing industry, and substitute in its place a good-neighbor policy of friendly cooperation with industrial enterprise. Our 12,000,000 unemployed can only be restored to pay rolls by private industry. Private industry under proper supervision and regulation by Government has made America what it was at the beginning of this depression, and private industry alone can restore it. The Brookings Institution in a recent study said:

> The vital problem is to secure a great increase in national production and income. The central issue, with respect to public finance, is whether such an expansion of production can best be stimulated by extravagant Federal expenditures, increasing deficits, and heavier taxes or by some modifications of taxes and a reduction of Federal expenditures—within the limits set by essential requirements. * * *
>
> Unless we can promptly secure a substantial increase in the national income it will be necessary to conclude that the United States has already reached the danger point in the growth of public indebtedness.

Some have contended that our economic collapse is due to the lack of capital. It is significant to note in considering this condition that in 1929, before the depression, the excess reserve in the member banks of the Federal Reserve averaged about $43,000,000. On April 26 of this year these excess reserves reached the staggering total of $4,120,000,000. In other words, there was lying idle in the banks of our Nation more than $4,000,000,000 available as the basis for credit expansion, which was almost 100 times above the average of idle funds lying in the banks in 1929. We may well ask, Why is this? As I have shown, it is not because the funds are not needed in industrial enterprise. The utilities, the railroads, the durable-goods industry, manufacturer of consumer goods, the housing and building industry—all are in need of immense sums of capital; but all of these great fundamental American enterprises are stagnant, and yet these immense sums of idle funds are lying without call in the coffers of American banks.

The Brookings Institution estimated that in 1936 between $25,000,000,000 and $30,000,000,000 would be needed for the durable-goods industry alone to make up the deficiency that had accumulated during the depression. Idle money means idle factories and unemployment. Lack of faith in our Government, mistrust of the policies it has been following, fear of the borrowing and spending program, and the mounting Federal debt and the unbalanced Budget and the inordinate taxes placed upon business have dried up at its sources the call of private enterprise upon bank funds. A normal condition, it is believed, will not return until this fear is removed and an assurance given to the investing public that the profit motive in private enterprise is to be acknowledged and protected, that Government itself will extend a helping hand and encouragement to industry to put back to work the unemployed.

As pointed out by John W. Hanes, Under Secretary of the Treasury, before the House Ways and Means Committee, the removal of irritants and deterrents to business recovery is essential, and social security and other reforms approved by the American people can only be maintained through the recovery of private enterprise, which always has been and must continue to be the backbone of Federal revenue. The Government must give recognition to the psychological blockade it has raised by the program it has been following for the last 7 years. A note of encouragement was sounded by the pronouncements of Secretary Morgenthau and Under Secretary Hanes that the administration at last recognizes that the path of recovery lies in the field of a definite assurance by our Government that private initiative will have encouragement from the Government rather than deterrents heaped upon it.

There must be also some assurance to business that the Government will gradually relinquish the functions of private enterprise which it has taken on in the last 7 years. Restoration of business confidence and faith in our Government cannot be accomplished until industry is assured that the Government itself will not enter into private competition with the great industrial enterprises of our country which have always been carried on by private investors.

I agree with what our colleague said in the other branch sometime ago, the Honorable JOSIAH W. BAILEY:

But what I want and what the country demands is a united Congress, not a group of Republicans seeking advantage, not a group of new dealers defending and apologizing, not a group of Socialists scheming to gain power, not a group of Democrats trying to see how they will win the next election, but a group of American Senators and Members of the House of Representatives who have a sense of responsibility to their circumstances and who are willing to unite in the common task of putting employment and business and industry in this country upon a firm foundation.

Mr. Speaker, during my campaign in the Third Congressional District of Oregon for the office I now occupy, I presented to my constituents a short program which I believe, if put into effect, would at least start us back on the road to recovery. The program is as follows:

Restore American democracy with constitutional checks and balances. Protect labor and industry from foreign cutthroat competition. Remove the shackles from industry. Assure the businessman and farmer a definite governmental program with good will and cooperation instead of antagonism and governmental dictation, so that confidence and prosperity will return, giving real jobs with decent wages to the unemployed. Replace friction with cooperation between labor and capital for good of both. Maintain law and order, no compromise with racketeers. Old-age assistance equal to American standards. Unemployed relief pending restoration of industry. Adequate aid for needy children, the blind, the handicapped. Armaments for defense only, no foreign wars or alliances. No Federal tax on gasoline or fuel oil. Curb unbearable Government expenses and tax-eating bureaus so Government may live within its income. Promote Oregon industries—lumber, wool, agriculture—providing pay rolls for Oregon labor. Extend and preserve civil service and promote the merit system. Square deal for veterans. Protect our youth and safeguard their interests that they may become stalwart, dependable, and clean-minded citizens. Provide adequate facilities for our schools and their teaching staff. Less cross-word puzzles, more horse sense in government.

Mr. Speaker, I commend the action of this House in passing this tax bill. I realize that it is not an answer to the problems that confront us. It will not put back on private pay rolls the 12,000,000 unemployed. It will not place aid in the hands of the many millions who are on relief or those in dire distress without any relief whatsoever. It is, however, some assurance that the Federal Government is at last ready to recognize that it must cooperate with business and industry if private enterprise is to be restored to a normal basis, and if the unemployed are to be put back on private pay rolls. It removes some of the deterrent tax burdens which have been shackles on business and have contributed to the fear which has gripped the heart of private enterprise. We of this Congress have an opportunity if we will only embrace it. We should by definite enactment make clear to the country that our Government stands ready to give a helping hand and an assurance of friendly cooperation with industrial enterprise. I believe we should, before this Congress adjourns, lay down a clear, well-defined program which will restore confidence to the Nation and to employers and employees alike. It should include a comprehensive and adequate legislative enactment for the care of our old people, the underprivileged, handicapped, and the youth of our country. I believe the objectives set forth by my colleague, the Honorable JOSEPH W. MARTIN, JR., are worthy of careful consideration, namely:

(1) Keep the United States out of war.
(2) Move immediately to curb unnecessary, wasteful, and reckless spending.
(3) Repeal the repressive tax on undistributed corporate earnings, which has proved so harassing and dangerous to business, large and small.
(4) Revise the remainder of the Federal tax structure to eliminate or modify provisions retarding business recovery.
(5) Repeal the dangerous discretionary authority which the President now has over the Nation's monetary system.
(6) Amend the National Labor Relations Act by clarifying the mutual obligations of worker and employer and the duties of both toward the public in order to end present paralyzing discord.
(7) Define specifically the area of Government competition with private enterprise so that business may be able to create jobs with some certainty as to the future.
(8) Restore American markets to the American farmer and wage earner and develop new markets for agricultural products.
(9) Adopt immediate legislation to rehabilitate the railroads to make secure the jobs of many hundreds of thousands of workers and the investments of savings banks and life-insurance companies.
(10) Create a special committee of Congress to inquire into the effect of the reciprocal trade agreement policy on American industry and agriculture.
(11) Clarify Federal rules and regulations so industry and business may know what to expect.
(12) Reject all experimental legislation not clearly helpful in promoting recovery, or which would subject agriculture, labor, or industry to compulsory decrees of a Federal bureaucracy.

Relief Appropriations

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. MILLER. Mr. Speaker, under permission to extend my remarks on the relief bill I desire to direct my remarks to section 16 of this bill. That section provides, as reported by the Appropriations Committee, for veterans' preference on W. P. A. where the relative needs are the same. In substance, the bill provides that preference shall be given to war veterans providing all else is equal.

The amendment offered by the gentleman from Pennsylvania [Mr. VAN ZANDT] provides for an absolute preference for veterans on W. P. A. Under the proposed Van Zandt amendment a veteran could own $1,500 in adjusted-service bonds, have a monthly pension of say, $40 or $50—in fact, any amount, so long as the pension was less per month than the amount to which he would be entitled per month if he were assigned to a W. P. A. project, and although he had no children to support, he would be given preference over a nonveteran with five or six children.

If I may be pardoned a personal reference, I have had the honor of serving as department commander of the American Legion in the State of Connecticut; I have served on the national executive committee of that organization. Through serving in those two positions I have come to know many World War veterans, and I do not hesitate to say that the overwhelming majority of veterans do not want that kind of a preference on a work-relief project. The veteran would be the first to admit that there should be only one qualification for relief and that is need.

As was pointed out during the recent debate on social-security legislation, the American Legion spent last year over $2,000,000 of its own money on child welfare. These same men would not now demand preference ahead of a nonveteran who had children to feed and support.

To give preference to the veteran, where all the conditions are equal, as the committee has recommended, is fair and just, but beyond that I could not go. I have recently talked with the proper national representative of the American Legion and he assures me that the committee's bill carries out the requests of the American Legion in respect to W. P. A.

If the law as written by the House committee is carried out, the World War veteran will be satisfied, I am sure. Therefore, as much as I regret to find myself in disagreement with my colleague from Pennsylvania, I hope that section 6, as written by the Appropriations Committee, will be accepted by the House.

Under permission to extend my remarks on the relief bill, I desire to lend my support to the amendment offered by the lady from New Jersey. In doing so may I state that I regret it is necessary to disagree with the members of our Appropriations Committee, who have worked so hard to bring in a relief bill to give every possible dollar to the needy unemployed.

I cannot support a recommendation that would remove from the W. P. A. rolls more than 9,000 unemployed actors, actresses, and stage hands, men and women who in normal times have made their livelihood on the stage.

Why discriminate against this group? Admitting that the Federal theater project has been disgracefully administered in some cities; admitting that some of the shows put on have been suggestive and in poor taste; some have been staged to spread un-American and subversive propaganda; admitting that in some places the theater project has been controlled by Communists; even if all these charges are true, why should those who have been employed on theater projects be barred from working at their profession under the W. P. A.? They could not control these projects. In most cases they were doing as they were told by their superiors.

No one has suggested that carpenters, bricklayers, plasterers, and so forth, should be eliminated just because some W. P. A. building projects cost two and three times what they were worth.

I will not admit that the Federal Government cannot clean up any mess that may exist in connection with the W. P. A. theater projects. Under the bill theater projects are but even if local sponsorship is available. It is a cruel, unfair, un-American, and unjust act.

I hope the amendment of the gentlewoman from New Jersey [Mrs. NORTON] will be adopted and the section eliminating theater projects will be stricken from this bill.

Savings in Operation of National Labor Relations Act in 1938

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, June 21 (legislative day of Thursday, June 15), 1939

ARTICLE BY MORRIS WEISZ, ASSISTANT ECONOMIST OF THE NATIONAL LABOR RELATIONS BOARD

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a study made by Mr. Morris Weisz, assistant economist of the National Labor Relations Board, on the subject of savings resulting from the operations of the National Labor Relations Act of 1938, compared with cost of its operation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAVINGS RESULTING FROM THE EFFECTIVE OPERATION OF THE NATIONAL LABOR RELATIONS ACT IN 1938, COMPARED WITH COSTS OF ITS OPERATION—MINIMUM OF $33,400,000 IS ESTIMATE OF SAVINGS TO AMERICAN PUBLIC

(Prepared under supervision of David J. Saposs, chief economist, by Morris Weisz, assistant economist)

Some critics have charged that the National Labor Relations Board is a heavy financial burden upon the American public. A statistical analysis of savings resulting from the effective operation of the National Labor Relations Act in 1938 reveals the fallacy of such charges, for even a conservative estimate indicates a saving of over $33,000,000 as compared with a cost of only $2,700,000 during last year. The operation of the act thus cost less than one-twelfth of the estimated savings resulting therefrom, and amounted to but 2 cents per person in the United States.

The cost of operation expressed in terms of service to workers involved in Board cases in 1938 was about $1 per person.[1] Of course, this does not take into account the indirect service of the Board to the millions of workers, never involved in any Board case, who benefited from the rights guaranteed them under the act.

The study of savings due to the effective operation of the act was conducted by comparing the trend of strikes in industries over which the Board has taken jurisdiction with the trend in other industries. From these data it was possible to estimate the strikes averted by Board operation, and their possible cost to workers, employers, and the general public.

THE GREATER DECREASE OF STRIKES IN INDUSTRIES OVER WHICH THE BOARD HAS TAKEN JURISDICTION

Strike data are broken down into industry groups, thus enabling us to compare the trends in industries over which the Board has taken jurisdiction with those over which the Board has not taken, or has only partially taken jurisdiction. Table A gives strike data by industry classifications for 1937 and 1938, grouping the industries according to the status of the Board's jurisdiction. The percentages of decrease in 1938, from the previous year, are also shown in this table.

The total number of strikes decreased from 4,740 in 1937 to 2,772 in 1938, or 42 percent. Of the 4,740 strikes in 1937, 3,184 were in industries over which the Board has taken jurisdiction and 1,556 in industries over which the Board has taken partial or no jurisdiction. Strikes in the former category decreased 48 percent to 1,673 in 1938, while strikes in industries over which the Board has taken partial or no jurisdiction decreased only 29 percent.

For workers involved in strikes, this tendency is also apparent, showing a decrease of 66 percent in industries over which the Board has taken jurisdiction as compared with a decrease of only 52 percent in all other industries.

Man-days of idleness due to strikes in industries over which the Board has taken jurisdiction decreased 71 percent during this period, whereas man-days of idleness due to strikes in other industries were only 51 percent less.

The general trend of strikes during the last year can therefore be described as one of greater decrease in industries in which the Board has applied the act, as against those industries over which the Board has taken only partial or no jurisdiction at all.

It should be noted that this tendency would be even more marked if it were possible to eliminate the effect upon all strikes of the activities of the various State boards. For instance, State labor boards in three of the most important industrial States, Massachusetts, Pennsylvania, and New York, would exert their powers over all industries, local and interstate, so that the existence of the National Wagner Act, as well as the "little" Wagner acts did more than merely help in the decrease of strikes in the first group of industries listed in table A.

STRIKES AVERTED

The considerations just mentioned make it clear that it is certainly a conservative procedure to credit the Board for the fact that there was a greater decrease in industrial disputes in those industries in which it took jurisdiction than in all other industries.

Let us assume, therefore, that strikes in all industries, in 1938, would have decreased only as much as they did in those industries in which the Board did not take jurisdiction or only took partial jurisdiction. If this had been so, the total number of strikes in 1938 would have been 3,365, which is 593, or 21 percent more than the actual number of strikes.

Applying similar reasoning to the data for workers involved in strikes, we discover that this figure would have been 893,098 for the year 1938, which is 204,722, or 30 percent more than the actual figure of 688,376.

For man-days of idleness due to strikes the results are even more interesting. In 1938 actual number of man-days of idleness amounted to 9,148,273. If the general decrease had been only as great as that in industries in which the Board had assumed partial or no jurisdiction, this figure would have been 13,928,180, which is 4,779,907, or 52 percent more than the actual number.

The Board can claim fairly, therefore, that had the principles of the act not been recognized because of its effective operation, the impetus to the will to organize would have resulted in the usual increase in labor assertiveness, and the number of strikes in 1938 would have been at least 21 percent more than they were actually, the number of workers involved would have been 30 percent more, and man-days of idleness would have been 52 percent more.

SAVINGS DUE TO AVERTED STRIKES

Using the figure of 4,779,907 as the number of man-days of strike idleness averted by effective Board operation, and assuming an average daily rate of pay of $3.50,[2] we find that workers saved $16,700,000 in wages through the effective operation of the act.

It is estimated conservatively to say that these strikes would have cost employers and the communities involved at least an additional amount equal to the cost to workers.[3]

[1] There were 11,488 cases involving about 2,620,000 workers in 1938. The appropriation for the calendar year of 1938 was approximately $2,700,000, which is one-half of the appropriation for the fiscal year ending June 30, 1938, plus one-half of the appropriation for the year ending June 30, 1939.

[2] According to the Social Security Board, average wages for workers covered by it in 1937 were $890. (Social Security Bulletin, March 1939, p. 3.) Even if we assume the generous estimate of 250 full working days per employee, this averages over $3.50 per day.

[3] According to the U. S. Bureau of the Census, value added by manufacture in 1937 was $25,173,933,310 for 9,786,571 salaried employees and wage earners. (Census of Manufactures: 1937, January 31, 1939.) This averages to more than $8.50 per employee per day, but since this entire amount is not lost to an employer each day a worker is on strike, we have used the conservative estimate of $3.50, an amount equal to his daily wage, as the combined value to the employer and the community as a whole of an employee's work for 1 day.

It should be made clear that the foregoing analysis represents merely an estimate of probable savings due to operation of the Board. It is, however, a minimum estimate of such savings. The results of the analysis may be summarized as follows:

Savings to workers from strikes averted by recognition of principles of the act	$16,700,000
Savings to employers and communities from strikes averted by recognition of principles of the act	16,700,000
Total, minimum estimate of savings in 1938	33,400,000
Cost of Board operation for calendar year of 1938	2,700,000

At a cost of less than $3,000,000, then, the Board has saved workers, employers, and the general public over 12 times as much. This is a conservative monetary evaluation of the work of the Board, which should be weighed along with other considerations of its tangible and intangible contributions to economic justice and industrial democracy in any description of the results of its operations.

TABLE A.—*Decrease in strikes in industries in which the National Labor Relations Board has taken jurisdiction compared with decrease in other industries, 1937–38* [1] *(for disputes beginning in the year)*

Disputes	Total, all industries	Industries in which the National Labor Relations Board has taken jurisdiction	Industries in which the National Labor Relations Board has taken partial or no jurisdiction
1937:

[1] Industries included in these categories are as follows:

Industries over which the National Labor Relations Board has taken jurisdiction (according to Bureau of Labor Statistics industry classifications): Iron and steel; machinery; transportation equipment; nonferrous metals; lumber; stone, clay, and glass; textiles; leather; food; tobacco; paper and printing; chemicals; rubber products; miscellaneous manufacturing; mineral extraction; water transportation; telephone and telegraph; radio transmission; wholesale trade; fishing.

Industries over which the National Labor Relations Board has taken partial or no jurisdiction (according to Bureau of Labor Statistics industry classifications): Motor-truck transportation; motorbus transportation; taxicabs and miscellaneous; electric railroad; steam railroad; other transportation; retail trade; domestic and personal service; professional service; building and construction; agriculture; other agriculture, fishing, etc.; Works Progress Administration, relief, etc.; other nonmanufacturing; general strikes.

Compiled and computed as follows: 1937: U. S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review, May 1938, pp. 1190–1192. 1938: U. S. Department of Labor, Bureau of Labor Statistics, Division of Industrial Relations.

The Townsend Plan and the G. O. P.

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, June 21 (legislative day of Thursday, June 15), 1939

RADIO ADDRESS BY HON. JAMES A. FARLEY

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered on June 7 over the National Broadcasting Co. hook-up by the Honorable James A. Farley on the subject The Townsend Plan and the G. O. P.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Recently the Republican National Committee decreed a week of public warning over the state of Uncle Sam's finances. They had all their orators singing their hymns of sorrow in the observance of National Debt Week. It so happens that the United States Treasury is in sounder condition than any treasury on earth. Every issue of bonds is oversubscribed several times, although the interest rate is less than that on the bonds of any other great nation. Everybody, at home or abroad, is garnering as many dollars as possible, for the dollar is the most stable currency on earth.

Tearfully the G. O. P. spokesmen moaned over the fate of the children of the future who would have to pay this debt. The grown people of today are not bowed down because of the World War debt, so it is safe to say that posterity, about which the G. O. P. spokesmen are so deeply concerned, will probably worry no more than did the children of yesterday over the twenty-odd billions that the World War cost us. Now right on the heels of the pitiful tale of Democratic extravagance, 55 Republican Members of the House of Representatives voted for the passage of the Townsend bill, the annual cost of which the fiscal authorities tell us would amount to $24,000,000,000 a year, allowing nothing for the cost of administration. It would triple the taxes now being collected and, according to an analysis printed in a financial magazine, would require the equivalent of an invested capital of double the total wealth of the United States.

These are, of course, fantastic figures, but they are no more fantastic than the project itself. Most of the people of the United States assume that the very magnitude of these calculations makes the passage of such a bill impossible. But what matters the impossible if advocating it produces votes on election day?

And yet our political opponents inveigh about the alleged extravagance of our Democratic administration. They call ours the party of radicalism; and still these Congressmen would saddle us with an annual expenditure six times as great as that of the worst deficit year. In the face of such figures ours is the conservative party and the other fellows are, or would like to be, the big spenders.

The only excuse suggested for the 55 Republican potential squanderers is that they knew the Democrats would defeat the bill and only voted for it to make good their preelection promises to the Townsendites. There is some evidence that they were ashamed of what they were doing in the fight they made against having a record vote. They hoped that the bill would be choked in committee or would be beaten without any of them having to be scored as voting for it. Rock-ribbed Republican Maine, which prides itself on its canny thrift, was represented in the final vote by all three of the Congressmen from that State. Does anybody suppose that Mr. OLIVER, or Mr. CLYDE SMITH, or ex-Governor RALPH BREWSTER did not know what he was about when he pledged himself to vote for the Townsend bill?

Does anybody think that those Members of Congress in Massachusetts were unaware of its significance when the Republican State convention pledged the Republican Congressmen to give the Townsend-plan legislation an early and complete hearing, or when the Townsend-plan candidate for Governor announced that he would support Republican nominee Saltonstall and promised him the vote of the 48,000 enrolled Republicans who had voted for McMasters in the primary?

Even that solemn grandson of Henry Cabot Lodge, one of the standpatters of all time, flirted with the Townsend plan and publicly voiced his appreciation of the soundness of the Townsend principle. This was, of course, when he was campaigning for the Senate under the time-honored Republican principle of promising anything for a vote. The tie between Henry Cabot Lodge, Jr., and Dr. Townsend was very close in those campaigning days. It was then the Doctor wrote to one of his associates: "Tell him (Senator Lodge) that we, too, are willing to start the pensions at $60 if that is all the 2-percent tax we propose will produce. But if the tax will produce more than that, we want it to be distributed clear up to the $200 limit."

I wonder if any of my hearers remember the closing days of the campaign of 1936, when the employers of labor were told to put in their workmen's pay envelopes a pamphlet declaring that the Federal old-age insurance was a fraud on the workingman; that it meant that he would be registered, cataloged, numbered, and no doubt fingerprinted, and that one of two ways in which the beneficiary could get his money back was by having his estate after his death make a claim. Among other things, the workmen were told that (I quote): "You have no guaranty that you will ever get your money back because you have no contract, no policy, no binding agreement with the Government."

This sort of literature was distributed in many forms in an eleventh-hour effort to defeat Franklin D. Roosevelt's reelection. Of course, it got nowhere. The social-security law has been on the books now for several years and is working extremely well, just as it has worked in other progressive countries for a generation or more. Nor have I heard since the law came into operation any complaint either by employers or employees of the functioning of this insurance principle.

Compared with the Townsend plan which the Republican Representatives would have voted onto the statute books, the social-security measure is like a penny whistle compared to a steam siren. The one has dislocated no part of our fiscal system, has added little or nothing to the cost of living; whereas the Townsend plan would have hoisted the costs of everything to a paralyzing level and bankrupted the country. To enforce its provisions it would have required an army of snoopers, in comparison with which the inspection and prosecution agencies of the prohibition era would have been as a squad to a regiment.

Some Members of the House welshed on their promise to Dr. Townsend and sought to have the bill returned to committee and thus escape a vote. The motion to recommit was made by Allen Treadway of Massachusetts, ranking minority member of the Ways and Means Committee, but when Dr. Townsend, waiting in

the gallery, sent word that a vote to recommit would be considered a vote against the bill, that devious method of avoiding a roll call evaporated and Mr. Treadway voted against the bill.

In view of the voting and the squirming that marked the proceedings, I insist that ours is the conservative party and the Republicans are the radicals. As to whether the greater departure from the ethics of the situation lies in promising a group of voters support of their views and defaulting on that pledge, or sticking by the promise and attempting to enact into law a measure that every recognized economist in either party denounces as calculated to bankrupt the Nation, I will leave to my hearers.

We know that some candidates will promise anything in order to gain votes. To win their election is more important than the fate of their country. It's a question whether the honesty of either of the courses I have mentioned is helped any because the Congressman does his voting with the expectation that the bill he advocates will be defeated, or if, by any unhappy combination it should pass the Congress, that it would be vetoed by the President? Fortunately for the reputation of the House of Representatives, a big majority cast their ballots for the burying of the measure which President Roosevelt described as "this cruel hoax" on elderly people.

People are naturally puzzled by the spectacle of the Republican Party, which is urging them to vote the Democratic administration out and themselves in in order to end the era of what they call reckless spending. They do this while exerting all the power of the lungs of their orators and the pens of their writers. Then they leave it to a Democratic majority to save the country from a career of spending that dwarfs anything ever before suggested.

Nor can the Republican Party escape responsibility for this thing. It is notable that the Republican National Committee, neither while the bill was pending nor after it was knocked out, disowned or repudiated the Townsend plan. Leading candidates for the Presidency on the prospective 1940 Republican ticket flirted with the crackpot project and have carefully abstained from expressing any alarm or interest in the conduct of the hapless 55 Representatives.

The solution of the puzzle lies in the circumstance that it was only a vote-catching device, the giving of a pledge that the pledgers never expected to see respected. In nearly every State where candidates had assured Townsend audiences that they were with them heart and soul the majority of the Congressmen defaulted when it came to voting. This was true in Ohio, Massachusetts, and other Commonwealths. An Indiana newspaper, after the bill had been defeated, published the fact that where five Republicans had recorded themselves in favor of the Townsend bill, only one sincerely believed in its provisions. The others depended on the votes of their colleagues to rescue them.

While observers may be amused at the wriggling and writhing of the men who set a vote trap only to be caught in it themselves finally, there is one serious element in the episode. The old people, eager for anything that would give them a measure of security and independence in their closing years, have been betrayed in the most callous fashion. They were not students of political economy. They were only eager listeners to glib talkers who capitalized their pathetic desires with no intention or expectation that the thing could be put through. It will be a long time before this country forgets the men who either voted to inflict an unworkable economic pipe dream on our country or who, after promising to do so, abandoned the unfortunate victims of their calculated deceit.

Land of the Free

EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, June 21 (legislative day of Thursday, June 15), 1939

ADDRESS BY HON. HUGH L. WHITE, GOVERNOR OF MISSISSIPPI, BEFORE THE KANSAS STATE CHAMBER OF COMMERCE

Mr. HARRISON. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very able address delivered before the Kansas State Chamber of Commerce, at Wichita, June 16, 1939, by the distinguished Governor of Mississippi, Hon. Hugh L. White, entitled "Land of the Free." Governor White's address is most interesting and informative, and I commend it to my colleagues as being the sincere expression of an outstanding southern leader.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My happiness at meeting with you here tonight far exceeds any pardonable pride I might feel in the compliment you have paid my State in inviting me to discuss with you the story of its recent program and progress.

For we of Mississippi and you of Kansas have more in common than either of us perhaps has realized. Both of us have been the victims of a colonial economy imposed upon us by a regional imperialism whose major difference from other tyrannies has been in the complexity of its application and subtleness of its control.

Full recognition of Mississippi's plight as an unprotected province of growing industrial despotism did not come home to us until such tribute had been extracted that no amount of subtleness could prevent us from feeling the knife as Shylock cut away his pound of flesh.

It is the function of a colony to draw raw materials from its wealth of field and forest, export them to the source of its control and then buy them back. Gradually the colony sinks progressively lower as it seeks to maintain its extractive economy by continuous excursions into the storehouses of nature. Ultimately and inevitably comes overexploitation of ever-dwindling natural reservoirs, as fertility of soil and resourcefulness of manpower are expended in ever more desperate efforts to maintain the balance of trade with industrial areas from which goods must be secured.

It is the economy of minimum returns, the economy of the peasant and the forester, at whose bottom rung are the Chinese coolie and the Hindu—an economy which utilizes the muscle of men and of animals rather than the wealth-creating resources of capital and machines.

If on some magic carpet I could whisk you to my State, turn back the calendar, and reveal before your eyes the scenes of a few years ago, I would show you an example of this economic blood letting at the peak of its flow.

I would show you hundreds of square miles where the only view within your horizon would consist of blackened stubble and fire-charred stumps. And I would tell you of the proud virgin pines which once had stood upon those lands with such uniform magnificence that they could be likened to a luxuriant green carpet laid by an Almighty hand across millions of clean and fragrant acres.

And I would show you desolate ghost towns where stone foundations, concrete flooring, piles of molded sawdust, and perhaps a windowless bank building would cause you to anticipate my explanation that here once was a village which thought itself to be prosperous, a village with its school and stores and sawmill and blissful unconsciousness of the fate which crept closer to it with every falling tree.

And I would admit to you that I was responsible in part for what you saw about you. I would tell you how my own axes had flashed through those forests and my own saws had helped whine the dirge of the pinelands.

In other sections of my State I would show you deep-gullied fields where farmers once tilled their crops, fields exhausted by relentless planting and helplessly abandoned when they could yield no longer the tribute which must be paid in exchange for the manufactured requirements of modern living. And I would explain to you that many of those once prosperous farms would never be used again, for erosion took up where defeated man left off, carrying on with unstayed hand the work of final destruction.

In other sections I would show you rolling prairies and broad alluvial plains were men were hard at work in rich and responsive fields. And you would note the perfection of the soil and the strength of the men who tilled it, and you would marvel at the poverty you would see reflected in the homes those fields surrounded.

And then I would summarize for you the condition of my State at that hapless time, a State of tremendous basic wealth, a State of tremendous human resources, yet a State of increasing poverty and want.

Here was a State blessed in abundance with a host of nature's greatest benefactions. Here were soils which held world records in the production of a dozen important food and feed crops, soils free from frost through 275 days of the year, soils showered with ample and even rainfall, soils warmed by so kind a sun that three food crops could be produced successively on the same land in the same season

Here were 17,000,000 acres of forest lands capable of producing pulpwood three times as fast as the woodlands of less hospitable climes. Here were hills covered with the Nation's finest hardwoods, and lowlands thick with cypress.

Yet here was a State feverishly felling its timber and selling its logs for the cash with which to buy its furniture from factories a thousand miles away. Ranking among the top three States of the Union in lumber production, my State was without one single factory to convert that lumber into manufactured products.

Here was a State boasting the world's largest shipping point for tomatoes, yet buying its catsup and its canned tomatoes from eastern corporations.

Here was a State producing a majority of all the premium long-staple cotton grown in the Nation, yet buying its automobile tires from Akron and its shirts from Massachusetts.

Here was a State producing a third of a billion pounds of cottonseed oil per year, yet without one industrial establishment even to refine that oil, much less to convert it into oleomargarine or soap or shortening or washing powder or phonograph records.

Here was a State shipping out its pulp and buying back its paper, shipping out its wool and buying back its blankets, shipping even its pecans and buying back its candy.

I could go on and on with similar illustrations, all pointing toward the one conclusive fact that here was a colonial economy struggling to bring forth ever greater volumes of raw materials in a hopeless and exhausting effort to balance a trade which could not be balanced, and to support a social and cultural structure which could not be supported, so long as it was dependent upon the practices of unrelenting extraction.

Hundreds of thousands of acres thrown back upon the State as worth less than the tax levy against them, a public treasury so deeply in debt that its bonds commanded neither price nor respect—such were the governmental manifestations of the multiplied problems of my people.

It is to the solution of those problems that Mississippi has been devoting its intelligence, its money, and its manpower during the past few years.

The plan under which Mississippi today is making progress toward economic parity is no half-baked product of political experimentation. Neither untried nor unproved, it is the State-wide application of a fundamental program which met the test of practical business experience as the economic savior of a Mississippi community facing the usual sawmill routine of stagnation and ultimate death.

I referred a moment ago to the fact that I was responsible in part for the wasted acres left in the wake of Mississippi sawmills. I am proud, therefore, to have a part in making of my own community the model which Mississippi has followed in her industrial advance. During the very period when the effects of a vanishing sawmill industry were at their worst, this small community increased its population from 4,833 to more than 6,000, boosted its industrial pay rolls to more than $1,600,000 a year, and replaced 1 lost sawmill with 8 new factories.

To make possible the participation of all of our people in a comprehensive and coordinated State-wide effort of similar goals and purpose, Mississippi has declared by law that industrial plants for the processing of its raw materials are "a public convenience and necessity." That law, already upheld by State and Federal Supreme Courts, provides for an industrial commission whose job it is to bring into the State those plants and factories to which Mississippi raw materials are adapted. Indicative of the sincerity of the act in this regard is the detail with which it lists those actual materials included within the scope of the program.

Under Mississippi's plan, upon approval of its industrial commission, any municipality may issue its bond for the construction of plants and industrial establishments. Before approval can be obtained, the community must show that there is a sufficient supply of raw material to guarantee operation of the industry for at least 10 years; that there is sufficient labor not already employed in industry to furnish one and one-half workers between the ages of 18 and 40 for each job in the plant; and that the community has sufficient property values and suitable financial conditions so that its bonded indebtedness for industry will not exceed 10 percent of its assessed valuation. So great has been public enthusiasm that in elections thus far held the average vote has been 11 to 1 in favor of the plan.

Recognizing the need for making its advantages known to the Nation, Mississippi launched simultaneously with its industrial program an advertising campaign addressed to those whose aid it needed in attaining objectives profitable alike to the investor and to the State. Appealing not alone, however, to those immediately interested in promises of local industrial profit, Mississippi has invited visitors from over the Nation to come and see its possibilities, to visit its vacation areas, and to feel the inspiration of a people setting forth on a road of logical and determined progress.

Funds for that important work, placed by the legislature in the hands of the Governor, are administered by an advertising commission of 15 businessmen, five of them elected by the State Press Association, five elected by the State Association of Chamber of Commerce Secretaries, and five appointed by the Governor, with the lieutenant-governor as chairman.

I could paint for you glowing verbal pictures of the results that have come from those two basic programs. Yet I think perhaps that a simple recitation of figures will give you the story more vividly than any other description could express it.

During the first 2 years of Mississippi's industrial program, the number of its people earning their livelihood through industrial employment increased 26.6 percent, and the average wage for those workmen was 11 times as great as the average earnings of their brothers on the farm.

The rising level of skilled employment offered in Mississippi's new plants is effectively illustrated by the fact that while the number of employees increased 26.6 percent, the total amount of wages paid rose 43 percent. Equally illustrative of such an upward trend is the fact that while the number of employees increased 26.6 percent and pay rolls 43 percent, value of manufactured products went up 58.6 percent.

These figures of course refer only to plants completed and in operation. Other plants are taking form and still others are projected, as Mississippi moves onward and upward through 1939.

Today in a Mississippi community best known to all of you for its ancient mansions and relics of ante bellum splendor, scores of Mississippi workmen are learning to manipulate new machinery such as never before has been seen in my State. And when Kansans again seek out our foremost pilgrimage city, they will find as of old the classic columns and high foreheads of the South's finest group of ante bellum homes, but there will be a new hum in the air and a new happiness in the hearts of Mississippi workmen as they fashion thousands of automobile tires each day from Mississippi cotton. The plant in which they work, consuming more electric power than the entire city of Natchez heretofore, speaks eloquently of the new Mississippi.

And farther south on a coast best known to you for its beaches and vacation facilities, a fleet of ocean-going ships is taking shape on the ways of new yards bordered by the moss-draped oaks of Pascagoula. Long famed for the craftsmanship of its boatbuilders on the Gulf, and for the quality of the native woods from which those workmen fashioned their shrimp and oyster trawls, Mississippi thus again gives modern expression to an ancient heritage.

In the midst of once blackened stump lands where now grow millions of newly planted seedlings, a factory boasting the State's largest industrial pay roll continues to astound the practical business world with announcements of new uses for Mississippi pine. Already established as a national institution through its achievements in the fields of wallboard and acoustical insulation, it adds this year the Nation's newest ligno-cellulose plastic.

Within a stone's throw stands a new plant which this year will expand its operations to care for added tens of thousands of bushels of Mississippi sweetpotatoes destined to become laundry starch, gumdrops, and glue.

Each morning in other communities, former agricultural workers board school busses for trips from their farm homes to their new daily tasks of converting Mississippi raw materials into Mississippi industrial products. Together those workers already have created for their State and mine the nearest approach to a balanced economy which Mississippi has ever known.

Results of Mississippi's invitation to visitors are best reflected in gasoline taxes which during the peak tourist month of the past winter were 62.9 percent greater than for the same month of the year immediately preceding introduction of the program.

Significant among barometers by which Mississippi may judge its business trends are comparative figures with reference to its sales tax. From a total of $3,066,000 for 1934, receipts from this 2-percent levy have advanced steadily to the $6,136,000 record they set in 1938. Thus is reflected an increase in annual retail business from $153,000,000 to $307,000,000.

More important, however, than preliminary financial profit has been the change which Mississippi's new determination has brought in the spirit of its people. Theirs no longer is the sad submissiveness of a citizenship bowed beneath burdens of hopelessness and despair. Theirs, rather, is the eager joy of participation in a common cause which holds promise of increasing individual returns. Theirs once more is the spirit of the pioneer, hewing out his own destiny and facing the future with confidence in his own strength and intelligence.

Yet I realize, as do you, that the problems of my State cannot be isolated and permanently solved, separate and apart from the greater mutual problems of the South as a whole; nor can problems of the South be segregated from the still greater mutual problems of all those States which have suffered the suction of colonial tribute.

My State is but one of a group in its area which have been designated as the Nation's No. 1 economic problem. Theirs is an area which since the turn of the century has sustained a net loss in population of three and a half million men, a loss occasioned by economic retrogression devoid of new opportunities for its sons and daughters.

The States which constitute that area are somewhat different from yours in geography, in history, in type of predominant agriculture, and to some extent in soil and climate. Yet we are bound to you by a tie which springs from man's first and most elemental instinct. Ours and yours is a common battle, mutually founded on Nature's foremost and fiercest of laws—the law of self-preservation.

It is therefore with particular gratification that we of Mississippi extend the hand of friendship as you set forth toward industrial emancipation. It is with true sincerity that we wish for you early and ever-increasing success; that we offer you whatever there may be in our own records and recent experience which may be of assistance to your effort; and that we pledge you our sympathetic cooperation. Indeed, we are proud to offer you our partnership in a fundamental movement designed to make true in practice the claim that all Americans are created free and equal.

As we study the source of our industrial privation we find towering above us a regional imperialism which has concentrated 25 percent of this Nation's manufactured wealth in seven geographically small communities. We find that 34 counties all but one of them located in one relatively small area, annually gather unto themselves one-half of America's manufactured wealth. We find that 217 other counties, most of them concentrated in that same area, gather in another one-third, while the remaining 2,600 counties of the land are left to divide as best they can the remaining one-sixth.

And we find that States like yours and mine, excluded from the Nation's economic feast except for the occasional sop of an agricultural appropriation, are expected nonetheless to contribute the best of our resources and a portion of the best of our manpower to the support of a financial absolutism with which our States individually are unable to cope.

Already gorged and bloated with $80 out of every $100 on deposit in the banks of America today, our regional ravagers continue their insatiable extractions. The South and West together, left

today with one-fifth of the Nation's monetary resources, are learning anew that each loss of blood money but inspires industrial vampires to still more vigorous sucking.

Not alone through manipulation of economic control but through manipulation of national politics is the pressure applied to keep us as financial provinces.

Freight rates, set by a political agency and embedded in the complexity and confusion of the Nation's transport system, foster continued concentration of industry and make difficult the logical location of factories close to raw materials and regional markets. So complete is control that even those railroads which serve the provinces are forced to join the fight against them.

And now in a new and still more intolerable effort to freeze forever their domination of the Nation's economic system and put to scorn the hope of industrial progress in States like yours and mine, our economic dictators have forged a new political chain with which to bind us. Under the disgustingly obvious false pretense of national uniformity, they have erected an internal tariff of wage standards which refuse us the privilege of normal and gradual education of our farm workmen to become competent industrial employees—which refuse us the right to nurture our necessarily infant industries through their early development period—compulsory standards for you and me which the Government itself does not recognize in its own operations.

Thus has corporate American feudalism repeated on a mammoth scale the gains made by medieval feudal lords of centuries ago: Immunity from interference, recognition of their status as free and privileged persons, and such freedom from regulation by the separate States that under the concealing cloak of Federal enactments and interpretations they escape the efforts of local governments to exercise either control or self-protection.

Fortunately for you and me, greed becomes more blind as it becomes more aggressive and intense. Our imperialists have forgotten that even animals still retain the instinct of herding together for common protection. With every new invasion they bring closer to final effectiveness a coalition of the South and West with strength sufficient to tear them from their top-heavy embattlements.

Ears attuned only to the clink of our cash cannot hear some of the questions we are beginning to ask of ourselves and each other.

Why, we ask, should the South and West have surrendered five and one-third billion dollars to one tiny area in exchange for the automobiles they have in active use today, when they themselves have raw materials abundant for the building of every automobile they need?

Why, when our people lack the funds with which to pay cash for those cars, should they pay interest approximating 12 percent to finance companies controlled by those same manufacturers?

Why should the profit on the fuel which operates those cars go to one of three Eastern States, when the fuel itself comes from wells dug into our own soil? Why should their tires come almost exclusively from one city in that same area, when the southern provinces grow the cotton which goes into them and have the advantage of a thousand miles in proximity to rubber?

And how does it happen that we see in the press on one day the governmental recommendation that beef for our Navy be imported from the Argentine, and that on the next we see that arrangements have been made for the Argentine to take twice as many American automobiles this year as last?

Why should our very insurance premiums build skyscrapers in eastern cities and help finance the system which oppresses us?

Why should 24 percent of the industrial wage earners of the Nation be concentrated in two States in the privileged area, while your State and mine are left with five-tenths and six-tenths of 1 percent, respectively?

By what natural advantages or through the operation of what normal economy should those two States enjoy industrial pay rolls exceeding $3,000,000,000 in the same year that the total for our two States was little more than one-thirtieth of that figure.

What would happen to us and the remainder of America should an enemy concentrate its power on that tiny area and succeed in cutting it off? How much more chance would we have than Haile Selassia's nomadic warriors against the mechanized Army of Italy?

What more perfect State than Kansas, for example, could America find as the place in which to carry out its huge new program for airplane construction? What less should Kansas expect from the Nation than recognition of the resources and advantages which are hers, and encouragement in their further development.

May God speed the day when your State and mine, and your section and mine, will forget to snap at each other over the bones that are cast to us in the guise of agricultural hand-outs, and combine our energies to demand our rightful place at the Nation's economic table.

The political interests of your section and mine are practically identical. Both of us are largely rural and agrarian. Both of us suffer the same pressure from forces which have come to dominate the daily life of every individual among us.

On the racks of bitter experience we should already have found that as long as we remain divided we will remain as beggars on the financial back steps of the Nation.

Our institutions and our agriculture will remain alive by sufferance alone, and that sufferance will extend only so far as our imperialists deem necessary to keep down open revolt against our exploitation.

It is therefore a vital part of your fight and ours that we combine our strength in a common cause, to the end that our people may enjoy in more just and reasonable measure the fruits of their own toil and the prosperity to which their natural resources entitle them.

Greater familiarity with our respective areas, closer understanding of our common problems, and development of clear delineation as to our common objectives are essential if our cooperation is to become effective in restoring to all States and regions of America a semblance of equal economic opportunity.

As the next step toward that mutual goal may I tonight invite the Governor of Kansas to address the people of my State in its capital city at Jackson, that Mississippians may meet and know him as the chief executive of a State which is setting out on the path with them toward economic justice. I want the leadership of my State to hear him speak to them on their own soil. I want his message of good will spread through print and over the air to every city and hamlet within our borders.

And may I call on him, and on you of Kansas, to assume leadership in the closer union of your section and my own? I see in that leadership a vision of mutual progress. I see the ultimate assembly of a council of midwestern Governors. And I see those Governors in joint session with the Governors of the South, discussing our common problems and our common objectives, lending the combined strength of all of their States to reestablishment of our Nation as an economic as well as political democracy. Ours is the power to achieve that goal. Should we do less we shall convict ourselves of intellectual feebleness as we sit idly by to await the day of more violent solution.

Our Nation is one, and it is obvious and apparent that no section of it can long prosper, or even endure, while other sections shrivel into dependencies subjugated by corporate greed and blind self-interest.

And thus may we take leadership in the creation of a more noble America, a Nation of which every section can be proud, for which we will feel again the patriotism which takes joy in sacrifice, a nation which will preserve our democracy from trends now leading toward results unthinkable.

And may I pledge you the loyalty of my State in so noble a cause. May I pledge you the cooperation of 2,000,000 people awake to the future which threatens them and their Nation, and determined to contribute their part toward making the home of the brave once more a land of the free.

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 21 (legislative day of Thursday, June 15), 1939

LETTER FROM HON. HARLLEE BRANCH, VICE CHAIRMAN OF THE CIVIL AERONAUTICS AUTHORITY

Mr. BAILEY. Mr. President, I ask leave to have printed in the Appendix of the RECORD a letter written by Hon. Harllee Branch, Vice Chairman of the Civil Aeronautics Authority, to the editor of the Huntington (W. Va.) Advertiser on the subject of the number of employees under the Civil Aeronautics Authority, the Administrator, and the Air Safety Board.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 7, 1939.

EDITOR, HUNTINGTON ADVERTISER,
Huntington, W. Va.

MY DEAR MR. EDITOR: On May 25 the Advertiser carried an editorial headed "Brass Hats," in which it is stated that "the Civil Aeronautics Authority has more employees than all the air lines it regulates." This is an error which I am sure you will desire to correct.

The employees of the Civil Aeronautics Authority, the Administrator, and the Air Safety Board total 3,601. Of this number, 2,662 are engaged in the performance of duties in connection with the construction, operation, and maintenance of the airways of the continental United States, its Territories, and possessions, including the installation and operation of such facilities as airway traffic control towers, intermediate landing fields, radio range and communication stations, airway beacons, etc.

The scheduled air lines regulated by the Authority have between 14,000 and 15,000 employees, and one of the air lines alone has between 4,000 and 5,000 employees. The Authority not only must regulate and provide inspection for the scheduled air lines but must also provide regulation and inspection of 10,828 civil aircraft, 25,376 pilots, 36,894 student pilots, 114 glider pilots, 161 student glider pilots, and 11,073 mechanics, dispatchers, air traffic control

operators, ground instructors, and other ground personnel. The regulatory powers of the Authority also extend to the manufacture, design, and export of aircraft and the rating of pilot and mechanic training schools.

The act, passed by Congress last year, which created the Civil Aeronautics Authority, the Administrator, and the Air Safety Board provided for the transfer to those three units of all of the functions and employees of the former Bureau of Air Commerce of the Department of Commerce and of the Bureau of Air Mail of the Interstate Commerce Commission. The employees of the Civil Aeronautics Authority, the Administrator, and the Air Safety Board, therefore, are made up for the most part of the two bureaus which the statute itself shifted to the new agency. Not only did the Authority, for example, not establish the large majority of its staff but the Authority was expressly prohibited by the act itself from reducing in classification or compensation any of the personnel so transferred to it until after July 1, 1939. The statute authorized the Authority, the Administrator, and the Air Safety Board to add such personnel as would be needed to take care of new functions and to take care of work formerly performed by personnel of the Interstate Commerce Commission and of the Department of Commerce which were not transferred by the new act.

The Authority, Administrator, and the Air Safety Board have added the additional personnel which were found necessary in order to perform the new functions and duties provided by the act. The total number of the employees taken on by the Authority, Administrator, and the Air Safety Board represents a net increase of only 254 employees over the total which had been authorized by Congress for the two old bureaus which existed prior to the passage of the Civil Aeronautics Act of 1938.

Sincerely yours,

HARLLEE BRANCH, *Vice Chairman.*

Facts About Trade Agreements

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 21 (legislative day of Thursday, June 15), 1939

ARTICLE BY C. E. BROUGHTON

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Facts About Trade Agreements," written by Mr. C. E. Broughton, editor of the Sheboygan (Wis.) Press.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sheboygan Press of June 1, 1939]

(By C. E. Broughton, Editor)

THE FACTS ABOUT TRADE AGREEMENTS

Sharply increased exports, accompanied by drastic decreases in imports, characterized the foreign trade of the United States in grains and grain products during 1938, according to C. Roy Mundee, Chief, Foodstuffs Division, Department of Commerce.

A comprehensive survey of this trade, prepared by Ruch Spicer, grain specialist, Foodstuffs Division, will be available for distribution this week, he said.

The survey shows that aggregate exports from the United States of grain and grain products reached a value of $233,554,000 in the calendar year 1938, compared with $91,095,000 in 1937. The grain and grain products export trade amounted to only $29,556,000 in 1936 and $28,922,000 in 1935. The 1938 valuation, it is pointed out, was the highest recorded for any year since 1929.

The largest single item in the grain export trade was corn, of which foreign shipments in 1938 amounted to 147,505,104 bushels, valued at $94,496,039, or more than the combined value of all grains exported in any one of the 3 preceding years. Approximately half of the corn shipments were destined to the United Kingdom and Canada, the survey shows.

Wheat ranked as the second most important item in the 1938 grain export trade, shipments abroad totaling 86,980,843 bushels, valued at $78,141,208. This total was more than twice as large as that of 1937 and many times in excess of the 1936 and 1935 figures. The United Kingdom was the leading export outlet, followed by the Netherlands and Belgium.

Exports of milled rice in 1938 amounted to 297,724,882 pounds, valued at $7,830,359, an increase of 101,723,000 pounds and $1,697,000, as compared with 1937. Smaller gains were registered in shipments of other grains, the only exception being rye, which showed a slight decline.

Exports of wheat flour milled wholly from United States grain increased from 2,270,097 barrels, valued at $11,927,112 in 1937, to 3,701,193 barrels, valued at $15,927,112 in 1938. On the other hand, exports of flour milled from wheat imported in bond for milling and export decreased from 2,182,611 barrels, valued at $13,339,314 in 1937, to 1,511,597 barrels, valued at $7,419,277 in 1938.

Exports of biscuits and crackers were higher in 1938, than in any of the 3 preceding years, as were shipments of macaroni, spaghetti, and noodles. All items of prepared cereals registered increases in the 1938 export trade over the preceding year with the exception of corn-cereal foods ready to eat.

Imports of grains and grain preparations in 1938, were valued at $7,976,000, which was only 7.8 percent of the value of $102,392,000 reached by these imports in 1937 and compared with $84,468,000 in 1936 and $73,314,000 in 1935. Last year, it is pointed out, was the first year since 1934, in which the value of imports of these products was less than that of exports.

Practically all items in the United States grain import trade showed decreases in 1938 compared with 1937 and the years immediately preceding. The greatest decrease was in imports of corn which amounted to only 403,371 bushels valued at $257,702, against imports of 86,337,248 bushels valued at $56,184,246 in 1937.

No reduction in duty on entry into the United States has been made for flaxseed in the trade-agreements program.

Of the 31,485,000 pounds of edible vegetable oils imported in January-February 1939, only 773,000 pounds of palm-kernel oil were subject to any reduced duty under the trade-agreements program.

The tabulation in the CONGRESSIONAL RECORD fails to state that the two classifications of cottonseed oil and olive, corn, and other oils are included under the vegetable-oils total shown, and, therefore, represent a 100 percent duplication. Cottonseed oils and other edible vegetable oils, except palm-kernel oil, have not been the subject of any trade agreements.

Oil cakes and oil-cake meal have not been given reduced duties in the trade-agreements program. The United States is on an export basis with respect to these products, shipments and exports in January-February 1939 totaling 109,730,000 pounds, as compared with imports during the same period of 33,868,000 pounds.

No concessions on butter have been granted under the trade-agreements program.

Imports of grains during January–February 1939 were at negligible levels. The United States is on an export basis in grains. As contrasted with the import figures shown, exports during the first 2 months of 1939 were: Oats, 366,000 bushels; corn, 9,693,000 bushels; wheat, 18,999,000 bushels; and barley, 1,080,000 bushels.

Of the January-February 1939 wheat imports, only 11,000 bushels consisted of wheat for human consumption actually entering the United States. Of the total imports for those 2 months of 1,874,000 bushels, 1,807,000 bushels entered bonded warehouses for grinding in bond and export, and 57,000 bushels were of wheat unfit for human consumption.

However, several concessions have been granted by the United States on grains. Among these were a reduction from 20 cents to 10 cents per bushel in the duty on corn from Cuba (effective September 3, 1934) alone (this concession was not extended to other countries); a reduction from 16 cents to 8 cents per bushel in the duty on hulled oats unfit for human consumption in the first trade agreement with Canada and the extension of the reduced rate to the classification oats, hulled or unhulled, in the second Canadian trade agreement; and the reduction in the duty on wheat when unfit for human consumption from 10 percent to 5 percent ad valorem in the second Canadian trade agreement, effective January 1, 1939. Pearl barley was reduced in duty from 2 cents to 1 cent per pound in the trade agreement with the Netherlands effective February 1, 1936. Barley, hulled or unhulled, was reduced in duty from 20 cents to 15 cents per bushel in the second Canadian trade agreement. There were other duty reductions in grains, but these are the important ones pertinent to the commodities included in the tabulation.

More than one-third of the January-February 1939, imports of vegetables and preparations were of items on which no concessions have been granted in trade agreements. These included various starches on the free list in the amount of $895,000 and canned tomatoes and tomato paste not the subject of any trade agreements in the amount of $518,000.

Unmanufactured cotton is on the free list and therefore has not been the subject of any duty concessions in the trade-agreements program.

Inedible molasses has not been the subject of any duty concessions in the trade-agreements program.

The large increase in January-February 1939 imports of maple sugar and sirup was due nearly entirely to the destruction of sugar maple trees in Vermont during the hurricane of last fall.

The duty on maple sugar on entry into the United States was reduced from 8 cents to 6 cents per pound by Presidential proclamation March 7, 1931, based on investigation by the Tariff Commission under section 336, 1930 Tariff Act, was further reduced to 4 cents per pound in the first Canadian trade agreement, effective January 1, 1936, and further reduced to 3 cents per pound in the second Canadian trade agreement effective January 1, 1939. The United States import duty on maple sirup was reduced from 5½ cents to 4 cents per pound under section 336 effective March 7, 1931, and was further reduced to 2 cents per pound in the second Canadian trade agreement effective January 31, 1939.

Treaty Obligations

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 21 (legislative day of Thursday, June 15), 1939

RADIO ADDRESS BY H. V. KALTENBORN

Mr. SCHWELLENBACH. Mr. President, last Sunday night, during the course of his regular weekly comments on current events over the Columbia Broadcasting System, H. V. Kaltenborn, distinguished commentator, discussed a resolution which I introduced 2 weeks ago in the Senate. This resolution involves the responsibility of our Government in regard to treaty obligations assumed by us. I ask unanimous consent that this portion of Mr. Kaltenborn's broadcast be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

And now, Mr. Kaltenborn.

H. V. KALTENBORN. Good evening, everybody, well, these are certainly days when maps are needed, with repercussions of difficulties of one kind and another echoing from the far corners of the world and jumping from one point to another with tremendous speed. And that reminds me that an American clipper with 50 passengers on board left Long Island on Saturday afternoon and reached the soil of Europe this evening. A total distance of some 3,500 miles accomplished in less than 24 hours. This means that passenger service between the Old World and the New with heavier-than-air ships across the North Atlantic is now an accomplished fact. That means something. That indicates a very definite change in the world in which we live. It means, whether we like it or not, the closer integration of America with Europe. It means that the world is growing smaller. It means that everything that happens in one part of it affects more definitely, more immediately, every other part.

I like to see the Pan American Co. develop this service ahead of other companies, because I think its record entitles it to that honor. It has always been careful, scientific, sure in its approach to aviation problems, and for that reason it has made a magnificent record in the many years in which it has been serving. Via the northern route, the trans-Atlantic passage can be made in three stops in 24 hours. Yes; in less than 24 hours. Of course, the trip all the way to Marseilles, a total of 3,650 miles, with the stops en route, will probably take a little less than 2 days, but certainly any time we wish to use the northern route it can be done altogether in less than 1, even though there are stops at New Brunswick, Canada, at Newfoundland, and in Ireland.

The *Atlantic Clipper* which is making this passage is the world's largest aircraft. It could take 74 passengers on short flights, 25 on long flights. It can cover 4,000 miles without taking on fuel. It travels at from 140 to 190 miles per hour on four motors. This flight is the culmination of 10 years of steady labor and research and planning, and it incorporates Pan-American's many years of experience on the Caribbean, in the South Atlantic, and in the Pacific. It is just one more step in man's conquest of space and time.

There is just enough food in the British concession in Tientsin, China, to last for another 48 hours. After that everyone will be on very short rations. Tonight Chinese are being forced into the concession by Japan to exhaust the food more quickly and presumably cause riots which would justify the Japanese in intervening. At the same time Japan definitely refuses any mediation. A prominent Tokio newspaper states tonight mediation will be utterly unacceptable. In London Sir Roger Keys, a retired admiral and prominent strategist, warned the British nation. He said Japan's action amounts to a declaration of war, and he points to the possibility of simultaneous action by the totalitarian powers in Europe and in the Far East. British opinion is hardening against the conciliatory Chamberlain policy and against the slowness with which the British Cabinet has acted in the face of this crisis.

Tomorrow the Foreign Affairs Committee of the Cabinet meets to consider the possibility of reprisals. The full Cabinet may meet on Wednesday, but there is no indication of any action that would bring immediate help to Tientsin or that would persuade Japan to change her attitude. French and British naval authorities are meeting in Singapore next week to plan concerted action, but there, too, there is delay.

Here in the United States Senator SCHWELLENBACH, of Washington, has submitted a bill calling for immediate economic reprisals against Japan. He would empower the President to cut our trade with Japan on the ground that the Japanese have violated the integrity of China which is guaranteed by the Nine Power Treaty to which both the United States and Japan are parties. Now, of course, that means that our Congress will soon be faced with the question to what extent we wish to safeguard our interests in the Orient; to what extent we wish to appear to be on Britain's side in this conflict. Of course, if we ask ourselves what should we do, it is obvious that whatever we do that is against Japan is in the same sense for Britain, even though we may not intend it to be so, because, after all, the United States is a power that has very important interests in the Orient, and we know that when you deal with a power that is dominated by an aggressive military government as Japan is today, appeasement and surrender do not always avoid war. They may stimulate new demands. If Japan can frighten us out of China, may not her next step be to try and frighten us out of the western Pacific?

One wonders how long the American people would tolerate an American government that surrendered our rights one after another because it was afraid to stand up for them. Polls of public opinion recently taken reveal that three-fourths of our people favor China as against Japan in the war that is now taking place between these two nations. And more than two-thirds are in favor of an embargo against Japan. This indicates that Senator SCHWELLENBACH'S resolution, if submitted to a vote of the people of the United States, would probably receive an overwhelming endorsement. The American public opinion has always backed this Government whenever it has made any strong protest against Japan, and such protests as we have made have been effective.

At Tientsin the Japanese commander expressed the current Japanese state of mind when he said: "An economic blockade against Japan would be impossible without the participation of the United States." It is extremely problematical whether the United States would rashly join British economic pressure against Japan in connection with such an issue as the Tientsin question. Yet Admiral Harry E. Yarnell, the American Navy commander in chief in the Far East, is arriving in Tientsin tomorrow to look after the welfare of some two hundred Americans living there; and since these Americans are being starved just as effectively as the British, we may hear something from America's naval commander. After all, it's an issue that confronts us, that faces us, perhaps not to the same extent as Britain, and yet we are quite definitely involved. It's interesting, too, to see how Italy, for example, reacts to the present situation in the Far East.

Here is what an outstanding Italian paper wrote today: "When the history of this period is written Britain will recognize the price she has paid for her anti-Fascist attitude and she will have to recall that Italy, which Anthony Eden tried to force to surrender, was the first to dispute the legend of inviolable British prestige." There is, of course, a constant sneer at British prestige in the Italian press and in the German press. It's not quite accurate, however, to say that Italy was the first to challenge British prestige. Japan did that in Manchuria in 1931 and perhaps we ought to recall that at that time the United States through its then Secretary of State, Henry L. Stimson, turned to Britain and suggested a joint demarché in Tokyo, and Sir John Simon, with a short-sightedness that the British Empire has long since regretted, said, "No. We will handle this ourselves."

Such is the record of history.

With Monopolies Running Wild Government Spending With the Hope of Bringing About Lasting Recovery Is Impossible

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. FULMER. Mr. Speaker, what a futile effort the administration and the Congress are making in trying to increase purchasing power, putting people to work, and the bringing back of a lasting recovery, which is essential if we are to maintain and continue the democracy that our fathers fought for, and under which we have so successfully carried on during the past 150 years.

Why do I make this statement?

Is there a Member of Congress who will deny the fact that the well-organized and well-financed groups in the various lines of industry, business, and finance are running wild with the most unfair, monopolistic control of production, distribution, and price fixing?

I challenge any Member of the Congress to name one of these groups that do not, under trade-practice rules and

regulations administered by their various associations, control their production, distribution, and the actual fixing of prices under their policy of distribution through their agents and distributors down to the actual consumer.

What we are doing today is nothing but taking a ride on a merry-go-round. If you do not believe this statement, stop the merry-go-round and you will find that we will be getting off right where we got on. Why?

Because you are just simply using the unemployed whom you have put to work, and the farmers whom you are subsidizing, as a transfer facility through which you are distributing tax money for the purpose of paying for what these people have to purchase. What I am talking about are these unreasonable fixed prices, all of which are absolutely destroying any increase in purchasing power which the Government has been endeavoring to give to these people.

When we slowed down in Government spending in 1938 what happened?

Industry and business commenced to slow down, and many of them closed down their factories, turning off thousands of employees; but they continued to maintain the same fixed prices on their products. Some of them actually increased their prices.

That is what happened prior to 1933. Speculation, installment selling, and monopolistic price-fixing succeeded in bleeding white the purchasing power of consumers. However, these monopolies, while slowing down and many closing down still continued to maintain, as stated, their fixed prices, and, naturally, unemployment ran wild, and farmers' prices, on account of the lack of purchasing power on the part of consumers, and, in that they were unable within themselves to control production or fix prices, hit the bottom.

What are we going to do about it?

You state that we have the Federal Trade Commission, the Department of Justice, and Senator O'MAHONEY's committee investigating these groups.

Yes, this is true.

The Federal Trade Commission, out of the spending of millions turned over to them by the Congress for the purpose of making these investigations, knows just as well as you do, that monopolies are running wild, but you have never heard of anybody connected with these monopolies being put in jail.

Senator O'MAHONEY and the Members of his committee know just as well as all of us know that monopolies are destroying the purchasing power of the people by their monopolistic control of production and the fixing of unfair prices, all of which are destroying the farmers, wage earners, and consumers.

What is happening to small industries and business concerns of the country? Why, they are being put out of business almost daily.

Perfectly good farmers are losing their lands, going into tenant farming to the extent, I am told by the Department of Agriculture, of 40,000 annually, all of which has been, and is being brought about because of just what I have been talking about.

This, however, is not the whole story. Not only are they holding down national recovery but the operations of these monopolies are absolutely destroying the liberty and freedom of the people of this great Republic.

Is there a Member of Congress who will not agree with me that at least from one-third to one-half of our perfectly good American citizens are living in poverty, many of them in misery, many of them, also, filling untimely graves, virtually, in the bonds of slavery, although they are permitted to live in the richest country in the world?

You can rest assured, in the words of Abraham Lincoln, "there can be no liberty or freedom with such a condition existing."

No one can deny that practically every policy and program advocated by the President has merit, and that much good has been accomplished in the way of helping the unorganized and the great masses of the people, who were facing a serious and disastrous situation at the close of the Hoover administration.

The thing that I am trying to get over to you is it should be very apparent at this time that it will be impossible to bring back normal recovery and a lasting recovery in the face of the strong opposition on the part of big business and those who are determined to destroy any possible recovery under the President's spending program.

There is just one of two things that we will have to do; that is, enforce the anti-trust law which seems to be tucked away in a pigeon hole, breaking up these monopolies, or the Government will have to assist farmers to monopolize, so as to place them on an equal basis in controlling their production, distribution, and price-fixing of farm products on a parity with these monopolies.

I am for breaking up these monopolies, and thereby permitting business and industry to proceed on an open and clean competitive basis.

As stated, we have various governmental groups making investigations, and this has been going on ever since I have been in Congress; and, although out of these investigations we have been able to catch these monopolies with the goods, just like a chicken rogue with the chickens in the bag, while we have proceeded to put the chicken thief on the chain gang, these monopolistic groups are told not to do these things any more and are permitted to go on their way as usual.

Recently I have had complaints about the monopolistic control of distribution and price fixing of one of the most important fertilizer materials used by farmers, costing farmers, because of these unfair fixed prices, perhaps just about as much as the Government has been giving them for the purpose of increasing their income and their purchasing power.

I refer to Barrett & Co. and the Chilean Nitrate Sales Corporation of New York, whose business is under one of the biggest monopolistically controlled agreements of any in the country.

This includes the price fixing of imported Chilean nitrate of soda, also.

Recently, the Federal Trade Commission, on account of complaints going in to them, had occasion to investigate this monopolistic octopus, which has been able and which is at this time spreading its sinister and selfish unfair trade practices along the line, as indicated, at the expense of farmers and governmental spending.

I would be very glad if those of you who are interested in this most important matter, and, certainly, every one of you should be interested, would get a booklet issued by the Federal Trade Commission some days ago giving complete information as to the complaints and the actual findings under their investigation of this monopoly, Docket No. 3764.

I am going to quote at this time for your information and solely for the purpose of bearing out the correctness of my charges, a few excerpts from this document, as follows:

CHARGES AND FINDINGS—FEDERAL TRADE COMMISSION

PARAGRAPH 1. Respondent, Chilean Nitrate Sales Corporation, is a corporation organized and existing under and by virtue of the laws of the State of New York, with its principal office located at 120 Broadway, New York. It is engaged in the business of importing into the United States from Chile nitrate of soda and other products, and of distributing for sale and of selling said commodities in this country.

PAR. 2. Respondent, the Barrett Co., is a corporation organized and existing under and by virtue of the laws of the State of New Jersey, with its principal office located at 40 Rector Street, New York, N. Y. It is engaged in distributing for sale and of selling nitrate of soda and other products in the United States. The nitrate of soda distributed and sold by this respondent is manufactured at Hopewell, Va., by a corporation of which this respondent is a subsidiary or affiliate.

PAR. 4. Respondents together supply all raw or basic nitrate of soda sold in the United States, and together they hold a monopoly on the distribution for sale and sale of such product in this country. Basic nitrate of soda is used by farmers as a raw, unmixed soil fertilizer, usually as a top dressing, and for this purpose respondents sell and distribute nitrate of soda in bags, which reaches the user in the original packages. Respondents also distribute and sell nitrate of soda in bulk to numerous manufacturers of mixed fertilizers, who incorporate the raw nitrate of soda into mixed fertilizers con-

taining other ingredients, these mixed fertilizers being in turn sold by the mixers thereof, directly or indirectly, to consumers.

PAR. 5. About August 1936 respondents, jointly and pursuant to understandings and agreements between them, adopted and established, and since that date have effectuated and maintained, substantially similar, and, in most aspects identical, systems, policies, and methods of marketing both the bulk and the bagged nitrate of soda sold by each of them. The purposes and objectives of said systems, policies, and methods and the results accomplished and achieved were and are—

(1) To establish, fix, and maintain the specified, uniform, and artificial prices at which bulk nitrate of soda is sold, respectively, by respondents to manufacturers of mixed fertilizers;

(2) To establish, fix, and maintain the specified, uniform, and artificial prices at which bagged nitrate of soda is sold, respectively, by respondents to distributors;

(5) To establish, fix, and maintain specified, uniform, artificial, and discriminatory rebates on prices at which respondents sell bagged nitrate of soda to their said distributors;

(6) To eliminate price competition in the sale of bagged nitrate of soda in all planes of distribution and sale.

(7) To establish, fix, and maintain points of distribution to be used as the bases for determining freight rates to be charged purchasers of bagged nitrate of soda as a part of the delivered price thereof.

(8) To establish, fix, and maintain specified freight charges, and maximum and minimum freight charges, to be added to or included in the prices at which distributors, dealers, and consumers purchase bagged nitrate of soda for delivery at specific destinations.

(9) To require distributors and dealers to charge consumers (farmers) a stated amount for hauling bagged nitrate of soda from the consumer's nearest railroad station to his farm.

(10) To establish, fix, and maintain the margin of profit which distributors and dealers realize on resales of bagged nitrate of soda made by them.

(11) To jointly select the customers to whom respondents sell bulk nitrate of soda and to whom such respondents sell bagged nitrate of soda for resale to dealers and consumers.

(13) To discriminate in price in favor of respondents' large distributors of bagged nitrate of soda because of their size and potential or actual ability to resell the said product.

(14) To encourage and induce distributors and dealers reselling bagged nitrate of soda to charge higher prices for bagged nitrate of soda resold by them to consumers on credit than the prices set for resales for cash.

(15) To allocate the trade territories in which respondents respectively market or push the sale of their bagged nitrate of soda.

(16) To allocate the trade territories in which respective purchasers of bagged nitrate of soda are permitted to resell said product.

(17) Generally to monopolize and control the channels of distribution and sale of bulk and bagged nitrate of soda within the United States.

PAR. 6. That for the purpose of making such systems, policies, and methods effective and of enforcing compliance therewith and observance thereof by all distributors and dealers in bulk and bagged nitrate of soda in the United States, respondents, acting both jointly and individually, in furtherance and in pursuance of their general plan and undertaking, have done the following things:

(1) Formulated, adopted, followed, carried out, enforced, imposed, and made effective the systems, policies, and methods hereinabove described.

(2) Formulated and issued bulletins, agreements, circulars, letters, price lists, and other printed matter, and distributed the same among purchasers of bulk nitrate of soda and distributors of bagged nitrate of soda, announcing the adoption of the systems, policies, and requirements above referred to and the imposition of the same upon all affected thereby.

(3) Formulated and entered into written contracts and agreements with their distributors requiring adherence by the latter to the principal points of said policies and to the impositions and requirements thereof.

(4) Each of the respondents has respectively adhered to the requirements of said policies, and refused to deviate therefrom.

(5) Respondents have issued identical price lists practically simultaneously, and offered identical rebates on such prices.

(6) Respondents have sought and obtained promises and assurances of cooperation from each other in establishing and making effective the policies and methods hereinabove described.

(7) Respondents have, respectively, sold bagged nitrate of soda to numerous distributors and dealers at prices which discriminate between and among such distributors.

(8) Respondents have exchanged or obtained information with respect to their respective businesses and activities, which was used in furtherance of the said policies and methods.

(9) Respondents have supervised and investigated practices and policies of distributors engaged in reselling bagged nitrate of soda to dealers and consumers and the prices at which such product was so resold, and have prevented some distributors and some dealers who did not conform to respondents' policies and prices from buying bagged nitrate of soda at the distributor's price or at all, and have acted concertedly to maintain resale prices agreed upon by them to control resale markets and to require recalcitrant distributors and dealers to conform to such policies and methods.

* * * * *

(6) To unreasonably lessen, eliminate, restrain, stifle, hamper, and suppress competition in the bulk and bagged nitrate-of-soda trade and industry and to deprive the purchasing and consuming public of advantages in price, service, and other considerations which they would receive and enjoy under conditions of normal and unobstructed and free and fair competition in said trade and industry, and to otherwise operate as a restraint upon and a detriment to the freedom of fair and legitimate competition in such trade and industry.

(7) To substantially increase the cost of such nitrate of soda to consumers.

(8) To suppress, eliminate, and discriminate against small dealers who are or have been engaged in or desire to engage in the business of buying and reselling bagged nitrate of soda.

(9) To obstruct and prevent the establishment of new distributors of bagged nitrate of soda.

(11) To regiment the nitrate-of-soda trade and industry and those engaging therein.

(12) To suppress and eliminate all price competition between respondents in the sale and distribution of bagged nitrate of soda between and among distributors and dealers in the resale thereof.

(13) To burden, hamper, and interfere with the normal and natural flow of trade and commerce in bagged nitrate of soda into, through, and from the various States of the United States; and to injure the competitors of large distributors by unfairly diverting business and trade from them, depriving them thereof and otherwise driving or freezing them out of business.

FIXED REBATES

(1) To purchasers so buying more than 1,000 tons of bagged nitrate of soda and less than 2,500 tons, annually, a rebate of 25 cents per ton.

(2) To purchasers of from 2,500 tons to 6,000 tons, a rebate of 50 cents per ton.

(3) To purchasers of from 6,000 tons to 12,500 tons, 75 cents per ton.

(4) To purchasers buying more than 12,500 tons, $1 per ton.

My friends, the findings of the Federal Trade Commission, as quoted by me, should convince any Member of Congress, as well as any citizen of this country, that the two nitrate agencies referred to have one of the most concrete, hog-tied monopolistically controlled businesses of any group in the country, and this is absolutely true, with all of the other well-organized groups.

I have had to buy farm machinery recently for my farm. Is there a Member of Congress who believes that, even with the spending of millions of dollars in trying to be of assistance to farmers, there is a possible chance of succeeding, with the prices that farmers are receiving for their products and the monopolistic, fixed prices that they have to pay for farm machinery?

I want to tell you, as a businessman and as a farmer, that it cannot be done.

At the beginning of 1938 the steel industry of this country stated, "Our prices for 1938 will be the same as in 1937."

Have you ever heard tell of any farmer or wage earner being able to tell the consuming public, or his employer, just what the price of farm products or wages would be during any year or at any time?

No, my friends. Not only are farmers and consumers forced to pay these monopolistic, fixed prices, but the marketing and price fixing of their products are absolutely in the hands of and under the control of groups other than farmers.

I am hoping that you will give deep and serious consideration to the very important matters that I have been talking about, with the hope that we will be able to proceed to do that which will have to be done if we ever hope to bring back national recovery and a square and fair deal to every group, and every class of people in this country.

In closing I want you to consider this important and serious thought:

Here we have a nation with stupendous resources in raw materials; completely equipped to turn these materials into consumable products; an abundance of workmen, able and willing to produce, manufacture, distribute, and consume. What is the mysterious force that interferes with this natural, workable process?

There can be only one answer, which I have endeavored to give to you at this time.

The Florida Canal Will Make a Scar Across the Face of This Nation That Must Forever Stand as a Monument to Wanton Waste and Extravagance

EXTENSION OF REMARKS

OF

HON. HARRY W. GRISWOLD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. GRISWOLD. Mr. Speaker, the building of a canal known as the Florida ship canal has been reported out of committee and may be before this House. If the bill is not brought before the House this session, it no doubt will be before the next Congress.

It involves an expenditure of between two and three hundred million dollars at a time when our Nation is over $40,000,000,000 in debt and this debt constantly increasing. To consider a matter of this kind at any time we should have before us in very plain figures tremendous savings or benefits before we should even consider the matter.

The Board of Army Engineers have twice refused, and still refuses, to justify this project. We certainly cannot consider this project as a great saving when the best waterway engineers we have in this country refuse to justify it. The shippers for whose purpose the canal is built and who might use the canal if and when completed have failed to ask for it or signify any intention of using the canal if available. In considering this project which may or may not be completed in 10 years if authorized, we must consider the kind of ship that will be traveling in the trade route should the canal be completed.

I have been endeavoring to secure information on the trend in the designing and building of ships so that we might know what to expect in size, speed, and depth of ships if and when the canal is completed. I have accordingly contacted various builders and designers of ships in an effort to find out the kind of boats that will ply the trade route at the time of the canal's completion. I asked of the designers and builders this question: "Do you expect an increase in speed in tankers in the next 10 years; and, if so, what do you expect that speed to be?" This is a very important question, as almost the only saving that the canal might render to our shipping interests is the saving of time. The following answer from Gielow, Inc., engineers, of New York City, best illustrates the answers I received from all such concerns. I quote:

> Improved methods of design and mechanical progress has made it possible to obtain better speed in general ship design, whether it be tankers or cargo vessel, without any appreciable increase in the cost of the vessel or the cost of its operation. Easier driving hull with improved design has produced a better speed with an employment of the horsepower as contained in the older tanker design. Light weight of machinery and also the light weight of construction materials and the methods of construction have also tended to increase the speed, so that any new tanker constructed during the next 10 years will undoubtedly result in an average speed of 15 knots. This is against the average speed of 10 to 11 knots of the older tankers.

It shows a constant increase in speed, design, and construction which entirely eliminates any saving of time by the use of the canal.

I also asked this question: "Do you expect tankers to be built requiring a greater depth than at present?" Many of our harbors are now 40 feet deep and the river and harbor bill passed at this session authorizes the deepening of the channel from New Orleans to the Gulf to 40 feet.

I also asked this question: "Is the depth of harbor the limiting factor in the construction of tankers?" The canal as proposed will have a depth of 33 to 35 feet, and it will be necessary to have a clearance or squat of 3 to 5 feet beneath each ship unless the speed is to be greatly retarded or excessive power used. Vessels drawing over 30 feet of water could not use the canal. In answer to the two questions just stated I give the answers of Gielow, Inc., and they state:

> We expect the tankers will be built requiring a greater depth than at present. The depth of harbors is a limiting factor in the construction of tankers in many ports of Texas and the city of New York, but we will say that these two cities have excellent harbors and for this particular run we do not believe that it will present any great difficulty.

This shows that shipping is going to use the greatest depth our harbors can give them. If our harbors provide a 40-foot depth, future construction is going to utilize that depth and such ships cannot use the canal if they would.

Inasmuch as no shipping interests have ever appeared before the Rivers and Harbors Committee or even signified any interest in the canal I believe it of prime importance to know their attitude toward the canal, as after all this canal is only built as a gift to the shipper who might use it. I accordingly wrote various large shippers operating fleets of vessels in that trade route.

I now wish to quote extracts from letters from various companies operating fleets of boats which must utilize this canal if the investment is to be at all justified. The Standard Oil Co. of New Jersey states as follows:

> Our study shows that even if our vessels were permitted to transit the proposed canal absolutely free from port charges and canal tolls, our average cost of moving products from the Gulf to North Atlantic ports would not be reduced, due principally to the reduced speed at which it would be necessary for a vessel to proceed while in the restricted waters of the canal. The estimated net saving or loss of time for vessels proceeding to and from the principal Gulf ports from a North Atlantic port is as follows:
>
> Baton Rouge, La.—8 hours saving per round trip.
> Texas City and Baytown, Tex.—No difference.
> Harbor Island and Ingleside, Tex.—4 hours loss per round trip.
> Tampico, Mexico.—25 hours loss per round trip.
>
> It is our opinion that this project is ill-advised and is not in conformity with the mature consideration of practical shipping people.

In this connection, Mr. Speaker, I ask unanimous consent to include at the close of my remarks the letters in full from the various shipping companies.

I now wish to quote from the Cities Service Oil Co., of New York City:

> The possible saving in time would be considerably offset by the element of hazard resulting from this long canal passage, plus the possibility that the ships would encounter considerable delay in transiting the canal in the winter months owing to fog conditions. Even though from 70 to 80 percent of all tonnage that might use the canal would be tanker tonnage, this tonnage would be represented solely by ships in ballast trim. A loaded tanker would actually lose time by using the canal on a passage from a Gulf port to a North Atlantic port. We estimate that conditions in the canal would make it impossible for our ships to average more than 5 miles an hour during transit.

The Sinclair Navigation Co. stated as follows:

> We have discussed this project extensively with several persons interested in it and have come to the conclusion that such a canal would be of no value to this company for transit of its ships from the Gulf to the Atlantic or vice versa.
>
> Our conclusions are based on calculations and investigations which show that the use of the canal would produce exceedingly small savings, which savings would be more than wiped out by any toll and pilotage charges.

The American Petroleum Transport Corporation states:

> Referring to your letter of April 21, we are operating eight coastwise tankers from the United States Gulf to north of Hatteras ports. From the experience that we have had trying to operate our ships in other canals, we would not consider sending any of our ships through the Florida canal, as a few miles would be more than offset in the time lost passing through the canal. I personally think it is a ridiculous waste of taxpayers' money.

I have other letters from other shipping interests that I shall not take the time to quote from now, but I was unable to find one single shipping interest who felt they would or could use the canal if constructed.

Mr. Speaker, we are considering an investment of at least $200,000,000 at a time when our Nation is facing bankruptcy. We are considering the investment of two to three hundred million dollars that cannot possibly be returned to us in any way. We are considering making a gift to the shipping interests of this Nation which they did not ask for, do not want, and cannot use. We are saying to our great steamship companies, "Here is a present of a great canal. We

built it and we are going to maintain it for you at a cost of half a million dollars a year. If you like it and can use it, throw a few crumbs to the American people; that is all we are asking for, and I am the first person that has even asked for that."

Go to any boy in your district or mine and make a proposition like that to him and he would not invest a nickel in it—yet that is exactly the proposition on which this House may be asked to vote.

Mr. Speaker, this is not just a waste, it is an actual squandering of the taxpayers' money beyond the wildest dream of our wildest dreamers. It should be rejected by the unanimous vote of this House. The construction of this canal will make a scar across the face of this Nation which must forever stand as a monument to wanton waste and extravagance.

APRIL 18, 1939.

GIELOW, INC.,
25 West 43d Street, New York, N. Y.

GENTLEMEN: Your name has been given me as a firm engaged in the designing of oil tankers suitable for service between New York and Texas. I am particularly interested in the trend of construction, and the information I wish would probably be covered in the following questions:

(1) Do you expect an increase in speed in tankers during the next 10 years, and if so, what do you expect that speed to be?

(2) Do you expect tankers to be built requiring a greater depth than at present?

(3) Is depth of harbor the limiting factor in the construction of tankers?

(4) Are harbor depths constantly increasing, and if so, will tankers be built to utilize the greatest harbor depth?

(5) Do you expect constantly increasing tonnage in the construction of tankers in the next 10 years?

(6) Do the above questions and answers apply equally to the general freight-carrying ships? Do they also apply to passenger vessels?

An answer to the above questions will be greatly appreciated.

Yours very truly,

HARRY W. GRISWOLD.

GIELOW, INC., ENGINEERS,
New York City, April 19, 1939.

Hon. HARRY W. GRISWOLD,
Congress of the United States,
House of Representatives, Washington, D. C.

DEAR SIR: We acknowledge receipt of your letter of April 18 relative to the design of oil tankers suitable for service between New York and Texas.

1. Improved methods of design and mechanical progress have made it possible to obtain better speed in general ship design whether it be tankers or cargo vessels without any appreciable increase in the cost of the vessel or the cost of its operation. Easier driving hull with improved design has produced a better speed with an employment of the horsepower as contained in the older tanker design. Light weight of machinery and also the light weight of construction materials and the methods of construction has also tended to increase the speed so that any new tanker constructed during the next 10 years will undoubtedly result in an average speed of 15 knots. This is against the average speed of 10 to 11 knots of the older tankers.

2. We expect the tankers will be built requiring a greater depth than at present.

3. The depth of harbors is a limiting factor in the construction of tankers in many ports of Texas and the city of New York but we will say that these two cities have excellent harbors and for this particular run we do not believe that it will present any great difficulty.

4. Harbor depths are constantly improving as well as our inland waterways and with anticipation of continued improvement, tankers as well as cargo ships are being designed for the utilization of greater depth when it is possible to use it.

5. We expect a constantly increasing tonnage in the construction of tankers in the next 10 years both in the large sizes, as well as the small tankers capable of serving the inland waterways and the Great Lakes.

6. The above questions apply generally to all types of vessels for the reason that there have been such definite strides in the development of design of all types of vessels which produce economy, better speed, and greater carrying capacity that everyone wants to take advantage of this whether they are building a freight carrier, tanker, passenger boat, tugboat, or a ferryboat.

We are enclosing a paper on the development and study of tanker design which may be of interest to you and we trust the above information will prove helpful to you.

Yours very truly,

GIELOW, INC.
A. J. MACDONALD.

APRIL 21, 1939.

SINCLAIR NAVIGATION CO.,
630 Fifth Avenue, New York, N. Y.

GENTLEMEN: The Rivers and Harbors Committee of Congress has had under consideration the advisability of constructing a Florida ship canal. Canal as proposed would have a depth of 33 to 35 feet and a width of 250 to 600 feet. It would be 195 miles long and be a sea-level canal. It was not requested by any shipping interest before the committee and the question naturally arose, "Would shipping care anything about the canal or use it if built?" Inasmuch as oil is 70 to 80 percent of all tonnage that might use the canal, I would like very much to have the attitude of shippers toward this project.

It will take, if the canal is authorized, from 6 to 10 years to construct. Considering the matter with this future date in mind, do you believe your fleet of tankers would use the canal? If you feel your tankers would use the canal would you kindly state why. If you feel they would not use the canal would you also state why not.

I would thank you very much for a prompt reply.

Yours very truly,

HARRY W. GRISWOLD.

Mr. Speaker, this is a copy of a letter sent to those whose replies follow:

SINCLAIR NAVIGATION CO.,
New York, N. Y., April 24, 1939.

Hon. HARRY W. GRISWOLD,
House of Representatives, Washington, D. C.

HONORABLE SIR: We have discussed this project extensively with several persons interested in it and have come to the conclusion that such a canal would be of no value to this company for transit of its ships from the Gulf to the Atlantic or vice versa.

Our conclusions are based on calculations and investigations which show that the use of the canal would produce exceedingly small savings, which savings would be more than wiped out by any toll and pilotage charges.

Respectfully yours,

SINCLAIR NAVIGATION CO.,
H. CAMPBELL, *Vice President.*

STANDARD OIL CO. OF NEW JERSEY,
New York, April 26, 1939.

Hon. HARRY W. GRISWOLD,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN GRISWOLD: With reference to your letter of April 20, 1939, the project of constructing a canal across the northern part of Florida connecting the Atlantic Ocean with the Gulf of Mexico has had our very careful consideration for a number of years.

Our study shows that even if our vessels were permitted to transit the proposed canal absolutely free from port charges and canal tolls our average cost of moving products from the Gulf to North Atlantic ports would not be reduced, due principally to the reduced speed at which it would be necessary for a vessel to proceed while in the restricted waters of the canal. The estimated net saving or loss of time for vessels proceeding to and from the principal Gulf ports from a North Atlantic port is as follows:

Baton Rouge, La.—8 hours' saving per round trip.
Texas City and Baytown, Tex.—no difference.
Harbor Island and Ingleside, Tex.—4 hours' loss per round trip.
Tampico, Mexico—25 hours' loss per round trip.

It is our opinion that this project is ill-advised and is not in conformity with the mature consideration of practical shipping people. In our judgment, an expenditure of $140,000,000 to $200,000,000 on this project is not justified by economic considerations nor by present or potential traffic which would profitably make use of the canal.

Therefore, as we do not believe there would be any monetary advantage to this company and in consideration of anticipated delays due to fog, increased collision hazards while in the confined waters of the canal, and added restrictions which would probably be imposed on oil tankers on account of the nature of their cargoes, we do not contemplate using this canal should it be constructed.

Yours very truly,

K. H. HAND, *General Manager.*

CITIES SERVICE OIL CO.,
New York, N. Y., May 6, 1939.

Hon. HARRY W. GRISWOLD,
House of Representatives, Washington, D. C.

DEAR SIR: Referring to your letter of April 20, 1939, relative to the possible use of the proposed Florida ship canal, we have to advise you that, in our opinion, this canal is unwarranted, and we do not propose to use it even should it be constructed.

The possible saving in time would be considerably offset by the element of hazard resulting from this long canal passage, plus the possibility that the ships would encounter considerable delay in transiting the canal in the winter months owing to fog conditions. Even though from 70 to 80 percent of all tonnage that might use the canal would be tanker tonnage, this tonnage would be represented solely by ships in ballast trim. A loaded tanker would actually lose time by using the canal on a passage from a

Gulf port to a North Atlantic port. We estimate that conditions in the canal would make it impossible for our ships to average more than 5 miles an hour during transit.

Very truly yours,

CITIES SERVICE OIL CO.,
By T. C. CONWELL.

AMERICAN PETROLEUM TRANSPORT CORPORATION,
NEW YORK, N. Y., *April 26, 1939.*

HON. HARRY W. GRISWOLD,
House of Representatives, Washington, D. C.

DEAR SIR: Referring to your letter of April 21, we are operating eight coastwise tankers from the United States Gulf to north of Hatteras ports. From the experience that we have had trying to operate our ships in other canals, we would not consider sending any of our ships through the Florida canal as a few miles would be more than offset in the time lost passing through the canal. I, personally, think it is a ridiculous waste of taxpayers' money.

Very truly yours,

AMERICAN PETROLEUM TRANSPORT CORPORATION,
D. K. LUDWIG, *President.*

W. P. A. Appropriations Should Not Have Been Reduced

EXTENSION OF REMARKS
OF
HON. CHARLES H. LEAVY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. LEAVY. Mr. Speaker, when we were considering relief appropriations on last Friday, June 16, I did everything within my power to see that they were maintained at least on the level of the present rate. I felt then, and do now, that we have made a most serious mistake to curtail and limit appropriations for this essential and all-important national activity.

I do not believe there is anyone in America who desires to see relief continued as a permanent governmental policy. We would all like to see it brought to an end. However, the mere desire or wish can never be made the basis of denying millions of American people the privilege of earning a living or keeping them from starving.

BALANCING THE BUDGET

Those in this Congress and the people throughout the country who are so deeply concerned with balancing the Budget seem to forget that the welfare and happiness of the millions and millions of unfortunate and underprivileged men and women in America are far more important to the continued greatness of this country than is any financial budget or balance sheet. There were at least one-third of the Members of this Congress who were willing to lay Budget consideration aside, if necessary, in order to insure to the men, women, and children of America the meager living that they can get through keeping W. P. A. going at the same rate as it has been this year. The facts are that the situation actually calls for greater service in this field during the coming year rather than less.

It was a pleasure to me to work with my colleague, Congressman CASEY, and give him all the support that I could for his amendment. It would have provided $2,250,000,000 for W. P. A. during the next year. This is the amount that we have provided this year. This amount would insure 3,000,000 W. P. A. workers throughout the United States.

CONGRESSMAN CASEY OF MASSACHUSETTS LEADS FIGHT

The gentleman from Massachusetts, Mr. CASEY, and myself are both members of the House Appropriations Committee and that position made it possible for us to do much more effective work than if we had not been on that committee, but even with that advantage, we were unable to accomplish the result we desired, because of the powerful reactionary influences and groups at work in Congress. These groups believe apparently that it would be better to pass the burden of relief to the States and to have the Federal Government make a small contribution in the way of a dole. I am utterly opposed to anything in the nature of a dole and shall always speak and work against such a program.

What we all want, of course, is the opportunity of every person to have an independent job but until that time comes, the Federal Government has the responsibility of seeing that no one suffers and that there be adequate relief for those that cannot find jobs.

Mr. Speaker, possibly I can make clearer my meaning as to who defeated the Casey bill by directly quoting from Mr. CASEY'S speech made when the amendment was being considered. He said:

Mr. Chairman, my bill provides merely that we shall not cut the W. P. A. In contrast with the committee bill it provides that we, on the other hand, strengthen the W. P. A. rather than weaken it at this time. Let us consider the facts. There are just as many people out of work and unemployed today as there were during the current year. During the current year we appropriated enough money to take care of 3,000,000 people. Under the pending bill we have reduced that number by one-third, and in addition to that third reduction, by a combined Republican action with a small block of Democrats, we have further reduced it 200,000 more by earmarking $125,000,000 from W. P. A. appropriation.

NO WORK FOR MORE THAN HALF CERTIFIED W. P. A. WORKERS

In spite of all the struggle and fight that the liberals and progressives in the House made in support of this splendid amendment of Mr. CASEY'S, on a non-record vote, we were defeated by a vote of 201 nays and 82 yeas.

The W. P. A. bill, as reported out by the committee and as finally passed, actually means a cut from 3,000,000 W. P. A. employees this year to 1,800,000 next year, or 40 percent, and this in spite of the fact that with the 3,000,000 on W. P. A. rolls, there are in the United States today another 1,000,000 who have qualified and been certified but for whom there is no work, because appropriations have been cut. In other words, we go into the next year beginning July 1 with 1,800,000 W. P. A. employees and 2,200,000 certified W. P. A. workers denied the opportunity to get even the meager earning that this activity gives them.

It was indefensible for the bill to reduce W. P. A. activities by 1,000,000 workers, but when the committee arranged to discontinue another 200,000 people on an average per month by earmarking $125,000,000 for the Public Works Administration simply cannot be excused, when they knew full well that this would not in any respect meet P. W. A. needs and had such strings tied to it that it could not be used for practical purposes by the agency, while at the same time it was taken from W. P. A. They took away $125,000,000 from W. P. A. and labeled it for P. W. A. but made sure P. W. A. could never use it.

I offered the amendment that would have restored the $125,000,000 to W. P. A. and it would have made 200,000 more W. P. A. jobs, and I led the fight on the floor for the amendment. This fight was supported by every progressive in the House, but we were unable to overcome the influence and efforts of the conservative and reactionary Republicans and Democrats, and the amendment was defeated by a vote of 84 to 194. Now I am hopeful that the Senate will correct this great mistake.

FIGHT TO RESTORE CUTS

Mr. Speaker, I am glad that it has been my privilege to take part in the fight and to actually lead in this particular as the spokesman for the millions of Americans who do not have the means to employ clever and adroit lawyers and do not have the means to have great and powerful organizations speak for them. It has always been my determination to give my support to, and raise my voice in behalf of, those millions of men and women whose number is unfortunately daily increasing and who are the victims of powerful economic influences beyond their control.

I desire to repeat a few statements made by me on the floor of the House when I was given an opportunity to talk for W. P. A. They are as follows:

We transfer by the bill as now written $125,000,000, and thus make just that much less for W. P. A. In other words, the W. P. A. budget is cut that much.

What is the effect of this transfer? The Budget estimate for 1940, as submitted, means a million less families on W. P. A. relief

for that year as compared with what we have this year, and there are a million now on the waiting list. If this language remains in the bill as the committee has reported it, it means that we go into the next fiscal year with 2,000,000 American families denied the right to get even the meager existence they get out of W. P. A. If the $125,000,000 provision is permitted to remain as now written in the bill, it means that an additional 200,000 families on the average every month during the next fiscal year will be denied the opportunity of remaining on W. P. A.

* * * * * * *

If we put this issue to the House today in the form of a question as to whether you want now to vote to strike, in addition to the million families a month off of W. P. A., an additional 200,000 families from the rolls, I say, if that issue were put in that form, then I know it would be voted down. [Applause.]

PAY DECENT PENSIONS—USE HOARDED GOLD

The bill we have just passed is so far short of what it should have been that those of us who are more concerned with balancing the human budget than with balancing the financial Budget feel deeply disappointed. In spite of its provisions that no more money can be appropriated to this cause, I am sure that next winter when the terrible effect of this unreasonable cut makes itself felt throughout this country of ours that Congress will be called upon to appropriate additional funds. When our Nation is threatened from without, we do not hesitate to appropriate money for military and naval purposes, regardless of how the Budget might be affected. We must come to recognize that the most important and fundamental thing in this Nation are the men, women, and children who make it a Nation. I would like to have seen us give every older citizen security and independence by passing proper old-age pension laws and making full use of all the gold we now have buried by having the Government own and control its money and credit system. We might then utilize the billions of hidden gold that we have stored in the hills of Kentucky and the almost $2,000,000,000 worth of silver stored away in West Point, N. Y.

For my part, I shall continue so long as I am in Congress to fight for the men, women, and children who have no voice back here other than the man they have elected to represent them.

Letter Urging Representative Fish To Be Republican Candidate for President

EXTENSION OF REMARKS

OF

HON. CARL G. BACHMANN

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

LETTER FROM HON. CARL G. BACHMANN

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter written by the Honorable Carl G. Bachmann, former Member of the House, and Republican whip, as well as the campaign manager for the Honorable WILLIAM E. BORAH, in the Presidential campaign of 1936, to the Honorable HAMILTON FISH, Member of the House of Representatives from the State of New York, urging that Mr. FISH become a candidate for the Presidency of the United States, and his reply:

WHEELING, W. VA., *June 19, 1939.*

The Honorable HAMILTON FISH,
House of Representatives, Washington, D. C.

DEAR HAM: As you know, in the last Presidential preconvention campaign, I acted as campaign manager for Senator WILLIAM E. BORAH. I was convinced then, and am more convinced now, that he was the most logical and strongest candidate for the Republicans to nominate. If he had been, there would have been a different story throughout the Nation. Any number of my friends who did not agree with me at the time have since told me that I was right.

I am equally convinced today that you are the logical and the strongest Republican in public life that our party could nominate for the Presidency. Your record of 20 years' service in the House of Representatives, fighting to maintain our American institutions and for a square deal for all elements of our population, including labor, the farmers, and businessmen, under our American system and the Constitution of the United States makes you an ideal candidate.

As a liberal conservative, I believe you are better qualified to unite the conservatives of the East and the more liberal elements of the West than any other Republican and to lead the fight against the radicalism of the New Deal.

Your continued reelection by increasing majorities from President Roosevelt's home congressional district and the fact that you ran many thousands of votes ahead of Tom Dewey in that district in the last gubernatorial campaign proves my contention that you are the best vote getter in our party. Few, if any, Republican Members of the House or the Senate have the experience or the knowledge you have on national and international issues.

Your uncompromising fight against communism, the unsound and radical New Deal measures, and your courageous leadership in trying to keep America out of foreign wars would appeal to millions of Americans in all sections of the country.

There are large groups of our population who would acclaim your nomination, including the World War veterans, of which you are one of the most distinguished, and the oldest in point of service in the Congress. In addition, the colored people, whose battles you have fought in Congress and led in battle on the fields of France, would be with you regardless of party affiliations.

The great peace-loving elements of our country, who want to keep out of all foreign entanglements and wars, are looking to you for leadership.

Your experience, knowledge, ability, courage, and Americanism are unchallenged. Your radio voice is one of the clearest and most forceful in our party.

From a purely political standpoint of getting votes and winning the election, I am certain that it will be necessary in 1940 to nominate for the Presidency a candidate from the State of New York, and preferably a World War veteran. We must nominate a candidate who on his record will emphasize that the preservation of our American system, under which we have become the greatest, richest, and freest nation in the world, depends on the restoration of the Republican Party to power in Washington.

I have discussed this question with many of my friends; and on their behalf and my own I urge you to become a candidate for the nomination for President on the Republican ticket, and am confident if you will that you will be nominated and elected.

With best wishes and kind regards, I am,

Sincerely yours,

CARL G. BACHMANN.

Let Us Be Tolerant

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

RADIO ADDRESS BY HON. J. PARNELL THOMAS, OF NEW JERSEY, JUNE 18, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to incorporate the following copy of a broadcast made by me over station WABC, New York City, on last Sunday evening, June 18, 1939:

This year's hearings of the congressional committee whose purpose it is to investigate un-American activities reveals the extent of intolerance in America today. Both committee witnesses and communications coming to the committee show the alarming recent growth in racial, religious, and class bitterness in the United States. While intolerance is not nearly so acute here as it is in some foreign lands, it is, however, a sign important enough not to be ignored, and it should be promptly and unequivocally condemned by all true Americans.

I say this because I firmly believe that the spirit of liberty on which the foundation of democracy rests is entwined with tolerance. In fact, our forefathers who drafted the Constitution for the United States definitely had tolerance in mind when they ordained and established the Constitution in order to promote the general welfare and to secure the inestimable blessings of civil and religious liberty to ourselves and our posterity. Further, they went so far as to declare that the "Congress shall make no law respecting an establishment of religion or prohibiting the exercise thereof." These words are the exact language of the founders of this great Nation when they wrote into law the wishes of the people. The doctrines expressed by these words have been the law of the land ever since,

over which span the United States has grown to be the greatest nation on earth.

Under our Constitution and under our form of government for generation after generation the people have enjoyed freedom of worship—whether Jew, Catholic, or Protestant. Both the worshipers of these various faiths and the churches themselves have been tolerant of each other.

So let us not at this late hour, just because the people of other nations choose to be intolerant, be intolerant ourselves; but let us, irrespective of our different spiritual beliefs and of our separate racial characteristics, be Americans first. You and I may not see eye to eye, nor may we agree in all of our beliefs, but certainly such disagreement does not warrant any spirit of intolerance.

Of course, much of this recent intolerant feeling in the United States is the result of propaganda disseminated in the guise of social and economic readjustment. Much of it is the backwash of European and Asiatic maladjustments. Hemispheres through modern communication are too close not to be affected by events which may happen in any part of the world. If there is a spirit of intolerance in Germany, in Italy, or in Russia, then there may likely develop a similar spirit in other nations of the world. Consequently, I think we should take every precaution to safeguard ourselves against any such pestilence getting a foothold here.

At the same time we in America, while defending ourselves against religious and racial intolerance, must also guard against the world trends of class feuds. Altogether in too many other countries there has developed class struggles which in time may be the ruination of such countries, for no nation can for long endure the constant draining of class intolerance. Its effects are as devastating to a healthy and virile society as the ravaging of insects on fertile soil.

Nevertheless, there has of late been disseminated in the United States a vast amount of class propaganda—propaganda insidiously designed to pit one class against another, the apparent purpose of which is to weaken the morale of the people so that the complexion of the State might be more easily changed. It is the most cleverly conceived of all propaganda and is in the main disseminated by organizations with alien ties, organizations which invariably hide their true aims by traveling under false colors. Usually they select names that will falsely leave the impression of a worthy and honorable purpose, such as the League Against War and Fascism. Then, too, they often draw upon a historical character, such as Lincoln or Washington. In this manner they set up a smoke screen and by it are more able to attract moral and financial support from the unwary. Such organizations constitute the united front for communism.

In addition, we have the Bund and various Fascist groups, including, among others, the Silver Legion of America, Industrial Associates, and the Knights of the White Camellia, also as active disseminators of intolerant propaganda. While all of these organizations may differ in names and in methods, their aims, however, are identical, and if intolerance exists anywhere in the entire world it truly thrives in these twentieth century jingo movements.

Our committee has also had plenty of testimony showing that individuals working on their own behalf have resorted to the modern-day witchcraft of class hatred, several even holding strategic positions in our Federal Government, a few of them holding particularly important positions. Their type of class propaganda mostly follows along the lines of name-calling and phrase-coining. Those who use it probably think it smart politics, but the results have caused economic and social injury to a large portion of our society. Whole industries and complete sections of our population have been smeared from one end of the land to the other. A few of the names so glibly used, and which come to my mind tonight, are "Tories," "copperheads," "money changers," "economic royalists," "Bourbons," "princes of privilege," "feudal families," and "back stabbers." These are the names used by the New Deal to undermine the moral and social security of almost half of our population.

With the use of these names our Federal administration has slipped to a new low in undemocratic methods. Never before in the history of the United States has a Federal administration used its strong power to character-assassinate its own people. Nor have we ever had an administration which has invariably gone out of its way to breed class strife. This is the American New Deal, and I might say in passing, if a government is inclined to encourage one form of intolerance, it can conceivably be expected in time to countenance some other form, just as has the new deal of Italy, the new deal of Germany, and the new deal of Russia.

The New Deal of America has time and again during its 6-year existence called names and coined phrases in order that it might climb the ladder of human misery to a point where the entire population would be subservient to its will and domination. It has gone far out of its way to besmirch the reputation of many honest, hard working, and thrifty citizens. It has done this that it might falsely prove to others just as honest but not so fortunate that the New Deal was their savior, while in reality the New Deal has been the average man's worst enemy, for through its extravagance, waste, and unsound fiscal policies, and foolish experimentation, 11,000,000 needy persons have been deprived of gainful employment, and in many instances have been relegated to a life term of economic slavery.

When I refer to the New Deal, I do not mean the Democratic Party, for I am definitely convinced that the New Deal and the Democratic Party do not stand for the same things, do not have the same aims, nor the same principles. The real Democratic Party today, like the Republican Party, as always, does not countenance intolerance, and certainly there has never been a political party in our history which has been more tolerant of religious faiths, or races, or of the people as has the Republican Party—the party of Abraham Lincoln.

I hope for the sake of this wonderful Nation, I hope in the interest of liberty, justice, freedom, and peace, that these groups and these people who have fanned the flame of intolerance will in time see the errors of their way. There is plenty of room here for different viewpoints without intolerance. There is no good reason why we should not at all times be willing and able to live up to the concepts of democracy. Yet one of the most important prerequisites of freedom, the base on which democracy rests, is tolerance. Without tolerance, there can be no liberty and without liberty there can be no democracy, so individuals who foster intolerance actually eat away the fabric of democracy. The Communists know this. It is their game. Avowed Communists make no bones about it. They purposely encourage intolerance to destroy democracy. On the other hand, there are other individuals who are intolerant today because they say it is patriotic to be that way, and I particularly refer to those individuals and to those organizations which are becoming so articulate of late toward the Hebrews. I cannot for the life of me see their reasonings, for the first principle of patriotism is to uphold the Constitution. Yet, if you subject any religion to involuntary servitude or to complete subjection, you violate both the spirit and letter of the Constitution of the United States. In addition, you are encouraging our people to forsake their democratic principles for the dogma of totalitarian states. You are consciously, or unconsciously, urging the strongest democracy in the world to follow in the ragged paths only too recently traveled by the dictators of Russia and of Germany. And lastly, if you should outlaw, and I hope to God you never do, one race or one religion, there is nothing to stop you at some future time from outlawing another race or another religion.

I am pleased, though, to admit on this radio broadcast that while our committee has unearthed much evidence which shows existence of religious, racial, and class intolerance in the United States today, while the extent of it is abnormal, it is, however, confined to minorities and a comparatively few persons. But, as I have said before, it is a definite danger signal.

We who believe that America is the greatest nation on earth, that its flag is the symbol of justice, liberty, and infinite possibilities should beware of this signal. We should do everything in our power to counteract it; we should encourage the civil authorities to be firm and courageous about it; and we should at all times keep it before the searching glare of public opinion.

I say this because I know a large majority of the American people will not tolerate any undue tampering with their Government or with their institutions or with their well-established customs; and if a large majority of the people appreciate existing dangers, they will speak in no uncertain terms.

So, in closing may I encourage the people of the United States to have faith, to be tolerant, and to journey along the American way. Lastly, obligations were passed on to you by your forefathers. If you will but carry them out, you will secure the blessings of opportunity for your posterity.

The Neutrality Act

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

ARTICLE BY WALTER LIPPMANN AND EDITORIALS FROM CALIFORNIA NEWSPAPERS

Mr. IZAC. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article by Walter Lippmann which appeared in the Pittsburgh Post-Gazette of May 31, 1939, and two editorials which appeared in California newspapers:

TODAY AND TOMORROW—SECRETARY HULL'S NEUTRALITY PROGRAM

(By Walter Lippmann)

There has been some criticism of Secretary Hull because he has waited so long before taking a position on the Neutrality Act. But his caution has, it seems to me, been wise, and the effect of the delay has been salutary. The delay has greatly improved the position in Europe, and the discussion before the congressional committees has resulted in a genuine clarification of American policy.

The reason for believing that the delay here has improved the position in Europe can be understood when we remember that nearly 3 months ago Great Britain stood helpless and irresolute while Hitler tore up the Munich agreement, overran Bohemia and

Moravia, occupied Memel, and threatened Poland, Lithuania, and Rumania. Since that happened the British and French have pulled themselves together, have constructed a great defensive alliance, and have made it clear that they mean to defend their vital interests. This has required the doing of a great many things that Mr. Chamberlain hated to do—the giving of guaranties to Poland, Rumania, and Greece; the making of an alliance with Turkey and with Russia; the adoption of conscription and the placing of British industry on a war footing.

The total effect of this reversal of British policy has been an acknowledgment of the fact that the vital interests of Great Britain in Europe can be defended only by Great Britain with such allies as she can find in Europe. Had the United States repealed the arms embargo 2 months ago, it is probable that this action would have been greatly misunderstood in London as meaning that the United States could be counted on to fight alongside of Britain in case the axis struck toward the west.

It is a reasonable assumption that if Mr. Chamberlain had had any reason for thinking that he could count on the United States as an ally, he would never have committed himself in Warsaw, Bucharest, Athens, Angora, much less in Moscow. This would have been a dangerous illusion on his part. Mr. Hull's delay, whether calculated or not, has compelled Mr. Chamberlain to accept the fact that the restoration of a balance of power in Europe is a European responsibility, and to act accordingly.

The delay has also had a good effect on Hitler and Mussolini. Back in March the two most prominent proposals before the committees were the Pittman "cash and carry" bill and the Thomas amendment to name "the aggressor." Neither bill commanded general support. Both had grave defects which would have caused all manner of confusion and entangling difficulties. Had Mr. Hull sponsored either proposal, it would probably have been defeated, because in the test of debate it could not have carried conviction.

It would have been very dangerous indeed to have this debate with the prospect of eventual defeat at a time when Hitler was on the march and the European opposition was as yet unorganized. It would have furnished one more reason, and a very powerful one, for continuing the campaign which so very nearly brought on a European war at the beginning of April. The delay here left Hitler and Mussolini uncertain as to what the United States might do, and convinced them, as we may fairly assume, that if they suddenly bombed London and Paris and overran Holland and Switzerland, the reaction in America would be terrific.

So by depriving Mr. Chamberlain of the illusion that he could count on America, by depriving Hitler of the illusion that he could count on hermetically sealed American isolation, a most necessary and healthy realism has been promoted in both camps. The interest of the United States has been served in that war has been postponed, and perhaps averted; if war has not been averted, our interest has also been served in that the resistance has been organized. The nations which share with us the control of our real frontiers in the Atlantic Ocean and in the Pacific cannot now be defeated by a knockout blow. Our own security is consequently much greater.

Now that Great Britain is committed in Europe and now that there is a balance of power among European States, the American interest will best be served by a prompt clarification of the neutrality act. For while the alliances that have been formed in Europe may postpone, perhaps prevent, a world war, there is no certainty that they will. All that is certain now is that if war breaks out it will be a long war and that it will be fought all over Europe, Africa, Asia, and on all the oceans.

The existing neutrality act puts the United States in a most awkward position. It gives to Hitler the power, by the simple act of declaring war or fomenting a revolution to stop our trade in a long list of commodities, to divert our shipping, to decide where Americans may travel, and to disorganize the financial basis of our foreign trade. Never in our own history, and never in the history of any independent state, has a legislative body voluntarily given such power over its own affairs to a foreign government. And never has a nation professing peace offered such an inducement to an aggressor, never has it put such a premium on going to war or on starting a revolution.

Though this is the effect, it was, of course, not the intention of the American Congress. The intention was to keep the United States from being entangled against its will and contrary to its national interest in a European war. The purpose of Congress in enacting these embargoes and prohibitions was to keep private citizens and private commercial interests from getting so entangled in a foreign war and suffering such injuries that America would have to go to war to protect or avenge them.

Now Mr. Hull's program carries out this purpose as exactly and as efficiently as it is possible to do it. Instead of giving to foreign nations the power to keep Americans out of any part of the world that they choose to name, Mr. Hull proposed to have the United States decide what parts of the world are too dangerous for American travelers, American ships, American exporters. That is the essence of the Hull plan and, once understood, it is the plainest common sense.

The difference between his plan and the existing law is that Mr. Hull proposes to have the United States, not some foreign nation, determine where the fighting is serious enough to warrant forbidding Americans to travel and to trade. Under the present law, Japan or Germany or Italy can regulate our trade and intercourse with, for example, Australia or Canada, just by declaring that they are at war.

Did anyone seriously mean to transfer so vital a part of American sovereignty to Tokyo or to Berlin? Obviously not, but unhappily that is the state of the existing law.

Mr. Hull's plan not only recovers American sovereignty, but it goes much further than the law as it has stood since May 1 in preventing private interests from getting us into trouble abroad. Under his plan we decide where the trouble exists. Having defined the area, we forbid Americans to travel in that zone of combat, we forbid American ships to enter it, we forbid American-owned goods to be transported through it, and we forbid Americans to lend money to anyone who is intending to carry goods through that zone.

But what we do not do is to stop trading with any part of the world that is theoretically, though not actually, in the zone of the fighting. We do not abandon our interests anywhere at the mere behest of foreign governments. We do not tie up our ships in port or let them go only where foreign governments choose to say we may let them go. We do not let foreign governments decide whether we may sell this American product but not that one. We do not let foreign governments decide whether nations they mean to attack may get the arms to defend themselves.

Fairly considered, examined on its merits, I submit that the Hull plan does everything that men like Senator NYE have sought to accomplish. Though the method is somewhat different, the purpose is the same, in that it fixes a definite line which cuts the entanglement of American private interests in foreign wars. That is what Mr. NYE has been after, and that principle has conquered.

The only difference is, first, that Mr. Hull cuts the entanglement at the zone of actual danger, whereas Mr. NYE would cut it at the 3-mile limit; and, second, that Mr. Hull would have our own Government, not foreign governments, decide where Americans shall travel and shall trade, whereas Mr. NYE would, unintentionally, of course, surrender that sovereign power to foreign governments.

[From the Mercury Herald of San Jose, Calif., of May 31, 1939]

NOT PARTISAN ISSUE

Representative FISH, Republican member of the House Foreign Relations Committee, views with alarm Secretary Hull's proposal to eliminate from the new Neutrality Act the mandatory embargo on sale of munitions to nations at war. The effect of it, he says, would be to "make the United States the slaughterhouse and arsenal for arms, munitions, and implements of war, and particularly for Great Britain, which controls the seas."

Foreign relations should not be made the football of partisan politics. Leaders of both parties should squarely face the facts presented in the international situation and devise constructive measures to safeguard the Nation's interests.

The inescapable facts are (1) that the three dictator nations forming the Berlin-Rome-Tokyo alliance proclaim force to be the instrument of their foreign policy, repudiate treaty obligations and international law, and menace world peace by their lawless conduct; that all nations, including the United States, realize this to be true and are spending billions to increase their armaments to protect themselves against the aggression of the dictators; (3) that the storm center is in Europe, and world peace depends on whether the peaceable nations of Europe can unite and make their armaments so strong the dictators dare not risk an attack on them.

On this state of facts it is self-evident the United States is secure against attack if the peaceable nations of Europe are militarily strong enough to curb the dictators. To prohibit the sale of munitions to the nations protecting us against the Nazi-Fascist menace would therefore be an act of folly. The way to prevent the United States from being a "slaughterhouse" is not to declare an embargo, but help pile up the munitions of the anti-aggression bloc.

[From the Los Angeles (Calif.) Times]

A SOUND PROGRAM

The bill which will probably enact Secretary Hull's neutrality proposals into law—since they are said to have full administration approval—appears to be soundly considered, in spite of objections to it immediately voiced by Senator BORAH and Representative FISH. The Senator and the Representative complain that sale of munitions even on a cash-and-carry basis will "turn the United States into an arsenal."

These objectors might well be asked what are munitions and what not. If there is any moral distinction between selling the raw materials to be made into munitions and the finished product, it would be hard to draw; the most innocent of materials may be turned into the deadliest of weapons or explosives.

To shut off a flow of materials necessary or useful in wartime would require the embargoing of all exports, regardless of character. Such a quixotic gesture on our part would entail an immense sacrifice.

Furthermore, it would cog the dice in favor of the well-prepared and war-disposed nations, which could get along without supplies from this country, and penalize nations which might be defending their very liberty and existence against aggressive attack.

There is no argument in favor of an embargo on munitions which does not apply with equal force to an embargo on all commodities.

This phase of the neutrality law has been debated for years and always comes out at the same place. It is time to admit that discrimination between various classes of exports is illogical.

The refusal of loans or credits to belligerents is a method of restricting war exports indirectly, which may or may not work out well in practice, but which may deserve a trial. It appears to be based in principle mainly on our bad experience with the war debts rather than on moral grounds.

The prohibition of travel by Americans on ships of belligerents and the prohibition of visits by American ships to dangerous areas are theoretically objectionable as interfering with individual freedom and as abandoning the historic American doctrine of freedom of the seas. It would serve all purposes if such travel and such visits were made at the risk of the parties concerned. In practice that will probably prove the effect of this provision, which appears impossible of practical enforcement.

Other provisions of the act speak for themselves. On the whole, it seems about the best neutrality bill obtainable and a considerable improvement over the existing statute.

Secretary Hull's coincident warning that a policy of isolation is both impossible and dangerous for the United States is correct in its main thesis. For good or ill, the United States is a part of the world. We need not take sides in every quarrel; but if we fail to act when the quarrel intimately concerns us, we may be gravely damaged and have no recourse.

Revision of the Neutrality Act

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

EDITORIAL COMMENT ON REVISION OF THE NEUTRALITY ACT

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials recently published with regard to proposed changes in the Neutrality Act:

[From the El Paso (Tex.) Times]

A ROAD TO PEACE

Secretary of State Cordell Hull's latest proposals for revision of the neutrality law should be accepted by Congress.

Mr. Hull's suggestions show a thorough understanding of the situation, based on a deep study of the present neutrality law, including its shortcomings and good points.

The Secretary made six recommendations, all of which appear sound.

His first proposal calls for elimination of the present arms embargo provisions of the neutrality law. He said the neutrality law's provisions for an embargo on export of arms, ammunition, and implements of war have failed. Theoretically, those provisions appeared sound, but in practice they have failed miserably. Experiences of the United States with those provisions during the civil war in Spain and the Chinese-Japanese bloodshed should have convinced anyone that they were not workable.

Mr. Hull's other proposals deal with prohibiting American-owned ships from entering combat areas; restriction of travel by American citizens in combat areas; provision that the export of goods destined for belligerents shall be preceded by transfer of title to the foreign purchaser, or, in effect, reenactment of the expired "cash and carry" policy; continuation of existing legislation respecting loans and credits to nations at war, and, regulation of the solicitation and collection in this country of funds for belligerents.

If America can be kept out of a general war, Mr. Hull's proposals, if put into force, would go a long way in that direction.

If American ships and nationals are kept out of combat areas, there should be small chance of embroilment on that score. If foreign purchasers at war are required to take title to their goods in the United States, paying cash upon delivery here and then undertaking to transport those goods themselves, the United States would be relieved of all responsibility for delivery, thus again lessening the chances of our becoming embroiled.

Many persons in high positions contend that the United States eventually would become involved in a general war, so why not enter into the hostilities at their outbreak on the side of our choice and bring the war to a successful end as quickly as possible?

Of course, that argument has some merit, but it seems better to take a chance that this Nation might not become involved.

Secretary Hull's latest proposals offer us an avenue, apparently the only avenue with honor, of avoiding a general conflict not of our own starting. Certainly, we should be foolish not to follow it.

[From the Denver (Colo.) News of May 31, 1939]

KEEPING OUT OF WAR

There are two ways in which neutrality legislation can help to keep America at peace:

First. By helping to prevent a European conflict.

Second. By reducing the chances of our entanglement if such a war cannot be averted.

It seems to us that Secretary Hull's proposals for amending the Neutrality Act are suited to both objectives.

As the act now stands, if fighting starts in Europe tomorrow, the President must forbid entirely the exportation of arms, ammunition, and implements of war to any of the belligerents. But the sale and delivery of oil and cotton and steel and a thousand other things, just as vital as machine guns, would not be restricted. And the torpedoing of American vessels bearing foodstuffs and fibers could point us down the road to war just as surely as could the sinking of cargoes of airplanes and cartridges.

Mr. Hull would place all exports to belligerents—whether tanks or shoes or wheat—on a cash-and-carry or come-and-get-it basis. He would forbid American ships to enter zones of conflict. Warring nations would have to send their own vessels to our docks, place their cash (no credit allowed) on the barrelhead, take title to the goods, and haul them at their own risk. Our industry and agriculture would suffer a minimum of dislocation.

That seems simple and fair. Actually, of course, in a general European conflagration, such a law would favor England and her allies so long as they controlled the seas and had the cash. But then it is utterly impossible to write a neutrality law that will give an even break to both sides. And surely even Fritz Kuhn is not so stupid as to think the American people would long tolerate a law that catered to the axis at the expense of the democracies.

As the Neutrality Act now stands, if Hitler launched his bombing fleets tomorrow against London and Paris and Warsaw and Bucharest, President Roosevelt would, by law, have to forbid delivery of the hundreds of fighting planes already ordered in this country by France and Britain. (True, the President might fail, as he has done in the case of China and Japan, to recognize that a state of war exists. Some authorities think he could properly do so on the ground that the act infringes unconstitutionally the Chief Executive's historic authority over the conduct of our foreign relations.)

But if Germany were convinced that he actually would apply the embargo her estimates of her chances in a quick war would be enhanced. If, on the contrary, Congress notified the world that our policy to all would be "come and get it," then Germany would have to revise her calculations. And to that extent the Hull proposals would tend to preserve peace in Europe.

Suppose, however, that we go along on the basis of our existing law. What do you think would happen if a war started and England and France, reeling under successive waves of mass bombing which their own air fleets proved inadequate to prevent or avenge, pleaded for delivery of those planes they ordered here before the war started?

Do you think Congress and the American people would shut their ears? We don't. We think Congress would repeal the Neutrality Act so fast it would make your head swim.

If that guess is a reasonable one, why hang on to the letter of the existing law now, when enactment of the Hull proposals might serve as a powerful deterrent to the war party in Berlin?

[From the Frederick (Okla.) Leader, of June 6, 1939]

NEUTRAL AND INDEPENDENT

Secretary of State Cordell Hull, the Cabinet's No. 1 statesman, has proposed a neutrality law which would aid greatly in keeping the United States out of war—and would preserve its international independence—something that is impossible under present laws.

Hull proposes to keep the American Government free to exercise its sovereignty, and at the same time to prevent our own people and other nations from involving us in foreign wars. He would provide the utmost in war trade with the least possible risk of becoming involved thereby—and he would also do away the possibility of foreigners financing their wars in this country or influencing our foreign policies.

His proposal ought to be passed speedily.

Wage and Hour Law Amendments

EXTENSION OF REMARKS

OF

HON. RAYMOND S. McKEOUGH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

RADIO ADDRESS BY HON. ELMER F. ANDREWS

Mr. McKEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by

Hon. Elmer F. Andrews, Administrator, Wage and Hour Division, United States Department of Labor, delivered over the radio on June 19, 1939:

The Social Security Act, the Wagner Act, and the wage and hour law together form the charter of industrial and economic democracy for the wage earners of the Nation. Together these statutes protect the Nation against mass poverty, sweatshop hours, and industrial war. Tonight I want to warn you that these three acts are in danger of being mangled by lobbies which, knowing the acts are here to stay, seek, by flank attacks, to chop these laws to pieces.

Literally millions of workers, the neediest, the least organized, and the economically weakest of all wage earners, are threatened by pending or proposed amendments to these great pieces of labor and social legislation.

More than a quarter of a million of these workers would be excluded from the benefits of the Social Security Act under an amendment which has passed the House and is now in the Senate.

More than 1,000,000 workers would be robbed of the protection of the wage and hour law by ripper amendments now before the House.

A million and one-half employees are threatened with industrial disfranchisement by proposed amendments to the Wagner Act.

Tonight I have time to tell you the story of only one of these pressure groups—the misnamed Agricultural Producers' Labor Committee. That committee is a legislative "front" for the Associated Farmers of California, a notorious labor-busting outfit of the west coast, which is largely financed by the Chamber of Commerce of California, big public-utility interests, and employers opposed to organized labor. The Associated Farmers have a long record of trying to solve their labor troubles by violence. It is a matter of notorious record that they have suppressed free speech, a free press, the right peaceably to assemble, the right to petition—just about all the constitutional guaranties that were intended to safeguard the liberties of a free people.

When you think of a farmer you probably have in mind a man who works 40 or 60 acres by the side of the road. He grows a little wheat and hay and corn, and keeps a few cows and raises a few pigs, and has an apple orchard and a berry patch. He works the farm with the help of his wife and children, and occasionally employs a hired man.

Well, most of the Agricultural Producers' Labor Committee aren't farmers in that sense at all. Most of them participate in the operation of packing or canning plants for which their vegetable ranches or fruit orchards, covering hundreds of acres, are feeders. They've got their operations on a production line like an automobile factory, and just as thoroughly industrialized, and instead of employing an occasional hired man they employ, off and on, hundreds or thousands of people, many of them Mexicans, Filipinos, and refugees from the Dust Bowl, who they can hire for a few cents a day, and they often house them in unsanitary tent colonies or in dilapidated shacks.

These organized operators aren't going to be held accountable for any of their acts, or for any of the intolerable conditions they create, if they can help it.

The Agricultural Producers' Labor Committee has neither constitution, bylaws, nor a declaration of principles. But they are perfectly frank as to what they want. They want out. They want immunity from the Wagner Act, the Social Security Act, State unemployment compensation acts State wage and hour laws, and the Federal wage and hour law. They seek to recapture the special privilege to exploit the workers in the industrialized packing, canning, and processing plants. They prefer the feudal system of the Dark Ages.

The Napoleon of this counterattack upon progressive legislation is one Ivan G. McDaniel, counsel to the Agricultural Producers' Labor Committee, a Los Angeles lobbyist lawyer, who, since he swung into action in Washington, has become familiarly known among his opponents and victims by his first name. That is a tribute to the effectiveness of his legislative raids to date. If Ivan gets his way, every employee engaged in packing or canning farm products will be deprived of all security in his old age, of the right to join with his fellow men in unions of his own choosing, and the right to work protected by a floor under wages and a ceiling over hours.

Ivan says that the farmer demands this immunity for the nonfarming middleman processor, the packer, and the canner. Let's see what a genuine farmer says. Let's see what Henry A. Wallace, Secretary of Agriculture, says. I quote from a letter written by Mr. Wallace to Senator ELBERT THOMAS, the statesmanlike chairman of the Senate Committee on Education and Labor: "The processing of farm products and preparing them for market, when performed off the farm, should unquestionably be regarded as a nonagricultural operation." Mr. Wallace shares our view that this employment should have the protection of the wage and hour provisions of the Fair Labor Standards Act.

Let me tell you just how Ivan operated upon the clarifying amendments to the Wage and Hour Act contained in H. R. 5435, which Mrs. NORTON, the courageous chairman of the House Labor Committee, and the Wage and Hour Division agreed upon last February. The changes proposed in these amendments were generally accepted as desirable improvements of the act. But when Ivan and his natural allies got through with this simple legislation it had been transformed into an instrument for the emasculation of the Federal wage and hour law.

Let me tell you what wage earners this bill proposes to banish from the protection of the Fair Labor Standards Act: One hundred and fifty thousand logging employees would be removed from the present 44-hour workweek and worked up to 60 hours a week for 38 workweeks with no hours limitation at all during the remaining 14 workweeks; 125,000 employees engaged in packing fresh fruits and vegetables would be deprived of the protection of both wages and hours; 73,000 employees (mostly Negroes) engaged in handling and processing tobacco would be similarly exposed to exploitation; hundreds of thousand of employees engaged in canning plants, slaughterhouses, terminal grain elevators, etc., would be removed from practically all protection from overtime hours.

But even this doesn't satisfy the opponents of labor. It is not enough to exempt from the benefits of the act loggers, packers of fresh fruits and vegetables, tobacco stemmers, and to impose intolerably long hours upon employees of canners, slaughterhouses, terminal grain elevators, and upon thousands of others. Now I am advised that these groups and others seeking exemptions are undertaking to have the House consider this bill, H. R. 5435, under a rule which will permit amendments from the floor, at which time proposals to exempt all clerical workers, all cannery plant workers, all packers, all sawmill workers, all telephone and telegraph workers, all miners, all truckers, the employees of all warehousemen, and wholesalers will be pressed.

There is even a proposal to deprive all wage earners of the 5-cents-an-hour increase in the minimum wage which is to take effect October 24, and to repeal the provisions which make possible the advancement of the minimum wage to 40 cents an hour in those industries which can afford it.

It is now clear that the high-priced lobbyists are not going to let any clarifying amendments go through the Congress unless these amendments carry along with them the emasculating exemptions which they seek for the special groups they represent. It is now clear that no clarifying amendments will go through the Congress without opening the Fair Labor Standards Act to a general revision. As Administrator of the Wage and Hour Division, I know that we have not had sufficient experience in administering the statute to provide any basis for such a general revision. The proposals now made for amendment by those who fought the bill before it was passed—and by those who fight it now—seek to make the amendments a bill to lower wages and lengthen hours of work.

Men and women of the radio audience, I do not feel that I can warn you too solemnly of the immediate danger in which hundreds of thousands of American workers are of losing their rights under the Federal Wages and Hours Act. The high-priced lobbyists of whom I have been speaking are working hard. They are busy tonight. There is real cause for immediate concern. If they have their way all clerical and industrial workers will be deprived of social gains which they have won during the last few years.

If the precedent is ever established of excluding large numbers of employees from this act merely because of the demand of employer pressure groups, no worker covered by the act can long expect to receive its benefits. Such a legislative reward would always be an invitation to other employer pressure groups to secure a similar exemption for their workers.

And as for organized labor, any law passed by the Federal Government which recognized intolerably long hours for hundreds of thousands of employees would handicap labor unions in obtaining reasonable hours in their collective-bargaining agreements.

Moreover, if the Federal Government removes the protection which hundreds of thousands of workers are now receiving from this law, the example would be cited in turning the "heat" on State laws regulating minimum wages and hours of work for employees.

Who will benefit by all this? Certainly not the genuine farmer. The effect will not be to help the farmers but to harm them. For to whom will the farmers sell their cotton, their wheat, their tobacco, their fruits and vegetables, if millions of industrial workers do not have jobs and the money to buy their products?

I repeat, there is reason for every workingman in America, and for responsible employers and citizens generally, to be alarmed because this bill (H. R. 5435) is being supported by well-financed lobby groups who are determined to recommit a large part of our working population to poverty and human misery. The Wage and Hour Act is in peril.

Flag Day Address

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

ADDRESS BY HON. ROBERT A. GRANT, OF INDIANA, JUNE 14, 1939

Mr. GRANT of Indiana. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following

address delivered by me at Michigan City, Ind., on Wednesday evening, June 14, 1939, at the Sixtieth Annual Encampment of the Grand Army of the Republic:

We are gathered here this day to celebrate, as well as to commemorate, an event that for us has a triple significance.

The flags are not yet faded, the flowers have not yet withered and floated away from the graves of our fallen dead who gave their last full measure of devotion to the cause of country, home, and liberty. Just a few days ago we were paying tribute in memoriam to those who laid their lives upon the sacrificial altar of their country.

Here, today, are some of the remaining few, full of honor and full of years, who fought in the great civil struggle which, alas, seemed necessary to cement for all time the union of States in this great Nation of ours. The scythe of time is fast thinning the ranks of those who escaped death on the fields of battle.

So, then, with the hallowed memories of our honored dead still fresh in our minds from the rites of Memorial Day, and with the deep love and respect we bear those now in the sunset of their years who remain with us from the Grand Army of the Republic, we gather here to celebrate Flag Day; to honor the Stars and Stripes, that beautiful symbol of a nation founded upon the eternal principle and ideal that the Creator has endowed man with certain inalienable rights which cannot be conferred by any government of men and which must not be taken away by any government of men—the right of life, liberty, and the pursuit of happiness.

In that immortal document, the Declaration of Independence, which will remain a magna charta of liberty so long as men have the power to reason, was first written, as a basic tenet of government among men the right of the individual to pursue life, liberty, and happiness; the right to make the most of his ambitions and talents, so long as his pursuit of life, liberty, and happiness does not interfere with the equal rights of his brother. In the Constitution, the organic law of our land, that doctrine was again written, to remain there so long as this Nation shall stand.

The Stars and Stripes, with its colors of the red, white, and blue, symbolizes not only those inalienable rights of man, but it symbolizes, too, the struggles and the sacrifices of those who were willing to offer up their all to keep it flying and to keep under its protecting folds a haven of refuge for the oppressed and the downtrodden.

We have here with us, whom we delight to honor, some of those who, too, offered up themselves on the altar of their country to uphold that flag. They represent an almost bygone generation of noble men and women to whom no sacrifice was too great to keep the Stars and Stripes flying from the masts of America.

In addressing you, I represent a generation too young ever to have known the sacrifices of war. I am of the younger generation of this Nation, to whom you of that other generation have handed down the rich heritage of a free government, in a free republic, in a rich nation, all to the end that we might attain those cultural and spiritual values which, so much more than all material things, make life worth while and spell progress in our civilization.

Therefore, representing as I do the youthful generation, in their name I bare my head and from my heart offer you our gratitude for your noble sacrifices, your patriotic efforts, and assure you that our illustrious dead have not died in vain. I assure you that as your sun of life sinks behind the horizon of the years, we shall give that measure of devotion to liberty and humanity for which you were ready to fight, to shed your blood, and, if so be, to die.

The colors of that glorious banner that today floats on the Indiana breeze—symbol of all that makes life worth while, symbol of a great free Government, symbol of a land of equality of opportunity—were not chosen by whim or accident. The white in the folds of that banner represents the purity of motives of those who would uphold among the men of earth the principles of justice, truth, good will, and brotherly love. Those bars of red represent the blood shed not alone on the fields of battle in time of war, but shed many times in the fields of strife, when peace should have reigned, in order that those ideals for which that banner stands as a symbol might not be sacrificed and desecrated and destroyed by the selfishness and the greed of men or the lust for power of those who would trample underfoot the flag of their country and the rights of their fellow men in order that they might taste of the fruits of power.

The blue in that field, on which float the stars representing our States, is the blue of the vault of heaven, that heaven whence cometh the inspiration from Divine Providence that gives to the hearts of men the impulse to be just, to have good will toward their fellow men. Thus we have the white and pure ideals of humanity, of justice, of good will, of truth, of brotherly love, sanctified in the blood of those who made their noble sacrifice to uphold those ideals, living on as eternal truth under God's vaulted sky.

It is tragic, tragic beyond expression, that there should be those in the human race, aye, among our own people, who in their thirst for power or gain are willing to forget or to destroy everything for which that flag stands, everything for which these men of silvered hair were willing to sacrifice their lives. It is tragic, inexpressibly tragic, that there should be working in this country today a ferment of false foreign philosophies that would erase from the Declaration of Independence and from the Constitution of the United States those rights and privileges of which the Stars and Stripes are a glorious symbol.

Just as it was the task of those who have laid down their lives in war, and of those who have grown gray through the years in guarding the liberties and the privileges which are symbolized in the flag, so it is our task, the youth of America today, to keep the watch fires burning, to walk the sentry post, if you please, in every corner of America, that those who would poison the wellsprings of liberty may not succeed.

It is our portion, we hope, through years of peace in the future, to give our great measure of devotion to guarding the flag and the Government it represents and the Nation it symbolizes against those insidious and iniquitous forces of darkness which, burrowing beneath, boring from within, would replace that noble banner with the flag of some dictator.

Be not deceived. That boring is going on. That tunneling under the structure of free government is being carried forward. The insidious poison of discontent with a constitutional government, of belief in its failure and its inefficiency, is being injected into the veins and arteries of this Nation on the campus, in the corridors of our schools and colleges, in the labor unions, in the political gatherings. You will find among us those who would bring about that chaos which must follow the failure of democracy in America in order that, like carrion vultures, they may feed to fatness upon the misery and the ruin of their fellow men.

Something more than a mere proclamation took place back on June 14, 1897, when the first official recognition of Flag Day was decreed by the Governor of New York, who gave orders that on each June 14 henceforth the national flag should fly over all the public buildings of that State. That event was destined to become a ceremony that would be observed throughout the length and breadth of free America.

We cannot observe Flag Day, we cannot pay a tribute to that glorious banner, without paying tribute to those who have stood ready to sacrifice life itself in its defense. We pay, in this rite, tribute to the founders of this Nation; to those who penned the Declaration of Independence and had the supreme courage to give it to the world; to those who signed the Constitution, that there might be born upon this continent of ours a government of the people, by the people, and for the people; to those who, from the first battle of Lexington to the last battle of France, left their homes and their loved ones and, with lips white and hearts aching with the agony of parting, went forth to do their duty when their country called.

In a way I know something of what that sacrifice means. Only a few years ago I trod the stretches of Chickamauga. There I could envision the story told me by my grandfather of the battle, and see again the scene when Chickamauga Creek ran red with the blood of the Blue and the Gray. He was in that battle in a uniform of blue. I remember one of the beautiful expressions which he uttered in describing to me the scenes of that battle. "My boy," he said, "hold no rancor in your heart for those on the other side. They, too, were fighting for what they believed was right."

What a tribute, what a magnificent victory for human ideals, for the truth upon which those who wrote the Declaration of Independence and the Constitution of the United States placed their faith. What a victory, I say, when in a comparatively few years those wounds which came with the riving of a nation were healed, and forgiveness replaced hatred, good will supplanted fratricide.

What a marvelous thing that in this great Nation of ours there could be that spirit which could again lead men to extend to each other the right hand of fellowship and brotherhood over the graves of their fallen brothers. That is why today we make no distinction when we put the living blossoms upon the graves that hide the mortal remains of those who died for what they conceived to be right. That is why, without distinction, we place the blossoms upon the graves of the Gray as well as upon the tombs of the Blue. That is why, when the Old Flag called, back in yonder years of '98, the Sons of the Gray and the Sons of the Blue shouldered their rifles and marched away, arm to arm, comrades in a common cause.

That is why, when we thought we were going into a holy crusade to make the world safe for democracy and to fight a war to end all wars, the sons of the Blue and the sons of the Gray again marched away together, comrades in a common cause.

It has been the heartbreak of America; it has been our great disappointment that while we thought we were giving of our blood and our treasure to make the world safe for democracy the other countries of the world had no such ideal.

Let us never again be inveigled into the age-old quarrels of Europe.

Just as the Man of Galilee, in His wisdom and His gentleness and His love, warned His disciples not to go into those regions to preach to those people who did not want salvation, just so we must never again yield up our men and our treasure in an effort to settle by clash of arms the quarrels of foreign nations, to whom for a thousand years quarrels have been a part of their daily national life and intercourse.

Rather let us make sure by our devotion to the principles embodied in the Declaration of Independence and the Constitution that America shall be kept safe for democracy. Let us by our devotion and our vigilance make sure that this Nation shall stand a beacon for all the world to see and read the lesson that the fruits of peace are happiness and progress, while ruin and chaos are the fruits of war. Let us for the sake of the whole world make sure that this Nation shall continue to stand a free country, in which cooperation and good will and devotion to the eternal truths are the pathway to that peace and prosperity for which men pray and struggle and work; and that brute force, the power of the dictators, the sabers of the oppressors, shall never have a place.

Those men and women who have laid their all, including their lives, upon the altar of their country, did not love war. They hated war. They gave their all that peace might reign. They gave their all that men might live as brothers instead of existing as brute beasts ready with fang and claw to rend each other. They died that men might be free, not enslaved. They died to establish in America the eternal truth that no one man, be he ever so benevolent, is strong enough, or wise enough, lone-handed to solve the problems of life, or the difficulties of a nation. Those eternal principles which are the foundation of this Republic can be upheld only by the devotion in the fervent hearts of every man, woman, and child in this broad land.

It matters not whether you seek to promote the progress of mankind through compulsion by a dictator, by an oligarchy, or by a political bureaucracy, it cannot be done that way. It was because it cannot be done that way that those brave men laid their liberty upon the altar of truth when they penned the Declaration of Independence. It was because those wise founding fathers knew that only in the allegiance of all the people to the ideals expressed in the Declaration of Independence could a free Government be sustained, that they provided for a Government with those checks and balances through three coordinate and coequal branches to prevent the rebirth on this continent of the very tyranny which had driven them from their homes across the seas to the unchartered shores of America.

It was because they knew that at all times, among all peoples, there are those who, under the name of preserving the people's liberties, would shackle their fellow men to gain power, that the founders wrote into the organic law of this land the restrictions which since that time have been assailed and assaulted whenever the lust for power became too strong in some men.

It was because the founding fathers and these men who came after them knew these dangers and sought to guard a young Nation against them that they believed that every citizen owed it as a duty to himself and to his loved ones, to his own home and hearth, to lay down, if necessary, his life in the battle to preserve the freedom proclaimed by the Declaration of Independence and written into the organic law of this free Republic.

True it is we have those among us today who would nurture class suspicions and hatreds, sectional jealousies, and strife. And when they do it they are seeking, whether they know it or not, to desecrate that flag which we are gathered here today to honor, that flag for which these silver-haired veterans were ready to offer up their all.

There is no logic under the sun, there is in eternal truth not one jot of justification for the hatreds and the strifes and the suspicions that have been aroused and nurtured in this land of ours in recent years.

That flag can float and its pristine beauties can gleam in the sunbeams of a free country only so long as we, one people united, are determined to uphold the ideals of which it is a symbol.

Divide and conquer is not a new mode in the world. It has been the method of the tyrant since men first came out of their caves and associated themselves in tribes. It has been the ruse of egos gone mad with lust for power ever since the dawn of conscience in mankind

He who would rule his fellow men first sets his brothers at variance with one another. How well the immortal Abraham Lincoln foresaw this when he said:

"It is to deny what the history of the world tells us is true to suppose that men of ambition and talent will not continue to spring up amongst us. And when they do, they will as naturally seek the gratification of their ruling passion as others have done before them. The question, then, is, Can that gratification be found in supporting and maintaining an edifice that has been erected by others? Most certainly it cannot. Many great and good men, sufficiently qualified for any task they should undertake, may ever be found whose ambitions would aspire to nothing beyond a seat in Congress, a gubernatorial or a Presidential chair; but such belong not to the family of the lion or the tribe of the eagle. What! Think you these places would satisfy an Alexander, a Caesar, or a Napoleon? Never! Towering genius disdains a beaten path. It seeks regions hitherto unexplored. It sees no distinction in adding story to story upon the monuments of fame erected to the memory of others. It denies that it is glory enough to serve under any chief. It scorns to tread in the footsteps of any predecessor, however illustrious. It thirsts and burns for distinction, and, if possible, it will have it, whether at the expense of emancipating slaves or enslaving freemen. Is it unreasonable, then, to expect that some man possessed of the loftiest genius, coupled with ambition sufficient to push it to its utmost stretch, will at some time spring up among us? And when such a one does, it will require the people to be united with each other, attached to the government and laws, and generally intelligent, to successfully frustrate his designs."

How prophetic were those words.

In these past years we have been engaged in a struggle to preserve the ideals represented by the flag just as surely as though it had been armed warfare. In these years we have been combating depression, extravagance, rising debt, mounting taxation, and a wave of discontent which unfortunately has been kept alive by those who appear to believe that only in the discontent of a disunited people can be found the formula for government.

Racial hatreds, class strife, sectional jealousies have been fanned into flame by men willing to gamble with those dangerous emotions in order to gain political aggrandizement.

Wisely did Abraham Lincoln say:

"Property is the fruit of labor; property is desirable, is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

The end and aim of free government under our Constitution is not to enable some men to live in idleness upon the labor of others, but is to so free men that they can by the exercise of their own talents and initiative maintain themselves in amity among their fellow men. The great task that faces us at this hour in our fight to maintain those ideals symbolized by the flag is to restore to the United States of America that freedom of effort, that freedom of industry, that freedom from the shackling regulations of too much government so that industry can again offer a decent job at decent wages to every citizen able to work, in order that he may maintain himself and his loved ones and retain his self-respect as a free son of the stars and bars that float above us.

You cannot tell me that any considerable number of free American citizens want to be upon the bounty of their fellows. Our people want an opportunity to work; they want an opportunity to maintain themselves by their own efforts. It is not for the Government under the flag to support the people. It is for the people under the flag to support the Government, while in their hearts there is kept alive that brotherly love, that good will, that humanity for man that will permit no suffering within the borders of this free Republic.

It is said that charity is a hateful thing. I say to you that charity is an expression of love when it is true charity; it is an expression of that same impulse that moves us to extend the helping hand to him who has fallen, not in order to carry him upon our backs for all time, but to set him upon his feet so that he may follow with us the road to rehabilitation and prosperity.

Just as Lincoln said that "this Government cannot endure permanently half slave and half free," so I say to you this Government cannot endure if the people of this country are politically half slave and half free.

I say to you that when a man must vote as someone tells him to vote as the price of the bread to sustain himself and his loved ones, he has lost that priceless liberty which makes life dear.

I say to you that prosperity can no more be found in creating debt than can peace be found in the maw of war.

Those who have struggled through the years in making this the greatest, richest, freest, happiest, most enlightened Nation on the globe, did not do so by plunging into debt, by spending with recklessness and abandon, by wastefulness and profligacy. They did it by thrift, by self-sacrifice, by the courage to meet hardship and privation and still hold in their hearts the ideals which are symbolized by the flag.

We have no more right to enslave this Nation in debt, to put upon it an insupportable burden of taxation, and then to pass those burdens on to posterity, than our forefathers would have had to waste the strength and the resources of this Nation and to pass on to us of this generation only an empty shell and a false hope.

It is all well and good for some of us to say, "What matters it if our children's children must pay the interest and the debt? They will only be paying themselves." That is a fallacy. The truth is not in it. Such a concept is a fraud upon the unborn generations who are not here to protest for themselves.

If this Nation is to live, each generation in its turn must be strong enough to meet the problems of its day and to pass on, unimpaired and shining with hope, the rich heritage of this great free Nation just as it has been passed on to them.

So, then, let us keep ourselves free of entanglements in the quarrels of the Old World. Let us keep ourselves free of dissensions and hatreds at home. Let us guard ourselves well against the insidious propaganda which would persuade us, if it could, to abandon the Government symbolized by the Stars and Stripes and to accept the tyranny of Russia, or the tyranny of Germany, or the tyranny of Italy.

I would say to those of my own generation, the youth of this land, Hold up your heads in hope, face the future with courage and resolution, let not your hearts be troubled by fear, because your fathers before you had to face privation; they had to undergo trials; they had to endure hardships. In their courage we shall take strength to meet the future and again under the Stars and Stripes lead this Nation back to peace and happiness and prosperity.

So, then, old and young together, let us give a renewed devotion to that flag that flies above us as we resolve anew to sustain those ideals for which it stands. Let us give a renewed devotion to the American's creed penned by that able and patriotic gentleman whom I am proud to call my friend, William Tyler Page. Let me read it to you as a conclusion to my message:

"I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes. I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

Tall Corn and Tall Men

EXTENSION OF REMARKS
OF
HON. VINCENT F. HARRINGTON
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 20, 1939

Mr. HARRINGTON. Mr. Speaker, the Ninth District of Iowa, which I have the honor to represent, possesses a number of claims for distinction. Within the boundaries of this district are the famous great lakes of Iowa, which serve as a cool summering mecca for hundreds of thousands of comfort seekers every year. When Congress adjourns I would like to invite my colleagues to come out to Spirit, Okoboji, or Storm Lake and keep cool.

We also produce a very distinguished specimen of hog in my district. Being fed on the famous Iowa tall corn, the Iowa hog would just naturally have to excel, and it does. The really de luxe ham and bacon you enjoy in the finest eating places comes from Iowa, and I say this with all due respect to my friends from Missouri and Virginia.

Another product of which we are justly proud is our popcorn. We grow the finest and most popcorn in the world in the Ninth District. Sac and Ida Counties, particularly, are referred to as the Nation's popcorn center. And speaking of world's fairs, we have at Spencer, Iowa, every year the world's greatest country fair.

In my home town of Sioux City we boast of the world's largest creamery, and at one time there we had the second elevated railroad to be built in the United States. Sioux City started out some 50 years ago to be a second Chicago. We had corn palaces, elevated railways, cable cars, steamboats, and polo teams. Then the bubble burst, the Missouri River sort of dried up on us, and we got slowed down. We are getting that river fixed up now, and in another year we expect to have river navigation again, and then watch our smoke!

But the Ninth District of Iowa is famous for something even more important than the things I have mentioned, and that is the quality and excellence of its newspapers and the character and ability of their editors.

One of my predecessors in Congress was the Honorable George D. Perkins, founder and editor of the Sioux City Journal, and a worthy Member of this body for four or five terms. The Kellys of Sioux City Tribune fame are another distinguished newspaper family. And with these two splendid daily newspapers as the pace setters there has developed in the ninth district a country newspaper fraternity that is second to none in the world. As evidence that their fame is not entirely local, several of the ninth district papers carry banner lines or ear boxes calling attention to honors or awards won in State and national contests.

Two years ago a journalist originating in my district won the Pulitzer prize for brilliant editorial writing. He is Mr. W. W. Waymack, able editor of the Des Moines Register, who was graduated from Morningside College and learned his newspapering in Sioux City.

Not long ago the Storm Lake Pilot-Tribune, edited by Mr. W. C. Jarnagin, was voted the best weekly newspaper in the United States by the National Editorial Association meeting in Los Angeles. This week the same association held its convention in Seattle, and word has just come to me that the Sheldon Mail, published by Mr. Paul C. Woods in my district, has been awarded first place in the Nation for community service by a weekly newspaper.

And so it goes. The Ninth District of Iowa not only produces a bumper crop of corn and hogs and popcorn but it also supplies the cream of the crop when it comes to newspaper editors.

One might assume from the bouquets I am handing out that all of these editors are supporters of mine. Unhappily this is not the case. Most of this newspaper fraternity got their baptism of printer's ink in an era when Iowa was incurably Republican. It was in a day when the fashionable, as well as the expedient thing to do, was to hang the G. O. P. emblem at the masthead. Out of over 75 papers published in my district I am sorry to say only about a half dozen are stanch defenders of the Democratic faith. But time will cure this deficiency, and the next generation of Iowa editors should be of a more mixed political breed.

Regardless of the personal politics of their editors, however, I find that the papers of the Ninth District are inclined to be fair. Some of them may breathe political fire and brimstone into their editorial pages, but in their news columns they most always tell the truth. And so at a time when the integrity of some of our newspapers is under fire I want to take this opportunity to pay tribute to the daily and weekly press of the Ninth District of Iowa. In the words of the motto of the Alton Democrat:

> When tongue and pen alike are free,
> Safe from all dwells liberty.

Americans and Our Flag

EXTENSION OF REMARKS
OF
HON. KARL M. LECOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 21, 1939

ADDRESS BY HON. BEN F. JENSEN, OF IOWA, AT BELLEVILLE, N. J., JUNE 18, 1939

Mr. LECOMPTE. Mr. Speaker, under leave to extend my own remarks in the RECORD I include a speech delivered by the Honorable BEN F. JENSEN, of Iowa, at Belleville, N. J., in commemoration of the one hundredth anniversary of the founding of that city, in connection with the Flag Day exercises, on Sunday, June 18, 1939, as follows:

Mr. Chairman and fellow Americans, first let me assure you that I deem it an honor and a privilege to come to Belleville, N. J., to take part in this great celebration in commemoration of our flag and the one hundredth anniversary of the founding of your fine city.

Before I go further, may I take this opportunity to express my deep feeling of gratitude to your most able Representative in Congress, who is responsible for my being with you today. While I have only known him during this session, as I am a new Member, I have had the privilege and pleasure of being very closely associated with him, and to you who know him best and love him for the fine, able, honest gentleman he is, let me say that he is held in the highest esteem possible by his colleagues on Capitol Hill, and I bespeak their deep admiration and respect for him when I say that what this country needs is more real men like your own Congressman, the Honorable FRED A. HARTLEY.

I understand this great celebration is made possible by the hearty cooperation of hundreds of civic-minded and patriotic citizens from your churches, schools, veterans, civic, and fraternal organizations, who are to be congratulated for their loyalty to their community, their country, and to their flag. Would that every community did likewise, then we would need have no fear for our future safety. It thrills me to the bone, as it must all of you, and makes my heart beat faster and truer and gives me greater pride that I am an American.

This is my first visit to your great State of New Jersey. I have read the history of your State; and while I have only a few minutes to talk, yet I cannot refrain from reminding you that there must be some of my kinfolk in this audience. You see, my mother and father came from Denmark, and we learn from the history books the resolute Swedes and Danes first came to the region known today as New Jersey and made their homes in the year 1737. So, if there be any in this audience of Danish descent, they might well call me "Cousin Ben."

That calls to my mind a little incident that happened last fall during my campaign for Congress. This is not just a story, it actually happened. Two of my very good friends had listened to me deliver a patriotic address, after which one of them said to me in jest, "Remember, Ben, there were no Danes at Bunker Hill." The other hastily came to my rescue by saying, "No; but the Scandinavians did take New Jersey." So it is rather a coincidence that I am speaking here in New Jersey today; in fact, the first

time I have ever made a public address outside of my own beloved State of Iowa, where I grew up with the tall corn, and I'll leave it to you if you don't think I gave the corn a pretty good race.

As I said before, it is both an honor and a privilege to be invited to address you on this historical occasion. An honor because any citizen is honored who is requested to pay a tribute to the flag and to that of which it is a symbol. A privilege because while I bring to you the concept of our people of the great Middle West, I am able also to acquaint myself with your concept here in the great crowded metropolitan area and to view with alarm your great accomplishments. Separated as we are by many miles of distance and by diverse regional interests and sectional concerns, we are one united unto the ideals for which the flag stands.

Such remarks as I propose to deliver here today might be entitled "The Flag—Long May It Wave." Or it might be entitled "Americansm—Long May It Survive." One cannot speak of Americanism without including the flag. One cannot extol the flag without paying tribute to Americanism.

It is true, of course, that the flag stands as the proud symbol of that high idealistic concept of man's estate proclaimed in the Declaration of Independence and imbedded in the Constitution, which is the organic law of our land.

So today I desire to discuss the flag from a practical standpoint, because it is not a symbol of abstract ideas, that banner of red, white, and blue is the symbol of a living, active, and practical ideal of humanity and government that must be translated into the everyday thinking and the everyday acts of the citizens of this country, if the flag is to really be anything more than merely a beautiful banner floating on the breeze.

Our flag stands for liberty, free government, cooperation, free speech, free press, freedom of religious belief and of political philosophy. It will stand for those ideals just so long as we remain vigilant, each of us, in guarding and upholding those ideals, and no longer.

The flag may be said to represent the national conscience. The national conscience is the composite of the conscience of each individual citizen.

Liberty and all that liberty means must be regarded in the same light as salvation. Salvation is free. But it is free only to those who desire it sufficiently to strive in their daily thinking and their daily living to attain it. Freedom, liberty, cooperation, progress, peace, prosperity are free under our Government in this great, rich, magnificent land of ours, but they are free only to those who desire them and deserve them by carrying those ideals into their daily thought and their daily acts and their daily contacts with their fellows.

Just as constant vigilance is essential if we would not be tempted by evil to let loose of our boon of salvation, so constant vigil is essential if we would not be tempted by a desire for a little temporary security to let loose of and to sacrifice those rights and privileges which have been sanctified in the blood and the struggle and the sacrifices and the privations of those who have gone before us.

For 10 years this Nation has been in the throes of a depression, like most of the world has. This depression had its origin in a great madness which we call the World War—a madness which involved nearly every major country of the globe in a mania of hate and murder and destruction.

The result of that horrible war was not alone a material depression. It was also a spiritual depression. The greatest depression we have in America today is a depression in good will and brotherly love. A depression of hope. A depression of courage. Until we reattain that profound faith in the all power and all love of Infinite Providence, and until we translate such a faith into our daily lives and acts we will not know prosperity. Faith is a purely personal quality. No one may have it for his brother. We may stretch forth our hand and lift our brother up for a strengthened or restored sense of his faith through a manifestation of good will and brotherly love; but having done that, it is his task to hold fast to it and live it.

A true American is practical in both his religion and his patriotism. We believe that religion and patriotism are not merely to be talked about or wished for. They are to be lived, they are to be translated into daily life, and thereby into practical accomplishment.

It was the courage, the initiative born of a profound faith that enabled our forefathers to carve out of the primeval forests and the trackless plains of this continent the greatest, the richest, the freest country on the face of the globe.

What but a profound faith in the goodness of God and the virtue of thrift and the victory of courage could have sustained our forefathers when they took their wives and children and, armed with an ax and a crude gun, went out unafraid into the unchartered areas of this country, and with none to depend upon but themselves, raised their homes, cleared their lands, and finally made of this a nation of churches and schools and farms and factories.

I am not attempting to preach a sermon here today, but I do feel most deeply that the most dangerous thing that is happening to us in this depression is the gradual loss of our confidence in ourselves.

I said awhile ago that the flag of any country means only that which its people make it mean. Our flag has always meant protection for thrift and initiative and ambition. A protection, if you please, for the home and the lands or other property honestly accumulated by hard work against excessive taxation caused by reckless extravagance.

We are not going to produce more jobs by making fewer goods and services. Prosperity is not found in scarcity and lack. It is found only in abundance.

Those things which make life fuller and richer are not found in a closed and silent factory, nor in farm fields lying fallow or overgrown with weeds. Industrial expansion, financial investment, agricultural improvement and progress cannot be forced by fear; they must be nourished by confidence—confidence in the policies and in the right of private property; confidence in the cooperation of our citizens with one another.

We sent our men and our money overseas in the last war under a false slogan of "Make the world safe for democracy." If we would be worthy of the flag which we have met here today to reverence we would do well to see to it that we make America safe for democracy.

Again I say to you that democracy, liberty, cannot be shoved down the throat of any people by force. Democracy is not something you plan, it is something you live. Liberty is not something you swallow, it is something you do. No man and no people can be free unless they desire freedom and deserve freedom.

Therefore, the flag means to keep the boys of America home alive and well and not to again send them across the seas as once we did to crimson the fields of France with their precious blood.

The flag means to keep the American market for the American workingman and the American producer, first, and to share with foreign workers and foreign producers that which is left.

There is no reason in logic or in government or in a good-neighbor policy why we should close a factory in this country in order to open a factory in some other country. Nor why we should impoverish the farmers of America to profit the farmers of foreign lands.

In that connection permit me to observe that it was farmers—an agrarian people—who wrote the Declaration of Independence. It was they who founded the Republic under the Constitution. It was the farmers of America, if you please, who unhitched their horses from their plows and rode to battle to defend the flag that flies above us today.

The farmers have been the backbone of America. They have been the mainstay of its progress and its prosperity. There are many reasons why that should be so, not the least of which is that the farmer loves the soil he tills. Removed from the obstructions and the confusions of the crowded cities, I think he has more time to commune with nature and to more properly evaluate the realities of life.

Mechanization of both industry and agriculture received a tremendous impetus as the result of the last war. Other countries of the world, using their manpower for fighting, turned to the United States for agricultural supplies. For some years after the war, so long as we were willing to lend the other countries money with which to buy our commodities, that artificial market for American farm products continued. As the armies of Europe and their people returned to the tilling of the soil, and when we quit lending them money, the American farmer lost his market. In the meantime the American farmer had become largely mechanized. Hence they were able to produce much more per man than they had previously. Also the horses and mules, which had consumed millions of bushels of grain the farmer had raised for sale and use, were replaced by combustion machinery, which the farmer today buys and feeds with gasoline and oil, which he must also buy. You know the result, which was inevitable.

Now, all this would present a dismal picture to the future if there were no remedy in sight. But there is. Vast new markets for American farm products at better prices than the farmer has ever dreamed of receiving exist here in America potentially, are ready for the taking, by which industry and labor will in turn derive equal profit.

The science of farm chemurgy has uncovered possibilities in the field of fuel alcohol, plastics, and essential oils, synthetic rubber, and building materials undreamed of 20 years ago. It is a remarkable thing, indeed, but a fact, that today the chemist can take farm grain, turn it into alcohol, and from that alcohol produce a synthetic rubber that will have all the qualities and more than natural rubber, and with which can be produced tires which will run 100,000 miles. This all seems incredible, but it is a fact.

It is estimated that plants to utilize farm products as industrial raw materials could be established in every community in this country for less money than we have spent on relief alone in the last 2 years. Now, I am sure you will agree that if only we take advantage of new discoveries that ingenious man has and will devise for our happiness and comfort, and if we will abide and cooperate with Divine Providence and natural progress as symbolized by our flag, we will solve our distressing problems.

And so in conclusion let me appeal to you all to be ever vigilant because the evidence is unmistakable that in high places and low places there are those who would rip that flag from yonder mast and trample it in the dust while they set up in this Nation a state of advanced socialism leading straight to the tyranny that crosses Russia today.

We must stamp out from every section of this land of ours every un-American influence that would overturn our cherished traditions, undermine the pillars of our constructional Republic, and finally enslave our children and our children's children.

God bless the flag and the ideals for which it stands, and may he grant this day that those ideals may not be only held in our hearts but manifested in our daily lives and acts that we may return to that state of peace and prosperity which we can attain if we will but observe the role of loyal, true Americans.

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. DAVID J. WARD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

ADDRESS BY HON. JAMES A. FARLEY AT BETHESDA, MD., JUNE 20, 1939

Mr. WARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable James A. Farley, Postmaster General of the United States, delivered to the graduating class of the Bethesda-Chevy Chase High School, Bethesda, Md., June 20, 1939:

Members of the faculty, members of the graduating class, and distinguished guests, this occasion recalls my high-school graduation 34 years ago in Stony Point, N. Y. Looking into the future 34 years seems a long time, but to look back it seems but yesterday.

Some of us today look back over years when you did not exist, and many of you are looking forward to the time when perhaps many of us will have passed on. It is possible that during the past half century of travel over life's highways there may have been found in our own experiences, or in the experiences of others, pitfalls which you can avoid, and in doing so make just a little easier the pathway of your life.

Commencement is an appropriate word for this occasion. It is the beginning for each of you. Here you have been taught from books—from the experiences of your teachers—and you have learned proper social customs. Here you have made friendships which will continue through your life. You may not remember all that you have learned, but if your mind has been trained to think and to reason correctly, the energy expended will not have been wasted

Whether you apply yourself to a profession, a business, or a career in public service, there is no substitute for experience in acquiring success. The physician calls upon the laboratory for the scientist who, through tireless years, has discovered old enemies of man, and by proper treatment retards or destroys them; the lawyer searches the decisions of the courts to apply the rulings to a particular statement of facts; the student of government follows the course of empires and republics to determine the cause of success or failure; the businessman gathers the facts from other periods of depression or prosperity to determine his policies; the economist studies the law of supply and demand, the results of artificial stimulation, or government regulation, to solve the problem of balanced production. In each instance it is the experience of the yesterdays that largely guides us in making the decisions of today.

Athough each generation has new problems, that does not lessen the value of experience nor minimize the importance of research. The world is in greater need of trained minds today than ever before. With the increase of population our civilization becomes more complex, and limitations encircle individual rights. In determining these limitations every rule or law must be tested by one standard—the greatest good to the greatest number.

A simple illustration makes clear this point: If a man owned a very large ranch, several thousand acres, he could drive across it at a hundred miles an hour in an automobile; he could park his car anywhere; he could shoot a gun in any direction. With the coming of population, these and many other original rights must be yielded in the interest of the common good. Because of danger to others, the car cannot be driven at an excessive rate of speed, nor firearms used as freely as formerly. These new problems which grow out of new conditions must be solved by those of us who live today, and other problems by you tomorrow. We pass from the immediate needs of the individual for himself and his family to the requirements of the community at large, of the State, of the Nation, and of the world. You must be prepared, after you have established yourself in some occupation, to make your contribution in helping to solve these larger problems which affect all. The village, the city, the State, and the Nation have a call upon you for your services.

As one looks across our land he finds many thousands of classes similar to the one before me today. They all leave with high hopes and eager to take part in the race of life. You will meet with discouragements; you will meet with defeats; you will meet with disappointments and sorrows; and you will meet with triumphs. These are all part of the experiences of life. Before the first adverse wind, the weak will fall; but the strong will grow stronger because of the triumph. You will hear it said there are no opportunities for the young people of today.

Benjamin Franklin, the first Postmaster General of the United States, came home one evening and told his dear old mother, in a burst of enthusiasm, that he had decided to start a newspaper. The kindly old lady looked at her young son and said: "Why, Benjamin, how can you think of such a thing? There are three newspapers in America now."

Do you remember a few years ago a boy lay stricken on a hospital bed in Kansas? The doctors shook their heads and told his mother that the burns were so severe on his body and legs that he would never walk again. He overheard it and, with a gleam in his eye, said to his mother: "You tell them, mother, not only will I walk again, but I will run." He did, and established many new records on the track. The courage and persistence of Glenn Cunningham will never be forgotten.

Yes, there are problems to be solved today in every city, in every State, in our Nation, and in our relation with other countries. These are troubled times, but that is the challenge that this generation throws at the feet of the young men and women who will be the leaders of tomorrow. If there were no problems to be solved, what would life hold for you or me? If there were no defeats, there would be no joy in victory. Someone expressed it in these words: "With every rose you get a thorn; but roses are beautiful."

Your life will be just what you make it. Lincoln said: "I always pluck a thistle and plant a rose where I think a rose will grow." Each of you has a choice; you can plant either thistles or roses. The objective of most people is to secure the greatest happiness out of life. There are some attributes which stand out prominently to attain this objective. They are honesty, hard work, fair play, and optimism.

Honesty should be placed first; not only honesty in financial transactions, but honesty in thinking. The more educated a dishonest person is, to that extent, he is a greater danger in the community. Such individuals may prosper for a time, but the road always ends, and during the passage over that uncertain road there is no compensation for the mental anguish which the individual suffers. False pride at times drives a person to dishonesty. How much more you think of a friend who states very frankly that he cannot afford the things he would like to have.

The real values in life are not the material things we see about us, but the things that are inside of us. Call it the soul if you will; it is our better self; that with which we must live every minute of the day. You can train yourself to look upon things in life in a downright honest way, and you will be happy or unhappy in the things you think and the thoughts to which you give expression. False pride has ruined more young people, next to dishonesty, than anything else.

Nothing really worth while was ever accomplished without hard work. If it can be accomplished without effort, then it's usually not worth doing. Look at the members of your own class and you will concede that those who have received the highest marks, with some possible exceptions, are the hardest workers. Look around your city and you will find that the men and women who have made a success are the men and women who have been diligent in their labors. Of course, hard work does not always bring success. There must be an intelligent driving force behind the effort. But you can rest assured that there will be no real success without hard work. Someone once said that genius was 90 percent perspiration.

Coupled with these two essentials of success should be fair play. Whether it be on a baseball team, in football, in any form of athletics, or in the business world, there is nothing that makes friends and holds them as securely as fair play. If it can be said about you in all your activities and business dealings that you are a square shooter, you will have straightened out many of the rough spots on the road to happiness.

There is another attribute, and that is optimism. Tackle your work with the slogan that it can be done. This will give you faith in yourself, faith in your friends, and make you eager to do what some people may call the impossible. No grouch ever succeeded, or if by accident he did, he never enjoyed his success. Always believe that tomorrow will be brighter than today. Someone expressed it in a rather crude manner when he said, "The optimist sees the doughnut, the pessimist sees the hole."

Remember that men and women whose memory we cherished in history are not those who accumulated great wealth, but those who rendered a distinct service to mankind. You have been given the advantage of a high-school education, which unfortunately is denied many hundreds of thousands of other young boys and girls in our country. Your fathers and mothers have made many sacrifices that you might receive the awards which are conferred upon you today. In return they ask very little of you. It is their sole wish that you be successful. That does not necessarily mean that you accumulate a great deal of money, but it does mean that when the last lap is run in the race of life, the community in which you lived can say, "We are all just a little better because he or she lived here."

Members of the graduating class, it was indeed a pleasure to accept the invitation to address you on this occasion. A new life with greater responsibilities unfolds before you. Keep an open mind as you attempt to solve each problem, and do not make hasty decisions. There is an old French proverb that says, "We only hate the man we do not know." Hate has no place in American life. Your life is your own. Make it worth while; make it really mean something. When the years have passed, you will come back again to this school to recount the victories and the

defeats, to recall the memories of the fine boys and girls you knew in your classes and the splendid men and women who gave you inspiration from the teachers' desks. America needs you, and you need America. May you prosper with the Nation, and may the Nation prosper because of the contribution each of you and millions of others of your age make to the common cause of mankind.

House Failed to Vote Sufficient Funds for P. W. A.—Sponsors Now Look to Senate for Aid—5,800 Project Applications Pending

EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. KRAMER. Mr. Speaker, on Friday last the House defeated the amendment to the relief and work relief appropriation bill, proposed by the gentleman from Alabama, Representative STARNES, which would have made available $350,000,000 for P. W. A. in addition to the $125,000,000 earmarked for that agency from the W. P. A. fund.

The $125,000,000 provided in the House bill is inadequate for a new public-works program when we take into consideration the fact that there are some 5,800 project applications pending for which no funds are available. The bill also opens the door for acceptance of new applications. What could the Public Works Administration possibly do with new applications when the House sum is not sufficient to provide allotments for even a small fraction of the pending approved applications? For the information of the House, I want to state that the 5,800 project applications already on file would provide a construction program amounting to $1,775,000,000 if the necessary sum for loans and grants were provided by the Congress.

With the permission of the House, I am inserting at this point an editorial of June 16 appearing in the Evening Star, Washington's most conservative newspaper, in support of the P. W. A. program. It will be noted that in the opinion of the editor, P. W. A.'s major accomplishment has been "putting idle capital to work." It was written on the sixth birthday of this agency and is a fitting commentary of its record of achievement in the field of construction and worth-while public improvements. It is hoped that the Senate will provide sufficient funds for the new program so that communities sponsoring the pending approved applications will not be disappointed when allotments are authorized. Certainly these communities have little cause to rejoice in the action of the House last Friday.

[From the Washington Star of June 16, 1939]

SIXTH BIRTHDAY REFLECTIONS

Six years ago today, when the Federal Emergency Administration of Public Works was created to stimulate the Nation's lagging heavy industries, the idea of a public-works program of this type had been the subject of theorizing for a generation or so. It had never been tested, however, on a national scale. For this reason grave doubts existed when the P. W. A. was launched and economists everywhere voiced different opinions on the effect such expenditures would have in the then desperate drive for national recovery.

Now, on its sixth birthday, the theory of the public-works program has been translated into facts. Whether it has accomplished all that its sponsors had hoped for is open to dispute. But few will deny it has rendered a service of considerable importance in priming the pump of industry at a time when the pump was very, very dry. Few also will deny the economic and civic value of the thousands of useful Federal as well as non-Federal projects that have been built throughout the country.

Putting idle capital to work has been one of the major accomplishments of the P. W. A. in this 6-year period. Cities, towns, and counties have contributed approximately $1,648,000,000 of their own funds toward the construction of 16,700 useful local projects. This contribution is drawn chiefly from idle capital which has been put to useful work as investors buy bonds of local public bodies and the money is used for employment-giving construction. Yet Administrator Harold L. Ickes has never claimed the P. W. A. is an emergency agency for providing public employment.

A large majority of these projects probably would never have been built during this period save for the contributions in Federal grants, amounting at first to 30 percent of the total construction cost of a project and increased later to 45 percent.

For obvious reasons, it has not been difficult to get commitments of funds from local communities. In the first program, the question of voters putting up their own money for projects was an issue in nearly 2,000 bond elections. The outcome was favorable in approximately 80 percent of the elections. It served as a sort of a national referendum on the P. W. A.

Six years ago Mr. Ickes was given a new and untried engine for use in national recovery. Since then it has been tested thoroughly. Its power and speed are known. Many of its defects have been corrected. The question now is whether the fires in this engine should be kept banked for use in any future emergency. With the experience of two great programs on which to draw, it should be a far simpler matter to get up full steam in this engine if the fires are kept banked in succeeding years, and apply its power to any national emergency that might arise in the future.

Shall Our President Determine Our Neutrality?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. BENDER. Mr. Speaker, shall the President of the United States have authority to determine the position of our Nation in time of war? Shall we vest in him the power to control our foreign policy so completely that the ultimate decision of war or peace is no longer open for discussion? All of us know full well that a President in whose hands we place the conduct of our international relations is to all intents and purposes the most powerful man in our land. Given the right to do as he chooses with the armed forces of the United States, moving the Navy about from hemisphere to hemisphere, his prerogatives are all but royal wherever there is danger of international conflict.

Under the Constitution of our country the White House is already the dominant influence in every question involving foreign affairs. But the followers of President Roosevelt are not satisfied with even this exalted position. They demand still more. A proposal sponsored by the New Deal would set up almost unlimited powers in the President.

First and foremost, he alone would have power to proclaim the existence of a war and to designate the nations involved. Consider the possibilities. In the recent Spanish civil war the President's keen vision detected a raging conflict and promptly invoked the terms of the existing Neutrality Act. Looking off to the Far East, however, where the troops of Japan were burning, looting, pillaging, where planes were dropping bombs upon thousands of helpless civilians, the President developed an astonishing case of international astigmatism. There he perceived no war. With so curious a vision anything is possible. We might find the powers of Germany, Italy, and Japan ranged in a war against Britain, France, and Russia, with our White House solemnly proclaiming that two of the six nations named were not engaged in a war. Ridiculous, you may argue, but surely it is no more absurd than the distinction drawn by our President in labeling the Spanish conflict a war and designating the Sino-Japanese struggle as something else.

The point must be clear. No President should be given the unrestricted authority to make so momentous a decision; and surely it is dangerous to entrust to our present President the determination of a war in the light of his own actions in the recent past.

But the tale does not end here. Under the measure favored by the administration, the President, having perceived the existence of a war, would then have the right to declare it unlawful for our citizens to travel on vessels of the warring nations, except in accordance with such rules and regulations as the President shall prescribe. From the White

House would come a description of "areas of combat operations" through which our people, and the vessels owned by citizens of the United States as well, could not travel except under such limitations as the President may prescribe.

Once the war was established to the President's satisfaction, it would be unlawful for any person in our country to sell, buy, or exchange securities issued thereafter on behalf of any of the governments named as engaged in the conflict, except that the President could make an exception in favor of commercial credits and short-term obligations of a peacetime nature.

Exports of goods to any belligerent state would be banned except in accordance with rules which the President might again fix. The use of American ports as bases of supply could be restricted by the President. He might forbid submarines and armed merchant vessels of belligerent nations to enter our harbors; and a good many pleasant international possibilities could rise here from the presence of machine guns, small arms, and the like, on any vessel.

Running through the entire proposal is the underlying current of dependence upon the judgment of the President. Once more the people of our Nation would be surrendering their right to determine their own affairs. Congress, which has just recaptured the constitutionally granted privilege of legislating for our people, would be in effect surrendering it once more to the White House.

Granting that under present world conditions we must have a flexible foreign policy, we cannot afford to let the determination of that policy rest in the hands of one man, no matter how wise or how benevolent we may regard him. And when we have received abundant evidence casting doubt on both his wisdom and his benevolence, we must make certain that our fate does not depend upon his incalculable whim.

District of Columbia Representation in Congress

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

EDITORIAL FROM THE ADRIAN (MICH.) DAILY TELEGRAM

Mr. MICHENER. Mr. Speaker, in view of the current local agitation in the District of Columbia concerning representation for the District in the Congress, I am including in my remarks a timely editorial from the Adrian (Mich.) Daily Telegram, which is as follows:

THE DISTRICT OF COLUMBIA

In yesterday's issue David Lawrence made a plea for giving the District of Columbia—that is, the city of Washington—a Representative and a Senator in Congress as a means of insuring fairer treatment of Washingtonians in matters of taxation. Their service on committees, he pointed out, would give them much influence over legislation affecting the District—even a veto power—on occasions when some proposal in either House required unanimous consent.

Though the old argument as to "taxation without representation" is ably made by Mr. Lawrence, we cannot agree with his conclusion; for his plan would definitely put the District into politics, and that is exactly what the framers of the Constitution wanted to avoid when they gave Congress exclusive power to govern it.

Such a plan would practically make the District a Territory, and that plan has been tried once with lamentable results. In 1871, in response to the pressure of local businessmen, Congress actually made the District a Territory, with a Governor, a legislature, and Delegates in Congress. But the District, in the words of the American Encyclopedia, "was at once seized upon by a ring of speculators, who obtained control of its government and plundered it into bankruptcy." In 1874 that plan was abolished and the government of the District by Congress was restored through three Commissioners.

The complaint of "taxation without representation" has less weight in Washington than in any other spot in the Nation, because the city is absolutely unique in character. It does not really belong to its inhabitants. They did not found it or plan it. They did not build it up with their labor, money, and thought, as is the case with every other city. Its prosperity is not due to their efforts, but is handed to them on Uncle Sam's golden platter. The Nation as a whole created it out of nothing, and the Nation as a whole has made it what it is. Its prosperity, its every existence, depends on Government business and the vast sums disbursed in Government pay rolls—all of which is paid for by the whole Nation.

Its population consists chiefly of an army of more than 120,000 well-paid Federal officials and employees. These people come from everywhere. They do not live in Washington because they have to, but because they are very glad to. Did any person ever refuse a Government job at Washington because he would be unable to vote or because he would have no voice in taxation? We doubt it. They accept their jobs eagerly, quite content to let themselves be governed by Congress through the District Commission.

And their confidence is well founded. The Commissioners are appointed by the President for 3-year terms and confirmed by the Senate. One is chosen from each major party and the third is an Army engineer. Such a commission ought to command confidence and give the city a good government, and, in fact, it has. Congress furnishes half the District's expenses, the other half being raised by local taxes. That seems quite fair to the residents. It is a bit hard for an outsider to see where they have any serious grievances.

About all they lack is a chance to participate in politics, and it is very much better that they should not have that chance. We saw what it produced in the seventies. Votes for the District and two Members in Congress would mean politics, wirepulling, logrolling, and all sorts of inside phenagling for political, personal, or money interests. It was to avoid such things that the Constitution provided for taking the District out of politics by letting it be governed by the Nation itself. That system has worked well. It better be left unchanged.

Separation of Church and State

EXTENSION OF REMARKS

OF

HON. MALCOLM C. TARVER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

RESOLUTION ADOPTED BY THE SOUTHERN BAPTIST CONVENTION

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution offered by L. E. Barton, Jasper, Ala., and adopted by the Southern Baptist Convention in session in Oklahoma City, Okla., May 20, 1939:

Resolution urging care in safeguarding the principle of the separation of church and state

Whereas upon the recent death of Pope Piux XI both Houses of the United States Congress adjourned in honor of the Pope; and

Whereas the President later sent Mr. Joseph P. Kennedy, Ambassador to the Court of St. James, as his personal representative to Rome to witness or participate in the crowning of Pope Pius XII;

Be it resolved:

1. That we recognize in the decease of the late Pope the passing of a distinguished world citizen which brought keen sorrow to all peoples of his faith, with whom we sympathize in the loss of their leader.

2. That we, the messengers to the Southern Baptist Convention in session at Oklahoma City, Okla., May 20, 1939, and representing more than 4,000,000 Southern Baptists, do cheerfully recognize and champion every person's right and liberty to make his own choice in matters of religion.

3. That the right and freedom of religious opinion does not justify the union or mingling of state and church, but rather requires and demands that the two be kept separate and inviolate, the one from the other.

4. That we deplore and protest such actions by Congress and the President of the United States as unwise and unwarranted, and as indicating a dangerous tendency toward the union of church and state, which is a chief cause of the troubles of the Old World.

5. If the sending of the Ambassador of the United States was to honor the crowning of an ecclesiastical head we believe it was an obvious violation of the traditions of this Republic and of the spirit of the first amendment of our Constitution even if, perhaps, not of its letter. If this course was in honor of the crowning of the civil ruler of a state with which we are not in diplomatic relations, it was as obviously an impropriety.

6. That we request Congress and the President to adhere strictly to the principles on which our Government was founded and the basal principle of separation of church and state so plainly taught in the first section of the Bill of Rights in our Constitution.

7. That copies of these resolutions be delivered by the public relations committee to the Secretary of State and to Members of the House and Senate of the United States Congress.

The Phony Farmer Lobby

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. GEYER of California. Mr. Speaker, the chairman of the Committee on Labor stated a few days ago that a vicious lobby that claimed to represent the farmers had been active in opposition to the Fair Labor Standards Act.

I herewith place in the RECORD an editorial from the Washington Daily News, under date of June 21, 1939. I, too, along with the author of this article, urge every Congressman to read Grapes of Wrath.

As one who has seen these deplorable conditions, I wish to state that the picture is not overdrawn.

[From the Washington Daily News of June 21, 1939]

THE PHONY FARMER LOBBY

"The Wage and Hour Act is in peril," says Administrator Elmer Andrews. And he puts the blame on such lobbyists as Ivan G. McDaniel, counsel to the Agricultural Producers' Labor Committee.

Mr. Andrews ought to find a way to persuade every Congressman to read John Steinbeck's great novel, The Grapes of Wrath. They might then be less vulnerable to the blandishments of Mr. McDaniel and his like. For Mr. Steinbeck has written an epic of man's inhumanity to man—the story of what happens to those pitiful people who flock to California and seek jobs in corporation-owned orchards, canneries, and fruit-packing plants.

The Agricultural Producers' Labor Committee, says Mr. Andrews, "is a legislative 'front' for the Associated Farmers of California, a notorious labor-busting outfit" with "a long record of trying to solve their labor troubles by violence."

Arguing that farmers should be exempted from paying the $11 a week minimum wage of the Wage-Hour Act this lobby for organized employers is seeking to deny that law's benefits to hundreds of thousands of workers in industrialized packing, canning, and processing plants, Mr. Andrews charges.

And, he asserts, most of those whom the committee represents are not farmers at all, in the usual sense. They "participate in the operation of packing or canning plants for which their vegetable ranches or fruit orchards * * * are feeders. They've got their operations on a production line like an automobile factory, and just as thoroughly industralized, and instead of employing an occasional hired man they employ, off and on, hundreds of thousands of people, many of them Mexicans, Filipinos, and refugees from the Dust Bowl whom they can hire for a few cents a day, and they often house them in insanitary tent colonies or in dilapidated shacks."

In short, these workers from whom the Agricultural Producers' Labor Committee would remove the protection of the Wage-Hour Act are the very ones who most need such protection. If their organized employers, masquerading as farmers, get what they are trying to get, we think it would be a good idea for every stooge of Ivan McDaniel in Congress not only to read The Grapes of Wrath but to eat it.

Defense and External Obligations

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, June 22, 1939

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH, JUNE 21, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the junior Senator from Utah [Mr. THOMAS] before the Third Conference on Canadian-American Affairs, at the St. Lawrence University, Canton, N. Y., June 21, 1939, on the subject An American View on the Question of Defense and External Obligations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My subject is Defense and External Obligations. I am supposed to reflect an American view. In the first place, let me say that the contents of my remarks will show that "an American view" has definitely been changed to "this American's view." In the second place, I have purposely read the title of my address into the body of my speech because years before I ever expected to deliver an address myself I accepted the philosophy of an old gentleman who happened to be enduring with me an oration, and who said, "I am glad that speaker told us what he was talking about because I never would have known it had he not mentioned it."

If we are to talk about defense, I am assuming that this conference is one which faces facts and not illusions, a conference which bases its deductions upon history and the facts of the world as they are, a conference which will remain in the atmosphere of the "is" and the "are" rather than in the rarer ether of the "ought" and "should." While I condemn war as being utterly stupid, hateful, and needless, I can never bring myself to believe that a world of human beings will ever be one of pure bliss. I expect contention, I look forward to contest, I do not conceive of a time when men will not have to take sides. There will always be a right and a wrong; and if we can put the sphere of nations, as civilization has attempted to put the sphere of individuals, on a plane of morality, that is all that anyone can ask. Let us fight for what is right and let us not belittle those who take a stand for right.

Many a life has been sacrified, much property has been destroyed, without the accomplishment of the purposes for which that destruction was made. Much sacrifice has been indulged in needlessly, and as a result of these things some persons have accepted a cynicism toward the actions of men and nations and have belittled noble efforts based upon high ideals as being perservions and deceptions. Into this category I refuse to place myself. I still recognize a nation in arms militantly offering its all as a sacrifice for right as civilization's most noble picture, but I still contend that a nation working and striving day by day and year by year to bring happiness, contentment, a better standard of living, and a relief from anxiety and worry to its men, women, and children is still a more glorious picture. If such a nation needs defense in this world, surely we should defend its right to make the world and its people a more perfect picture of a purposeful, morally dominated place consistent with all dreams of those thinkers who have accepted the theory of an evolutionary and progressive onward march for mankind.

America does assume that the peaceful state is the best. America does assume that a state of stable trade and profit-bringing commerce is good. America therefore probably wants peace because she assumes that there is some selfish advantage in it. She will, though, count costs and consider values if the question is to be a forced peace or not. Will she fight for a peaceful, profitable trade? The minute she does, why then we discover that there is something stronger than mere peace that controls our actions.

What, then, are we going to defend? We are going to defend the right to come and go freely, the right to buy and sell, the right to own and dispose. In short, we are going to stand for those four great freedoms in relation to person, to mind, to soul, and to property, which we in America classify as our civil liberties. Do not think that a challenge to these things will not arouse America in the future as it has in the past.

Under a defense of these great principles, what then are our obligations? First of all, we must see to it that both nationally and internationally, no act of ours shall ever deprive others of the attainment of these political and social rights.

It is part of America's fundamental foreign policy to assert and to maintain independent action and to avoid entanglement in non-American conflicts. We have prided ourselves upon our neutral rights, we have interpreted neutrality as impartiality, and we have claimed that we do not take sides. But if being impartial means that in its practical results that impartiality definitely aids one of the two combatants, then we are only impartial in theory and definitely not impartial in fact. The Greeks used a word that covered such a situation. When a theory was contrary to truth and fact, it was marked down as being hypocritical, and when one stood in defense of that kind of sophistry he was marked down a hypocrite. If impartial neutrality gives all the advantage to a wrongdoer, call him what you will—aggressor, treaty violator, or destroyer of those principles for which our Nation was established—then impartiality becomes ordinary immorality. You cannot be on the side of a wrongdoer without being a partner in the wrongdoing.

Our defense, then, shall be any means, any action necessary to see that those rights of man for which America was established shall not be driven from the earth. Our obligations shall be that when we fight in defense of those principles we shall fight with law and morality on our side.

To make the United States and Canada partners in such a contest does not require alliances, agreements, or written understanding. No words are necessary. Words between friends are sometimes superfluous. It is remarkable how significant a silence reached through understanding may be. There is still much that can be done to increase the significance of two happy peoples living side by side without distrust of one another. There will always be some differences. The American Union has not overcome

the rivalries incident to State lines. Our dual citizenship has always shown us that we have at least two loyalties which we must respect during our lifetime. Even a dead citizen when he meets his obligations must discover, or at least his heirs will discover, that his property has to respect many loyalties after he has gone.

Canada, too, presents a federated form of government, and the Canadian citizen has a provincial, a dominion, and an imperial loyalty. Thus the Canadian-American governmental scheme has in itself an answer to the single-willed state, with a single loyalty demanded of a person in that state.

I have just taken through the Congress of the United States, after 3 years' study and consultation with the experts from six or seven departments of our Government, an extremely significant defensive measure. The bill was called the strategic materials bill. Some aspects of this measure may be assumed by the thoughtless to represent an American tendency toward nationalism because the bill's aim is to provide stock piles of essential, critical, and strategic materials in anticipation of an emergency, and to develop, where possible, within the sphere of American activity those materials which we lack today but which we believe we may have in abundance when once they are developed. The point which I wish to make in regard to the discussion and the consideration given to certain materials in this discussion is that there was always a question mark about whether a material which Canada had but which we do not have could ever be considered as really strategic in the sense that we should provide a stock pile of such material. Let us take nickel, for example. Nickel, of course, is essential, is critical, is strategic from every standpoint to the United States. But, pointed out person after person, our chief source of supply is Canada, which to all intents and purposes, is a supply just as sure as if we were producing it in our own borders. The point there I wish to make is simply this: That the psychological aspects of these great questions were quite as important as the material ones. In the minds of men dealing even with a subject as narrow as this one, Canada complements the United States in times of emergency.

Here, consciously or unconsciously, this complementing finds a place in our defense plans. Whether Canada likes it or not is not the question, but America's defense in the Pacific includes of necessity the defense of the Canadian coast line. In the Atlantic, consciously or unconsciously again, our whole sense of security rests upon the deduction that the control of the Atlantic is in friendly hands. Or to put it more bluntly, the British imperial necessity of keeping open the lines between Canada and the motherland and the fact that these lines are preserved and protected by friends leaves America's Atlantic defense lines in at least a psychological manner satisfactory. Thus, Canada is much a part of our scheme and a satisfactory part, too.

This would not be a Canadian-American meeting if something were not said about the unprotected boundary line. I trust I shall not ruin a hundred years of oratory by saying that line is protected by the best defense known to nations, a defense of understanding and trust. But it is protected, too, actually because of its complementary nature. I sponsored the Army airbase bill in the Senate. I had to smile when I received letters from some Americans telling me that my provision for a base in the northeastern part of the United States was a direct thrust against Canada and an insult to our 100-year monument of an unprotected border. The thoughtlessness of such criticism was apparent when we realized that never once did anyone criticize the base in the northwest part of the United States, and that has already been established in Washington State right close to the Canadian border without a word of criticism. In air warfare a base 500 miles from the border may be used as a border fortification. Canada today and Canada's friends in the United States understand what is being done and have no fears.

Out in my State, Utah, political orators protest hotly, during a campaign especially, the importation of any Canadian products whether on the hoof or in a can, which may come over the border as a result of the reciprocal trade agreement. But since the 1880's persons from my State have gone into Canada's western Provinces, taken up, as pioneers, land, raised there their families, coming and going as they saw fit, and until the passage of America's strict immigration laws considered themselves both Americans and Canadians, and as our records of immigration cases show, were actually surprised when they were told that persons born in Alberta were not American citizens. There was no disloyalty to Canada or to America, so completely alike were the institutions of each. When the war came there were no slackers and no advantage takers as a result of these conditions. Few recognized the situation as being complicated. That is as fine a monument to Canadian-American friendship as our unfortified border. And these citizens—I know them so well because many of them have been my relatives, and others I have taught in school—have a loyalty which respects the dual or multiple obligations. But greater still than this, whether they be Americans, Canadians, or as a result of complications neither, or stateless, the two Governments concerned react and act on the basis of a human right rather than a political one, and much worry is thereby relieved. Is the honor, the dignity, the majesty, or the sovereignty of America or Canada thereby impaired? Of course not; it would be utterly stupid to have such a thought. If, then, these two great nations can afford to put human values above the assumed dignities which belong to great national entities, why should not other States do so?

Having emphasized the actual existence of a multiplicity of loyalties without destroying in any way the dignities and the rights of a single one of those entities which demand those loyalties, why cannot Canada bend a little and become a wholehearted participant in one of the greatest friendly developments between nations that our world has ever seen?

For a hundred years that which is spoken of as our Monroe Doctrine has been in a process of evolution. During the World War, before the United States entered the war, when our President suggested the extension of the theory of the Monroe Doctrine to include the whole world, the British Empire applauded to the last man. Later, when this same President, President Wilson, wrote the doctrine into the peace treaties as a regional understanding, which the whole world respected as applying to the Americas, it was accepted in the treaties. Now, by peaceful process of multilateral agreement, the Monroe Doctrine has ceased to be unilateral and has become multilateral in practically all of its aspects. Canada holds aloof. Why should not Canada become a party to our Pan-American treaties? Canada, of course, accepts the friendship and security of these treaties and benefits indirectly from deliberations of the Pan American Union. Why does she not occupy the chair that is reserved for her?

Please do not answer that question by asking me one. I know in advance what it will be, and I have no answer.

Tributes to the Late Dr. Grace Abbott

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 22, 1939

NEWSPAPER COMMENT IN REFERENCE TO SERVICE OF DR. ABBOTT

Mr. LA FOLLETTE. Mr. President, on June 19 Dr. Grace Abbott died in Chicago. She was one of this country's ablest women and one of the finest women it has ever been my privilege to know. She had a long and distinguished career. For 14 years she was Chief of the United States Children's Bureau. I ask unanimous consent that there may be printed in the Appendix of the RECORD an article from the New York Times under date of June 21, an editorial from the New York Times of the same date, and an editorial from the Washington Post, all having reference to Dr. Abbott's great service to this country.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of June 21, 1939]

DR. GRACE ABBOTT, CHILD LABOR'S FOE—CHIEF OF THE UNITED STATES CHILDREN'S BUREAU FOR 14 YEARS UNTIL 1934—DIES AT AGE OF 60—RECENTLY A PROFESSOR—TAUGHT IN CHICAGO UNIVERSITY'S SOCIAL SERVICE SCHOOL—WAS HONORED BY PRESIDENTS

CHICAGO, June 19.—Dr. Grace Abbott, member of the University of Chicago faculty and chief from 1921 to 1934 of the United States Children's Bureau, died tonight in the Albert Merritt Billings Hospital at the age of 60. She had been suffering from anemia for some time.

FAMILY'S NAME FAMOUS

The Abbott name is famous in modern social-service work. Grace Abbott was Chief of the Children's Bureau through four Presidential administrations before she resigned to become professor of public welfare administration in the School of Social Service of the University of Chicago. There she joined her sister, Edith Abbott, who was dean of the school.

Chosen in a national poll conducted by a magazine in 1931 as one of America's 12 most distinguished women, Grace Abbott was one of the most influential women in active public service. She had served on many governmental commissions and committees and was a pioneer leader in the fight for a child labor amendment and for social-security legislation. Her struggles against infant and maternal mortality, child labor, and juvenile delinquency are internationally known.

Born on November 17, 1878, in Grand Island, Nebr., the daughter of Othman A. and Elizabeth M. Griffith Abbott, she received a bachelor's degree from Grand Island College in 1898. After teaching for 3 years she studied at the University of Nebraska in 1902–3 and thereafter taught until 1907.

In that year she became director of the Immigrants Protective League of Chicago, in which position she served until 1917. Meanwhile, in 1909, she obtained a master's degree in political science

at the University of Chicago. In the period of 1908–15, she was a resident of Hull House, Chicago, where she was associated with Jane Addams in many of Miss Addams' efforts on behalf of the underprivileged. Later she became a trustee of Hull House and a member of the faculty of the Chicago School of Civics and Philanthropy, the forerunner of the School of Social Service Administration of the University of Chicago.

APPOINTMENT FROM WILSON

In 1917 Miss Abbott went to Washington, on an appointment by President Wilson, to administer the child-labor law, of which she had been one of the leading proponents. When this law was declared unconstitutional and her position as director of the Child Labor Division of the Children's Bureau abolished, she remained in Washington as secretary of the Child Welfare Conference, conducting a children's year campaign.

During 1918 Miss Abbott also served as adviser to the War Labor Policies Board. In 1920–21 she was executive secretary of the Illinois Immigrants Commission. In the latter year President Harding appointed her Chief of the Children's Bureau, a position she retained until her decision to return to academic work in 1934.

Miss Abbott had held many important positions in social-service groups. She was president of the National Conference of Social Work in 1924; since 1923 had been a member for the United States of the League of Nations Advisory Committee on Traffic in Women and Children; was a member of the board of the International Conference on Social Work, delegate of the United States to the International Labor Conference at Geneva in 1934 and 1935, and head of the United States delegation in 1938.

DELEGATE TO MEXICO CONFERENCE

She was chief of the United States delegation to the Pan American Child Welfare Congress in Mexico City in October 1935. A member of the advisory council of the Committee on Economic Security, Miss Abbott had a substantial part in drafting the committee's report, made to President Roosevelt in January 1935.

She was managing editor of the Social Service Review. Dispatches from Geneva on June 3, 1939, reported that she was under consideration for the post of chief of the New League of Nations organization that was expected to result from the merger of the health, opium, and social-service sections.

Her published work includes the editorship of bulletins of the Children's Bureau on infant and child care and training, familiar to millions of American mothers, and many articles on child welfare, labor legislation, social security, and other subjects in which she was an authority.

In December 1938, Miss Abbott published a two-volume study, the Child and the State, which has been recognized as the authoritative work in the field. Other books by her include the Immigrant and the Community and the Immigrant in Massachusetts.

Miss Abbott received the gold medal of the American Social Science Association in 1931. Parents Magazine awarded her a gold medal in 1935 for "outstanding service to children." She received the honorary degree of LL. D. from Grand Island College, the University of Nebraska, the University of Wisconsin, the University of New Hampshire, and Wilson College.

ABBOTT RITES TODAY—QUAKER SERVICES IN CHICAGO—FRANCES PERKINS PAYS TRIBUTE

CHICAGO, June 20.—Funeral services for Miss Grace Abbott will be held at 10 a. m. tomorrow in her home here. A Quaker service will be read by Prof. Warder C. Allee. The body will be cremated and the ashes sent to Miss Abbott's birthplace in Grand Island, Nebr.

Secretary of Labor Frances E. Perkins, who is here for the funeral, paid this tribute to her friend and associate:

"Dr. Abbott was one of the stays of the Department of Labor. When I came into the Department I found her not only the competent head of the Children's Bureau but an invariable authority on the whole Department of Labor. She had given long and practical thought to its problems, and her advice was so sound that I recognized her more often than anyone else. Dr. Abbott was greatly loved and greatly admired and deeply respected as well for her knowledge, integrity, and her willingness to give herself to good causes."

[From the New York Times of June 21, 1939]

GRACE ABBOTT

Grace Abbott combined the attributes of warm sympathy, careful scholarship, and unusual administrative ability. Nine years ago, when she was still at the head of the Children's Bureau, a writer in the Times called her the mother of 43,000,000 children. She was indeed a mother who sincerely loved all these adopted young people, without regard to race or creed. Her interest in the less fortunate began early in her career. It was undoubtedly strengthened by her association with Jane Addams at Hull House. For 17 years she worked directly for the children of the Nation, 13 years of which she spent as head of the Children's Bureau. When she left that post in 1934 to go to the University of Chicago President Roosevelt declared that she had "rendered services of inestimable value to the children and mothers and fathers of the country, as well as to Federal and State Governments."

The words can be repeated now, though she will not hear them. She belonged to that growing company of women in public life or in prominent executive positions who have nobly translated into action the best of the qualities that we like to call feminine. An informed sympathy, a courage that could not be broken, a determination that could meet effectively some of the dreadful new situations brought about by the depression—these Grace Abbott had. Her death at the age of 60 is tragically premature. We needed her.

[From the Washington Post of June 21, 1939]

GRACE ABBOTT

The death of Grace Abbott, professor of public welfare administration at the University of Chicago and former head of the United States Children's Bureau, brings to an untimely close a distinguished career of public service.

Few men and women possess the qualities that enable them to function both as effective crusaders for social betterment and as capable administrators. Miss Abbott was one of the rare individuals who could do both. Her zeal as a reformer was tempered by the restraint that comes from having a trained mind and a disciplined imagination.

As Director of the Children's Bureau during the formative years from 1921 to 1934, Miss Abbott's name became known to literally millions of households interested in the problems of child welfare. Her efforts were directed constantly toward improving and expanding the statistical and informational services of the organization and establishing closer contact with the States and local communities. While engaged in this exacting work she served as a member of numerous private committees and governmental bodies at home and on various occasions represented this country at international conferences dealing with the problems of women and children.

Miss Abbott's competence as a bureau head and her broad vision of the developmental task that awaited her as Chief of the Children's Bureau were due to some extent to her varied experiences as a social worker and her expert knowledge of governmental organization and administration. Before entering the Federal service, for instance, she had been director of the Immigrants' Protective League of Chicago and executive secretary of the State immigration commissions of Massachusetts and Illinois. In this capacity she became especially interested in the children of immigrants and the difficulties encountered in adjusting them to an alien environment.

When Miss Abbott retired voluntarily from the public service 5 years ago, it was to take up another kind of work for which she was ideally fitted—that of training others to enter a field in which she had labored with such conspicuous success. After becoming associated with the University of Chicago, she continued to serve the public as teacher, editor of the Social Service Review, and author of a recently published authoritative study, The Child and the State.

Her death deprives the country of an outstanding citizen, honored for what she has achieved and doubly regretted because she was not given time to make the fuller contribution of which she was capable.

Tributes to the Late Dr. Grace Abbott

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, June 22, 1939

EDITORIAL FROM THE WASHINGTON DAILY NEWS AND STATEMENT BY MISS KATHARINE F. LENROOT

Mr. WAGNER. Mr. President, I had risen a moment ago to pay a like tribute to that paid by the Senator from Wisconsin [Mr. LA FOLLETTE] to this remarkable and great woman, Dr. Grace Abbott. I shall at a later date take the opportunity, as some length, to pay what I believe is a tribute that ought to be paid in the Congress of the United States to this outstanding woman in our American life. I simply wanted to add to the tributes paid to her, which have already been introduced by the Senator from Wisconsin, an editorial from the Washington News and a statement by Miss Katharine F. Lenroot, who is the Chief of the Children's Bureau of the United States Department of Labor. I ask unanimous consent that the editorial and statement may be published in the RECORD.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of June 21, 1939]

GRACE ABBOTT

Death has cut short the brilliantly useful career of Miss Grace Abbott. To call her one of America's greatest women is an inadequate tribute to the effectiveness, vision, and courage with which she served the mothers and children of this country.

For 14 years, under four Presidential administrations, she was chief of the United States Children's Bureau. It is literally true that tens of thousands of citizens owe their lives to her fight against infant and maternal mortality. That and her struggles to curb child labor and juvenile delinquency made her internationally famous. She dared President Hoover's displeasure when she battled to preserve the independent Children's Bureau, and thus probably sacrificed an opportunity to become Secretary of Labor and the first woman Cabinet member. Since her resignation, in 1934, she has been professor of Public Welfare Administration at the University of Chicago, managing editor of the Social Service Review and author of such invaluable books as the recently published, The Child and the State.

Miss Abbott earned the right to an unusual memorial. The one most fitting—the one she would most have desired—would be ratification of the child labor amendment. She was a leader of that cause for many years, she lived to see the United States Supreme Court declare that the amendment is still vital, and she died in the hope that a few more States would soon ratify it and so make it part of the Federal Constitution.

STATEMENT BY KATHARINE F. LENROOT, CHIEF, CHILDREN'S BUREAU, UNITED STATES DEPARTMENT OF LABOR

With the passing of Grace Abbott, the Children's Bureau has lost a beloved chief, the United States has lost a great public servant, and American childhood has lost its most fearless and devoted champion. Personally, I cannot measure the debt I owe to Grace Abbott, who, with Julia Lathrop, the Bureau's first chief, is responsible for all that I have ever been able to do in the cause of American childhood. Although Miss Abbott resigned in 1934 after 13 years as head of the Bureau, we still considered her our chief and looked to her vision and courage for advice and leadership in developing phases of the Bureau's work. Miss Abbott, too, still considered herself a member of the Bureau, saying, "We must do this," in discussing plans.

Joining the staff of the Bureau in 1917 as Director of the Child Labor Division, in charge of administration of the first Federal child-labor law, Miss Abbott returned to the Bureau in 1921 as the successor to Miss Julia Lathrop. Miss Abbott's appointment as Chief of the Children's Bureau was followed almost immediately by passage of the Federal Maternity and Infancy Act, which, like the child-labor law, broke new ground. Her administration of these two pioneer measures demonstrated the possibilities of vital, flexible, and constructive Federal and State cooperation in the administration of child-welfare programs.

Miss Abbott served under five Presidents and her conduct of general research, educational, and advisory work of the Bureau revealed a fearless ability to see in the facts of today the needs of tomorrow and to anticipate those needs by farsighted action. With rare understanding of the meaning of social and economic developments in national life, Miss Abbott saw the needs of children always in their relation to general social needs, but was unfailing in her insistence that the needs of children are paramount. Thus, during the depression years, Miss Abbott worked tirelessly to focus national attention on problems of malnutrition, child labor, transient youth, and family relief, and many of the measures taken to deal with these problems owe much to her vision and courageous leadership.

"You can't feed children skimmed milk this year and make up by feeding them cream next year," Miss Abbott used to say. "What they didn't get this year, you can never make up to them." And again, "The only time to save the babies who are going to die this year is this year."

When Miss Abbott was chosen in 1931 as one of America's 12 greatest women, the biographer who summed up her career said, "If I wanted to be really sure of what fine benevolent things the world will do in the next 20 years, I should try to find out what Grace Abbott wants, for her dreams are the kind that come true."

Miss Abbott often expressed the expectation that a reasonably high minimum of opportunity will be made possible for American children. "That means," she said, "pleasant homes, good food, affectionate care, as well as good schools. It means that while parents should be able to provide the necessities during normal times, under abnormal conditions the State—and if necessary to equalize the burdens which abnormal conditions bring, the Nation—will cooperate in insuring this reasonable minimum for American children."

All those of us who had the privilege of association with Grace Abbott, of working under her leadership, and of sharing her vision of a better world for children will feel it our duty to carry on her untiring effort to make this vision a reality.

All that I personally have been privileged to do I owe to those two great women, Julia Lathrop and Grace Abbott, who, while Chief of the Children's Bureau, laid so firmly the foundations of its work and charted so clearly the path which it should follow. There is scarcely a home in which children dwell that has not been benefited by the activities they set in motion.

Credit and Currency Management and Price Level

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, June 22, 1939

ADDRESS BY HON. CHESTER C. DAVIS, DECEMBER 15, 1938

Mr. BAILEY. Mr. President, I ask leave to have printed in the Appendix of the RECORD an address delivered by Hon. Chester C. Davis, a member of the Board of Governors of the Federal Reserve System, on the subject of Credit and Currency Management and Price Level. I think it is very pertinent to the discussion now pending in the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Time on this crowded program will not permit me to discuss this question adequately. Your patience, which is remarkable, would be tried beyond endurance if I attempted to do so. I recognize that I shall have to strip my talk down to a few bare essentials, and sincerely beg your forgiveness for keeping you at all.

First, I hope to make it perfectly clear that we do not have a central monetary authority, or even a central banking authority, in the United States. In this connection we ought to consider in the light of experience at home and abroad what a central monetary authority can do, and what it cannot do, to influence and control price levels through monetary action.

Secondly, I want briefly and frankly to discuss currency devaluation—changing the gold value of the dollar—as a lever to control prices. The most I can hope to do is to emphasize the importance of thinking that question through for yourselves to a definite conclusion.

Finally, I want you to consider with me whether the goal of our national endeavor should be merely to establish and maintain a certain price level, or whether we should not fix our sights on something of perhaps even greater importance—our national income, our employment, and our standard of living.

The Board of Governors of the Federal Reserve System is not the powerful monetary authority many of you believe it to be. I want to help you to look facts in the face, even though some cherished illusions may fall and halos vanish in the process.

In the field of money and credit the spending policies of the Government, its taxation policies, its deficit financing—all are powerful factors, and they are in the hands of Congress, not of the Federal Reserve, nor could they be delegated to any other monetary authority Congress might set up.

The gold stabilization fund and international exchange transactions constitute a powerful monetary force, and they are operated by the Treasury, not by the Federal Reserve. It is left with the Treasury to determine the nature of our gold operations. Gold inflow from abroad has taken place in recent years in quantities that stagger the imagination. During the past 4 months alone this country's net receipts of gold have amounted to $1,250,000,000. They are handled in such a way that their dollar equivalent is added to the excess reserves of the banks. And, while the Federal Reserve is involved in the operation, it has no more control over the policy than does the board of directors of your own American Farm Bureau.

In the banking field, Federal responsibility is split up into several segments, of which the Federal Reserve has only one. It plays, in fact, a relatively minor role in banking supervision, even though its powers to influence general credit conditions are considerable.

Let me show you what I mean by a split-up in Federal responsibility. On a recent date there were 15,964 banks in the banking structure. Of these, only 6,341 are members of the Federal Reserve System. Of the members, 5,239 are national banks which are primarily responsible to the Comptroller of the Currency, who examines and supervises them. The rest of the members are 1,102 State banks who choose to belong, and the Federal Reserve System shares the responsibility of examining and supervising them with the banking authorities of 48 States. Of the nonmember State banks, numbering 8,280, 7,356 are insured in the Federal Deposit Insurance Corporation, which shares the responsibility of supervision with the 48 State authorities. The remaining 924 are not insured. A comparison of the number of member banks with the number of nonmember banks, however, is misleading, since member banks represent about 85 percent of the country's banking resources.

Perhaps much that is worth while might be accomplished by governmental authorities through supervision and through direct influence on the banks. In other countries this method is often quite effective.

I mention these things so that you may see the picture as it is, not as many people think it is. Now that I have at least tried to clear away some of the underbrush, I am willing to come to grips with the first question. If Congress creates a central authority with full monetary powers, can that authority, by action in the field of money and credit alone, establish and maintain a certain desired price level, say the price level of 1926?

I doubt it. In the first place, Congress could not even if it would delegate to the authority any control over taxation and spending, two powerful monetary factors. That, however, is aside from the main question. I would say that such an authority, using the powers Congress might grant it, could insure an abundant supply of money and credit at low rates of interest. The existence of that supply of cheap money, however, would not guarantee the desired degree of economic activity, or the desired response in prices.

Money, in the modern sense, includes the currency and coin we use, and our bank deposits. These constitute our means of payment. Currency is available in whatever quantities the public demands. If circumstances created the demand, currency would flow out tomorrow in almost unlimited quantities. To illustrate that point, currency in the amount of $9,206,000,000 was issued by the Federal Reserve System in the 12-months' period from July 1, 1937, to June 30, 1938.

It is a mistake to assume that the mere issue of currency has any monetary effect on the economic structure. The point is not whether the Government pays by currency or otherwise, but merely how much the Government spends and how it raises it. If it comes out of taxes, it may or may not diminish some other spending. If it comes out of savings, it may and may not diminish other investments. If it is borrowed from the banks, then it adds to the money supply as well as to the spending stream. If new currency is issued it flows right back into the banks, and only that quantity remains in circulation that the needs of business or the whim of hoarders calls for. As the currency is deposited with the banks it merely adds to the excess reserves of the banks, which are already very large.

Many of you believe, with Senator THOMAS, that a monetary authority, by monetary action alone, could restore the 1926 price level and maintain it. Let's take a look at the record. What was the price and monetary picture in 1926 compared with today?

In 1926 the index of all farm prices was 145; that is, the average prices of farm products was 145 percent of the 1910–14 level. The index of prices farmers paid was 155. Farmers, therefore, were getting 94 percent of parity price in 1926. Grain farmers were getting 85 percent of parity.

In November 1938, last month, the index of all farm prices was 94. The index of grain prices was 60. The index of prices farmers paid was 121. Farmers were receiving 78 percent of the parity price. Grain farmers were receiving 50 percent of the parity price.

Now, let's turn the page over and look at the monetary picture in 1926 compared with that of last month.

The daily average of money in circulation in 1926 was $4,645,000,000. The daily average in November 1938, was $6,750,000,000, an increase of $2,105,000,000, or 45½ percent, over 1926. Of course, the quantity of currency in circulation has nothing to do with prosperity or prices. If it did, March 1933 should have been a period of prosperity and high prices, for then the quantity of currency in circulation reached an all-time high. That didn't mean people were prosperous; it meant they were afraid of the banks.

The total of all bank deposits exclusive of interbank deposits and United States Government deposits, which was $46,440,000,000 in 1926, climbed to $51,250,000,000 in 1938, an increase of nearly $5,000,000,000.

The monetary gold stock in 1926 was $4,165,000,000. In November 1938, it was $14,162,000,000. The increase was nearly 250 percent.

How about the cost of money? The Federal Reserve discount rate in 1926 was 4 percent. In 1938 it was 1 percent in the New York bank; 1½ percent in the other Federal Reserve banks.

Compare the interest rates charged customers. In November 1926 the average rate charged in New York City was 4.79 percent. In November 1938 it was 2.38 percent.

The average rate charged by banks in 8 other northern and eastern cities was 5.06 percent in November 1926, and 3.28 percent in November 1938.

In 27 southern and western cities the banks charged 5.61 percent in November 1926, and 4.05 percent in November 1938.

Now, just one more figure in this monetary comparison and then I want to pass along to something else. You all have heard about excess reserves. They are the reserves which member banks have on deposit with the Federal Reserve banks in excess of the reserves they are required by law to hold. These excess reserves may serve as the basis for a multiple expansion of credit. In 1926 there were, practically speaking, no excess reserves at all. At the first of this month they stood at over $3,350,000,000.

We stand today approximately at an all-time high in the combined total of money supply and an all-time low in the cost of money. Yet we are about to finish a year in which the total annual income will reach approximately $64,000,000,000 compared with $73,000,000,000 in 1926 and about $79,000,000,000 in 1929.

In other words, we have fashioned for ourselves the longest piece of string we ever had. The trouble is, that while you can cut a string to about any length you want, you can't push it where you want it to go. Someone at the other end has to pull. We have the deposits but they refuse to work. The annual rate of deposit turn-over which was estimated at 20 times in 1926 and at 26 times in 1929 is running at a rate of about 13 times this year. People just aren't using the money they have as actively as they did in those earlier years.

I really hesitate to turn now to the second topic I outlined for discussion, because complete consideration of that issue would require more time than we could possibly command today.

Many of you believe that we can establish any desired level of commodity prices by changing the dollar value of gold. I devoutly wish the solution of the farm problem were as simple as that, but a fairly close study of the question has made a skeptic out of me.

There is no supreme court of finance and economics before whom this issue can be debated, and by whom it can be decided. Personally, I think the group in this room is just as competent to reach a sound conclusion as any in the world, provided they will question all assumptions and take account of experience in making up their minds.

For the belief that the level of prices can be raised or lowered at will by changing the currency price of gold does rest on an assumption, and it is very important to understand that. It is the crux of the entire matter. The assumption is that commodity prices are in reality gold prices, not currency prices; that fundamentally you sell your grain and your livestock and your dairy products for ounces of gold—not for dollars; and that you get the same number of ounces whether the price of gold is high or low. If that assumption is correct, then it follows as a matter of course that if you double the number of dollars a unit of gold represents, you double the number of dollars required to purchase the commodity.

If the controlling and primary price of a suit of clothes is an ounce of gold, then Congress, by raising the legal price of gold from $20.67 to $35 an ounce, could raise the price of the suit from, say, $21 to $35.

If the dominant price of 1,000 bricks is 232 grains of gold, and gold is priced at $20.67 an ounce, the brick might be said to be worth $10. If the assumption is correct, and if the gold price of brick is the real price, then when Congress and the President said that an ounce of gold would represent $35, not $20.67, the brick should sell at $16.93 per 1,000 instead of $10.

But if after the price of gold is changed a similar suit continues to sell for $21, and the brick continues to sell for $10, you might begin to wonder whether after all the basic assumption is correct. Perhaps the dominant price was not the gold price, but the price in which business is done, that is, the currency price.

I recommend that this group study that basic assumption with the greatest care. I suspect you will find some interesting things about price behavior, leading into fields of international exchange, trade balances, and others that I simply cannot cover today.

There is another aspect which I feel I must touch upon, and that is this matter of average price levels. Averages are terribly misleading. Experts may tell you that the average depth of the Mississippi River is only 2½ feet, but you know there are a lot of places in it to drown you if you start to wade it.

Take some comparisons in farm price movements, for example. For the month of February 1934, after devaluation and the increasing dollar price of gold during the summer and fall, grains in the United States sold for an average of 79 percent of the 1910–14 price. In November of 1938 grains averaged only 60 percent of the 1910–14 price. Meat animals, on the other hand, commanded a price in February 1934 only 65 percent of their 1910–14 average, and by November of this year those prices had risen to 111 percent of the 1910–14 average.

These figures I have been giving are just samples, and they are not intended to prove anything beyond pointing up the question I have raised about the assumption on which devaluation to achieve a given price level must rest. The thought I want to leave with you is that we must study this and related proposals with an open and critical mind.

Of course, changes in the exchange relationship between currencies of different countries are important, and do affect prices of commodities in international trade. But that is something entirely distinct from the devaluation theory which I have been considering.

As my concluding point, I want to raise in your minds the question whether we aren't getting sidetracked when we concentrate our attention on a certain average price level and forget other goals that are perhaps of greater importance to ourselves and to the Nation.

What we need in this country is an annual income comparable to our man-power and our physical and monetary resources.

We do not have it today. The great central question, the challenge to the Nation, is this: How may our people be employed in the increasing production of useful things that will afford a higher standard of living to those who work?

I believe, and my associates on the Board of Governors of the Federal Reserve System believe, that the income and purchasing power of a prosperous agriculture are essential to that goal. Within the scope of their powers they will do their utmost to help you achieve it.

But aside from everything that can be done directly to make agriculture a driving power and not a brake in our economic machine, one important principle must be made to work if we are to hit the stride we are capable of. If industry and labor will look to full production for increased earnings, then we can produce and enjoy a constantly expanding national income. Incidentally, that is what agriculture always has done, and if the rest of the economy will learn to practice it, the treatment necessary for agriculture will be greatly simplified.

The job ahead of us is to bring about such a rate of production that all of our effective manpower may find useful employment. We are not going to do it unless and until the employers of labor look to increased production rather than to higher prices for profit; and unless and until organized labor learns that increased production is the only safe path to higher real wages.

Time and again we have seen it happen that manufacturers and other nonagricultural producers shove prices up at the first quickening of demand.

We have seen organized labor imitate them by striving for the highest attainable hourly wage for a minimum of production.

We have seen these practices kill off the goose which, alive, would have laid golden eggs. We saw them choke off the expected and all-important rise in building in 1936 and 1937.

What incentive, what economic mainspring, is necessary to keep industry running at capacity on things people need and want? And what will turn labor's eyes away from the hourly wage to a higher annual income earned through steady employment and the production of more wealth to share?

I don't pretend to be able to give you the answers. I do say that every policy of government, and of business, and of labor, ought to be tested by its contribution to that principle.

We have the men, we have the resources, we have the money, and we have the human needs unfilled to justify a rate of production and a total national income far beyond anything we ever have dreamed of. If we don't learn how to achieve this under our own power, then we are going to be trying to do it in other, and strange, and less pleasant ways.

There is no magic way to achieve these desired ends, neither through monetary action, nor legislative device, nor by negative inaction. Adjustments will be called for that may be unwelcome and uncomfortable.

All elements—the manufacturer, the laborer, the farmer, the distributor, the carrier, the press, the educator—had better address themselves to this central problem. I hope our approach to it will be reasonably good-humored, tolerant of the other fellow's problems, and courageous—qualities which I like to think of as characteristic of the American way.

One thing we can all be perfectly sure of: Sooner or later the American people are going to lose patience with an economy that tolerates unemployment and poverty in the midst of potential abundance.

Restriction of Immigration

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, June 22, 1939

LETTER FROM JAMES L. WILMETH

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD a very interesting article and forceful argument against the Wagner-Rogers joint resolution. This article is from the pen of Hon. James L. Wilmeth, national secretary of the Junior Order United American Mechanics, with national headquarters at Philadelphia, Pa., one of the oldest patriotic societies in America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL COUNCIL, JUNIOR ORDER UNITED AMERICAN MECHANICS, UNITED STATES OF NORTH AMERICA,
Philadelphia, June 14, 1939.

CANDID OPINION

It is incumbent upon Americans to give more thought to our immigration laws and to assist and support our Congressmen and Senators who are working diligently to stop the influx of alien people to the United States of America. Unless we do support them and block proposed legislation, we shall continue to receive more than our share of foreigners who will compete with American workingmen and thus add to the unemployment and relief situation.

The Wagner-Rogers resolution which proposes to receive 20,000 German refugee children within the next 2 years, has been receiving the consideration of the Senate and House Committees on Immigration for some time. This resolution would tear down immigration bars and admit 10,000 children a year, or 20,000 in all.

There were many distinguished persons who testified in favor of this resolution. A careful reading of the testimony shows that suffering and sentiment were the mainsprings of the argument submitted to the Immigration Committees of the two Houses of Congress.

A representative of the National Council, Junior Order United American Mechanics, one of the oldest patriotic and fraternal societies in the United States, made an appearance as a witness in opposition to this resolution on April 24, 1939, and during his testimony was submitted to close cross-questioning by members of the Senate Immigration Committee.

He opposed the resolution as a whole and submitted arguments along the following lines, in opposition testimony:

First, he informed the committee that there was no need to increase the quotas in order to admit 10,000 refugee children, because Germany had not filled its quota of immigrants for the year 1938 by almost exactly 10,000. He argued that to enlarge the quotas was unnecessary and would leave open the unused quota for grown-ups who would come here seeking jobs which belonged to our own citizens.

He argued that our first thought and concern should be for the ill-fed, ill-nourished, and underprivileged children of this country to which the President of the United States has referred so often recently, and with so much force. He took issue with some of the testimony submitted by prominent people who had stated their willingness to adopt some of these children, and stated that such persons could find helpless, needy American orphan children within a few squares of the doorstep of their own home city or the hotel where they lived, without bringing children 3,000 or 4,000 miles for adoption.

He submitted that suffering and sentiment which is outlined in the preamble of this resolution should not be made the criterion for breaking down immigration bars, or making a way by which these children should come into the United States outside present quotas. If we should admit German refugee children on account of suffering, then it naturally follows that we should open our doors for the starving children of Spain, China, and Ethiopia, and other war-torn countries. He stated that we do not wish at the present time to open our immigration doors to any of these countries.

It was pointed out that it does not make good sense to bring German refugee children to this country, where there are 10,000,000 unemployed, when the dictator and other authorities in Germany brag and gloat over the statement that they have no unemployment there.

We are not responsible in America for persecution of any racial or religious minorities in Germany or elsewhere, and sentiment should not be resorted to in order to bring this large number of children here at a time when so many people are out of work, and so many on relief, and such a large number in want. Further, it can be reasonably expected that if this resolution should be adopted by the Congress, that nonquota relatives in large numbers would immediately file application to come to this country under existing non-quota-immigration laws. In other words, our society feels that the adoption of this resolution, namely, Wagner-Rogers German refugee children resolution, by the Congress would be the entering wedge in the tearing down of our immigration restriction bars which would admit many thousands of aliens who would seek to come into this country as relatives on a nonquota basis.

The adoption of needy, hungry, ill-fed, and ill-clothed American children should receive our first attention before we attempt to remove immigration restrictions and admit children from across the sea from any country. Let us remember the Bible injunction that "The man who does not provide for his own is worse than an infidel." Let us apply these words of Holy Writ to our own people in this country, and let those who appear to be so anxious to adopt some of these refugee children be guided accordingly.

Again, America should oppose this resolution on the ground that we cannot afford, in justice to our own people, to take care of suffering persecuted peoples from one country of the earth to the exclusion of the other countries where children are in distress. The paramount reason for our being opposed to it is that we have crowded orphanages in this country with children whose parents are both dead, or where the breadwinner has passed on

and the mother is unable to take care of them. This is the only home they can find. In addition to this, there are tens of thousands of little children in the poorer sections of our cities whose parents are on relief and who are barely eking out an existence, living in poverty, suffering, and want. The needs of the forgotten, uncared for, homeless orphans of America command our first attention.

Sincerely yours,

JAMES L. WILMETH,
National Secretary.

Adherence to Policies of Roosevelt Administration

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, June 22, 1939

RESOLUTION OF PENNSYLVANIA DEMOCRATIC STATE COMMITTEE

Mr. GUFFEY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a resolution which was unanimously adopted by the Pennsylvania Democratic State Committee at a meeting held in Harrisburg, Pa., on June 21, 1939.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

The preservation of democracy depends upon the just advancement of the common welfare and the jealous protection of individual liberties.

Under the administration of President Franklin D. Roosevelt, the Government of the United States has taken wholesome steps to revive the faith of the people in the strength and validity of popular government. Assuming office at a time of general pessimism and acute industrial distress, the administration has moved in swift and sure fashion to restore confidence and to improve the social and economic well-being of millions of worthy citizens. Peace has been preserved in a troubled world and economic chaos has given way to order and progress.

The accomplishments of the administration constitute the finest record of constructive achievement in modern history.

Bank depositors are now insured against loss and the banking structure has been stabilized.

The horizon of hope has been opened up by the Social Security Act to aged citizens who must face the twilight of existence without financial independence.

The farmer has been given substantial Federal assistance to meet the twin handicaps of depressed prices and glutted markets.

The laboring man, through progressive legislation, has had his lot made more secure.

Food, shelter, and clothing have been provided for the needy and unemployed.

The swindling of honest investors has been curbed by the Securities and Exchange Commission.

Business has been stimulated by generous loans from the Reconstruction Finance Corporation.

The building of decent housing has been encouraged and the Nation's physical plant expanded by the construction of good schools, public highways, public buildings, and other needed improvements.

The depletion of natural resources has been halted and replaced by wise policies of conservation.

These necessary reforms, approved by the great mass of the electorate, have been accomplished within the framework of democratic government and without impairment to the fundamental rights and liberties of the American people: Therefore be it

Resolved, by the Democratic State Committee of Pennsylvania, That a departure from the fundamental policies of the Roosevelt administration would be a disaster for the Democratic Party and a calamity for the Nation: Therefore be it further

Resolved, That the Democratic candidates for the Presidency and the Vice Presidency in 1940 should pledge themselves to a sincere and wholehearted furtherance of the Roosevelt policies as the only means of preserving and extending the magnificent social gains which have been won under the inspiring leadership of the present Chief Executive, Franklin D. Roosevelt.

Japan and Neutrality

EXTENSION OF REMARKS
OF
HON. LEWIS B. SCHWELLENBACH
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, June 22, 1939

EDITORIAL FROM THE WASHINGTON POST

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in today's Washington Post entitled "Japan and Neutrality."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post]

JAPAN AND NEUTRALITY

The United States Government is directing to Japan, thus far without conspicuous success, one note after another protesting against Japanese infringements of American rights and interests in China. But Congress remains deadlocked on the neutrality issue.

These two circumstances are by no means unrelated. The spectacle of congressional confusion on foreign policy, such as is provided by the debate on neutrality, encourages Japan, as it encourages all other aggressor nations, to disregard the United States as a factor in their calculations.

It happens that Japan is extremely vulnerable to the kind of nonmilitary pressure which the United States could easily apply against her. More than half of all the strategic raw materials that Japan needs for the conduct of the undeclared war on China comes from the United States. And some of these supplies, scrap iron for instance, Japan would find it difficult to get from any other source.

One might assume, therefore, that Japan would be especially careful to avoid taking any action which the United States would deem destructive of American rights and interests. Almost the exact opposite has been the case. Japan has paid little or no attention to American protests. And she has been able to do so with assurance because of the legislative barrier placed in the way of retaliatory action.

At the moment, were a larger measure of discretionary power vested in the President, the effect of such action on Japan might be very salutary. The Japanese do not underestimate the strength and importance of the United States. That is left for overtimorous Members of Congress. Neutrality legislation of the mandatory variety has become a fetish with them, to which they are determined to cling no matter what the ultimate consequences on our position in eastern Asia or elsewhere.

Admission of German Refugee Children

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, June 22, 1939

LETTERS AND EDITORIALS

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the RECORD the following documents in regard to the admission of German refugee children: Letter from Senator ROBERT R. REYNOLDS, of North Carolina, and telegram addressed to him signed by citizens of Asheville, N. C.; letter from Dr. Henry A. Atkinson, general secretary of the Church Peace Union; editorial from the Baltimore Sun, May 7, 1939; editorial from the Sacramento (Calif.) Union, May 16; editorial from the Cincinnati (Ohio) Enquirer, May

25; editorial from the Richmond (Va.) Times-Dispatch, May 25; editorial from the Los Angeles (Calif.) Times, May 25; editorial from the Paterson (N. J.) News, June 13.

There being no objection, the letters and editorials were ordered to be printed in the RECORD, as follows:

JUNE 5, 1939.

Hon. ROBERT WAGNER,
United States Senate, Washington, D. C.

MY DEAR BOB: At Asheville, N. C., there lives a friend of mine by the name of Mr. Gustav Lichtenfels. He is one of our most respected citizens. He married a Miss Edna Long, with whom I attended public school years ago.

Gus and I have been friends for more than a quarter of a century, and for him I have the highest respect.

On May 24 he sent to me a telegram in reference to your bill introduced in the Senate, and sponsored by Mrs. ROGERS in the House, pertaining to refugee children of Germany. This telegram by Western Union was signed by a great many of our very finest citizens in Asheville, N. C.

I was requested to give favorable consideration to and support of the Wagner-Rogers resolution.

I have today written Gus my attitude about immigration and of my opposition to your bill, but I told him that I would send to you his telegram, and herewith you will find it enclosed with a statement from me to the effect that if you so desire you may use this telegram in your argument before the committee, your debate before the Senate, or in any part of the CONGRESSIONAL RECORD. I send this on to you from my fellow citizen and friend, Mr. Lichtenfels, because I want him to know and I want you to know that I want to be as fair as I can about this proposed legislation.

With warm personal regards, and assurances of my highest esteem, I am as you will ever find me to be,

Most sincerely yours,

ROBERT R. REYNOLDS,
United States Senator.

ASHEVILLE, N. C., *May 24, 1939.*

Hon. ROBERT R. REYNOLDS,
United States Senate, Washington, D. C.:

We, who are your constituents, want you to know that we the undersigned citizens of Asheville, N. C., Buncombe County, are heartily in favor of the Wagner-Rogers bill. We understand that hearings are being held on the bill this week and earnestly urge that you give your most sympathetic consideration. As the intervening time is too short to mail the petitions before the hearing the names signed thereto are here appended. The petitions bearing these are in the care of Gustav Lichtenfels, of Asheville. There are many more signers as the petitions have not all been collected. Individuals' letters would have been sent you, but thought best not to burden you.

Gustav Lichtenfels; Chas. A. Webb; John W. Williams; D. Hiden Ramsey; Don S. Ellias; Hugh Stansel; Joseph B. Green, M. D.; Nell Zachary; Sarah E. Winter; Mary F. Shuford; S. R. Godman; J. Guard; Edward Goldsmith; Philip Michalove; B. Pearlman; F. Pearlman; S. A. Rubin; Wm. Rothenbery; Geo. Colley; Mortimer Kahn; S. H. Michalove; Minnie Turiff; Frances Auld; Marie Shank; Martha Brown; Anne Benson; Priest Shirley; L. Britt; Lillian Hodgkins; Elizabeth A. Bird; Mayme H. Redmond; Katie M. Howell; Margaret H. Ligon; Mrs. P. G. Johnson, Jr.; Martha S. McDowell; Rebecca Stradley; Pearl P. Lunsford; Alin H. Jones; Ethel M. Shade; Frances Hayman; L. H. Pollock; Nello S. Garren; A. B. Bigham; Irving Kassack; Vina F. Kassack; Margaret Adams; Melvin Scher; Helen Cauble; Robert Tucker; Sam Mayer; Charles Rosenfeld; Frank J. Rhinehardt; Belle Pollock; H. L. Chambers; Rabbi Robt. P. Jacobs; Virginia Myers; E. B. Braly; Robert G. Swartzberg; Robert D. Bunn; Norman Hawkins; Ben Manekin; Leo Finkelstein; Mrs. Fannie Finkelstein; Mrs. S. W. Lees; M. Levitt; Julia Meyer; Hershel Lang; D. Robinson; Eva Robinson; Ralph Roth; Philip Ness; Max Scheer; J. Sultan; G. Berkman; D. S. Schandle; E. Wadopian; J. A. Young; M. Reisenberg; H. R. Rubin; Robert Persky; Mrs. M. Rosenfeld; Carolyn Litchenfels; Martin Rosenthal; Fred Pearlman; Louis Rufkin; Irving Ness; Eugene Schochet; Harry Blomberg; T. Galumbeck; B. Fox; Joseph Litchenfels; George Coggins; George M. Stephens; W. Bynum; J. G. Deshler; Tom Rowland, Jr.; Julius Lowembien; B. L. Jackson; Victor Avzaradel; Hyman Dave; Nathan Factor; Al J. THE CHURCH PEACE UNION,
New York, June 12, 1939.

Hon. ROBERT F. WAGNER,
United States Senate, Washington, D. C.

DEAR SIR: At the semiannual meeting of the board of trustees of the Church Peace Union it was unanimously voted to support the two bills to aid refugee children—S. J. Res. 64 and H. J. Res. 168—that have been introduced in Congress by you and Representative EDITH N. ROGERS.

We will do everything we can to help facilitate the passage of the necessary legislation to make it possible for these children to come into our country.

Respectfully yours,

HENRY A. ATKINSON,
General Secretary.

[From the Baltimore Sun of May 7, 1939]

UNCLE SAM OR SCROOGE?

(By Frederic Nelson)

The ravages of depressions are not all financial and economic; they are social and spiritual. Only a soul erosion produced by prolonged anxiety and privation can account for a phenomenon which must dismay those of us who have regarded the American people as generous and friendly and the American tradition as favorable to help for the needy and asylum for the oppressed. I refer to the public reaction to the Wagner bill to admit 20,000 German refugee children to the United States.

To the credit of the politicians it must be said that support for this humane measure has come from unexpected sources. But in the correspondence columns of the newspapers in many parts of the country I have observed a harsh and crabbed resentment toward this proposal. It is as if America's heart had chilled and congealed in the face of an opportunity to relieve the distresses of at least a few children who will otherwise be left to the fate of minorities in Nazi Germany. In Baltimore and other cities the newspaper letter writers have much the same opinion on the admission of refugee children. It is "Let's take care of our own first." One Baltimore pro bono publico had the brass to base his attitude on an extraordinary reading of what Jesus would do in similar circumstances.

"I venture to say what I'm sure He wouldn't do," wrote this theologian. "He wouldn't take the bread away from the undernourished and starving children in our midst and give it to foreign-born children for whom we have no moral obligation." As a product of a pious upbringing I can dispose of that statement with one text from the words of Jesus, whose whole philosophy, incidentally, was quite contrary to this notion of discriminating against "foreign-born children." I could go further and preach a plausible sermon, making it plain that it was Christ's preaching against the narrow nationalism of the Scribes and Pharisees, His insistence that the Philistines and aliens generally must also be the concern of all, which brought about His violent death.

The text, of course, is from the fifteenth chapter of St. Matthew's Gospel, in which Jesus was asked by a woman of Canaan to cure her daughter. Jesus, apparently to rebuke His disciples by paraphrasing their opinions, said: "It is not meet to take the children's bread and to cast it to dogs." To which the woman of Canaan replied, "Yet the dogs eat of the crumbs which fall from their master's table." And Jesus, praising the woman's great faith, repudiated the narrow exclusiveness of those about Him by granting the woman's request, albeit she was a foreigner.

Not even this scriptural exegesis ought to be needed, however, to make it plain that the Wagner bill takes no bread from the mouths of American children to give it to aliens. In the first place, American children are not suffering from any such competition. If they are undernourished, it is because millions of dollars' worth

of foodstuffs are stored under Federal bond, or have been plowed under or destroyed. In fact, our agricultural producers are always in favor of shipping their surplus to China, Spain, or any place except the American market at a price the poor can pay. So why talk as if Senator WAGNER's 20,000 German refugee children were going to take bread away from some other children?

In the second place, Senator WAGNER's bill specifically provides that every child admitted must be provided for in advance with a home able to feed and care for him. The number is limited to 10,000 a year for 2 years, a total of 20,000. So what? The children will be placed in families able to care for them and, if Americans have come to the point where they must have a canny reason for doing something decent, all the families who harbor a refugee child will have to buy just a little more milk, eggs, vitamin D, and spinach.

In short, there is no economic disadvantage to this good deed in a naughty world and, it seems to me, the possible benefits from taking in these children are very great. Officially and unofficially we Americans have been protesting against the villainies which have made these children exiles and made it impossible for them to remain with their families. Up to now, however it has been England and France—whose Governments we have not hesitated to denounce as traitors to the cause of democracy—that have taken in the refugees. This inexpensive show of traditional American hospitality to the oppressed and the homeless would make our light shine farther than several columns of denunciation of dictatorships. If we cannot do this humane act generously and wholeheartedly, then let us charge it to advertising account.

[From the Sacramento (Calif.) Union, May 16, 1939]

REFUGEES AND AMERICA

Once again this Nation has an opportunity to open its doors to the political and racial refugees of Europe.

A joint resolution, sponsored by Senator ROBERT F. WAGNER, Democrat, of New York, and by Representative EDITH NOURSE ROGERS, Republican, of Massachusetts, urges the admission to this country of 20,000 German refugee children in the next 2 years.

The Senate Immigration Committee has been hearing evidence on this proposal. The arguments and names supporting the measure are impressive, indeed, and weak are the reasons offered in opposition.

Will these children become a public charge? How could they, when no child can be admitted under the proposal unless its support is first guaranteed by an individual or group?

Will these children become competitors in the labor market and hurt American job seekers? How can a child—and no children over 14 will be admitted—displace an American worker? On the contrary—20,000 children are 20,000 mouths to feed, 20,000 bodies to clothe, 40,000 feet to be shod. They will not only not displace American workmen or flood the labor market but they will make jobs for American workmen.

Another reason offered in opposition is that it will weaken our immigration laws—that it will be the first step in undermining them. How weak this reasoning is can be seen that in 1938 alien admissions totaled only 68,000, almost 90,000 less than the quota.

Moreover, the continued rigidity of our immigration bars is by no means a matter of proven benefit to this Nation. There are those who argue that the reason we are in a deep depression is because we halted the flow of immigrants—who are initiative workers and consumers, bent on bettering themselves—to this Nation.

Other nations—England, France, Holland, Norway, Sweden, and Belgium—have opened their doors to these young refugees. Shall America, richest of the world's nations, do less?

America has built its greatness on the outcasts, the refugees of Europe. To admit these children—Catholic, Protestant, and Jewish—will be a tribute to those refugees who made this Nation.

[From the Cincinnati Enquirer of May 25, 1939]

THIS LAND OF IMMIGRANTS

In the name of "Americanism," and with appeals to prejudice against foreigners, efforts are being made to arouse popular anger against the Wagner-Rogers bill to admit 20,000 refugee children from Germany apart from the immigration quotas. This in itself seems odd in a country peopled entirely by comparatively recent immigrants and their descendants—except for a few aborigines who are faring none too well in their concentration camps.

The campaign against this humanitarian measure is the more astonishing because of the charge that it "releases a flood of aliens from eastern Europe." Now 20,000 children under 14 do not constitute an avalanche or an inundation, particularly when individual American citizens have assumed complete responsibility for their support and education. Neither does this measure set a precedent for breaking down the immigration laws. The quotas will remain precisely as they are—small in themselves, and unfilled in most cases.

It might be well, since so much unreason is being spoken and written about the "influx of aliens," to notice the actual statistics of recent immigration. During 1938, the year of "the great refugee flight," the net immigration into the United States for permanent residence here was 42,685. This, it may be noted, is four one-hundredths of 1 percent of our total population. The fraction is so small the mind cannot visualize it.

After allowing for immigrants who returned to homes abroad, the net immigration from Germany for the last 6 years—since Hitler came to power—has been on the average only 6,622 a year. In the light of these facts, which are honest facts, not weapons of prejudice, can it truthfully be said that "we Americans are doing a great deal already for the refugees of Europe"?

It goes without saying that the policy of restricted immigration started 15 years ago is necessary and has general support. But it is equally true that the total net immigration last year was only about 7 percent of that in 1924, the first year under the restricted quotas. The plain fact is that immigration into this country for nearly a decade has been so small as to have no significance in our national life, and particularly no bearing on our economic life.

When these facts are considered the artificially fostered wave of prejudice against the Wagner-Rogers bill cannot be explained by an informed and honest concern over the volume of immigration. If the American people were to consider the facts stripped of the coloring of antiforeign intolerance so suddenly developed, they will welcome enactment of this carefully restricted bill to admit a few refugee children.

It is impossible to believe that so modest a proposal for humanitarian action will be shouted down by the few who would create a hysterical Americanism on the foundations of antiforeign prejudice.

[From the Richmond (Va.) Times-Dispatch of May 25, 1939]

ADMITTING REFUGEE CHILDREN

Committee hearings are going forward in Washington concerning the Wagner joint resolution to admit 10,000 refugee children from Germany this year to the United States over and above the regular immigration quota, and an equal number next year.

There is considerable misunderstanding with respect to this measure. In the first place, it is argued that there are a great many impoverished and undernourished children in this country now, and that our own children ought to be cared for properly before any are admitted from foreign lands. There would be much truth in this contention, if there were any reason to believe that the exclusion of the 20,000 children would improve the lot of the underprivileged children now in our midst. But there is no reason for thinking so.

The refugee children would be admitted only on condition that "satisfactory assurances are given that such children will be supported and properly cared for through the voluntary action of responsible citizens or responsible private organizations of the United States, and consequently will not become public charges." Thousands of persons in 40 States already have volunteered to be responsible for their care.

The needy children now in America should be cared for in their own homes through tax-supported aid to dependent children. Consequently the care which they are receiving, or which it is hoped they will receive in the future, will not be lessened by the foster care which would be accorded the refugee children in homes of their own faith.

The proposed group would be chosen by the American Friends Service Committee, the Quaker organization with branches all over Europe, and the children would be Protestant, Catholic, and Jewish. They would be picked children, all under 14, sound in mind and body, of the type which any country would regard as assets to its citizenship.

Many would be "Aryans," whose parents are in concentration camps, because of their dislike of the Hitler regime. Since almost the entire German and Austrian aristocracies are hostile to the Nazis, and many of its members are incarcerated, it can be taken for granted that children from these groups would be included. Tens of thousands of devout Catholics are likewise utterly out of sympathy with the regime, and children from their families also would be admitted under the bill.

Similarly, many of the children would be "non-Aryans," either wholly or partially Jewish, whose racial backgrounds make their lives in the Germany of today a constant horror. It is assumed that the children would come from the vigorously able group which has furnished large numbers of the most cultured and accomplished citizens of Germany, Austria, and Czechoslovakia.

Since selection of the children by the Quakers would not be made until after adoption of the joint resolution by Congress, it is impossible to say at this time just what the racial and religious composition of the refugee children would be. However, it can be said with assurance that these would be children with physical, mental, and racial backgrounds calculated to make them valuable American citizens. They would not take jobs away from Americans, or lessen the amount of care given to needy American children.

It is to be hoped, therefore that Congress will admit them to the United States, a country which has long prided itself upon being a haven for the oppressed of many lands.

[From the Los Angeles Times of May 25, 1939]

THE WAGNER-ROGERS BILL

Nobody who has made an understanding study of the Wagner-Rogers bill to admit a limited number of refugee children, about half Jewish and half Catholic and Protestant, from Nazi Germany to a safe haven in our own land, has found any adequate reason for opposing so carefully drawn a measure. It is nonpolitical, nonpartisan, nonracial, devised by experts in child welfare, animated by the purest of human sentiments.

Since these innocent waifs of organized persecution will be cared for by private families or in institutions supported by voluntary

subscription, they will add little if anything to the public expense. They will be carefully selected and transported to this country in small groups, accompanied by trained social workers. Competent child welfare agencies will supervise the children after placement and no additional groups will be brought over till the first have been absorbed.

It has been feared in some quarters that these children will aggravate our unemployment situation. At the start they will not make clothes; they will wear them. They will not grow food; they will eat it. They will not be producers, but consumers. It will be some years before these children will begin to compete in our labor markets. In fact, we are facing a coming shortage in the supply of skilled young workers such as under the training contemplated, these youngsters will become.

The California Assembly, by a vote of 47 to 1, has adopted a resolution urging congressional enactment of the bill. This action represents the sentiment of a probably large majority of Californians, and the State senate should give it similar support.

We have displayed national enthusiasm in welcoming to America representatives of leading European royal families. Shall our welcome be less heartfelt for the child victims of European persecution?

[From the Paterson (N. J.) News of June 13, 1939]

A HUMANITARIAN MEASURE IN THE BEST TRADITION OF A FREE NATION

So much confusion has arisen concerning the Wagner-Rogers bill to admit 20,000 refugee children from Germany that it seems wise to correct the more glaring misconceptions.

The bill would authorize the admission of 10,000 children a year for 2 years. This would not, as some have feared, let down the standards for admission of aliens. These refugee children would have to meet the same stringent tests which are applied to all who seek immigration visas.

It is sometimes thought this bill would change the quota system established in 1924. This is not the case. The Wagner-Rogers bill has nothing to do with the quota system, would not change it in any way, and would not affect the quotas of various countries. The entire immigration law would be left just as it is today.

Some persons evidently think these refugee children would become a responsibility of the American public. They perhaps get that impression from the loose talk of America's "doing something for the refugees."

But the truth is that the Government would not be "doing something" for these refugees. It would merely allow individual Americans to receive into their homes refugees whom they have agreed to support. There are homes awaiting all these children. Absolute assurance will be given in every case that individual Americans will be able to support the children they take.

There also is some misunderstanding as to who these children would be. They will not be restricted to Jews or to the so-called non-Aryan Christians. They will come from persecuted groups, which will include Jew, Catholic, and Protestant.

Finally, there is an impression, fostered by dishonest propagandists, that the persons who are urging the Wagner-Rogers bill are setting out to break down the immigration-quota system. This is not only a gross distortion of the real intent of the bill and its sponsors but is a shocking injustice to the many distinguished Americans who have led the campaign for this measure. It is precisely because they do not want to change the quota system that they have urged a separate bill to admit these refugees.

In reality, the bill is simply a humanitarian measure in the best tradition of a country known for its generosity. It provides a means by which private citizens in America can save 20,000 little children from lives of frustration and suffering under a brutal tyranny abroad.

A Permanent P. W. A.

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. BUCKLEY of New York. Mr. Speaker, in 1928 we were warned that the Government must be prepared for an economic emergency and to begin to plan for a comprehensive program of public works to insure employment for those who would lose their jobs in private industry.

Mr. Speaker, It was not until 1932 that the Congress of the United States gave heed to this warning. In that year the first public-works program was adopted. Unfortunately, it did not get into operation before the crisis of early 1933 was upon us. I can remember well, however, how, when the present administration took office, it turned to public works as an important factor in meeting the emergency that was upon us. Then Congress appropriated more than $3,000,000,000 for public works as a backlog of resistance against the depression.

In the first Public Works Act is found the phrase "the construction of projects to serve the interests of the general public" and in practically all of the the P. W. A. acts occurs the phrase, "to increase employment by providing for useful public works projects."

This has been the story of the Public Works Administration for the past 6 years. It has fostered and helped finance the greatest construction program in history. It has added $3,750,000,000 in finished projects to the visible worth of the Nation. It has $2,100,000,000 worth of projects still under construction. It has been responsible for the employment of hundreds of thousands of men at construction sites. Through the stimulus of huge orders for materials, additional hundreds of thousands of men have been employed by the heavy-goods industries and the spending of pay rolls has aided the consumers' goods industries.

That the Public Works Administration has fulfilled the function of stimulating employment is a proven fact. The Bureau of Labor Statistics of the United States Department of Labor has estimated that P. W. A. has provided, up to May 1, 1939, approximately 1,790,000,000 man-hours of employment at construction sites. The Bureau found that for every 2 man-hours of work at a construction site, 5 hours of employment in industry were necessary to produce, fabricate, and distribute the materials going into a project. Applying this formula, it is estimated that P. W. A. has provided 4,475,000,000 man-hours of indirect labor at the sources of manufacture. But this is not all. For the past 6 years pay rolls resulting from P. W. A. projects have been spent in thousands of communities in nearly every county in the Nation. This has resulted in an increased demand for consumers' goods, and it is estimated that an additional 3,500,000,000 man-hours of indirect employment have been created to supply the demand for consumers' goods.

Construction always has been one of the greatest forces toward diminishing unemployment and elevating the living conditions and standards of the citizens of this country. I am of the firm belief that widespread benefit to the Nation, as provided by P. W. A., should be made a permanent part of the Federal Government. That such a place in our Federal structure should be made for a permanent P. W. A. is recognized on all sides.

Every dollar spent on P. W. A. projects pays dividends. It provides wages and material orders and builds useful and permanent public works, increasing the visible worth of our Nation. Wealth has been created by P. W. A. that will pay dividends for many years to come in better educational facilities, more adequate hospital facilities, sewers, better highways, tunnels, and bridges.

I beg to remind the House, Mr. Speaker, that all this has been done by methods regarded as the safest in the expenditure of Federal funds. Every safeguard has been established to insure economy and to maintain the independence of private industry. It was also made certain that the workman was paid the wage commonly recognized in his locality as the going rate of pay for his particular skill.

Hon. Harold L. Ickes, Public Works Administrator, in recent testimony before a subcommittee of this House, stated that only four-fifths of 1 percent of all P. W. A. loans were in default, and that the amount was about $5,000,000. Aside from this wonderful record of safety in loans must be taken into consideration the additional statement made by Mr. Ickes that the P. W. A. had made a profit of $12,000,000 on the bonds it has purchased from city, county, and State governments to finance projects, and then disposed of through resale by the Reconstruction Finance Corporation.

Recently we have had an example of the faith of local communities in the Public Works Administration. A Nation-wide survey shows that 81 percent of all communities voting on the question of issuance of bonds to finance the localities' share of the public-works projects voted favorably.

The Public Works Administration is known by its projects in 3,069 out of the 3,071 counties in the country. It has made itself felt in nearly every phase of our national economic life. By encouraging towns, cities, counties, and States to make long-desired local improvements with the aid of P. W. A. loans and grants, American educational, health, sanitation, social, and transportation improvements have been stepped up many years. More than 7,000 schools and college buildings, including additions and improvements, have been erected. Many new or improved water systems were made possible through P. W. A. I could go on indefinitely pointing out the merits of the Public Works Administration through its aid to sewer and disposal plants, hospital and institutional, flood control and harbor improvement, highway and bridge, civic improvement, including city halls and courthouses, and community buildings. It is evident that some of our finest public buildings and public projects in this country have been built since the inception of the public-works program.

I feel confident in saying, as far as the city of New York is concerned, that many of them might not have been built had it not been for the availability of the public-works funds. Let me cite the building of the new Criminal Courts Building in Manhattan. Let me point out that during the continuation of the world's fair millions of citizens will travel to New York to attend the fair. They will pass over the Triborough Bridge, built with the assistance of the Public Works Administration at a cost of more than $44,000,000. A remarkable engineering project, the bridge is more than self-sustaining by reason of its tolls, and eventually will pay for itself. In New York City I look as I travel about at the wonderful schools, colleges, hospitals, piers, tunnels, sewage-treatment plant, housing developments, highways, grade-crossing elimination, health centers, and know that they are due to the Public Works Administration. The other cities in New York State are also in possession of these newly created structures benefiting the masses of people in their cities.

The Public Works Administration has demonstrated beyond all question of doubt its efficiency. Its record in putting into operation the huge 1938 program from the receipt of over 12,000 applications to the getting under construction, in a period of less than 6 months, over 8,000 Federal and non-Federal projects, is nothing short of a miracle. All of this has been done with a fine, well-managed organization. This applies not only to the Public Works Administration staff in Washington but also to the remarkably efficient field organizations with headquarters in New York, Atlanta, Chicago, Omaha, Fort Worth, San Francisco, and Portland. Regional directors in these seven sections have a tremendous responsibility and they have carried out their tasks in an unusually brilliant manner.

I want to call particular attention to the work accomplished by the staff of P. W. A. region 1, comprising the New England States, New York, Pennsylvania, New Jersey, Delaware, and Maryland. Under the competent and wise leadership of Col. Maurice E. Gilmore, the largest portion of the P. W. A. program has been accomplished. It included the largest of all P. W. A. projects, such as the Triborough Bridge, the Midtown Tunnel, the municipal subway in New York, the Philadelphia subway, the Boston water works, and dozens of other huge projects, including hospitals, schools, sewer systems, and civic buildings.

The P. W. A. program has been the Nation's largest single customer during the last few years. It placed orders for more than $2,500,000,000 worth of goods with American industry. The manufacture of these goods, the production of raw materials for them, and the transportation and distribution of the finished projects provided extensive activity for mills, mines, factories, and forests. Purchases, the life force of industry, flowed from P. W. A. projects in a steady stream into American business. For the vast construction programs undertaken by P. W. A. everything from cordage and twine to structural steel and motorcycle parts has been bought. Some $591,000,000 worth of iron and steel and their products was ordered; $605,900,000 went for stone, clay, and glass products; $451,272,000 went for machinery; $90,000,000 worth of transportation equipment for use on land, water, and in the air was bought, while $138,599,000 worth of forest products was purchased. Some of the individual items required included such diverse industrial products as lime, glass, awnings, nails, and spikes, steel rails, stoves, steam locomotives, gas meters, refrigerators, paving materials, mattresses, X-ray machines, and railway cars.

The production of all these goods resulted in employment and pay rolls. The spending of these wages in turn benefited other industries supplying consumer goods and services, thus keeping the economic cycle functioning.

P. W. A.'s march to construction has been accompanied by a simultaneous increase in employment and production in America's basic industries. Cement orders from P. W. A. took 72 percent of the entire domestic output in 1934. In 1936 P. W. A. orders required 43 percent of all the brick and hollow tile produced that year. In 1934, 48 percent of the value of steel rails manufactured that year went for P. W. A. aided railroad orders. In 1938 the steel index rose from 28 to 62.5 percent of capacity during the period in which P. W. A. allotments were made. The F. W. Dodge Corporation, nationally known construction reporting agency, recently reported that construction activity in the United States has increased for the fifth consecutive year and that "major credit for the 1938 increase is due to public construction expenditures, principally those stimulated by P. W. A. loans and grants."

The New York Times of Wednesday, May 31, 1939, had an item quoting from a communication sent by Secretary Ickes, as Public Works Administrator, to President Roosevelt. In said communication Mr. Ickes, on the basis of a study made by the Bureau of Labor Statistics, stated that 59 percent of the construction worker's dollar goes directly to the grocer, clothier, and landlord in the community where the builder works. The rest is expended for transportation, medical care, household operation, furnishing and equipment, recreation, and other items. Mr. Ickes emphasized that this has "a direct effect on the national income." He showed that the worker spent great sums of money for coal, electricity, water, paint, house repairs, refrigerators, furniture, rugs, automobile tires for transportation. This money went for insurance, movies, and recreation, and for medical care. There can be no doubt that this money, being expended in various channels for consumption of goods, is a great factor in helping business.

I maintain that due to the Public Works Administration many workers have had an opportunity of employment, and that the merchants have had the benefit of the purchasing power as a result of the wages paid to these workers.

In view of all this I again urge that P. W. A. be made a permanent agency of the Federal Government. Congressman STARNES, of Alabama, has introduced in the House of Representatives a bill, known as H. R. 4576, which provides for the continuation of the Public Works Authority and an appropriation of $500,000,000 for loans and grants for new construction projects. A similar bill has been introduced in the Senate by Senator MEAD, of New York, known as S. 2063. The Starnes-Mead bill provides for the release, in times of depression, of worth-while projects, for immediate operation. It is a long-range program and it already has substantial support in the Congress as well as on the outside.

This bill accepts the theory that P. W. A. should be retained as a permanent part of our Federal Government structure. It would permit loans and grants to public bodies and, in addition, it will permit loans or grants to nonprofit corporations for the construction of hospitals, sewage-treatment and disposal plants and for the elimination of stream pollution.

If this new program is made possible by Congress it will result in the construction of projects costing over a billion dollars. Over 5,000 applications are now pending in the Public Works Administration which were filed prior to the expiration date for accepting new applications under the 1938 act. A large number of these applications have already

been approved and will be eligible for allotments if further funds are provided. Therefore, I urge that the Starnes-Mead bill be passed by this Congress so that P. W. A., as a recognized and permanent agency of the Government will be ready to swing into immediate action to help to continue the American march of progress by employing men, money, and mills.

Construction always has been one of the greatest forces toward diminishing unemployment and elevating the living conditions and standards of the citizens of this country. That such a place in our Federal structure should be made for a permanent P. W. A. is recognized on all sides. I am of the firm belief that widespread benefit to the Nation, as provided by P. W. A., should be made a permanent part of the Federal Government.

W. P. A. Appropriations

EXTENSION OF REMARKS

OF

HON. FRANK W. FRIES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. FRIES. Mr. Speaker, today, as in the past, the United States Congress is called on to pass legislation to take care of the underprivileged people of America, who, through no fault of their own are denied the right to enjoy the necessities of life.

I regret that we are again called upon to appropriate vast sums of money to take care of our underprivileged people—sums which if double or triple the amount asked would fail to give these people adequate economic and social security.

People in business, people employed, and everyone having an income are sick and tired of contributing to a fund, through taxation, for the purpose of maintaining an army of fifteen to twenty-five million unemployed, who are denied the right to participate in our economic and social program through no fault of their own; who are forced to accept charity against their wishes.

This method of distribution of the meagre necessities of life to the underprivileged is destroying the morale of our entire people, and creating hatred in the minds and hearts of those who are fortunate enough to have an income.

However, this situation is made possible by the stupidity of the United States Congress by its failure to recognize its responsibilities to the people it represents, and I for one will continue to vote for legislation which will appropriate money to eliminate starvation, or the possibility of starvation and suffering amongst our people so long as there is no better solution offered than to appropriate money to take care of them.

I am reluctant to comment on the plight of these millions of people who are denied the privilege of enjoying the necessities of life, and who find themselves today in the category of underprivileged characters in a land of plenty; people who are compelled to accept the wishes of the United States Congress, when I am confident they would far rather be part of an organization which—without the stigma of relief or a work-relief program—honorably produced the necessities of life; people who, outside of what we will provide for them in our Government work-relief program, are denied the privilege of participating in our economic and social life, and who are at the mercy of the dictates of the United States Congress.

It is not that I do not realize the benefits—the far-reaching benefits—that some of our Federal work-relief projects have bestowed on the underprivileged of our Nation. I do. Benefits have also accrued from our work-relief program not only on the underprivileged but upon those of us who are more fortunate. I cannot subscribe, in the least, to the cut in appropriations for continuance of the N. Y. A. which the Committee on Appropriations has made.

I noted with interest the remarks of the gentleman from Mississippi [Mr. COLLINS] dealing with the attitude of the press toward the program of the National Youth Administration. Especially noteworthy was the fact that among the newspapers which were high in their praise of the N. Y. A. was the Grand Rapids Herald, of Grand Rapids, Mich. This is the newspaper with which the senior Senator from that State, who is among the most vocal critics of the present administration, has long been associated, and I hope the Republican Members of the House, who have not already done so, will read this editorial.

Since the inception of the program in 1935, through March of this year, the N. Y. A. has spent more than $12,000,000 in Illinois, of which all but 2½ percent has been paid to labor. In 10 Illinois cities, including Carlinville and Springfield in my own district, the National Youth Administration has instituted junior placement offices which have been of material service to boys and girls in helping them find jobs in private industry.

In Illinois, and throughout the Nation, the N. Y. A. has done a job that has brought highest praise from educators, labor, and business groups. Certainly one of the best ways of insuring continuation of democracy in the United States is by providing an educated electorate, by providing our young people with an opportunity to develop sound work habits, and by providing them with jobs, in other words, continuing the National Youth Administration and providing it with an increased appropriation adequate to meet the needs of all who are in want.

However, it is rather difficult to understand why a condition exists in our Nation which compels us to maintain a vast number of our citizens on any relief program whatsoever. Our Nation finds itself troubled with a problem entirely different from any problem existing in any other nation in the universe.

Most of the other countries of the universe, as we are able to understand them, are troubled with the problem of adequate production of the necessities of life and the problem of sufficient natural resources to make such an adequate production possible, but here in America we find an entirely different situation.

When the Almighty God created this world, He seemed to have set aside for us, who are Americans, all of the natural resources, all of the ideal climatic conditions which we would need.

And, since we have established ourselves as a democracy and with the years have acquired skilled methods of technical training, and since by the grace of God we have developed the greatest scientists and inventors and engineers in the world, it does appear that our country should be a land of plenty for all.

Nevertheless, we find ourselves in a category which is unexplainable. For we realize not only the wonders of our particular situation in the universe—the abundance, the prodigality of our natural resources—but we are also made to realize the inability of the representatives of our people—which means us, the United States Congress—to cope with the problem of a satisfactory distribution to all of our people of our resources; the failure of Congress to deal with our troubled financial and economic situation.

For it remains inescapably true that our economic and social problems are different from those of any other country in the world.

Recently Look magazine brought to our attention, by illustration and comment, the inability of the United States Congress to deal with the economic problems which face 130,000,000 of our people.

It is my conscientious belief that no true, red-blooded American citizen is asking for any concession, or any consideration from the United States Government, or from anyone else, other than the rights guaranteed us by the Constitution of the United States.

American citizens want the right to be a part, each of them, of our economic and social life—American citizens want to be producers, not "takers."

Unless the United States Congress exercises its right to establish a true picture of what the actual economic situation is in America, it will be impossible for this Congress, or for any other Congress, or for the President, or any man, or any group of men in America, to correct the irregularities now existing in our country.

In the last Congress I introduced a bill which would give to the United States Congress a true picture of the economic situation, and I still believe that if we had a true census as to what the facts are in our economic and social life, the United States Congress, with the assistance of labor, agriculture, business, and the Government could correct all of these evils, and make it possible for our American citizens to enjoy the privileges and rights which belong to them as American citizens, and by an intelligent solution of our problems could prevent communism, fascism, or any other un-American "ism" from prevailing in this country.

The census bill, which I proposed, and will introduce again, will give to the United States Congress and to 130,000,000 people the true facts as to the number of people we have in America who are employed, and the number of hours they are employed. It will also give the number of people we have in America who are unemployed—why they are unemployed, and what they are qualified to do. By the same means we can ascertain the number of hours it is necessary for man to toil with the aid of modern machinery and modern science to produce the necessities of life for our domestic consumption and for foreign exports. By the same means we can also find the number of hours it will be necessary for all of our people to be employed in order to produce the necessities of life, and also the annual income necessary for our American citizens each to enjoy the necessities of life.

If we had this information, I am confident that it would be mighty easy to deal with our economic and social problems in a businesslike manner.

Our method of taxation, and our effort to guess ourselves out of this economic jungle is deplorable, and I am confident that unless we have a census which will give to the United States Congress the true facts as to the number of hours man should toil and the number of people eligible and qualified to participate in our economic program, this American form of government will fail, and that is one thing no red-blooded American desires to happen.

Why should our American people be denied the privilege of actually knowing what our economic conditions are and what is causing this deplorable economic situation? Unless we have facts to govern us in our deliberations concerning our people, Congress is a complete failure.

I, as a humble Member of the United States Congress, fear the antagonism, the hatred, fear, and insecurity which exists today amongst our people, and which is brought about simply by the stupidity of our lack of responsibility to the people we represent.

Unless we exercise our rights as representatives of the people, and give to the underprivileged of this country the right to enjoy the necessities of life, we cannot expect them to respect our Government.

If every Member of the United States Congress and the people interested in the continuation of this form of government will review my census bill, I am confident they will find that the United States Congress, labor, agriculture, and business can get together and formulate a program by which we can eliminate this miserable situation which exists today in our economic and social life, and eliminate this unreasonable, this damnable taxation, and, most important of all, eliminate the insecurity, the uncertainty, and the hatred which exists amongst our people.

Relief Appropriations

EXTENSION OF REMARKS

OF

HON. DONALD H. McLEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. McLEAN. Mr. Speaker, the particular provision of the bill now under consideration provides:

(c) On and after October 1, 1939, employment on work projects authorized under this section in the several States, Territories, possessions, and the District of Columbia (hereafter referred to in this subsection as States), shall be apportioned on the following basis: (1) Forty-five percent of the total number employed, in the ratio which the population of each State bears to the total population of all States as shown by the latest available Federal census; (2) 45 percent of the total number employed, in the ratio which the number of unemployed persons in each State bears to the total number of unemployed in all States; and (3) 10 percent of the total number employed at the discretion of the Works Projects Board, established by subsection (g) (hereinafter referred to as the "Board"), to meet unusual local conditions.

It is encouraging to note that in the appropriation of funds under this measure some consideration is being given the States from which most of the money comes. The more prosperous States, where the population is larger, are to be given consideration in proportion to the population. Since the adoption of the sixteenth amendment the Federal Government has had tremendous resources at its command. These resources have come from a few, the more prosperous of the States, and have been used for the benefit of the less prosperous. New Jersey, for instance, for the fiscal year 1938, received in Federal grants for various relief purposes only about one-third of its contribution. Its contribution in Federal taxation amounted to about $210,000,000 and its receipts about $73,000,000. Some States received in Federal grants more than they contributed in taxation.

The people are beginning to realize the necessity of some limitation and control of governmental expenditures, and, likewise, some limitation upon the amount of money the Federal Government can raise by taxation. Evidence of this is a resolution recently adopted by the Legislature of the State of New Jersey providing that the amount of money which the Federal Government may be permitted to raise by taxation should not exceed 25 percent of the total income of the Nation. This may not be the means by which the object of the resolution may be attained, but at least it indicates a desire or purpose to that end. The only limitation that I know of on the power of the Federal Government to raise money is that contained in the statutes which place a limitation upon the amount of bonds that can be issued.

This limitation amounts to nothing at all, because it can be changed at the will of Congress. It has been frequently changed since it was first included in the Liberty Loan Act of 1922, and there is talk of changing it again, and each change has been an increase in the item which, after all, is merely a declaration of the intention of Congress as to how far it should go in creating a national debt. It is of no value as a restraint on the spending power of Congress.

It is to be hoped that if the Federal Government is committed to the recently created practice of making contributions or grants-in-aid to the States that provisions such as are now under discussion may be arranged on an orderly basis so that States which provide the funds will receive a fair and proportionate amount of the distribution or return. This provision which we are now discussing is an indication that Congress is beginning to realize the fairness, if not the need, for some policy of this kind.

In Defense of W. P. A. Appropriations

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 16, 1939

Mr. BUCKLEY of New York. Mr. Speaker, last year I presented to the House my views relative to the accomplishments of W. P. A. I am still as ever convinced that the W. P. A. is responsible for many valuable contributions that are now permanent assets of the Nation, States, and local communities. More than that, it has afforded employment to many people thereby, providing money with which to purchase the bare necessities of life. Further, it has preserved the skill of the worker and his morale which are so important for the continuation of an orderly democracy. It has helped the small-business man as those on work projects had means to purchase essential commodities.

We had hoped that private industry would absorb the people from the relief rolls. A certain percentage were successful—a great portion of the unemployed did not receive this opportunity. It may be true that some mistakes have been made in the administration of projects but such have been or can easily be corrected. No program of such wide scope can be perfect. We are also aware that business conditions are as yet not normal so that we can discontinue or curtail this program.

We hear complaints that the Government is not able to carry the burden of furnishing money for the W. P. A. I am not so easily deceived into believing that the United States is not prosperous enough to take care of its poor and unfortunate humans but must let them starve. That is unthinkable. That policy is un-American and un-Christian.

The press in the last few days carried news items to the effect that this body was going to make certain reforms in order to eliminate the undue influence of the Workers Alliance in connection with W. P. A. activities. Many of my colleagues from other sections dislike the Workers Alliance. I have no great love nor have I ever catered to that organization. On many occasions, unsolicited, they forwarded to me communications praising my work in connection with relief matters. Last year when I refused to deal with them for the reason that I stated that I did not believe in the methods they were pursuing, they came out against my reelection and distributed circulars falsely stating that I was an enemy of relief. This occurred 2 months after that organization had sent to me a letter of commendation for my efforts in behalf of the relief program.

However, to effect changes because of the Workers Alliance and thereby work great hardships upon the persons employed on the projects is to harm the needy for activities for which they are not at all responsible. The greatest portion of W. P. A. workers are fine, upright men and women and as patriotic and American as can be found in any body of men and women in this land. According to the report of the Appropriations Committee in March of 1939, there were 2,917,000 people on W. P. A. projects, and the estimated persons benefited were 11,570,000. There are about 2,500,000 persons now on the W. P. A. rolls. We can, therefore, readily see the tremendous importance of this bill.

The provision in the bill of removing all persons who have been employed on relief projects continuously for more than 18 months will work a great hardship on many people. There are many persons who cannot obtain employment in private industry. We have hundreds of thousands of able-bodied men and women between the ages of 40 and 65 who are unable to obtain jobs in private employment solely because of their age. This cannot be denied. I believe these persons should be allowed to continue on W. P. A.

The workers on both labor and white-collar projects have well earned the small wages they received. From my observation of their work in New York City I can say that they have done a very splendid job.

A word or two about the National Youth Administration. The program has aided our out-of-school youth in employing them on public projects and extended educational opportunities to the underprivileged. This has kept many from leaving schools and competing in the open labor market for adult positions. The National Youth Administration program is necessary to continue to provide part-time work and educational opportunities to hundreds of thousands of needy young people in assisting them to continue their studies in the schools, colleges, and universities. This program also provides work experience and training which will stand them in good stead in the future. I have spoken to many of these students. I have talked to their teachers and they have praised and expressed deep appreciation for this aid by the Government. The student-aid program reaches into nearly every county in the United States. It benefits young people from the low-income families. It is money well spent.

In these days we are appropriating moneys in the preparation of activities for the defense of the Nation from outside forces. It is just as important to defend our country from the subversive forces within who challenge our democracy and preach and point to communism, nazi-ism and fascism as the panacea. I have always contended that this country will weather the storm and work out its problems. It must, therefore, continue its policy to aid the deserving, who, through no fault of their own, need this comforting hand of our Government. This Nation will not let them down, and so today, in considering this program, let us do what we can to help those who merit our favorable support. I am sure that the moneys disbursed for these purposes will return dividends in the form of happier and healthier American citizens.

Agriculture Appropriation Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 22, 1939

Mr. COCHRAN. Mr. Speaker, I have, with one or two exceptions, always supported legislation advanced in the interest of the farmer. This applies to my entire service in the House. Today, I regret to say, I find myself in disagreement with the report of the committee on the annual appropriation bill for the Department of Agriculture. I have stood squarely back of my colleague from Missouri [Mr. CANNON] because I knew of his interest in the farmer, but my outstanding reason for supporting farm legislation was that I know when the farmers are prosperous that prosperity is reflected in the cities. We who come from large cities realize that we cannot sell what we produce unless the farmer has money to buy our products. The farmer, I am sure, realizes that when those in the city are employed there is a better market for his products, reflected, of course, in the price they receive.

The House passed the agriculture appropriation bill March 28. When the Senate passed the bill May 12, it contained 158 amendments, the majority of which being increases. The House was within the estimates recommended by the Bureau of the Budget, while the Senate added nearly a half a billion dollars to this amount. The large increases added by the Senate were items that were not carried in the Budget recommendations.

One of the items added provided for $225,000,000 to make parity payments to producers of wheat, cotton, corn—in the commercial corn-producing area—rice, and tobacco pursuant to the provisions of the Agricultural Adjustment Act of 1938. Another was to carry out other provisions of that act affect-

ing disposal of surplus commodities for which $113,000,000 was added by the Senate.

When the President signed the Agricultural Adjustment Act of 1938 he made it plain that if its provisions were to be carried out money must be raised by taxation to meet the expenditures. The President has indicated that he did not favor the parity payments nor the appropriation for the disposal of surplus commodities because the money has not been raised.

In my campaign in 1938, in fact in all my campaigns, 1932 to date, I have promised my constituents to support the President. I could not support these appropriations for $338,000,000 and at the same time keep my pledge to my constituents.

No President has ever been a better friend to agriculture than has President Roosevelt. That statement cannot be disputed.

Despite the billions of dollars that we have appropriated for agriculture since I have been a Member of the House, the farm problem remains unsolved. The farmer is better organized than he ever was. Farm organization leaders have come forward with suggestion after suggestion; nevertheless the farmer has had a hard time getting the cost of production. It is admitted the prices he receives barely enables him to keep ahead of the sheriff in many instances—yes; thousands upon thousands of instances the sheriff has caught up with him, took what he had, and left him without farm or home.

Surely there must be some solution to this question. If that solution can be found, you will find me going along with those who represent the rural sections.

I have not remained silent on the farm problem. Time and again I have pointed out that while the farmer might not be receiving a fair price for his products, still the consumer is paying a fair price. I have insisted and I insist now that if we can put into the farmer's pockets a reasonable part of the spread between that which he is now receiving and what we pay to place his yield on our tables the farm problem will be solved.

Is there not some way we can do this? Too many are profiting from the farmers' labor. As an example, while in the country several weeks ago I personally saw a farmer sell large bunches of asparagus for 10 cents. Each bunch contained about 20 stalks. When I returned to the city the very next night I paid 15 cents for 5 stalks of asparagus in a restaurant. The same applies to almost everything the farmer raises. Here we find the consumer paying 60 cents for a vegetable that the producer, the farmer, received 10 cents. That spread will be found when you buy eggs, chickens, butter, meat, or in fact everything the farmer produces. Is it not plain that the fault lies in part in the distribution? I would be willing to support an appropriation for any amount for a thorough investigation if I was sure it would result in legislation that would in some way guarantee to the farmer a reasonable part of this spread.

Mr. Speaker, as I have stated before, if money is raised to carry out the provisions of the Agricultural Adjustment Act, then I will support legislation for parity payments or anything else that will be beneficial to the farmer, but I do feel it is our duty to provide this money before we enact such legislation.

What Do the Philippines Mean to the United States?

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

Mr. ALEXANDER. Mr. Speaker, America was discovered in the search for the "wealth of the Indies." Columbus and the explorers who followed him for 200 years sought the westward route to India and China.

The westward trek of civilization had its counterpart in the United States when Jefferson bought from Napoleon in 1803 the 827,987 square miles of the Louisiana Purchase, comprising most of 14 States west of the Mississippi; when in 1845 the 389,166 square miles of Texas was organized; when in 1846 came the Oregon-Washington acquisition; when in 1848 came the Mexican cession including California, Arizona, Nevada, Utah, and New Mexico, followed by the Gadsen Purchase in 1853; when in 1867 Alaska came to us from Russia; when in 1898 came the Hawaiian Islands, and in 1899 Guam and the Philippines.

Back as far as 1521, shortly after Columbus' voyage, Ferdinand Magellan, in search of a westerly route to the spice islands of the east for the King of Spain, landed in the Philippines and named them the Island of St. Lazarus. For 200 years Spain, Portugal, the Dutch, and Japanese struggle for possession of the Philippines. In the Seven Years' War between England and Spain Great Britain determined to possess the Philippines and sent into Manila Bay a British squadron of 13 vessels and demanded surrender in 1762, just before the Declaration of Independence, 1776.

Foreign trade first began at Manila in 1834. The first revolution of the Filipinos against Spanish rule was in 1896, when they tore up their poll-tax receipts and revolted against the sovereignty of Spain. Only 2 years later, May 1, 1898, Admiral Dewey entered Manila Bay, destroyed the Spanish Fleet, and since that day the Philippines have achieved their freedom and made their great development under the flag of the United States, and the laws made by Congress—including the treaty of 1934 which provides for complete Philippine Independence on July 4, 1946.

The westward trek of American trade across the Pacific to the Orient found its sequel in the "open door" for China, established by international treaty in 1900, which was renewed in the Nine Power Pact signed in Washington, D. C., in 1922, and is today flagrantly violated by one of the signatories, namely, Japan.

It was pursuant to our westward trade, reaching to and across the Pacific, that billions of American capital have gone into the building of Pacific railways for the development of our Pacific States and in ships for the Pacific commerce to which the ocean ports of these Pacific States are the gateways.

Ten years ago, our Pacific commerce exceeded $1,200,000,000. Exports of the products of American farms and factories to the Pacific trade have in many years exceeded $500,000,000 a year, and a like quantity of tropical raw materials have come from the Orient to give employment in American factories.

In our westward trek to the peoples of the Pacific we have carried peace and commerce, and all that goes to aid enlightenment and independence under the rules of progressive law. Our flag and Constitution, our laws and commerce, have gone hand in hand. No land and no people, to whom the Government of the United States has gone, has lost liberty and independence. Least of all, have the people of the Philippines suffered from the liberation of their archipelago from Spanish rule, and from our 40 years of administration and our $700,000,000 Government investment.

The shot fired from Dewey's flagship at Manila Bay, May 1, 1898, was the first signal for the liberation of the Philippines, and the beginning of an impressive development, which is here briefly reviewed.

NATURAL RESOURCES OF THE PHILIPPINES—HAVE THEY VALUE TO THE UNITED STATES OF AMERICA?

Ceded to the United States by the Treaty of Paris, December 10, 1898, the 7,091 islands of the Philippine Archipelago have a north and south extent of 1,152 statute miles and an east and west width of 682 miles.

There are 462 islands of 1 square mile of area or over, and 2,441 bear geographical names. Luzon, the largest, has an area of 40,814 square miles; Mindanao, 36,906; Panay,

4,448; Palawan, 4,500; Mindoro, 3,794; Bohol, 1,554; Masbate, 1,255; Cebu, 1,695. Other groups are the Sulu or Jolo islands of the south, the Babuganes and Batanes of the north, the Candanuanes of the east, and the Culion group of the west.

The archipelago has a coast line of 11,444 statute miles, which exceeds that of Alaska, or even the mainland of the United States, and is several times that of all other island possessions of the United States, including the Hawaiians, Puerto Rico, Guam, the Panama Canal Zone, the Virgin Islands, and the Samoan. The Philippines have 21 fine harbors, and 8 landlocked straits, including the 7 finest sheltered harbors on the far Pacific.

There are 8 distinct languages, many dialects, and 4,000,000 people who speak English. English and Spanish are the official languages. In 1936 the 7,938 public schools had 1,262,353 pupils with 28,845 teachers. In 1937–38 there were 120,052 college and university students, of whom the State University of the Philippines alone had 8,139 enrolled. Vocational courses in trades and industries have 14,647 enrolled. The total population is estimated at 17,000,000. The Christian population of the Philippines is placed at 13,500,000, the Mohammedan, pagan, and sundry foreign at 1,300,000, with about 2,000,000 unclassified.

The total land area of the Philippines exceeds that of the British Isles, approximates that of Italy, and is only slightly less than Japan's. The 114,400 square miles of Philippine lands exceed the total area of the Middle Atlantic States, and not quite double the size of New England.

It is estimated that 63 percent of the land area, or 45,946,000 acres, are suitable for agriculture, of which 9,743,000 were cropped in 1937, by 2,000,000 Filipino farmers.

Livestock includes 2,400,000 water buffalo, 1,500,000 cattle, 450,000 horses and mules, over 3,000,000 hogs, and 700,000 goats and sheep.

Principle agricultural crops in 1933 and 1937, as estimated by the Philippine Department of Interior, include:

	1933	1937
Sugar (metric tons)	1,218,175	975,000
Abaca (hemp, tons)	134,456	200,000
Tobacco (tons)	41,750	30,000
Copra (metric tons)	474,240	500,000
Coconut oil (1,000 lbs.)	328,795	326,000
Rice (1,000 lbs.)	3,272,000	2,800,000
Corn (1,000 lbs.)	925,346	600,000
Coffee (1,000 lbs)	2,223	1,600

Rice cultivation leads with an acreage of 45 percent of the total cultivated area, and supports 4,000,000 workers from farm to ship dock. The bulk of the exports are for the United States.

Sugar takes about 6 percent of the cultivated area. The United States quota of Philippine sugar, under the Tydings-McDuffie Act, is 952,000 tons. The total sugar investment, American and Philippine, is $260,000,000, of which $93,000,000 represent sugar factories. Sugar is the leading export crop and represents nearly 50 percent of the export total. The industry supports 2,000,000 people, including a substantial group of farm cooperatives.

Abaca, known here as manila hemp for twine and cordage, covers 11 percent of the total cultivated area, and supports 2,500,000 people. In this product the Philippines lead the world.

Coconut plantations cover 14 percent of the cultivated area, or one and one-half million acres. In coconut products, including oil, nuts, and copra, the Philippines rank first in volume of world exports, supporting 4,000,000 people, according to testimony of Commissioner ELIZALDE, in recent Senate hearings. The 115,000,000 coconut trees of the Philippines are 20 percent of the world total.

The Philippines are seventh in world-tobacco production. Tobacco production supports 600,000 people and accounts for one-fifth of the exports. About 5,000,000 pounds come to the United States in the form of cigars and cigarettes.

Philippine forests now cover 57 percent of the land area. Standing commercial timber is estimated at 500,000,000,000 board feet. Of 1,000 commercial species about 200 are now marketed. Lumber ranks fourth in value in industrial production. Principal exports to date are for timber of special strength and durability, adapted for airplane construction, tool handles, boat construction, pilings, mine timbers, and tobacco boxes. Lumber is second in volume of wages paid in major industries.

Leading manufacturing industries include 5 cordage factories, which exported in 1937, largely to this country, 7,452,000 kilos or 16,592,400 pounds; 30 American-controlled embroidery factories; 15 candy and confectionery factories; 8 leather and rubber shoe factories; 4 paint and varnish, several cement and rattan, 87 cigar factories, 15 cigarette factories, and one large pineapple canning factory that has an export trade which gave the United States 26,000,000 pounds in 1937.

The Philippines claim to be the ninth largest producer of the world's gold and is the third largest exporter to United States being led only by sugar and copra. In 1937 the Philippine production was a close second to that of California and exceeded Alaska. The Government action in boosting the gold price from $20.67 per ounce to $35 had the effect to increase Philippine production from $5,000,000 in 1932 to $25,600,000 in 1937 and put into the field 34 operating companies. The Balatoc and Benguet Consolidated are the two largest gold producers under the American flag.

In company with gold the Philippine mine production of silver, copper, iron ore, lead, and in particular chromium, have made marked recent advance. Coal, petroleum, asphalt, gypsum, salt, sulfur, limestone, marble, are being developed, as well as numerous quarries of building stone.

Of Philippine resources in general, it may be said that they are as yet in the pioneer stage of development. Less than one-fourth of the land adapted to agriculture has been put under cultivation. The 500,000,000,000 board measure of commercial forests has hardly been tapped. The sudden quadrupling of the gold product in 8 years marks the general possibilities in mine production. The present rapid advancement in education presages rapid industrial development when the new generation of Filipino youth awake to their economic opportunities.

All the Philippines need is stable and farsighted government—freedom from the threats of war and the dangers of foreign exploitation, such as at the present time is overwhelming China.

The fact that the Japanese have already secured control of the hemp industry of the Philippines—which only a few years ago was a Philippine industrial monopoly—is not reassuring in the face of Japanese conquest of China. If the Philippines survive the latent Japanese threat, which has overwhelmed Manchukuo and the coast section of China, the industrial and commercial future of the Philippines will be a bright page in the history of free government in Asia.

As the Nation which has by far the greatest stake in the Philippines, can the United States in honor go on a "sit-down strike" and permit the patriotic people whom we saved from Spain to become subjects of a like power which even now may be waiting for the end of American occupation in 1946?

To allow that to happen or to do aught to hasten that day, as by a Government-controlled plebiscite, or by a revolutionary change in the Philippine Constitution, may lead to serious international complications. In the interest of humanity and 13,500,000 Filipino Christians, should we not rather give the rising generation of Filipinos time to work out a sound program of national salvation?

Agricultural Conditions on the Pacific Coast

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

Mr. ANDERSON of California. Mr. Speaker, I wish to call to the attention of the House the desperate plight of a once flourishing agriculture on the Pacific slope. A serious situation confronts the California farmers and their employees. It is not a partisan issue; it is not a question between Republicans and Democrats. It is one of the fundamental problems of the welfare of Americans.

California supplies approximately 40 percent of the fruits and vegetables grown in the United States today, and the farmers I represent are at present faced with the complete collapse of what was once a principal source of livelihood and wealth to our State. California agriculture is, and will continue to be, in an exceptionally vulnerable position for which a protection must be found. Our principal carloadings are products of agriculture; our crops are highly specialized and these crops cannot be well diversified on individual farms under our specialized soil and climatic conditions.

The farmer who has an investment in a full-bearing orchard of apricots, prunes, peaches, apples, oranges, pears, or some other similar commodity is a valuable year-round asset to his community—if he can stay in business. Unlike the wheat, cotton, or corn grower, the fruit man has a job that keeps him busy 52 weeks of the year. There is always work to be done, and men must be employed to do this work. However, at the present time our farmers are being liquidated so rapidly that unless some remedy is soon forthcoming California will be faced with a depression that will make the last one look small by comparison.

The Federal Trade Commission, in a recent report covering various agricultural commodities in my State, shows the farmer actually receiving only 32 percent of the consumer's dollar. As a matter of practical economic fact, it is idle to discuss what may be a farmer's just share of the consumer's dollar. If the farmer has the market, and if other conditions are equal, his share is that amount which will pay his cost of production and leave him a decent profit on his operations. Since that question involves so many factors such as land value, distance from market, insurance, taxes, production costs, wages, and other items, it becomes impossible to fix any specific percentage of the consumer dollar that the farmer must have at any given time in order to operate on a sound and enduring basis. We must face the fact that the farmer's share of the consumer dollar varies with the number of consumer dollars available at the retail market.

Our problems are immediate and pressing. Our farmers want to keep their farms, to farm them well, and to keep their orchards and vineyards healthy in order to be ready for the markets of good times when they come. We need more outlets for our various commodities, at home as well as abroad. Increased consumption and a growing demand would eliminate the necessity for destroying food crops. It would lessen the growing burden of overproduction and at the same time place our products in the homes of many families not now in a position to receive them. Benefit payments and crop-control measures are temporary expedients at best. They are not, nor were they ever, intended to be the real solution which we seek.

California agriculture is in a rather unique position with respect to marketing its products. Located, on the average, approximately 2,500 miles from the great consuming centers of the country, the cost of transportation is a vital factor requiring special attention. We want to put our farm merchandise in the hands of the ultimate consumer at a price that can be paid by the average American family. Exorbitant transportation rates, handling charges, and distribution costs tend to create a luxury out of many necessary staple commodities. Lower freight rates would be at once a boon to the producer and the consumer alike.

Competition with cheaply produced foreign goods is gradually causing a decline in the high standard of farm living and farm wages in California. True, we need foreign markets for many of our specialty crops, but where direct competition with similar products from other countries is encountered, we must have protection. For many years the farmers of our State have paid higher wages to agricultural labor than any other section of the country. This policy cannot be continued if the cost of everything the farmer buys continues to increase, while the price of his product declines.

Let me give you some examples of what happened to fruit growers in my district last year. Apricot growers were offered $25 a ton for their fruit, which costs approximately $30 per ton to produce. It costs about $18 per ton to grow Bartlett pears, and our pear growers sold their pears to the canners for $12.50 per ton. Peaches, costing $20 per ton to produce, sold for from $6 to $7.50 per ton. It costs approximately 3½ cents per pound to produce dried prunes, and yet I do not believe any grower in California received more than 2 cents per pound for last year's crop. Corresponding losses can be shown for many other fruit and vegetable commodities.

Many of our farmers are losing their homes, and will eventually wind up on the relief rolls, if assistance is not forthcoming. Some sound method of refinancing distressed farm loans is immediately essential. Some means of lending money at a low rate of interest, with a long-time amortization period, would be of inestimable value. The California farmers are well able to work out their own destiny if they can only be assured that their farms and homes will not be taken from them because of a lack of proper financing.

I wish to urge upon this Congress the necessity for giving special attention to the problems I have called to your attention. Agriculture is still our basic industry, and if we are to achieve a prosperity that is sound and lasting we must start in at the foundation to build our prosperity structure.

Planned Economy

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

Mr. SMITH of Ohio. Mr. Speaker, I have expressed myself heretofore on this floor to the effect that the farmers themselves will have to pay these subsidies we are voting for them. They pay for them in lower prices. They are paying for them with taxes to support the hundreds of thousands of people on the Federal pay roll operating the whole Government-planned agricultural program. Worst of all, the farmer is paying for all this Government mooching and meddling with his precious liberty.

What is all this planned economy but political exploitation? Examine every remedy that has been applied to cure our sick economic body in the last 10 years and you will find that in nearly every case the essential ingredient has been a new political board or bureau, and the creation of multitudinous political jobs. This, of course, is the old, old remedy that politicians have always applied to cure the sick economic body. Though history clearly indicates that it

never cured anything but always made the patient worse, yet the people of our great land are now compelled to endure this same old oppression.

What really is happening to the United States today is that we are, so to speak, eating ourselves. The fundamental trouble with the cures that have been applied to relieve our distress is that we fail to envision the economic body as a whole, each one of us apparently seeing only a little segment of it. The world of each one of us is confined within the limits of this segment. Finding it in distress we seek to relieve the same by drawing in whatsoever manner may be possible upon the resources of the other parts of the economic body. We fail to grasp the fundamental truth that the well being of any of the parts of the economic body is dependent upon the state of health of the economic body as a whole.

Indeed, nearly all of the political medicines and remedies that have been applied to our sick economic body in the last 10 years can be reduced to a very simple little process. The political doctors draw blood, taxes, out of the veins of one part of the economic body and then reinject that same blood back into another part of the same economic body. But the process is not quite that simple. There is just a little trick in it. The political doctors never reinject as much blood as they withdrew. After withdrawing the blood from the first part of the economic body, they inject as much of it into their own veins as they require for their sustenance and promotion, and then what is left over they reinject into the second part of the same economic body. Hence, we see the political body puffing up, getting bigger and bigger, while the poor benumbed economic body is shriveling up and getting smaller and smaller.

Shall Congress Take Charge?

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

Mr. THORKELSON. Mr. Speaker, Congress itself may be assumed to be engaged in a most contemptible un-American activity when it fails to recognize the danger which confronts the Nation and our people, when in its partisan blindness it fails to read the handwriting on the wall. The danger which confronts the Nation is a deliberate attempt by which international money-mad fanatics expect to take charge of the United States so that it may be converted into a home for themselves and their strange un-American cults.

Control of gold is a dangerous power in the hands of exploiters and Congress has been warned of that. Those who now control the Nation's gold admit such ownership and control of money is a power which is greater than the Government itself. I now ask what Congress is waiting for. Are we true to our obligation when we sell the Nation and the people into the hands of the international Shylocks, into the hands of those who now own and control the Nation's gold?

It is my desire to inform my colleagues of the fact that $13,513,000,000 in gold certificates are outstanding against the gold in the Treasury, and that such certificates are held by interests outside of the Treasury and by the Governors of the Federal Reserve banks. The Federal Reserve are private banks, and Treasury gold is subject to withdrawal in settlement of international balances. Let Congress not be fooled about that, for refusal to pay international debts can only end in reprisal or war with the powers that are deprived of receiving payment in gold in settlement of their balances.

Gold is and has always been the international standard of monetary value. The President and the Secretary of the Treasury are empowered with absolute control of two billions in gold, which is used to stabilize bonds and other fluctuating securities of all kinds, foreign and domestic. These $2,000,000,000 are not used to stabilize the international dollar, for it is stabilized upon its own gold content of 15.521 grains of gold nine-tenths fine, and the stabilization fund is therefore unnecessary.

Members of Congress should also understand that international balances are not paid in dollars, francs, or shillings, but are paid in the number of grains of gold such money contains. It is my desire to go a little further than that and say that gold is of exactly the same value today as it was before 1933, and international transactions are still settled on grain value of gold, as has always been customary.

There should be no argument about the ownership of gold, for it is set forth in the RECORD of June 19, 1939, on page 10420, by Mr. M. S. Eccles, the Chairman of the Federal Reserve Board, now called a "system" since it has been sovietized. He distinctly states who are the owners of the gold in the Treasury. It is quite true that Mr. Eccles evades the issue when he speaks of the title to the gold, but in the second paragraph, he admits that the gold is held as security against outstanding gold certificates and international credits payable in gold only.

Mr. John W. Hanes, Acting Secretary of the Treasury, makes this statement:

> A large part of the gold held by the Treasury ($12,336,858,563 on March 15, 1939) is held as security for gold certificates (or credits payable in gold certificates) issued to and held by the Federal Reserve banks pursuant to the Gold Reserve Act of 1934.

Mr. Eccles made his statement under restraint because he did not want to admit that the American people had been cheated out of their own property. Mr. Hanes, on the contrary, states facts, but both of them try to obscure the real ownership by including extraneous matter. Both of the letters should be sufficient evidence even to Congress that the American people, including Members of Congress, have been deprived of their own property; that it has been taken from them by legislation enacted by Congress, and given, lock, stock, and barrel, to the international money changers. The purpose of this act was to sell the American Nation into the hands of these damnable communistic fanatics. I submit both letters as evidence of the correctness of my statements.

It is not my desire to discuss or criticize opinions held by the distinguished Members on the other side of the Capitol, but to keep the record straight, I want to say that no comparison can be made between prices previous to 1933 and prices since that time, for the simple reason that, previous to 1933, our domestic dollar was stablized on a gold content of 25.8 grains, nine-tenths fine, and the same dollar was used in international transactions. That dollar was valuable because it contained 25.8 grains of gold, and our people owned such amount of gold in the Treasury as was represented by the currency and securities they had in their possession. Today, our domestic dollar is a hocus-pocus dollar, not redeemable in gold, and with no gold value. It is a rubber dollar, often made into rubber stamps, and is well represented in legislation and appropriations passed in both Houses.

How is it possible for anyone to compare prices before 1933 when we had a dollar stabilized on 25.8 grains of gold, with today's worthless money of the type we are now using in our domestic transactions? No one knows when our present currency will collapse, and when it does, we will have exactly the same condition in the United States as existed in Germany during the inflation there. It is a pitiful exhibition of incompetence and a clear exemplification of what the people may expect from incompetent statesmen.

It is also well for the people to bear in mind that this money was planned by the invisible government and is a part of a communistic plan to destroy the United States. It is un-American for Congress not to recognize this and set it right during the present session, because it might be too late next year. Congress and the people should give a little more consideration to the two-billion gold stabilization fund set aside by Congress for the private use of the President and the Secretary of the Treasury. The law distinctly states that

it is not even necessary for either of them to give an accounting for this $2,000,000,000. And no officer can investigate the use of it. The President or the Secretary of the Treasury is not responsible to Congress for losses which this fund may sustain in wild market speculation to support falling prices of American bonds and credits.

If the international money changers should decide to dump American bonds on a market, money in the stabilization fund will, of course, be used to bolster falling bond prices, and may end in complete loss of the $2,000,000,000 in gold. This is something for Congress to think over, because there are so many questionable possibilities for the use of this $2,000,000,000.

It is confusing to read the different opinions as to how much gold can be bought with cotton, potatoes, and other merchandise. It is a childish attempt to obscure and justify unsound procedures. It is well to bear in mind that gold is a recognized international standard, and for that reason does not change, and it is the medium that buys all commodities. In reply to certain statesmen who seem to believe that we buy gold with cotton and potatoes, I suggest that they take a bale of cotton along with them and try to buy gold with it.

In the glory of modern education we have become rich by dividing an apple in half and calling each half a whole apple. This is profit as taught in our educational institutions of today. It is an example of communistic confusion within every educational institution in the United States, and which is for no other purpose than to obscure the issue and destroy morale.

I wish to suggest at this point that every educational institution in the United States should dismiss every instructor who is "pink," "red," or "scarlet," and particularly those who seem to be unable to grasp the meaning of the Constitution of the United States.

Congress engaged in un-American activities when it created the many corporations which are now so detrimental and destructive to private industries and business. It was un-American when it granted the power to the President which he now has, and the greatest un-American activity is in failure to now recognize that the Nation's security is threatened, and our own and the real patriotic American people's lives are in jeopardy.

I realize how hopeless it is for anyone to receive recognition when he digresses from the majority, when he tries to walk uphill instead of downhill. It has always been so, as history vividly demonstrates. Yet, while recognizing this, it is still my opinion that we must return to sound constitutional government in order to survive. Congress should now take charge and direct the various intelligence departments to report to it the real facts as they now exist within the Nation, not those that are found in the communistic alleys and sidestreets, but communistic activities that exist in every public place, colleges, and Federal departments.

The investigation should begin with those who have financed the World War, the Russian revolution, the Spanish revolution, and those who are now financing communistic activities within the United States. When they have been disposed of, communism itself will disappear, for it has no excuse for existence in our or any other civilized nation. If Congress will follow this advice and order a thorough investigation, I venture to say the most astonishing revelations will be forthcoming, which I am sure will establish such clear-cut evidence that many officials now in the Government employ can be impeached. This is a harsh word for anyone to use, yet if such procedure is necessary to preserve, protect, and defend the Constitution of the United States and the rights of the people, it is a weapon which is justified in the Constitution itself.

As an observer for the past 5 months, it occurs to me that Congress has done very little to help the people, but it has outdone itself to give more power to the President. He after each Asiatic spiritualistic interlude, calls for more power and immediately the rubber stamps go into action to grant his wish. In this concession, Congress, instead of preserving and protecting the Republic, is establishing a totalitarian State. It is quite evident that the majority in the present Congress is the victim of some influence which is sufficiently powerful to direct its action. For that reason, I can see no relief from this body at the present time. It is therefore left to the people themselves. They must take charge and fight for their rights, by appeal to Congress, by the ballot, and, finally, by the same method as is ordinarily used to protect the Nation when the Government fails.

The Communists are getting ready, and I now understand there are 50,000 of those who fought under the communistic government in Spain who are to be allowed entrance into Mexico. If this is true, and I believe it is, they will be used for infiltration into the United States to spread communism, or as a fighting unit when civil strife breaks here. Do not be mistaken about that. The proletarian Communists in the United States are trying to establish a dictator of the same type as now rules in Russia. We must set our own house in order, for I do not believe the great majority of the American people, including the Army and the Navy, will accept a dictator without a fight.

Let us look at this picture from another angle. We are friends with Russia and Russia is communistic, of the most vicious type. The President and a few members of the Cabinet have been unfriendly to Germany ever since the Communists were expelled.

The President and a few of his Cabinet members are friendly to Mexico, which is communistic in fact and in principle. The American Government smiled approval when communistic Mexico confiscated American property, and the end is not yet. Mexico is communistic and the home of Bronstein, alias Trotsky. It is a home for communistic refugees, and is now to be a haven for 50,000 communistic dupes who fought for "red" Russia in order to destroy a Christian government in Spain.

The Secretary of State is now beating the war drums against an imaginary enemy in the Orient, where we have no interest or property any longer. I say we have no interest in the Orient, for we have agreed to give independence to the Philippine Islands, which in reality should be an American commercial and military outpost in the Orient. The Secretary of State is, however, bent upon meddling in Chinese affairs. And mark you, China is infiltrated with communism and supported by Russia.

I dislike to say this, for I am friendly to and have acquaintances in China, so in making this statement it must be understood that I do not approve the warlike attitude of Japan and its invasion of a defenseless nation. Speaking on the situation as I understand it, I am positively certain that we have no cause for interfering in China, for the Chinese are proving capable of taking care of themselves. If Congress allows the President and the State Department to declare war in the Orient, it will be to help the proletarian Communists instead of the Chinese.

In order to clarify the administration's attitude toward a a communistic country and a Christian, civilized country, I shall quote the President's replies to the Russian and to the Spanish Ambassadors. In reading these replies I shall ask you to draw your own conclusions:

THE PRESIDENT'S REPLY TO THE REMARKS OF THE NEWLY APPOINTED AMBASSADOR OF SPAIN, SENOR DON JUAN FRANCISCO DE CARDENAS, UPON THE OCCASION OF THE PRESENTATION OF HIS LETTERS OF CREDENCE

Mr. Ambassador, I am happy to receive from you the letters accrediting you as Ambassador Extraordinary and Plenipotentiary of Spain to the Government of the United States.

I can assure you that this Government will be prepared at all times to cooperate with you in maintaining and developing friendly relations between our two countries. The great contribution made by Spain in the past to the civilization of the New World, many traces of which still remain in the United States, should serve to strengthen these relations.

I trust that such problems as may arise will be faced in a spirit of mutual confidence and good will, and I know that you will find all officials of the American Government ever ready to collaborate for progressive understanding and peace.

I sincerely hope that you will find your sojourn in this country, where you have already served with distinction on previous occasions, most agreeable and happy.

THE PRESIDENT'S REPLY TO THE REMARKS OF THE NEWLY APPOINTED AMBASSADOR OF THE UNION OF SOVIET SOCIALIST REPUBLICS, MR. CONSTANTINE A. OUMANSKY, UPON THE OCCASION OF THE PRESENTATION OF HIS LETTERS OF CREDENCE

Mr. Ambassador, it affords me pleasure to accept from you the letters by which the Presidium of the Supreme Soviet accredits you as Ambassador Extraordinary and Plenipotentiary of the Union of Soviet Socialist Republics to the Government of the United States. I am happy to receive in that high capacity a person so thoroughly familiar as you have become during your residence here with the traditions and aspirations of the American people.

I also accept the letter of recall of your predecessor, Mr. Troyanovsky, who, as the first Soviet Ambassador to this Government, rendered such distinguished services in promoting friendly relations between the United States and the Soviet Union.

It has given me deep satisfaction to hear from you of the feeling of genuine friendship which the peoples of the Soviet Union have for the American people, a feeling which you are assured is fully reciprocated.

I have noted your statement that the purpose of your mission is to strengthen and develop friendly cooperation between our two countries. You may be sure that you will enjoy my full support, as well as every assistance of the Government of the United States, in your efforts to achieve that purpose.

I am grateful for the expression of good wishes which you have conveyed on behalf of your Government. In return, please convey to the Government of the Union of Soviet Socialist Republics my hope for the continued peace and prosperity of the Soviet Union.

These two greetings need no comment from me for they are perfectly clear. They are in themselves evidence that the President favors Russia and its Communistic regime in preference to the new, peaceful, Christian government in Spain.

In time of stress the safety of the Nation should be our first consideration and we look for unstinted patriotic aid from leaders in Congress and from chairmen on important committees.

The leaders in Congress are well known, but the chairmen of the committees often remain in obscurity. We have the following distinguished gentlemen occupying the following important positions as chairmen and ranking members of committees: The gentleman from New York [Mr. BLOOM], now acting chairman of Foreign Affairs Committee; the gentleman from Illinois [Mr. SABATH], chairman of the Rules Committee; the gentleman from New York [Mr. DICKSTEIN], chairman of Immigration and Naturalization Committee; the gentleman from New York [Mr. SIROVICH], chairman of Patents Committee and ranking member on the Civil Service and Merchant Marine and Fisheries Committees; and the gentleman from New York [Mr. CELLER], ranking member on the Judiciary Committee.

I realize that these gentlemen are interested in all things which concern the welfare of the Government of the United States; in free debate without restrictions; in opposition to immigration, particularly of those of proletarian communistic philosophies; in the protection and safeguarding of patents; in clarification of the civil service; in a straightforward statement of the real facts in the merchant marine. The distinguished ranking member of the Judiciary Committee should also endeavor to eliminate unconstitutional and confusing legislation that gives Congress a continual headache.

I do not propose this as a criticism, but I look toward the members of the various committees for leadership when legislation is up for consideration, and their interest and elucidation of the laws I am sure would be for the general good of all concerned. I realize chairmanships on committees are responsible positions and must therefore be left in responsible hands.

The founders of our country recognized this, and so a provision was incorporated in the Constitution which I now quote, from article I, section 9, paragraph 8:

> No title of nobility shall be granted by the United States, and no person holding any office of profit or trust under them, shall without the consent of the Congress, accept of any present, emolument, office, or title, of any kind whatever, from any king, prince, or foreign state.

It was recognized then, and it is now recognized, that such honors as referred to in this paragraph carry with them repayment or some consideration to the governments granting such honors in time of peace. It was therefore rightly forbidden to any officeholder. It is amazing how well the founders understood human nature, and because of such understanding, incorporated in the Constitution such public safeguards. I admire them for their wisdom, and often wish, as I sit in this House, that a Washington or a Jefferson could be with us now in these times of stress.

I am apprehensive, and in observing present trends, I believe we are rapidly falling into the hands of the Communists. I am not alone in this opinion, for communism and its evils now seem to be a general topic. In the Appendix of the RECORD, page 2661, the distinguished gentleman from Illinois [Mr. MASON], gives the low-down on communism in a most vivid manner, and I suggest that the Members in the House read the gentleman's remarks.

I am convinced that the greatest menace facing us today is the invisible government which has promoted wars, revolutions, espionage, and corruption. One would be foolish to deny that there is not a plan on foot to destroy the civilization that has been built for past centuries. History is again repeating itself. Civilization has been destroyed in the past, and it is due for destruction again if we fail to protect ourselves as other nations have done.

Let us now look facts squarely in the face and try to solve this problem. Much has been said about Germany by the President and his official family. We may ask, for what particular reason? It was the Communist who exploited Germany after the invisible government had brought about a destructive inflation. Property worth millions of marks was acquired by these spoilers for a few hundred dollars. The German inflation was for the purpose of depriving or robbing the German people of their property. It was manipulated, and forced upon the German Nation. What did Germany do? Germany did the only logical thing it could do, that is, expelled the Communist from Germany. And I might say at this point, the same thing has been done in Italy, and I believe it will happen here.

Why have they expelled the Communist and his dupes from both of these countries? For one reason alone—because they are destructive to sound government and will destroy, as they have in the past, all governments in which they gain control.

Who engineered the World War? Again the answer comes, those individuals in the invisible government who, for certain reasons of their own, were willing to sacrifice everyone except themselves and their greedy brothers.

Who financed the Russian Revolution? Individuals from the same government who for personal reasons were interested in acquiring control of Russia. This was accomplished at the expense of millions of innocent Christian lives. In this destruction the real, native Russian has suffered, because he is now ruled by a minority that is opposed and destructive to him and his traditions. This minority that is now ruling Russia comprises about 1.7 percent of the total population. They are not satisfied in controlling and ruling Russia, in spite of the fact that it comprises an area of 8,144,228 square miles, with an abundance of all wealth. This minority is beset with one desire, and it is to destroy and rule the whole world, an attempt, of course, in which they will meet with their own Waterloo, as they have repeatedly in the past.

It was this same minority in Russia that promoted revolution in Spain—the so-called "red" revolution, often confusing because they called themselves loyalists. What was done in Spain? The history is now to be had, and we find the murder of innocent people was the order of the day or night. In the neighborhood of legations the dawn would cast the light upon 50 to 100 innocent victims of this murderous mob. It is not my desire to describe this in detail, but it is well to bear in mind the money for this revolution was furnished by certain communistic individuals in the invisible government who occupied high positions in the United States and Europe.

Who are the leaders in this movement? The same people who are now ruling Russia. The same people who were driven out of Germany. The same people who killed and destroyed during this regime in Spain, and the same people who are now undermining the United States and deliberately

destroying all those things that we have accumulated, built, and cherished since the inception of our country. What is their purpose in sabotaging the United States? The answer is to acquire more power for themselves and to create a haven for those who at heart have always been and will always be Communist. Is this attempt new? The answer is again no, because deception and intrigue go hand in hand with the Communist. How is this done? By the power and ownership of gold alone. Gold buys spies and espionage. Gold buys saboteurs, and gold and glamour buy those to accept communism and then fight in its ranks, only to bring about their own destruction and the destruction of their own kind. Gold hires the dupes who sing the song of the Communist and praise him, as they are now doing in the United States, only themselves to fall victims to the greatest scourge the world has ever had.

Let us not be deceived. The Communist is here with one idea in mind, and that is to destroy the United States. The same group and its disciples are well entrenched in the highest places in the Federal Goverment, departments, and bureaus, ready to strike if a favorable moment arises.

Who will pay for this in the United States? The real patriotic American, no different from the patriotic German that paid for the inflation in Germany. And do not forget, it will require the same medicine to cure the United States that brought about cure in Germany. The people who will bring this about and save the United States for its own people will be the so-called middle class, or common, patriotic people who comprise 90 percent of our population. It must be done under patriotic leadership, and not under the leadership of anyone who tolerates communism or communistic intrigue in any manner, shape, or form.

The instigators of this communistic regime or its sponsors are generally known, and I might say at this point that they are internationalists. They may be identified, for 98 percent of them are the rulers of Russia, the leaders in international radical organizations, and the leaders in radical organizations in the United States. They are found in business as well as in radical labor groups. When you have named and identified those, you have also named and identified the greatest menace the world has ever had.

Congress must stop immigration, foolish peace and neutrality legislation, for all such legislation is provocation or a cause for war. Congress has the power to declare war, but Congress also has the power to stop such foolishness. Congress must resume its rightful power for the security of the Nation and for the people.

Organized Labor and the Florida Canal

EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

STATEMENT OF E. C. VALENTINE

Mr. KITCHENS. Mr. Speaker, there has lately come to my attention a presentation of the vital interest of organized labor in the Florida Canal. As is well known, the executive council of the American Federation of Labor has passed a special resolution directing the president of that organization, Mr. William Green, to support on its behalf legislation for the construction of this project which, it is claimed, would mean so much to labor and industry in the United States.

By permission of the House and for the purpose that it may be more fully informed of the attitude of the American Federation of Labor in this matter, and without committing myself for or against the proposal in any way, I insert in the RECORD a statement made on May 12, 1939, by Mr. E. C. Valentine before the executive council of that body.

STATEMENT READ TO AND FILED WITH THE EXECUTIVE COUNCIL, A. F. OF L., ON FRIDAY, MAY 12, 1939

To the President and Members of the Executive Council, American Federation of Labor, Greetings:

For a great many years various interests have worked to secure the necessary legislation in the National Congress to provide a safe and convenient passage for ships across the Florida Peninsula for the purpose of shortening the distance between ports on the Gulf of Mexico and adjacent territory and the industrial sections on the Atlantic seaboard.

The reasons for establishing this connecting link in our system of intracoastal waterways, which have already been provided along the entire Atlantic coast from New York to the southern end of Florida, and along much of the Gulf coast to the Rio Grande River, are obvious. This will provide the connecting link in this system of waterways, upon which the Federal Government has already invested many millions of dollars, and which they will continue to improve as time goes on.

This important link will shorten by about 400 miles the distance between Gulf and Atlantic ports, and the establishment of this new trade route would open new markets and stimulate trade and industry, and will, according to the survey made by the Chief of Engineers of the United States Army and reported to Congress by the Secretary of War, affect 78 percent of all persons gainfully employed in the United States. This fact alone should be enough to cause any unbiased person to give serious consideration to the question.

It is believed that no Federal project has undergone quite as thorough investigation from every conceivable angle as has the proposed Florida Canal, and we believe that every objection by its opponents has been refuted by competent testimony from reliable authorities. These objections have been met with sound argument and logical reasoning, and at least one of the opponents in his report to Congress admits that "* * * these distinguished engineers gave emphatic testimony that the project was economically worthy of immediate adoption by Congress." A copy of the report of the Committee on Rivers and Harbors, known as Report No. 509, Seventy-sixth Congress, first session, recommending that its completion be now authorized, together with a statement of its benefits to labor, has been mailed to every member of this executive council recently; therefore I feel it is not necessary to use much of the time allotted me in an explanation of the many advantages to labor and to the public generally which the building of this canal will provide, except to stress the importance of making the position of labor clear to the Members of Congress while the matter is still before them for their consideration.

It should be borne in mind, in your consideration of this question, that the opponents of this project have had ample opportunity to present evidence in their behalf and have had access to the many volumes of data which has been secured and compiled by every department of the Government which has been connected with these surveys, covering a period of a great many years. In spite of all the argument presented in behalf of the undertaking, some of the opponents, no doubt for purely political reasons, continue to make free use of the public press to oppose it because of the cost. As has already been pointed out, the Federal Government has invested millions of dollars in our system of waterways, and will continue to improve them. The establishment of this connecting link will without doubt enhance the value of the entire system, and, presuming the estimates of the Chief of Engineers to be correct, the savings to shipping would amount to over 7 percent of the construction cost, annually. The report further states, "that the entire cost of the project with interest, will, in all probability, be repaid to the Federal Government by transportation benefits in less than 20 years, and possibly within a substantially shorter period."

The committee further finds, that "notwithstanding the abundant economic justification of this canal, its military value, in emergency, will transcend its commercial value."

In a communication from the Assistant Secretary of the Navy under date of March 9, 1939, he stated that, "the improvements of the St. Johns River, contemplated under the plans for the construction of the canal would contribute materially to the use of this location for the operation of naval seaplanes."

Congress has recently passed legislation providing for the expenditure of the sum of $15,000,000 for the establishment of a naval air base on the St. Johns River near Jacksonville, which is near the northern terminus of the proposed canal and located on the proposed canal route.

Answering one of the principal contentions of our opponents, that it will curtail the business of the railroads, I have pointed out in previous communications to at least some of the representatives of labor, that the estimate of the engineers as to the potential shipping that may reasonably be expected to use the canal, was based upon the actual existing water-borne traffic that is now carried in ships by the long route through the Florida Straits.

How, then, can this be construed as taking business away from the railroads, to simply divert this existing traffic through the canal?

In very recent years, many large industries have built and opened plants in the Southeastern States, and the present trend of industrial development is southward, because of the longer season of operations and to be nearer the sources of raw materials, which

are available in this section. The sources of these raw materials are not always on or near navigable waters therefore, the railroads have been materially benefited in this increased traffic in carrying materials to the plants and in moving out the finished products. There is no reason to doubt much of the increased business of moving this tonnage to and from this region will continue throughout this period of development and that it will continue to increase thereafter.

The conclusions reached by the committee, and contained in their report to Congress are that, "Neither the representatives of the railroads nor any other person has presented any evidence tending to show that the Atlantic-Gulf commerce which would transit the canal would represent freight taken from the railroads, nor does it seem possible that such could be the case."

We cannot conceive of any reason why this project should be opposed for any except selfish or political reasons, because common sense and our better judgment tell us that it is this type of project, rather than temporary relief measures, is fundamentally sound and the only way to approach an economic balance.

Those who oppose it for selfish reasons—as have the railroad managements, have not supported their claim with any substantiating evidence, but there is ample proof of the claim of the proponents that its benefits would be almost Nation-wide. The committee, in their report to Congress, find "* * * these fears have been fostered and developed by the organized efforts of the railroads and others seeking to defeat the project for reasons unconnected with the public interest."

In conclusion, may I earnestly request of all of you, that this matter be considered in the light of promoting a great Federal project of a permanent nature, which will be of lasting benefit to a large percentage of the people throughout the Nation, and with a view of granting the most good to the greatest number, and that when you arrive at an honest, unbiased opinion of which I know you are capable, that you will take immediate steps to advise the Members of Congress of your decision.

Respectfully submitted.

E. C. VALENTINE.

Your Task as a Citizen

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

ADDRESS BY J. EDGAR HOOVER JUNE 21, 1939

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Mr. J. Edgar Hoover, Director, Federal Bureau of Investigation, before the national convention, United States Junior Chamber of Commerce, Tulsa, Okla., June 21, 1939:

My pleasure in being able to be with you is matched only by my hopes for the future of the Junior Chamber of Commerce. I have followed your programs closely over a period of years, and taken pride in your achievements. In the practicality of your activities you are building on firm foundations. May your civic programs gather momentum and roll forward to help in the building of a better America.

Your small groups, banded together some 20 years ago in St. Louis, soon would have withered had they not built their future upon a platform of worth-while programs and crusading civic spirit. As a result you today have 600 junior chambers of commerce in a like number of communities, all working, I know, toward a worth-while goal.

An organization is only as good as its friends and supporters, thus I am indeed proud of the fact that when you embark upon a civic program you can count on the support of not only 110,000 members but of millions of good citizens, who know you, admire you, and trust you. Of course, obstacles will beset you, but adversity is the real test of virile manhood.

We of the Federal Bureau of Investigation have likewise faced adversity. The development of our Bureau, like the growth of the Junior Chamber of Commerce, has been over a hard road. Its achievements stand as a tribute to youth. The average age today of the men of the F. B. I. is scarcely 34. Its development in reality has been a ceaseless conflict between corruption, inefficiency, and the deadly forces of the underworld on one hand and the forces of decency and truth on the other.

I recall vividly the tribulations with which we were confronted 15 years ago this summer. Attorney General Harlan Fiske Stone, now a Justice of the United States Supreme Court, as fearless a foe of corruption and inefficiency as our present Attorney General, Hon. Frank Murphy, was determined to rebuild the Nation's law office on the firm foundations of honesty and integrity. He agreed with me that political influence should not dictate appointments or promotions. Overnight the Federal Bureau of Investigation was removed from the political arena where it had been kicked about like a football, the pawn of pull, prejudice, and patronage. Today only merit counts in an F. B. I. appointment; no man can enter without it.

In 1924 only 30 percent of the men had legal or accounting training. The others included some persons who had police records and at least one man who had been tried for murder. Others had been declared physically unfit and disqualified for duty by other law-enforcement agencies and had sought refuge in the Bureau. All that was changed, and drastically. Today, to be eligible for appointment as a special agent, the applicant must be between 23 and 35 years of age, a graduate of a recognized law school, and a member of the bar, with at least 2 years of legal or business experience, or he must be a graduate of a recognized accounting school with 3 years of commercial accounting or auditing experience. These men, after appointment, attend a 16-week training school, where they are diligently trained in all forms of scientific deduction, detection, and apprehension. They are imbued with the principle that no case is ever closed until the wrongdoer is brought to justice. They are taught to get the facts, thereby freeing the innocent and convicting the guilty. Our ever-present watchword is fidelity, bravery, integrity.

Since 1932, when the Federal kidnaping law was passed by Congress, authorizing the F. B. I. to act in such cases, all but two of the 156 cases reported to us have been completely solved and the wrongdoers—crooked lawyers, gang doctors, money changers, finger men, fixers, and harborers of criminals—have been brought to justice. Sooner or later the heartless body snatchers and killers in the two remaining cases will be brought to justice.

Already in the case involving the abduction and murder of the little Levine boy at New Rochelle, N. Y., more than 8,000 persons have been interviewed, 450 automobiles checked, some 500 premises inspected, 560 anonymous and crank letters investigated, and over 500 scientific laboratory examinations have been made. In the case of the little Mattson boy in Tacoma, Wash., over 20,000 persons have been investigated, more than enough suspects to populate a small city. And still the search goes on.

There is no mystery to good law enforcement. It merely applies to crime detection the same principles of efficiency necessary in any high-geared business. Plus this is the fact that the F. B. I. is distinctly a "we" organization—everyone has his part in its trials or triumphs. Without cohesion everywhere the Bureau could not function with the success we enjoy.

Of course, I am proud of the record of the Bureau. For instance, in the past 15 years the Federal Bureau of Investigation has cost the taxpayers less than $50,000,000 and returned to those taxpayers of the Nation a profit of more than $190,000,000—and this even includes those early days when we were rebuilding the Bureau. I hope that our services to society in the apprehension and conviction of over 43,000 notorious criminals during the past 10-year period are achievements beyond the capabilities of financial measurement.

In doing this the F. B. I. has paid heavily in effort and even in life itself; 12 of our men have died in the line of duty, others have injured their health by overwork and overexposure and have joined their fellows where the rattle of machine-gun fire is unknown. Nor has the sacrifice ceased there. The long hours of vigil and the sorrow bravely faced by the women who stand behind the men of the F. B. I. is an inspiration to the living and a monument to their sacrifice. Today seven of the widows are a part of our organization, because they wanted to take their husbands' places and carry on for them. We are proud of them; we are proud of our record, of honest, law-abiding citizens and cooperative law-enforcing officers, who have aided us in times of great stress. We would be even more proud if this record could be rivaled by local law enforcement in every town and hamlet of every State in the Union. Government is not some far-away, visualistic thing. You are government, and you can get what you want at home as easily as you can get it at Washington if you'll only square your shoulders and fight for it.

Certainly this applies to the widespread wave of lawlessness that has so long engulfed our social order. It is unnecessary, and it could be conquered as quickly as have the kidnaper and the bank robber, whose activities have declined over 80 percent in the past 7 years, if everybody insisted that this be done. Our crime bill is bigger than our entire national tax bill. Think that over. And meanwhile remember that nations have crumbled because of internal disasters rooted in lawlessness. True freedom lies in true justice to all people and in all things. This comes not from superimposed regulation; it springs from good conscience, honesty, and integrity. It is the Golden Rule translated into action. It is the exemplification of the Ten Commandments and the embodiment of religious teachings. Justice insures the integrity of the Nation. I hope the day will never dawn when your America and mine sinks to the debauched level of vicious subversions. I long for the day when every man, woman, and child will be impelled by the force of conscience to abide by the spirit of the law, rather than be driven to abide by the letter of the law imposed to correct abuses that would not exist if justice prevailed.

It is high time that we give more thought and energy to crime-preventive measures; to curing the cause of lawlessness rather than to be forever combatting it, once it runs rampant. The emergency situations must always receive first consideration, and it is for this reason that we of the F. B. I. have placed so much stress on detection and apprehension which, together with certainty of trial and punishment, constitute the time-proven deterrents to crime. But an even greater result can be achieved by damming the flow of crime at its source.

In this regard, a definite portion of every civic organization's program should be devoted to a study of crime conditions and the methods used in combatting them. What, for instance, do you know about law enforcement in your town? What has happened to the big cases which were in the newspaper headlines a few months ago? Were they vigorously prosecuted, or were the felons allowed delay after delay while witnesses disappeared, and the final courtroom scene became a mere mockery of the law? Were juries tampered with, witnesses intimidated, perjury suborned? Did the criminal in a heinous crime or hundred-thousand-dollar swindle get off easier than some wayward youth who stole a car or burglarized a store while hungry? Are the operators of vice dens who commission high-school students to solicit for them excused by the paying of a mere fine which amounts to a license to traffic in human flesh? Can criminals "cop a plea"—plead guilty to a lesser offense—and get by with a short sentence? Do sentences imposed by the courts mean what they say? Are convicted criminals afforded greater opportunities and pleasures in prison than out? Can a traffic ticket be fixed? Do public officials who receive a pitiable salary live like millionaires?

Such questions are not hypothetical. For the past 15 years every day has brought reports to my desk of just such cases. Few communities in the land are wholly free of abuse of the very laws enacted to protect society. But there is an answer. In America the majority still elects public officials. And if the majority demands it, they can oust corruption overnight.

Just as the price of liberty is eternal vigilance, the freedom of your community from the forces of crime that strike somewhere in the Nation every 22 seconds carries a sales ticket—to be bought by civic alertness, decency, energy, and self-sacrifice not only for self-preservation but for the welfare of coming generations.

Are there slot machines in drug stores and restaurants in your town? Does gambling thrive? Are there bookmaking joints on every corner? Who controls the numbers racket? Is vice kept at an irreducible minimum or does it contaminate most sections of the city? Does white slavery exist? Are the newsstands cluttered with salacious and perversive printed matter? Remember that the habits of youth govern the actions of the man. No public enemy ever won a place in the headlines overnight. Trace their histories as I have and you will find their criminal careers began long before in surroundings that insulted civic decency.

Those who engage in widespread vice activities and rackets could not long survive without their ally—the political renegade. No community in the land is contaminated by rackets and corruption to any great extent without the assistance of local interests, which hold law enforcement in restraint. Your law-enforcement officers are your representatives. They are not persons with unlimited power; they must obey those under whom they hold office. If they are bent beneath the domination of the criminal-alined politician, ruthless rackets and vice are inevitable. The law-enforcement officials of our Nation, for the most part, are honest and anxious to do a good job. Regardless of their personal honesty, however, they are frequently powerless to act. You, and only you, can take the handcuffs off their wrists and place them where they belong—upon the racketeers and criminals.

It behooves every citizen and every group such as yours to constantly scrutinize the qualifications and the background of candidates for public office in order that the crook may be unmasked and the self-sacrificing, honest man in public service may be given every possible assistance. Here, party lines cannot exist. Public service should beckon and attract young men of character and ability. A career of honest public service is as sacred as the ministry and should demand the same stalwart principles. Thus honest citizens everywhere should aid the man who would dedicate his talents to public welfare. Only when two men are equal in character, ability, and honesty are party lines, as we know them, justified.

Many outstanding community leaders have told me that they would not seek public office because of the muckraking and foul, unfair besmirching tactics adopted by those affiliated with venal politics. This is indeed tragic. The Nation very frankly is being cheated at the polls when its citizens tolerate and cheer such tactics. It will only be by the courageous outlawing of the mudslinger and rabble rouser, that public offices, when contaminated, can be cleansed. More and more the Nation and all of its political subdivisions need career men in politics, men who regard their community above their own personal desires. I hope indeed that some of the young men of this organization will some day see their way clear to make their contributions through public service. The Nation is in great need of the pioneering and patriotic spirit which has helped to make this organization a great and respected one.

Let us appraise further, your duties as a good citizen. What do you know about the judiciary in your community? Is it a fountainhead of justice, or is it controlled by entrenched interests? For if the robes of justice are not clean, then society and mankind are not secure. America has been fortunate indeed in the high character of its judges, and those honest, God-fearing men would be the first to urge eternal vigilance that the bench may be incorruptible. And your prosecutors, do they seek justice for society and the accused as well? Or do they safeguard the interests of the accused by grand jury whitewashing, or improperly prepared cases?

Has there ever been a prison break in your community? Was this break investigated by an impartial authority? Have you ever looked into the coddling of prisoners—the free and easy way they circulate in so many so-called penal institutions? Or is the institution operated so that its inmates will really be rehabilitated and reformed, through fair, humane, constructive, yet stern discipline?

When did you last visit your police department and observe its equipment? Have you inquired as to whether your local department has a police-training school? Has one of its officers attended the F. B. I. National Police Academy, which is maintained for them free of charge? And did the officer have to mortgage his home, as some of them have, to pay his railroad fare to Washington and defray his living expenses while attending the academy? And upon his return was he afforded the necessary cooperation and assistance in starting a training school or was he relegated to a beat by professionally jealous superiors or overly anxious venal politicians?

American law enforcement is to be commended because of its sincere efforts in recent years to improve conditions and protect our citizens. When you criticize your police force remember that you and other citizens like you constitute the real power behind your police and public officials. Beyond that you possess the power of recall if they are not efficient.

Fifteen years ago the Fingerprint Division of the F. B. I. was organized in response to a vital need. Rapid means of transportation had made crime a swift-moving, dangerously elusive problem. Older methods of identification were faulty. Thus the Identification Division of the F. B. I. came into existence, and the machine-like precision of modern business methods applied to its organization. Today it is possible in less than 3 minutes to search a set of fingerprints and identify the impressions on the card if the individual has previously been fingerprinted, despite the fact that there are nearly 11,000,000 sets of fingerprint records on file.

Recognizing the value of a positive means of identification, law-abiding citizens began to clamor for the benefits which were given the criminal. Thus in 1933 our Civil Identification Section was inaugurated. There the fingerprints of over 1,300,000 honest, law-abiding citizens are placed, wholly divorced from the criminal files, forever insuring their identity. You of the Junior Chamber of Commerce have long been allied with this project, which is designed to serve law-abiding citizens. The time is rapidly approaching when every honest citizen will want to have his fingerprints on file. Yet there are those who claim fingerprinting is a violation of civil liberties. Drivers' licenses are required in many States—I have never heard them denounced as a violation of civil liberties. That is silly. Fingerprinting is liberty insurance, except for those who desire to conceal the fact that they are enemies of society.

I firmly believe that the public interest would best be served by requiring all persons in public office, or occupying positions of public trust, to be fingerprinted. This would surely put trusting, law-abiding citizens on their guard, and might have prevented, for instance, the $241,000 bank fraud perpetrated some time ago by the vice president of a bank, who had previously been convicted for fraud.

As an experiment the Travelers' Aid Society in Richmond, Va., recently arranged for the police department to fingerprint all transients seeking assistance. The results were highly revealing. Out of 7,034 persons fingerprinted, 4,345 had previous police records, 2,387 were for minor charges while 1,958 were for serious charges. Among these were 8 fugitives and 1 individual who had been reported missing.

In New York City the policy was adopted by the W. P. A. administrator of fingerprinting applicants for certain positions of trust and teaching and recreational assignments. Out of 18,594 sets of impressions, 1,555 represented persons with previous police records. Many who were seeking jobs in playgrounds had previously been charged with the commission of sex offenses. One individual was wanted for parole violation and had served a prison term for rape.

Last December a young man was found mortally wounded. He was rushed to the County Hospital in Chicago where he died unidentified. His fingerprints were forwarded to Washington. They were searched through the civil files and identified as having been received several months before from a C. C. C. camp. On the back of the fingerprint card was the young man's home address and the name of the person to notify in case of an emergency.

Likewise the body of an unidentified man was removed from the Connecticut River last fall. His fingerprints were taken at the morgue and then sent to Washington. A search revealed he had been arrested on five occasions. Again complete identifying data as to his home and relatives were made available in order that this 70-year-old man could be given a decent burial. Had he never been arrested or had the foresight to have had his fingerprints recorded, he would have been buried, unnamed, in a potter's field.

The mutilated body of an unidentified man was found beside the railroad tracks near Union, S. C. Again we made identification. This person had been previously fingerprinted in Richmond, Va., when he sought aid from the Travelers' Aid Society and the complete details of his home and family were soon made available to the authorities in South Carolina.

At least 192,000 persons were reported missing last year and more than 16,000 have not been located. Over 9,500 unidentified bodies were removed to morgues last year. Some 1,600 cases of amnesia attacks were reported to authorities last year. Think of the sorrow and suffering that could have been alleviated had these

unfortunate persons only had the foresight to have had their fingerprints recorded. It has only been a few years since we went to the morgues and solicited the cooperation of authorities in fingerprinting unidentified deceased persons. At times we encountered opposition but today even that has given way to a sincere desire to cooperate in the public's interest. Thus your Civil Identification Committee can well feel gratified by the service they have already rendered in many communities.

America needs your patriotic zeal and your services in a crusade to insure her destiny on the chartered sea of democracy. As never before in our national history, the country summons her men of character and action. Once and for all we must eradicate from American thought and life those sinister forces which are alien to justice and which are the allies of lawlessness. The fight will require sacrifices, but they are necessary if we are to preserve our homes and our traditions. Remember that from dawn this morning until dawn tomorrow morning, 3,928 major crimes will have been committed, including 33 homicides, 814 burglaries, 162 robberies, 2,258 larcenies, 22 rapes, 515 auto thefts, and 122 aggravated assaults. The criminal forces of America will have extorted and collected their daily tax of over $41,000,000 for the invisible empire of lawlessness that exists within our midst. Why cannot that money be turned into the flow of commerce and the veins of progress, instead of falling constantly into the grimy, blood-soiled paws of the underworld?

I sincerely hope that each of the 110,000 members of the junior chamber of commerce will resolve to dedicate himself here and now to ceaseless activity and relentless warfare against the forces that threaten the peace, security, and well-being of our beloved America. There is great need that you enlist. There is greater need that you do not falter in purpose, nor cease to battle for the cleanliness, the happiness, and the welfare of the kind of an America which we all so greatly desire.

The Third-Term Issue

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

EDITORIAL FROM THE WASHINGTON STAR

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Washington Evening Star, of date June 21, 1939:

[From the Washington Star of June 21, 1939]

THE THIRD-TERM ISSUE

Some inkling of the storm which will arise in this country should the third-term issue be carried to the people with another nomination of President Roosevelt may be gleaned from the address of Senator BURKE, of Nebraska, a Democrat, denouncing a third term in the White House for any man.

The Nebraska Senator, speaking in the national radio forum Monday night, replied specifically to statements by Secretary Ickes and others that the tradition against a third term is "political humbug." The leaders of the Democratic Party, from Thomas Jefferson down to the present day, as Senator BURKE said, have not only aided in maintaining this tradition but have agreed that the tradition has as much weight as though a two-term limitation had been written into the Constitution.

Never before in the history of the country has an administration had at its disposition such great powers, such huge sums of public funds to provide all kinds of subsidies to all kinds of people. Never before has there been a bureaucratic control of the people and their lives to be compared to that of today. And finally, never before has an administration been in so strong a position to perpetuate itself through a bureaucratic form of government armed with immense sums of money. All this Senator BURKE pointed out. He warned the country that should the third-term tradition be broken in 1940, "no man can safely predict the fate of our form of government."

The truth of these assertions by Senator BURKE is borne out by the failure of the Senate—or the House—at this time to press the adoption of an anti-third-term resolution. How many Senators and how many Representatives—particularly of the Democratic faith—wish to impair their ability to obtain money and jobs from the Federal administration? How many of them would care to place themselves in a position where they would have the "Indian sign" hung on them in their efforts to win renomination next year?

When the friends of General Grant, then serving his second term in the White House, advocated his renomination for a third term—on the same theory that the friends of President Roosevelt now urge his renomination—the House of Representatives adopted an anti-third-term resolution by a vote of 233 to 18. The Senate, in February 1928, by a vote of 56 to 26, put through a similar resolution to halt the demand for another term for President Coolidge. Mr. Coolidge, it is true, had served only one "elective" term. But his service during the unexpired term of his predecessor, President Harding, was construed as a "term" and so considered by the Senate when it adopted the resolution.

Thomas Jefferson wrote: "Should a President consent to be a candidate for a third election, I trust he would be rejected on this demonstration of ambitious views." Andrew Jackson—to whom his friends liken the present Chief Executive—repeatedly recommended that Presidents should be limited to a single term.

In all justice to President Roosevelt, it must be said there has been no statement from him indicating that he fails to recognize, too, the need of maintaining this tradition. He could easily clear the atmosphere.

With Brains and Skill

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

EDITORIAL FROM THE BOSTON GLOBE

Mr. McCORMACK. Mr. Speaker, under the permission granted to me to extend my remarks, I herewith include a very interesting editorial that appeared in the Boston Globe of June 17, 1939. This editorial, entitled "With Brains and Skill," is worthy of profound consideration.

[From the Boston Globe of June 17, 1939]

WITH BRAINS AND SKILL

In the city of Lawrence a considerable number of residents maintain cordial feelings toward German refugees. A year and a half ago Julius Stern, whose family for four generations had been manufacturers of woolen hosiery in Sobernheim, Germany, appeared in Lawrence to establish a factory. Although there were no hosiery mills in Lawrence he had selected the city as best suited to his requirements because of the local yarn mills and the skill of the workers.

The first machines were brought from Germany, but four times as many are operating now in the plant, the newer ones being made in Laconia, N. H. More than 50 workers have steady employment and the prospect is that this number will increase.

The story of how New England went in for textiles is not dissimilar. Back in 1789 an English worker, Samuel Slater, decided that America was the land of opportunity. He came over to see what he could accomplish in his line, but no machinery followed him. He would have liked to bring drawings, but their export was forbidden by law. In Pawtucket he made the drawings from memory. The cotton spinning machines were built and the foundation for a great industry was laid.

Not so long ago some American shoe manufacturers were worried about the competition of Jan Bata, of Czechoslovakia. He has come over here now and if, as is expected, he sets up in this country, there will be no question of any cost advantage. He must conform to American conditions.

During the brief life of their reconstructed nation the Czechs made a specialty of work in glass and now a committee of the Bead, Stone, and Glass Importers' Association of New York is planning to bring Czech experts to this country to teach between 50,000 and 75,000 Americans the secrets of making glass, bead, and stone dress trimmings and costume jewelry for which the Czechs have been noted. It will become another American industry.

A patent brought over from Germany by a refugee has been the foundation of a brand-new industry in New Jersey, the manufacture of a flexible, synthetic resin for tubing, sheet material, gaskets, and the like.

For three centuries refugees from the Old World have been coming over to this side of the water bringing with them talents, qualities, and energies that have been woven into the life of the new. The Pilgrims and the Puritans were refugees in the larger sense of the term. So were the Quakers, the Huguenots, and at various periods the Irish. The web of this civilization was made by migrants from many lands, an enormous proportion of them seeking a haven in this country where they could attempt new starts. Their contributions have made the United States.

Because of the immigration laws very few are coming over today. During the 6-year period beginning July 1, 1932, only 45,952 Germans have come into the United States. But this is not the net increase from Germany, since in the same 6 years 18,445 aliens, legally permanent residents of the United States, returned to Germany. The total of the immigration quotas from all countries is 153,774 a year, but from many lands few or none arrive. The

allowance from Great Britain and Ireland is 83,754, but in 1938 emigration from those countries to our own amounted to 4,551.

Wild stories, unrelated to the facts, have been passed around regarding the supposed influx of immigrants to the United States. Cold figures do not support the theories of street-corner gossips or armchair tongue-waggers.

What is happening is parallel to what has taken place before. The difficult conditions in certain parts of the world have caused those who could manage the journey and are able to obtain the visas to come over here. A natural selection operates to place a large proportion of highly desirable persons in this stream. It is beginning to bring a relocation of industries which will give increased employment to American capital and American workers just as has been the case many times before.

UNCLE DUDLEY.

Tax Relief Versus Public Spending

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. CRAWFORD. Mr. Speaker, the eminent gentleman from New York [Mr. BARTON] has recently suggested the one sure way to stage a prompt recovery while calling a halt on public spending, to wit:

> Cut taxes immediately. Instead of decreasing the deficit the first year, this might for the moment increase it.

But the gentleman from New York has failed, it seems to me, to consider sufficiently the dangerous situation which deficit pump priming has already reduced under deficits "borrowed" from the banking system. Smothering taxation, accompanied by extravagant subsidies of all kinds, have produced the condition fostered by subsidized interest rates that has been disclosed by the chart of farm prices, money supply, and income, which I presented before this House on May 4. Unless we systematize the gentleman's procedure for tax relief to make it check, as well as cause inflation, and change also to a system of demand deposits covered by full reserves to prevent "credit" inflation, we can have only a gamblers' recovery of runaway prices; and such a "recovery," it would seem, probably cannot be stalled off much longer. Without this divorce of money supply from bank loans, as proposed by Dr. Currie, we face assured instability from the "perverse elasticity" of the system. This was pointed out also by Professor Slichter of the Harvard School of Business, in his book, Toward Stability. That instability, that uncontrolled inflation, may bring recovery, but with it will surely come the attempt to dictate prices and control investment that spells fascism. Thus arises the subtle subversion of democracy and free enterprise foreseen by Dr. Goldenweiser, of the Federal Reserve Board's staff, early in the New Deal, when he thus expressed himself:

> I am firmly convinced that monetary control does not exist and that within the framework of our economic and political organization monetary control can never exist. It will not exist until such time * * * when the Government will control substantially all economic activity.

Mr. Speaker, new money must be issued, not by doles at the bottom of the system, but by tax relief to those whose incomes are in part available as taxes to support unproductive public spending, and therefore can and will be used in private productive investment and employment when released by remission of taxes. As long as public policy is based on the theory that public spending instead of tax relief for private spending is the only available expedient, it is assuredly inevitable that the Nation will be progressively engaged either in a fatal drift to communistic futilities or in boondoggling instead of in profitable production and trade. Since neither of these is feasible, Government squandering to "prime the pump" is a policy which finds itself in a dilemma, caught between the devil of depression and the deep blue sea of autocracy and bureaucracy.

WHAT IS CAPITALISM?

I want now to ask consideration for what seems to me underlying principles in the normal operation today, as always throughout human history, of the competitive capitalistic system. Let me say that while I hold no brief from Dr. Knight, of Chicago, and do not wish to involve him in the shortcomings of this presentation, I take my cue from my own business experience as illuminated by ideas which he has offered, particularly in criticism of Irving Fisher's presentation of the orthodox theory of interest and value.

A human economy can only operate capitalistically. Human economic values always represent estimates of future annual income accruing from the productivity of the asset being appraised, which is then capitalized as a fixed natural rate of interest to set the valuation. Capital, in other words—real wealth, not money—must maintain a net reproductive rate in excess of all amortization charges, including insurance against risk, of approximately 5 percent annually in order to be worth what it cost.

This dynamic process of maximizing productivity (income), estimating it numerically, capitalizing the resulting values at a multiple of 20 times the annual income, and adjusting antecedent costs to this appraisal—this is all so complex and speculative a procedure that its solvency can be assured only by the personal responsibility of ownership for the results attained. A free market choice should exist, free from price fixing by government; but it cannot be free from the stern realities of our existence and our environment as they fix the consequences of behavior. The profit and loss in property values resulting from reduction or elevation of expenses or productivity is a fixed multiple of resulting annual income. That is to say, any property is ultimately altered in value about 20 times as much as its annual net income is altered. This is true whether trading occurs or not.

It is thus obvious that errors in estimating incomes and resulting values may develop not only from individual lack of technical skill or knowledge but also from a social failure to use either a constant rate of interest or a common denominator of constant economic value in recording items of expense and production. Such a denominator and rate of interest cannot be selected arbitrarily for use but must be real economic constants naturally involved in the cumulative cost of all production as it is molded into property which can be owned and appraised. Obviously, a change in the numerical (monetary) expression of this real unit of cost or economic value, or a change in the interest ratio at which capital values are computed, will theoretically create a change in the numerical (monetary) inventory that is proportionate to the investment already attained in processing at the time of the change in the monetary denominator or in the rate of interest. Highly processed, durable commodities which do not have to be used up as fast as purchased will, therefore, become involved in capitalistic, speculative trading, resulting from interest rate and monetary changes, at prices which vary intricately in proportion to their durability and length of processing.

Thus the fixed, natural rate of interest is the fulcrum upon which all trading values, including natural resources, are balanced against their productive capacity per annum. The process of appraisal on this basis is and always has been continuous and dynamic, for we are always debiting the investment with the rate of interest and crediting it with the value of services obtained during the intervals of use. If this account fails to balance, the investment is recapitalized accordingly by all those who trade for pricing on the market. Investment thus never yields any continuous profit or loss above or below the rate of interest. It is always reappraised, not on the basis of whether or not it produces a net income—above or below zero—but on the basis of the net income as related to the rate of interest—above or below about 5 percent per annum.

When the Greeks used a word meaning "offspring" for what the romance languages came to call "inter-est" they had not fallen so completely under the spell of the money illusion but that they recognized that trading invariably proceeds on

this fundamental, reproductive precept in capitalization. Every attempt in history to alter it by lending of new money at depressed rates or at no interest has resulted in more or less disastrous hoarding and subsequent uncontrollable inflation. It has resulted, in other words, in a "business cycle." In my opinion, that is the way all this Government meddling with the lending of money will work out this time; and it is against this very contingency that the Federal Reserve Board has now warned the Congress that it does not have and cannot be given effective powers of control.

John J. Boylan

MEMORIAL ADDRESS
OF
HON. CHRISTOPHER D. SULLIVAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN J. BOYLAN, late a Representative from the State of New York

Mr. SULLIVAN. Mr. Speaker, it is appointed of every man that one day he shall die. This is the inexorable dictum of the great Master, and in fulfillment thereof in His infinite wisdom, our Heavenly Father set the day of October 5, 1938, as the appointed time when His good and faithful servant, my friend and colleague, JOHN J. BOYLAN, should be called to his reward.

It is truly meet and right that we pause on this day from the routine work of the Congress to pay tribute to the memory of those of our colleagues who have answered the final roll call.

Among those who have gone in the last year there was none so dear to me as JOHN BOYLAN. It was my privilege and pleasure to have known him for many years. We served as legislators in the State Senate of New York from 1913 to 1916, in which latter year I was elected to Congress. Our legislative paths again crossed when he joined me in Congress in 1923, where we labored together side by side until his death, which came all too soon.

For 28 years JOHN BOYLAN served the people of the district in which he was born, first as a member of the Assembly and Senate of the State of New York, 1910–22, and thereafter as a Representative in Congress from the Fifteenth Congressional District until his death.

Experience made him an able legislator, and he leaves to his memory an outstanding record of accomplishments and achievements in behalf of his constituents, unmarred by selfishness and unsullied by scandal.

His outstanding work during all his years of service was his labor for the erection of a suitable memorial in the city of Washington to the greatest Democrat of all times, Thomas Jefferson. He saw the fulfillment of his dream come true only after many years of hard work, for what should have had the whole-hearted support of the people of the United States met with much opposition from various and influential sources; opposition so powerful and so difficult to overcome that it took of much of his physical strength, racked his soul and body, and hastened him to his journey's end ere his eyes could rest upon the completion of the monument which he had enshrined in his heart.

As I speak these few words the memorial to Thomas Jefferson is fast taking shape. Like Jefferson, his hero, JOHN BOYLAN was a real Jeffersonian Democrat; and in the years to come this monument will stand not alone as a memorial to Jefferson but as well to the memory of JOHN BOYLAN, a stalwart American and a loyal friend. Peace be to his soul forever; may his family find comfort and solace in the thought that he has reaped the final reward which comes from a consciousness of duty well performed.

Royal Samuel Copeland

MEMORIAL ADDRESS
OF
HON. FRANK CROWTHER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROYAL S. COPELAND, late a Senator from the State of New York

Mr. CROWTHER. Mr. Speaker, the long and distinguished service rendered to his State and the Nation by Senator COPELAND is ended. His passing cast a shadow of gloom and sorrow over his vast constituency. In his senatorial capacity he rendered yeoman service not only to the 12,000,000 in his own State but in the role of statesman he contributed to the general welfare of the Nation.

On one occasion he said to me:

Dr. CROWTHER, I am afraid we are too much concerned with the material things of life in our legislative activities and lose the human touch.

That remark was indicative of his desire for progressive humanitarian legislation.

Possessed of a charming personality, he endeared himself to all who had the privilege of his acquaintance. A man of courage and integrity, he earned the confidence and respect of those who were associated with him during his tremendously busy life. Those of us who knew him best will miss him most.

Memorial Service for Robert M. La Follette, Sr.

EXTENSION OF REMARKS
OF
HON. ROBERT M. LA FOLLETTE, JR.
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, June 23 (legislative day of Thursday, June 22), 1939

ADDRESSES BY THE ATTORNEY GENERAL AND HON. ALVIN C. REIS

Mr. LA FOLLETTE. Mr. President, on Sunday, June 18, 1939, the fourteenth annual memorial service was held at the grave of my father in Madison, Wis. A large number of people gathered to hear the address of Hon. Frank Murphy, Attorney General of the United States.

Col. John J. Hannan was chairman of the committee on arrangements. Hon. Alvin C. Reis, of the Wisconsin circuit court, introduced the Attorney General.

I ask unanimous consent to have the remarks of Judge Reis and the address of the Attorney General printed in the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY JUDGE ALVIN C. REIS, OF THE WISCONSIN CIRCUIT COURT

I shall not praise the speaker of the day unduly. I praise Wisconsin for his coming.

Many of us know Frank Murphy as a lawyer. We know him as a liberal—one who shares the views held by Mr. Justice Brandeis, by that late scholar Cardozo, by Felix Frankfurter and Bill Douglas. We know that he believes that law is not a formula; that you cannot put law into a strait jacket; that law is a living, moving creation; and that in the last reckoning the will of a people will make the law in its own image.

Most of us, however, know Frank Murphy not as a lawyer but as Governor of Michigan in 1937 and '38. We know that he caused to be enacted there several reforms well known to Wisconsin: A civil-service statute, workmen's compensation for occupational disease as well as industrial accident, and unemployment compensation. It is too bad that Governor Murphy did not have also Wisconsin's 1931 law regulating injunctions in labor disputes.

For it was in Michigan's 1937 labor strikes—which he handled, I may say, alone—where Frank Murphy faced his hardest problem and yet therein made his national reputation.

When Governor Murphy took office in January 1937 he inherited, to use his word, the sit-down strike of General Motors at Flint. That strike was settled. Then there broke out an epidemic of the novel sit-down strikes in Michigan, culminating in the serious situation in the Chrysler plants at Detroit.

The employers, it was charged, had refused to bargain under the National Labor Relations Act. Lower Federal courts had paralyzed the law. Labor took the remedy of self-help and established sit-down strikes in the factories of Chrysler.

Frank Murphy knew that the sit-down strike was not lawful. It constituted a trespass on the property of the owner. Frank Murphy knew that it was his duty to uphold the law. It is because he temporarily suspended the law—in consideration of higher ideals—that he suffered bitter denunciation by some elements in his State.

The sit-down strike went on for 10 days. Rumblings began in parts of the press and among some shallow-brained statesmen. "Throw the strikers out," they cried. "Call out the National Guard. These strikers are breaking the law."

To which Murphy responded: "They are not criminals. They are thousands of honest citizens. Of course they are violating the law, but in their own minds they believe that they are only defending their rights to stay in those factories until their employers will bargain collectively with them."

Then the rumbling against Governor Murphy rose to a roar. "He is spineless," they shouted. "Law and order are at stake. There is no compromise on the illegal possession of property. Call out the militia and police and shoot down these marauders of property."

To which Murphy replied: "If I send the militia against the strikers, there will be massacre."

There were 6,000 men and women on the sit-down strike. Thousands of other Chrysler employees were out on strike; 90,000 were on strike in Detroit; 20,000 strike sympathizers were gathered at Chrysler's gates. It is estimated that 100,000 might have been drawn into battle, if there had been a battle.

On the alert were 3,500 police and 4,500 of the National Guard—8,000 rifles and pistols—800,000 rounds of ammunition.

"Turn them loose," yelled the exponents of law and order. "Wipe out these rascals. Show them that property in Michigan will be respected."

But Murphy answered: "I shall settle this strike in peace."

Then came the injunction. A circuit judge issued a mandatory injunction ordering the strikers to vacate. He issued a writ of attachment calling for the arrest of the 6,000. He went further and ordered that unless the strikers evacuated by 9 o'clock on Wednesday a penalty of $10,000,000 should be collected against their "lands, goods and chattels"—that was the language of the order—$10,000,000 against the lands, goods, and chattels of 6,000 families, even though, so far as I know, they had not destroyed a penny of property.

Still the strikers sat. And for the first time they issued their official manifesto, and in these words: "We are resolved to protect our rights to our jobs with our lives."

Then the critics howled: "Murphy will not send out the guard to enforce the court order. He deserves to be impeached. He is a disgrace to law and order."

But Governor Murphy knew that there could not be both law and order. To enforce the law meant disorder, bloodshed, and riot. To preserve order meant temporary suspension of the law. Murphy had made his choice and he clung to it. A few days later the strike was settled—men and women went back to their work—and the wheels of industry rolled on.

And the beautiful city of Detroit came through that threatened reign of terror—Michigan came through that potential massacre and holocaust of death—employer and employee came through that likely living hell—without the sacrifice of one single human life.

Five months ago, on the floor of the United States Senate, when 7 out of the 96 Senators voted against Murphy's confirmation as Attorney General, one Senator declared that he was against him because he was the "symbol of opposition to law and order."

Another Senator made this statement, and I quote: "Bloodshed is necessary in the preservation of law."

Bloodshed is necessary in the preservation of law! I challenge that. Where in the law is the right to kill for trespass?

"Bloodshed is necessary in the preservation of law." That, on the floor of the United States Senate, which each noon offers prayer to Him who said: "Thou shalt not kill."

Men may criticize Frank Murphy, men may condemn him because he did not execute to the letter their man-made laws; but if in Heaven there be a God, that God today blesses Frank Murphy.

Let it be said to the credit of the employers of Michigan that it was not they who shouted the loudest to call out the militia and police. These employers did not want to see their property ruined in a pitched battle between tens of thousands. They did not want to see their faithful employees shot down in cold blood. No; it was the citizens' leagues, the pseudopatriotic societies, the self-appointed and self-anointed guardians of law and order. These called for war.

It is ever thus with bloodshed and war. It is not the man on the streets who wants war. It is not the man whose home and factory are to be looted who asks for war. It is neither the shedder of blood nor the one whose blood is to be shed who demands war. It is not the soldier in the trenches on either side who seeks war.

Let me say right there—and I believe I speak for Frank Murphy, who was with me in the Army in France; and I know I speak for hundreds of thousands of American boys who fought over there—when I say to you that, so far as is in our power, we will not stand for another war, unless it be a war of defense inside the boundaries of this America!

The irony of time! You applaud. Twenty-two years ago a great man of this State was hissed and branded traitor for no worse an utterance than that which you now applaud.

General Murphy, we in Wisconsin know how cruel and intolerant man can be to man. We know the calumny and condemnation that can be heaped upon the human head. But we know also how that head can be held high. Through it all—22 years ago—he never wavered, he never faltered, he never cringed. Here sleep the brave. God grant that he might come back today to help in this war-torn world. That prince of peace, that patriot of piece—the Robert Marion La Follette of 1917.

Today to the serene shrine of that immortal in the cause for social justice there comes a crusader whose colors still fly in the fight.

I present Hon. Frank Murphy, Attorney General of the United States.

This would not be the end of a perfect day if I did not say one word in memory of the brave woman who also is treasured by this ground.

She was his wife, his counselor, his comrade.

I did not meet her often, but when I did I realized that I had touched a brilliant mind, a noble soul—Belle Case La Follette.

ADDRESS BY HON. FRANK MURPHY, ATTORNEY GENERAL OF THE UNITED STATES, AT THE MEMORIAL SERVICES FOR SENATOR ROBERT M. LA FOLLETTE, SR., MADISON, WIS., JUNE 18, 1939

Someone has wisely said that it is characteristic of mankind for one generation to stone the prophet and for another to gather up the stones and with them erect a monument in his memory.

So it is with the great spirit who has brought us here today. Many of Robert La Follette's generation still live, yet it is largely true that not until after his passing has America come to realize how greatly it is indebted to him. Indeed, I doubt that we will fully know his worth until many more years have ebbed away and the picture of his deeds has been etched more clearly against the background of history.

The world would be the better for more leaders as militant and as clear of vision as Robert La Follette. But our thought today is not regret that his type is too rare. We are grateful, instead, that such men do now and then pass across the stage, leaving the common life richer than when they found it.

We live in a period of history when the future of civilization sometimes seems black. There are moments when pessimism threatens to engulf the thoughts of men.

But there were such moments, too, in the lifetime of Robert La Follette. And never once did he lose hope or faith. He did not know the meaning of retreat; he never took a backward step. There was no "last ditch" in his fight to make democracy more complete. A courage like tempered steel kept him driving ahead along the path his judgment marked out for him.

His attitude toward the war reflects that courage better, perhaps, than any other single thing he did. Having reviewed the facts as they appeared to him, he concluded that it was wrong for America to enter the war, and on that decision he made his stand. Nothing moved him from it even though he stood virtually alone in his position.

In 1918, when the flames of war were at their height, he conceived it to be his duty to speak out against profiteering in the materials of war. Friends went to him in the Senate and pleaded with him to be silent rather than offend public opinion. He said to them in reply:

"The children may live to see the day when sentiment will change toward me and what I am about to do; I never shall."

His words were prophetically true. Robert La Follette is gone, but today the principle he advocated so staunchly—that war should not be a source of financial profit—is being widely and favorably discussed in forums throughout the land.

Robert La Follette lived in a period when men were so obsessed with the idea of individualism that to mention human rights was to invite suspicion. Yet he feared not suspicion, nor calumny, nor the opposition of great power, and he made human rights his particular concern.

To him the workers of the merchant marine, of the Nation's railroads, and of the Federal civil service owe the first effective blows for the improvement of their lot. He advocated employers' liability, he fought for the prohibition of child labor, he made his stand against the harmful "speed-up" in industry.

Never turning, never faltering, he searched restlessly for new ways to lift up the common man and let into his life more of the sunlight of liberty. Nothing shook his faith in the people, nothing dampened his interest in their little problems that in the aggregate mean so much to all society. Because so many of his causes were unpopular with men of wealth and power, his battles never eased. He knew himself that much of what he was fighting for would not be attained in his day. But these things that dishearten so many ordinary men only challenged him to greater efforts.

The way he went about his work is an inspiration to everyone who has faith in the eventual triumph of knowledge and fact over the emotionalism of demagogues. "Ye shall know the truth," he said, "and the truth shall make you free." With the zeal of a scientist and the scholar's trust in facts, he acquainted himself in full with every subject which came within the scope of his public service. Mark Sullivan once wrote that Senator La Follette knew more about the intricate subject of taxation than any other man in official life.

It was because he kept himself informed and acted on the basis of his information that his enemies often resorted to ridicule rather than attempt to make reply. He was one of those rare figures in public life who followed not the politician's way but the way of the university.

It followed naturally from his devotion to truth that he could not be a partisan. His first desire was to know what was right in the light of the facts—what was actually best for the people. And in any conflict between such a course and a party measure he never hesitated to choose the former. "Partisanship," said one newspaper after his death, "was not in his make-up. Expediency he knew not of. He dealt in principles, principles that he believed would bring about equality of opportunity and justice in practice."

He stands out so boldly in our history as a force of justice and right that even if we did not know, we could not help feeling that this man could have done no dishonest thing. And, in fact, there was never a stain on either his private life or his official conduct. Dishonesty was a stranger to his conception of public service. He believed that for himself, he believed it for others. When the time came for the leasing of the Teapot Dome oil reservation his voice was the only one in protest, as so often was the case, and later it was his instigation that brought about the exposure of corruption.

To a degree equaled by few men in our history, Senator La Follette was the people's prosecutor against the powerful elements whose power depended on the maintenance of rugged individualism. But it is splendid testimony to his Americanism that he never fought in terms of class strife, never waged a campaign of hate. He had no desire to injure others; it was only that out of a tremendous compassion for the lowly he was determined to end, if he could, the abuses that weighed them down. Louis Brandeis, before he ascended to the Supreme Court, summed up his economic philosophy in these words:

"La Follette will have due solicitude for the needs of business, but he will never forget that business was made for man and not man for business."

Seen in relation to the gilded era during which he served, Robert La Follette's life is a thread of burnished gold. And if there was one thing more than another that gave it luster, it was, perhaps, his great devotion to democracy.

"The will of the people," he said, "shall be the law of the land," and in terms of that he made every fight. Once his objectives were defined, he fought to reach them with every ounce of strength at his disposal, but always it was through the institutions and processes of democracy. Because in his eyes the people's will was the law of the land, he did not retire when his fight against the declaration of war was lost. Instead, he remained on the field to back every measure for the support of the soldiers who went overseas.

It was only 14 years ago this day that Senator La Follette, "at peace with all the world," passed on to the great tomorrow. But those 14 years have left us with an America such as he never saw—an America that passed through the shadow and emerged more serious, more chastened than ever before; an America in which 10,000,000 of those whom he sought to lift up are now deprived of even the chance to work.

It is in times like this that men are tempted to find comfort and guidance by reflecting on what the patriots of an older day might do were they now alive. How would they appraise the great problems of the moment? What course would they have the Nation choose?

In the case of this man, whose vision history has proved to be so keen, it seems less a matter of temptation than of duty to ask what he would do in this hour of trial.

When we have not found ourselves the exact course that we shall follow, it is idle to reflect on what exact pattern of action would have been his choice. But on thing we can believe, and believe with reason: Robert La Follette would not, in this day, leave individuals to struggle alone against hopeless odds. He would insist, with all his fire and courage, that the agencies of democracy, the Government which alone can speak the thoughts of all the people, be used in the quest for stability in the industrial system. In the face of need among the unemployed and the aged, he would insist that Government interest itself in their security. In the face of needless disease and death, he would ask that Government help in the task of spreading wider the blessings of medical science. In the face of misery among those who inhabit the city slums and the country hovels, he would demand that the institutions of democracy enter the struggle for decent shelter. Himself pure of heart and a lover of freedom, he would insist that these necessary tasks be done, without the denial of one liberty, by public servants whose concept of their trusteeship allowed no traffic with corruption.

In speaking thus of what might have been, we deal with the hypothetical, but we do so with confidence. For when a man has given to the great spiritual idea of dignity in the human personality such an impetus as was given to it by Robert La Follette, we can only believe that he would stand today for this approach to our present problems which would carry that idea ahead. It could not be otherwise.

We are met not in sorrow but in gratitude to Robert La Follette for having lived in the way he did. And I am moved to believe that we could not pay our tribute better than by seeking, each of us in his own way, to follow the pledge written to him shortly after his death:

"With strength of hand and strength of soul, without sloth or sorrow, to build that vision which he saw and which he helped us all to believe is within the reach of mankind."

Business, Government, and the Economic Crisis

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, June 23 (legislative day of Thursday, June 22), 1939

ADDRESS BY HON. JOSEPH C. O'MAHONEY, OF WYOMING, JUNE 12, 1939

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be published in the RECORD an interesting address delivered by the distinguished Senator from Wyoming [Mr. O'MAHONEY] at the National Catholic Social Action Congress in Cleveland, Ohio, on June 12 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It seems to me to be particularly appropriate that the National Catholic Social Action Congress should devote its attention to the manifold problems which arise out of the obvious maladjustments of modern economic life. I say it is appropriate for this congress, because both as Americans and as Catholics you believe in individual human rights, and the whole trouble in the modern world, here and abroad, arises from the fact that individual rights are being submerged by the very organizations which men originally created to advance those rights.

The simple failure to comprehend that in our time organizations of men have become more important than men themselves has been the primary cause of all the unemployment and all the misery and all the economic maladjustments by which we are surrounded. The anomaly which everybody recognizes and most of us talk about, that in the midst of plenty we are in want, is not the result of active malevolence on the part of groups or classes of men but of a simple failure to comprehend that we have moved out of the era in which our economic life was carried on by individuals within local boundaries into an era in which it is carried on by organized groups of individuals within national and international boundaries.

Oblivious of this change which progress itself has wrought, we have vainly endeavored to regulate the business of the new era by the methods of the old—a perfectly impossible task which has brought only disturbance and disaster in its wake.

This is not only the reason why men are without jobs the world over, though business organizations as such are prosperous; it is also the reason why in many lands freedom of conscience, as well as political freedom, is being suppressed. If you seek to know why, within 20 years after the "war to make the world safe for democracy," that ideal seems to be vanishing from the face of the earth, or why the belief seems to be growing that men have no rights which the state is bound to respect, you will find the reason in the centralism which has developed in economic life and which has brought about a progressive deterioration of both economic and political freedom among individual men.

THE RIGHT OF ECONOMIC FREEDOM

Just as man was created with a free will, he was created with the right to economic freedom. He was commanded to earn his bread in the sweat of his brow, and the same Providence which uttered the command placed at his disposal the unlimited resources of Nature to enable him to carry out the command.

The solution of the economic problem, therefore, is merely the finding of the formula which, in the modern world, will guarantee economic freedom to the individual in the face of the organizations which dominate and control his economic life.

Humanity stands, as it were, upon the threshold of the promised land. Science and invention are constantly developing new luxuries, new opportunities, new duties for men. Life is being prolonged, disease is being banished, education is being spread broadcast, the standard of living is constantly being raised, and yet in the midst of all this advance there is a terrible insecurity which condemns an appallingly large proportion of our people to misery and fear. All the advance of science is concentrated on benefits to the individual, but economic progress has lagged behind, making it impossible for the individual securely to enjoy the benefits which scientific progress affords.

The same forces which have enabled men by their collective genius to span the sea with the airplane, to penetrate the ether

with the radio, to live in a continent instead of in a county, have at the same time made it impossible for them to support themselves and their families by their own unaided efforts.

HOW THE TOTALITARIAN STATE IS PROMOTED

This is the condition which has promoted the totalitarian state. When men have been unable by their own efforts to earn their bread by the sweat of their brows, they have turned to government to do it for them, and as government undertakes to provide security for the body it takes away from men that freedom of the soul which is their inherent right.

But we shall have failed to understand the modern dilemma unless we realize that big government, by whatever phrase it may be denominated, is the direct, natural, and inevitable result of big business.

Let us trace the change which has taken place in America almost before our eyes. When this country was founded 150 years ago, business was local, industry was local, commerce for the most part was also local. The whole economic life of our people was carried on by individual citizens in their individual capacity and with their own individual resources. It was not until after the Civil War that business and industry turned to the collective assets of men for development. The most complex business organization of the first 75 years of our history as a nation was the partnership, but as steam and electricity became more common, as the radius within which a man could exert his power became greater, and more capital was needed to develop the wonders of science than individual businessmen or partnerships could supply, organized business appeared upon the scene in the form of the corporation. After the Civil War, slowly at first and then more and more rapidly, business organizations superseded individuals in the economic field.

This change began with the advent of the railroad, and finally, 20 years after the Civil War, the people of the country at last awakened to the fact that railroad organizations had become so great that the regulation of commerce in the public interest, which has always been recognized as a responsibility of government, could no longer be carried on by the States.

THE GROWTH OF FEDERAL REGULATION

The Interstate Commerce Act was passed in 1887, and the Federal Government entered upon its modern experiment in the regulation of business. From that time to the present the powers of Government have been constantly made broader, and though each new experiment of regulation is condemned when it is undertaken, once undertaken, it has never been abandoned. The reason for this steady expansion of Government power has been the steady development of centralism in the control of business.

The Sherman antitrust law, the Clayton Act, the Federal Trade Commission, the Radio Commission and its successor, the Communications Commission, the Civil Aeronautics Authority—all alike are the result of the desire of the great majority of the people to have some public authority to protect the freedom of individuals in the face of the growing concentration of business.

No responsible person would for a moment suggest that these efforts to regulate modern business in the public interest should be abandoned, and yet we are faced by the appalling fact, which we must acknowledge, that all of these efforts combined have failed to produce the results which were hoped to be derived from them. The farm problem, the labor problem, the industrial problem—all have become more acute instead of less acute as time has passed.

While it must be acknowledged that none of these problems has been solved, that we still have unemployment with us, and that farmers still are producing for less than the cost of production, the dispassionate observer must acknowledge that there is no hope of a solution of these problems by going back to the conditions which existed before the experiments were undertaken. In the midst of all of our imagined prosperity of 1928 and 1929 we had a farm problem and we had unemployment.

The fact that we still have them is not an argument for returning to the conditions under which they developed, but is rather a compelling argument for a cooperative determination upon the part of all of our people, in business and in government, in industry and on the farm, in commerce and in the professions, to unite in a spirit of mutual confidence and good will to look frankly at the economic scene and strive to develop the formula by which our system may be made to work.

THE TASK BEFORE THE ECONOMIC COMMITTEE

This is the task which the temporary National Economic Committee has approached, not with the intention of forcing any particular formula upon business or upon government, but solely for the purpose of studying things as they are to see whether or not the frank exposition of facts may not promote both public understanding and good will.

Ignorance, fear, and suspicion are the greatest obstacles to a solution. These are the elements out of which tyranny and oppression grow. They are foreign to democratic ideals, and in the degree in which they are absent from the American approach to the problem lies the hope of success.

It is a matter of great gratification to me that I am able to say, now that the committee has been at work for almost 12 months, that most leaders in business and in government sincerely desire to find a way which will enable our economic system to supply the needs of all while at the same time preserving individual freedom.

Sometimes I think that the great mistake in the past 50 years has been that each new law has been enacted from the point of view of punishing those who were deemed to be culprits rather than of helping those whose only object was to do the right thing. I feel that we shall make greater progress by concentrating our efforts on helping that 90 percent who want only that which is fair and constructive rather than on punishing the 5 or 10 percent who have knowingly engaged in vicious and antisocial practices.

There is a growing disposition among the executives of big business to recognize the responsibility of big business to the consumer and to the general public as well as to labor. Ample evidence of this is found upon every hand, and no one who studies the modern business scene can fail to recognize that our standards of ethics as well as our standards of industrial and commercial service have vastly improved.

The difficulty is that restraints of trade when committed by the large organizations of modern business are far more widespread in their scope and far more disastrous in their effects than similar restraints of trade when practiced by individuals in their individual capacities. It is more important now than ever in the history of mankind that business abuses which everybody knows to be wrongful should be abandoned. Public sentiment supports the idea that they should be abandoned; and it is my personal belief that we need only to build up mutual confidence between leaders of business and leaders of government to lay the basis upon which we may erect an enduring prosperity.

It is not helpful if business leaders have reason to believe that the leaders of government cherish feelings of hostility. It is not helpful if those who are charged with responsibilities of government have reason to believe that leaders of business are likewise hostile.

GOVERNMENT AND BUSINESS SHOULD BOTH SERVE THE PEOPLE

What we need most of all is a comprehension upon the part of both that government and business alike exist only to serve people. Government and business alike are organizations created by people to make it easier for people to enjoy life, liberty, and the pursuit of happiness.

Government is not an end in itself, nor is business. Kings and constitutions and corporations, too, are the creatures of men. Men are the creatures of God, and by Him endowed with the unalienable rights that both business and government have been taken away from them. In this fact we find the reason for all the economic and political turbulence of the modern world.

The same forces which were operating in the United States 50 years ago and which resulted in the passage of the Sherman antitrust law have been operating in Europe. Combinations in restraint of trade, known here as trusts, known in Europe as cartels, have closed the door of opportunity to the rising generation by restraints of trade and mopolistic practices which every student of government can well identify and with which every business executive and every responsible government leader is well acquainted. These restraints have been practiced by those who happen to have the power to practice them for the purpose of gathering to themselves more power and property than they actually need; and the bad example which they have set has been blindly followed by those who have sought merely to escape the effects of "monopoly."

Industry, for example, consciously followed the policy of restricting production in order to maintain price. Labor has preferred to go idle for months in the year rather than to endanger the scale of wages. And in agriculture we have adopted the same principle and are attempting to restrict production in order to maintain price, though we know that the market for all of the products of the farm would be vastly increased if the masses of the people were better able to purchase them.

MASS CONSUMPTION NECESSARY

When we realize that the economic system of the modern world is really built upon a luxury plane and when we begin to understand that mass production by big corporations can continue only if we have mass consumption, then it becomes increasingly apparent that the best market for industry is a contented people with a stable and sufficient income, and that the supreme need of the hour is to turn away from the philosophy of restricting production and embrace wholeheartedly the philosophy of increased production. Commodities are of no value unless they are purchased and used by men. We must undertake, therefore, first of all to make it possible for men to produce and to consume.

If we are to do this, we must also recognize that government and business have separate responsibilities. Business should not be permitted to grow so great that it becomes a private government, and when I say great, I do not necessarily mean to imply any limitation upon size but only upon the power to exclude men from the opportunity to work. On the other hand, government should not be permitted to become so great that it dominates the lives of individual citizens and prescribes limits to their freedom of action. The proper function of government is to preserve order and to promote the general welfare. The proper function of business is to carry on the production and exchange of commodities and services for use by the people.

When the abuses which produced the so-called trusts and cartels are not abandoned, the inevitable result is the growth of overpowering government. If there is one lesson which modern business should learn from what exists in the modern world, it is that arbitrary private power produces arbitrary political power. The great test for business and for government in America is that which will determine whether both in business and in government we have the courage to continue to be democratic.

MONOPOLISTIC PRACTICES SHOULD BE ABANDONED

Government should foster and encourage commerce, whether carried on by individuals or by the organizations which in the modern world are its necessary instrumentalities. But to be worthy of that encouragement, organized business should be content to ccoperate with Government in developing the formula by which monopolistic exploitation of the masses can be avoided. I should like to see taxes reduced so that business in its proper sphere, namely, in the production and exchange of commodities, should be encouraged. I should like to see free private enterprise rewarded by lower tax burdens, particularly upon those who provide opportunities for new employment. We need to do everything in our power to reward those who have the brains, the initiative, and the courage to create new opportunities for employment in the development of the unlimited resources which Nature has provided. This objective is not to be obtained by building up big government; it is not to be obtained by mere loans to industry of non-existent Government funds; it is not to be obtained by regimentation in the name of government. Neither is it to be obtained by the aggrandizement of self-sufficient business organizations which themselves regiment and exploit the masses.

If taxes upon business are to be reduced, business must be prepared to increase the participation of labor in what business produces. To do this it is not necessary to break up big business or to take a penny away from any wealthy person. It is only necessary to encourage small business and to preserve opportunity to every individual to engage in business.

Business must recognize the fact that labor is not a commodity like coal or iron to be used or abandoned as the exigencies of the moment dictate. When business becomes so great that it has outgrown State and even national boundaries, it owes a responsibility to the people as well as to itself to stabilize employment; for, after all, not even the most self-sufficient of our modern business corporations can permanently survive and make a profit unless the masses of the people have the employment that will enable them to purchase its products.

Finally, it seems to me to be essential that we must recognize the fact that corporations are not persons but are creatures of government. Corporations exist only because some government has called them into existence, and in every instance, theoretically at least, they are created for the public good. They have served that good, to be sure, and have rendered great service to mankind, but they have not stabilized our economic system. Great as our accomplishments may be admitted to have been, it must be acknowledged, however, that they have failed in the ultimate necessity of providing economic security for the masses.

This objective can be attained. Mankind which built the Pyramids in ancient Egypt, which cut the Panama Canal, which constructed the Boulder Dam, which is wresting every secret from Nature and making her its servant—mankind can use the agencies and instrumentalities which it has itself created to provide prosperity and happiness for all. There is but one thing needed—faith—faith in the integrity and the majesty of the human soul, faith in the ideals of democracy, to justify which before the whole world this Nation was brought into being.

Woman's Contribution to the Politics of the Nation

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, June 23 (legislative day of Thursday, June 22), 1939

ADDRESS BY HON. JAMES A. FARLEY BEFORE KNOX COUNTY (TENN.) DEMOCRATIC WOMEN'S CLUB

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. James A. Farley at a meeting of the Knox County Women's Club at Knoxville, Tenn., on June 5, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am more than glad of the opportunity to give a political talk under the auspices of the Knox County Democratic Women's Club. For some reason that I am not able to analyze properly, southern folk have a very much warmer feeling for their political and patriotic shrines than we of the North appear to entertain.

This is particularly true of the people of Tennessee. And as a result of your keen interest in politics and the affairs of government, this great State has made an outstanding contribution to the leadership of the Nation and has played an unusual role in shaping the destiny of the American people. Only Tennessee could produce an Andrew Jackson, and let it be said to your everlasting glory that throughout the years you have lived up to the noble traditions of that immortal hero.

Not only does your delegation in the National Congress carry on your tradition of sending big men to Washington, but the Nation has reason to be grateful to your State for Cordell Hull, Secretary of State, who has done more for the cause of peace and amity between the nations with the reciprocity agreements he fathered than any Cabinet officer within my recollection.

It is but natural that I should feel quite at home in this atmosphere of Tennessee politics. And while I have been invited to Knoxville to give you the benefit of some of my observations in politics, I expect to learn a great deal more from you and from my association with you to take back to Washington a new inspiration to carry on the work of chairman of our great party.

When we speak of poltics we ought to have in mind the two different applications of the term. In one sense it conveys merely the partisan idea, the scramble for office, and that sort of thing. That kind of politics has little meaning and little influence on our national progress. Actually, politics, if it amounts to anything, should be just another name for patriotism.

There may be, and frequently are, two schools of thought in regard to policies to be followed by the Federal Government. The adherents of each school may be, and frequently are, as sincere as the followers of the other. The controversies ought to be confined to a discussion of the merits of the two ideals. That is true politics. The incidental clashes of personalities and charges and countercharges, the expedients of strategy, and the other phases which nowadays figure almost exclusively in the newspaper headlines, are merely the froth and steam arising from the basic problem of determining what is best for all the people.

From the beginning of our national life, there has, of course, existed the conflict between those who believed in an aristocratic form of Government—a Government handed down from above to the ordinary citizen—and on the other hand, the democratic theory that the people are supreme and that the only fitting government for a republic is that in which great wealth had no more authority than great poverty, and that in any disputed question of policy the will of the majority must govern.

Jefferson and Hamilton are contesting today, as they have since the foundation of the Republic, for the determination of the true course of our Nation's progress.

Whenever a measure is conceived in Washington for the benefit of the people at large, the cry goes up from the Hamiltonians that the Government is an enemy to business. It was so when Andrew Jackson crushed the power of the great private bank which dominated not only our early financing but which sought to usurp practically every other function of government. It was so when the antitrust laws were first put into effect. The pattern was followed when the Federal Reserve System was adopted, and it was shrieked from the housetops when the principle of the income tax was made the basis of our revenue system.

Nothing could be more absurd than the idea that this administration, or any other administration for that matter, is an enemy of business. No administration can be successful unless it struggles always for the prosperity of the Nation. That does not mean in all cases that it must enlist on the side of those who have amassed great fortunes and think that these fortunes should be increased without regard to the tens of millions of American citizens dependent on their labor for their daily bread. There can be no real prosperity in a nation made up of a handful of multimillionaires, with the great mass of the people so near starvation that their every day is a day of anxiety.

Great wealth can always take care of itself. It is up to the Government to do its best to help the men and women who through no fault of their own have no reserves of capital to tide them over the tragic misfortunes incident to hard times.

We do not make the charge that every rich man is a despot or a cold-hearted villain. The enormous charities and welfare foundations that have come from these vast accumulations would alone make such a charge unfair and absurd. But on the other hand, long custom has brought upon the great corporations a habit of considering the maintenance of a particular profit rate as the most important thing on earth. A corporation naturally feels bound to earn high salaries for its officers, and fine dividends for its stockholders. When the market for the corporation's particular product, for one reason or another, falls off, it feels bound to undertake economies; and the easiest economy consists in laying off the workers.

It may be admitted, however, that many of these corporations now would gladly continue employment and high wages. For, as businessmen, their directors have come to realize that they cannot increase the consumption of their goods unless there exists also the customers' purchasing power to buy these goods. But in the past it has been the almost invariable rule to let the greater purchasing power appear as an abstraction and to act on the pressing reality of passing on the burden of less prosperous times to those least able to assume that burden.

I am grateful tonight for this representative audience of intelligent, clear-thinking women. I have always gone on the principle that there is no difference in the mental processes of one sex and the other on public questions. The man who is threatened with the loss of his job is no less dismayed than are his wife and daughters. Indeed, the pain of such a disaster is usually more acute for the mother than for the father, more painful for the daughter than for the son. So I am talking to you tonight exactly as I would talk to an audience made up exclusively of men, with the full confidence that such arguments as I have to offer will be judged and appraised in precisely the same way.

In one respect I think that the patriotism of politics is more appreciated by the so-called weaker sex than by the male voter. One evidence of this is the sag of interest in the period between campaigns. In the heat and passion of an election year it is not difficult to arouse enthusiasm and make the voters sensible to the issue involved as to their individual interests or the interests of the country. But once the election is over, the majority of men appear to be willing to put away their political fervor, as they put away their blankets and heavy clothes in moth balls when winter is over.

The essence of successful party politics is that our entire population shall be made politically conscious. That is the only antidote for the evils that have resulted at various times in our past history from the domination of a relatively small group who made politics their business and whose ideals were perhaps not always of the highest. In making this statement I do not wish to diminish in the slightest degree my high regard and appreciation of the achievements of the party worker—the man or woman in the ranks to whose effort is due the efficiency of party organization. They do a fine and necessary work, and I take this occasion to express again my sincere thanks for the assistance they have given me throughout the Nation in every campaign since I have been the party chairman.

After all, the result of any political campaign rests with that great multitude whose political life lies in the zone between the two great parties. There never were enough regular Democrats in this country to elect a President. There never were enough Republicans, in the strict sense of the word, to elect a President. It seems to be a fact that the balance of power resides in that independent element of our population who have either the thinnest and most casual relationship to either of the parties or no relationship at all.

Campaigns start with the basic vote of the two parties reasonably matched. The object of a campaign comes down to persuading a majority of the neutrals to our own way of thinking—to convincing them of the validity and value to the Nation of our policies as compared with the policies of the opposition. If you keep this picture in mind, you will see how inadequate it is to think that, in the hurry and bustle of a short campaign, a nation can be aroused to the importance of the problems of government. Particularly is this consideration involved for the party of the administration in power.

The tactics and strategy of the opposition must always be to assail the administration.

The minority party is supposed, under the American system of government, to prove its capacity for leadership by the prudent use of the weapon of opposition while out of power. The people interpret opposition to mean something more than mere obstruction. If the minority wishes to prepare itself for the resumption of Federal authority, it should produce and train statesmen who have a program of their own and the ability to translate that program into reality.

Despite the surface optimism now showing in Republican ranks, the truth is that the party has woefully failed to produce a single leader of national dimensions, and no one knows that fact better than the Republicans themselves.

It is always easy to stand on the side lines and to offer advice and criticism to those who have been given a difficult assignment to carry out. Our Republican friends, of course, are quite unhappy. They have established themselves as Monday morning quarterbacks and bleacher managers. Ignoring the many fine things that have been accomplished, concerning which they find it wise to be silent, they point to the problems that remain and demand to know why they haven't been solved.

The obvious answer is, Why didn't they solve them when they were in authority? Every single sore spot that now troubles the Nation had its inception and grew to maturity in the 12 years of Republican misrule that took place before 1933. They had nothing to offer then as corrective measures; and they have nothing to offer now. They have not moved an inch from the position they occupied on public questions during the disastrous period of Herbert Hoover's reign.

The only statesmanlike leadership this country has known in our generation has come from President Roosevelt.

It is an old custom in politics, when a party wishes to cover up its own shortcomings, to manufacture an issue that will distract the attention of the public. This is a period of chaos and upheaval in world affairs, and the Chief Executive has been compelled to grapple day by day with foreign problems of serious magnitude. Civilization has been trembling at the fear of another general war. Every realistic person who is ready to face facts knows this to be true.

And yet only recently a distinguished Republican Senator, mentioned as a probable party standard bearer, gravely announced that the supposed crisis was merely an invention of the President to take the public mind off domestic questions. From other quarters the charge has come that the Chief Executive wants to lead us into war because he has had the courage to raise his voice against violence and international wrongdoing, a policy pursued by nearly every one of his illustrious predecessors in the White House.

I have known Mr. Roosevelt intimately for many years, and there is no individual to whom I would rather trust the safety and security of the United States in these dangerous times. During his term of office there has been a tragic war in the Orient, a war in Africa, a destructive civil war in Spain, and a number of border clashes that threatened to provoke a general conflict. In each of these instances American interests were involved either directly or indirectly. Yet the President, by his wise and skillful handling of these incidents, kept this country free of entanglement. Not a single American enlisted man has lost his life on foreign soil under this administration.

And as time moves onward, and the program of the Roosevelt administration is viewed in its proper perspective, the wisdom of the course pursued by the Chief Executive will be generally appreciated. He has kept the peace, he has diminished the menace of foreign aggression by rebuilding the Nation's defenses, he has given aid and support to agriculture, he has stabilized the banking system, and put a stop to reckless speculation with other people's money.

The reforms instituted by President Roosevelt will never be undone, because they are rooted deep in the American system of fair play and equal opportunity for all. We face the future confident in the knowledge that the great mass of people will continue to demand this kind of government in America.

Archibald MacLeish

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, June 23 (legislative day of Thursday, June 22), 1939

ARTICLE BY GLENN DILLARD GUNN

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD two interesting articles by Glenn Dillard Gunn on Archibald MacLeish.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MACLEISH CASE

(By Glenn Dillard Gunn)

Asked to confirm the appointment of Archibald MacLeish as Librarian of the Library of Congress, the lawmakers are baffled.

The man's a poet.

There is no precedent for appointing poets to important offices. In fact, a canvass of Congress doubtless would disclose little interest in poetry.

Having thus picked up two strikes on the way to the plate, Mr. MacLeish's position looks dubious. He is accused of communistic sympathies. Basis for this accusation may derive from his last book of verse. This, issued by the house of Harcourt, Brace & Co., New York, displays a series of doleful pictures of vagrants and sharecroppers, gathered by the Department of Agriculture, each the illustration of an accompanying poem.

At a moment when economy is the watchword of Congress, such active sympathy with misfortune may have been construed as indicating unorthodox leanings. Then the verse itself, its questionable sentiment quite apart, is puzzling. MacLeish calls it "sound track" verse, which connects in some mysterious way with his two recent radio plays, the Fall of the City and Air Raid.

While the cautious conservatives call him a Communist, the Communists disown him and assert that he is a Fascist, and the latter in turn describe him as a confirmed liberal. It's all very confusing.

However, the man is a poet. There's no denying that. He won the Pultizer prize for poetry in 1927. That's bad, even when it is remembered that the place he has been called to fill involves the direction of the Nation's cultural center and the world's greatest library.

The librarians, with one important exception, also regard this appointment with aversion. Their national association passed resolutions Thursday objecting on the grounds that he is not a trained librarian. The minority report comes from the great library of New York City, where the directors emphatically endorsed MacLeish.

At the Library of Congress there is a great official silence, which hides a feeling of general satisfaction. The department heads must not talk. But they may be permitted to point out that this Library is not as other libraries, being organized to serve other ends. It has its famous staff of specialists and consultants, its "chairs" occupied by celebrated authorities. A librarian of conventional background easily might disturb the machine which Herbert Putnam perfected in his 40 years of service. Dr. Putnam, before he left for his vacation in Maine, was severely noncommittal.

"I know Mr. MacLeish by reputation. I have great respect for his attainments. I have not met him." That was his comment, out of which neither the Dies committee nor the librarians will get much comfort.

MacLeish's friends in the Government service, like Dr. Putnam, decline to comment on a matter now before Congress. But they point to his background and describe it as one which makes the charge of communistic activities unlikely. Yale and Harvard, with a brilliant athletic record at the former university and with such

outstanding accomplishments in the field of international law at the latter that he was made a faculty member upon receiving his degree—this, they assert, is no recruiting ground for Lenin or Trotsky.

Still less communistic is his war record. He left Harvard to become captain of field artillery and saw service in France, where he remained some years. Returning to his native land, he became one of the editors of the newly organized Time-Fortune magazines. For Fortune he wrote no poetry, but discussed industry—steel especially—politics, South American relations, Japan, and the always more pressing subject of relief. While with Fortune he did not live up to the accepted picture of the poet. He never missed a deadline.

He resigned from Fortune, June 1938, to become curator of the Lucius W. Niemann Newspaper Fellowship at Harvard. Here his duties were to award fellowships to newspaper writers and guide their studies during their year at Harvard. He resigned this post to write.

Politically, his friends describe him as "a passionate American." He believes in democracy. He knows this land, especially the Southwest and New England. He has, they say, "the feel of the country."

MACLEISH WINS APPROVAL AS LIBRARY CHIEF—SENATE COMMITTEE REJECTS PROTESTS AGAINST POET'S APPOINTMENT BY PRESIDENT

(By Glenn Dillard Gunn)

After hearing final protests against the appointment of Archibald MacLeish as Librarian of Congress, the Senate Library Committee yesterday favorably reported his nomination to the Senate.

First poet to be nominated for an important Federal post, MacLeish was named as the successor to Dr. Herbert Putnam, who served 40 years as Librarian.

WIDELY QUOTED

MacLeish is the author of a widely quoted article published by Fortune Magazine in February 1935, in which he pointed out how the Library of Congress had been kept free from patronage spoilsmen although its staff is not covered by civil service.

The Senate Library Committee delayed action on MacLeish's nomination to hear protests from representatives of the National Librarians' Association. Spokesmen for the organization were Dr. Harry M. Lydenberg, director of the New York public library, and Harold F. Bingham, of the Louisville, Ky., public library.

URGED TRAINED LIBRARIAN

They argued for the appointment of a trained librarian as head of the world's greatest library, pleading that not only would this institution suffer under untechnical administration but the example would break down the tradition which prescribes trained men as heads of lesser institutions. They feared the return to a regime of political influences and untrained undesirables.

It is possible that their objections will be echoed on the floor, though the Senate has excellent reasons for exempting MacLeish from the category of untrained undesirables in which the librarians have listed him. These appear in that same article in Fortune, which has been described as the ablest summary of the Senate's history and of its growth to its present unparalleled power ever penned. Widely read and quoted, this article has done much to reaffirm the respect of Americans for their most formidable institution.

ESTIMATE OF SENATE

"The Senate," wrote MacLeish, "is at once a legislative body and a high court"—it is the only court that can try the Chief Justice—"an advisory foreign office, an advisory executive in appointments to high office and, in practical effect, a prosecuting attorney.

"There was once a President of the United States," he continued, "whose prestige was so great that Italian peasants made aisles of the streets to touch him as he passed. He was destroyed by the American Senate within a year."

It does not follow that because MacLeish has written justly and eloquently about the Senate that august body, in turn, must think well of him as its next Librarian. But, as MacLeish reminds us, "a Republican floor leader once wistfully remarked that the Senate rules (which Thomas Jefferson wrote) are predicated on the assumption that Members of the Senate are gentlemen," and gentlemen, of course, can be appreciative and grateful.

Young Democrats' Keynote Address

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, June 23 (legislative day of Thursday, June 22), 1939

ADDRESS BY CHARLES H. SHREVE BEFORE YOUNG DEMOCRATIC CLUBS OF CALIFORNIA

Mr. MINTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech delivered on May 28, 1939, before the Young Democratic Clubs of California by Mr. Charles H. Shreve, executive secretary of the Young Democratic Clubs of America. I have had an estimate made in accordance with the rule.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, and fellow young Democrats: It is impossible for me to adequately express my pleasure at being with you today for your fourth biennial convention. I have been away from California a long time, and the greeting which my fellow young Democrats have given me on my return is something I shall never forget. But more than that, I am extremely happy to be able to be with you to bring you the greetings as well as to promise the whole-hearted support and cooperation of your national organization.

We in national headquarters are proud of the progress you have made in California under the able leadership of Richard Henneberry, Cecelia Bittner, Al Murray, Ed. Mattox, John Coleman, and a host of other devoted, hard-working, and unselfish young Democratic leaders. You have had very difficult problems to face, but you have met them with courage, determination, and good common sense, and are now well on your way toward the brilliant future which your hard work guarantees.

As the official representative of your national headquarters, it is my pleasure and privilege to bring you the sincere good wishes of your national officers. Your national president, Pitt Tyson Maner, has asked me to express his deep regret at his inability to leave the East at this time. He wanted very much to be with you so that he might personally thank each of you for the fine work you have been doing. However, he has asked me to represent him, and I can assure you that the national organization is with you 100 percent.

YOUNG DEMOCRATIC NATIONAL CONVENTION, AUGUST 10, 11, AND 12

At this time I want to extend to you a cordial invitation to attend our fourth national convention at Pittsburgh, Pa., August 10, 11, and 12. This will be the largest and best national convention ever held, and I feel sure every one of you will enjoy and profit by attendance at that affair. We will have practically all the national leaders of our party in attendance, and expect most of those who have been mentioned as potential nominees for President in 1940 to be there. Many of you will be delegates to the senior party convention and will benefit by this opportunity to meet and evaluate these persons of whom you read so much in the papers.

The city of Pittsburgh is planning a real welcome for our convention, and numerous entertainment events will make it well worth your while. Of course, the exchange of ideas and discussions of problems with leaders from all the other States will be of great value, and I know you will send a sizable delegation to Pittsburgh. One of the States has already advised us that they will send approximately 2,000 delegates, so I feel no hesitancy in assuring you that this convention will be the best we have ever had in point of attendance as well as in constructive work leading to another great Democratic victory in 1940.

Incidentally, I have heard of some most remarkable untruths spread by persons seeking to disrupt your organization, and I want to state here and now that there is no foundation in fact for any of them. Your organization is officially recognized; it is the only official organization in California and there will be no other. Our national committee meeting at Richmond last March, which settled the question of chartering a California organization, was the best attended national committee meeting that has ever been held except for the ones held during national conventions. You have been told that there were only a handful of members present and that the decision to issue the national charter to Richard Henneberry was made by the use of a great number of proxies. This is absolutely untrue as there were 38 national committee members present at Richmond when the national committee voted 38 to 0 to take such action. More than 40 proxies on file were not used or the total vote would have been that much greater. You may rest assured that the charter question is settled. You will continue to be the only recognized organization in California, and only delegates and alternates from your organization will be seated at the national convention at Pittsburgh.

You have also heard all sorts of rumors about your national organization emanating from the same sources. I understand that some persons have said that we are anti-New Deal, anti-Roosevelt, reactionary, and a great many other things. I want to state here and now, officially and unequivocably, that the Young Democratic Clubs of America stand squarely behind, wholeheartedly endorse, and vigorously support our greatest Democratic President and unparalleled leader, Franklin D. Roosevelt.

As an official branch of the Democratic National Committee we are a hundred percent for the administration and will always so remain.

Now you have been told by the same rumormongers that your national organization is secretly behind Vice President Garner or Governor McNutt, or other potential candiates for the nomination in 1940. I have come a long distance and want to take you into my confidence on this very important matter. I trust there are no representatives of the press here because I am going to tell you in strict confidence whom we are supporting for the democratic nomination in 1940. The Young Democratic Clubs of America are supporting now, have supported in the past, and will support in the future absolutely no one.

Our national constitution provides explicitly that "we shall not endorse or support the candidacy of any person for public office prior to nomination." We must and shall support with an aggressive campaign the nominee of the Democratic Party whoever he may be. This clause in our national constitution has never been violated and will not be violated now. All reports you may hear to the contrary are wholly untrue and are made for the purpose of creating dissension in your ranks.

As a matter of actual fact, your national officers feel that no sensible person in an official capacity can even make a personal choice until President Roosevelt announces his position on this very important question. Consequently, I want to stop for once and for all these ridiculous rumors that your national officers or your national organization favors any of the persons named as possible candidates for the nomination.

Speaking to you today is rendered somewhat difficult, because I cannot come before you and suggest any "cure-all" for the problems which face you. Every young democratic organization in the country faces serious problems, and no two are identical. Your success in bringing together this great gathering from all parts of the State makes it apparent that you are wide-awake and on your toes doing constructive work for the Democratic Party in California under the distinguished leadership of Senator Sheridan Downey and Gov. Culbert Olson. I feel sure that the service you have rendered the party in the past and the greater service you are prepared to render in the future, merit and will receive the full support of all the party leaders in our great State.

I fully realize that each State and each local club finds problems peculiar to its locality. We cannot create some set formula for solving these problems. I want to assure you, however, that national headquarters are at your service at all times, and that we shall deem it a real privilege to assist you in specific matters if you come to us for help or advice.

THE PROBLEM FACING YOUNG DEMOCRATS

We Young Democrats have an increasingly responsible part to play in the future of our country. America today is engaged in a conflict as far reaching in its implications as any which our Nation has ever known. Once again, as in the earliest days of our country, it is up to the young men and young women, too, to lead the way in the never-ending fight for progress.

The myriad complications of our national life, aggravated by our phenomenal industrial development and the absence of more free land, which formerly solved our problems of unemployment and maldistribution, combine to present a problem which all too many of our people are willing to admit is insoluble. The vitality of youth, our freedom from the fears and prejudices which bind the older generation, our faith in the elemental soundness of our system of government, and our eagerness to battle the forces of greed and oppression are the tools with which we can work out the destiny of our country and insure for posterity the finer, cleaner, fairer democracy, with a more just and equitable distribution of prosperity which is the goal of our inspired leader, Franklin D. Roosevelt.

No one in America is so deeply concerned in the reforms made and proposed by this administration for the preservation of democracy, liberty, and human rights as are the young people of America, for these reforms necessarily determine the future of our country, and that future belongs to us. What this country will be in 20 years means little to the man of 60. It means everything to you and to me, for the average man of 60 will be gone and we will be here to suffer from or to profit by the results.

There is a situation confronting the world today which should be of paramount interest to every citizen of the United States and which has aspects of particular significance to every Young Democrat. There is a spark burning now in Europe which at this very moment threatens to explode into the most devastating conflagration which this world has ever seen.

We in America are prone to sit back nonchalantly, with a false sense of security and a feeling of gratitude that we are not involved. We are particularly grateful for the vision and the wisdom of our great President, who, while bending every effort to see that our country shall not be involved in war, has set a magnificent example for the world in trying to preserve peace. But if we feel safe because the scenes of battle will be centered thousands of miles from our shores, we are indeed filled with a false sense of security from which it is high time we should be aroused.

More is at stake today in Europe than the territorial integrity of any nation, or problems of any nationalists domiciled in a foreign country. It would be wise for every Young Democrat to pause and consider the greater problems which may, unfortunately, doom the Old World again to the horrors of war.

We in America are all too willing to accept the blessings of peace and liberty without considering from whence they flow. We are all too prone to forget that the freedom of which we are so proud is our heritage from those brave leaders who in 1776 risked their lives and all they held most dear to create a new concept of liberty and of human rights and a new form of government.

As Lincoln has truthfully said, "The world has never had a good definition of the word 'liberty'—we all declare for liberty, but in using the same word, we do not mean the same thing * * *." To one man, liberty may mean anarchy, the right to do as he pleases, subject to no law, human or divine. To another, it may mean no freedom of tongue, or pen, or action, save such as is granted by the beneficent act of a government to whom every knee must bend.

To an American, however, it means something more. It is no mere abstraction, but is a part of his very birthright. Liberty means to us freedom of spirit, economically, politically, and religiously, for all, under a government of law. It is not merely liberty to eke out an existence ordained and directed by the fiat of a dictator, whether that dictatorship exists in the person of one man or a dozen men; whether it be a political dictatorship, or an economic dictatorship, or a combination of both.

Our form of liberty exists under the law as it springs from the aspirations and desires of a free people, in a free country under a free flag. This is the liberty for which our country's founders fought, and it is the liberty for whose preservation we must ever be on the alert. It is the liberty upon which the strength of this American Government is founded and which our people are firmly determined to maintain.

It is not the liberty of the few to exploit the many, nor the liberty of the privileged to order the fates of the millions of people merely because a generous government permits them to acquire and possess great economic wealth and power.

Six years ago the American people rededicated themselves to the idea of liberty established by the founding fathers, and in a peaceful revolution restored to themselves the authority and control of their Government, which had drifted away into the hands of an economic dictatorship.

The man through whom all this was accomplished, who revived stricken hope, who drove from the temples of business and finance and out of the halls of government the abuses which had throttled the liberty of the people, was hailed as a liberator—and rightly so. We can never overestimate our debt of gratitude to our great President, Franklin D. Roosevelt.

ALL DEMOCRACIES ON TRIAL

Today there is a challenge to democracy and to the adequacy of our form of government, which is more serious than the economic dictatorship of Wall Street to which this country bowed until 1933. Every democratic form of government in the world today is on trial before the challenge of dictatorship. Freedom, as we know it, has been banished from country after country of the Old World. Freedom of speech, freedom of press, freedom to worship as one pleases, cannot exist in the totalitarian state. All those things which go to make up our definition of liberty have been taken from the peoples of some of the greatest countries of the world.

It is high time that we realize that there is significance in the events in Europe for the people of America, and learn from the lessons taught there how we may best preserve democracy here.

The meteoric rise to dictatorship of autocrats, nay, of tyrants, in one country after another in Europe, may seem to many of you to be very remote from the American scene. But, I warn you here today, that unless we study the problems which have confronted the nations of Europe and profit by the lessons which they have failed to profit from, our democratic form of government of which we are so proud cannot long endure.

We must not forget that each of the nations of the world has had depressions similar to the one which followed our crash of 1929. In some countries the depression has been of long standing; in others it came more nearly at the time of our own. In every country of the world the maladjustments in the distribution of the products of labor have caused labor parties to rise and have brought on problems of relief comparable to our own. Only a few of the democracies of the Old World have survived the terrific upheavals caused by economic depressions. Most of them have utterly collapsed, to be replaced by dictatorships whose destruction of individual liberty is as complete as it is ruthless.

Many of you have marveled at the amazing rise of this or that dictator and have freely predicted that no oppressor would be long tolerated by a people accustomed to freedom quite comparable to our own. Today we must face the fact that the people of many nations are not discontented with their totalitarian governments but follow in the main wherever the will of their leader chooses to take them. We are forced to concede that the former democracies of many a European state are gone forever, and that the people, having sacrificed their liberty in an effort to gain an advantage over their neighbor in solving their economic woes, have completely surrendered all those things we hold most dear. There is no freedom of speech, no freedom of press, no freedom to worship according to the dictates of one's own conscience, in three-fourths of Europe and Asia combined.

Pause for a moment to consider that.

More than a billion men and women—men and women like you and me—who treasured the freedom of thought and action they possessed in varying degrees, have relinquished every vestige of liberty, every trace of freedom for a mere shadowy promise of an economic security which their despots can only achieve for them at the expense of their neighbors.

IT CAN HAPPEN HERE

You may say, "It can't happen here." I want to warn you, it not only can happen here but it will happen here if a militant, determined citizenry does not aggressively fight for the preservation of our democratic form of government.

There are organized forces already at work in our country spreading propaganda with which they hope to force us to change our whole form of government and adopt either communism or fascism in place of democracy. Be not deceived. These forces are powerful, clever, adequately financed, and are boring from within in a thousand different manners. We must be alert and learn to recognize the symptoms of their underhanded work, for they are laying

the ground work which at a strategic moment may be used to attack our very Government itself.

There is no danger of a dictatorship under Franklin D. Roosevelt. He fully recognizes that the principles of freedom, liberty, and equality upon which our Nation was founded would be lost forever if we swung to either extreme—fascism or communism. He has been masterfully steering a middle course, and has secured for us long-needed reforms without endangering the form of our government or allowing us to drift to either of these unwanted extremes.

But we must face the fact that we will not always have Franklin D. Roosevelt to lead us and show us the way in this, the most difficult problem which besets the democratic governments of the world today. We cannot depend forever upon his benign guidance, and it is up to the Young Democrats, to whom the future of our country is so important, to assume the burden of protecting our form of government here and now.

If war should come in Europe, and God grant that the means has been found to avoid it, you may be sure that a victory by the totalitarian states will leave them with a lust for power which will be a very real danger to the remaining democracies of the world. In such an event, we must be thoroughly prepared to resist far more aggressive campaigns of propaganda and un-American activities than we have seen to date. The young people of America and the Young Democrats of America, because they are more actively interested in the welfare of their Government than any other group of young people, must protect and preserve the liberty which is our birthright under a democratic form of government.

This is my message to you Young Democrats of California and to Young Democrats everywhere.

Look carefully around you. Learn to recognize the insidious infiltration of alien propaganda when it first rears its ugly head in your community. Stifle the small beginnings of the monstrous system which promises false economic security in exchange for all the liberty and freedom which are yours because of a hundred and fifty years of valiant effort on the part of the great men and women of the United States. Search out these foreign "isms" and groups in your own neighborhood and expose them for what they are, so that there may be no foothold here for the forces which have brought war and destruction today to so much of the world. It is your task and mine to preserve the blessings of democracy for ourselves and our posterity.

Our great national chairman phrased this problem better than I can when he addressed us last summer at our national rally in Seattle. He said:

"There are black reactionary forces in America, blind to everything but their immediate personal profits, who do not have foresight enough to see that the preservation of democracy and human liberty demands, through necessary reforms, the solution of the human problems of the mass of the people.

"If democracy is to be saved, if capitalism is to be preserved, we must set our house in order politically, socially, and economically—and that is a program dictated by the highest conservatism.

"You to whom tomorrow belongs want to preserve for your own happiness and that of your children the liberties and human rights, based on justice and fair dealing, that can exist only under democratic institutions; and democratic institutions cannot be preserved in these revolutionary times unless they are made to function.

"I believe that all young men and women can follow a fighter like Roosevelt, who fights with a smile, and keeps on fighting until the victory is won. He is fighting to make America the America of which our fathers dreamed; an America of liberty made supreme by the law; an America where justice reigns and privilege is dead; an America of social justice, where every man who does his part can live his life in a happy state of security; where farmers can own the soil they till and profit by the harvest of their sowing; where workers can work under decent conditions and receive a sufficient wage to live in comfort; where banks are safe and securities bear upon their back the stamp of their authentic value; where employers and employees recognize their equal responsibilities and rights as copartners in the service of society; where slums have been wiped out and the poorest live in wholesome quarters; where the natural resources that God gave are put to work in the service of all the people—a land safe from fascism, communism, and plutocracy and dedicated to liberty and democracy. That is what Roosevelt is fighting for."

And for that the young people of America are prepared to fight with him.

I thank you.

The United States Secret Service

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 22, 1939

Mr. COCHRAN. Mr. Speaker, I should like to call the attention of this House and to the country to the approaching seventy-fifth anniversary of the United States Secret Service, which will be celebrated on July 2. This splendid agency of government, widely known and respected by those with whom it comes in contact, has an impressive history running back to Civil War days. Year after year its chief appears before the congressional Appropriations Committee, describing the work of his organization, and explains his need of money to carry on this work. But very little more than this is known to many Members of Congress. As we consider immediate problems of the Service each year, we lose sight at times of the rich background.

The Secret Service is directly responsible for saving the American businessman many millions of dollars each year, as it successfully prevents the counterfeiter from debasing the currency of our country. Its efficiency in detecting the operations of counterfeiters before they succeed in flooding the States with bad money has further resulted in savings of immense sums to merchants and other citizens in the United States.

Since 1901, this Treasury Department agency has been charged with protecting the President of our country, the person elected to be President, and members of the President's family. To the quiet competence of this Service, we owe the every day safety of our Chief Executive.

The Secret Service guards our money, billions of dollars of which are on hand, ready to be issued. In the vaults of the Treasury are billions of dollars in securities, for the protection of which the Secret Service is responsible. Its work has steadily grown since July 2, 1864, when the Civil War organization of General Baker, provost marshal of the War Department, was taken over by the Treasury to form the nucleus of a body which has developed into the Secret Service as we know it today. General Baker's unit had been created by President Lincoln, to deal with investigative problems arising during the War between the States.

The entire country at that time was flooded with both counterfeit currency and worthless bank notes, creating a condition of business chaos that demanded immediate and thorough enforcement of the law. It was said by reliable observers of the period that every third bank note involved a loss for the person accepting it. This state of affairs during the 5 years immediately subsequent to 1865 was entirely eliminated through the activity of the newly created United States Secret Service, conclusively establishing the integrity of the national currency, which has been maintained through the years.

The protection of this country's financial obligations has been so adequate that at no time within the past 75 years has there been any interruption in the ordinary flow of currency to the banks of the United States or to the public. This is an enviable record, of which the Secret Service may be justly proud, and for which we may rightfully commend it.

During its early years this Service was the general law-enforcement agency for the Federal Government, lending its trained investigators to the departments and bureaus which had need for them. These agents participated in the important investigations which broke up the infamous Whisky Ring, the Louisiana Lottery, the Beef Trust, the sugar-fraud cases, national-bank embezzlements, naturalization frauds, and many cases involving land grants in the Western States.

At the outbreak of the War with Spain, the War Department called upon the Secret Service to suppress the activities of foreign agents operating in this country. Probably the most important case during this war was handled almost entirely on Canadian soil. Spanish spies were recruited by a member of the Spanish Embassy in Canada, and sent to many points of the United States, reporting directly to cover addresses in Canada. The Secret Service broke up this enemy activity, arrested almost all the agents sent into our territory, and eventually secured enough evidence to convince the Canadian authorities that the Spanish diplomatic officials there were violating Canadian neutrality laws, resulting in their deportation and entirely suppressing the Spanish spy ring in North America.

During the Spanish-American War, the Spanish Government acted largely without accurate information, while this country, on the contrary, was fully informed of the proposed

operations of the Spanish Army and Navy. As an example, the decision of Spain to fight a naval engagement off the Philippines was known to our defense forces 3 months before it occurred.

Before the entrance of this Nation into the World War, saboteurs began to injure and destroy the vessels which were sailing to European ports. The Secret Service was instrumental in locating the responsible agents directing this destructive activity. The work it so brilliantly performed may be best illustrated by an example showing the high caliber of the personnel engaged.

In exposing these plots, its investigators found that Dr. Heinrich F. Albert was the most dangerous representative of an alien power within our borders. Prolonged inquiry disclosed that he received no less than $27,000,000 from his government during the period 1914–17 to hinder operations in munitions factories and encourage sabotage, his actions in general outraging the neutrality of this country.

On July 24, 1915, an agent of the Secret Service trailed Dr. Albert, secured possession of a brief case belonging to him, which was found to be crammed with incriminating evidence of all kinds. These papers showed that Dr. Albert expected to control and influence public opinion by purchasing newspapers and establishing news services; that he expected to publish books, to invade the Chautauqua circuit by professional lecturers, and to finance motion pictures which would improperly influence our citizens; that he expected to hinder operations in munitions plants; that he expected to corner the supply of liquid chlorine used for poison gas, to keep it from reaching his nation's enemies; that he expected to acquire the Wright Aeroplane Co. and its patents and use them for his country's interests; that he expected to cut off the American supply of cotton being shipped to enemy nations; and that he expected to organize a movement to put an embargo on shipments of munitions.

A prominent publisher, a compatriot of Dr. Albert's, said:

> The publication of the Albert papers was a catastrophe * * *. It was a veritable nest of intrigue, conspiracy, and propaganda that reposed placidly in Dr. Albert's portfolio. The inner workings of a propaganda machine were laid bare. The loss of the Albert portfolio was like the loss of the Marne.

I believe that this is the first time that the attention of the Congress of the United States has been called to the fact that the seizure of the Albert papers was the work of the United States Secret Service, and not the work of espionage agents of our later Allies, as was commonly reported at the time. As a matter of fact, the New York World was given the Albert papers in confidence by William G. McAdoo, then Secretary of the Treasury, who requested that the information be printed, but that its source be withheld; he did not reveal the circumstances surrounding this case until the publication of his memoirs, Crowded Years, in 1931.

Following the World War it became necessary for the President of the United States to attend the meetings held at the Versailles Peace Conference. It was the responsibility of the Secret Service, as it has been since 1901, to protect the President while making what was then an unprecedented departure from tradition. The arrangements and routines built up through the years were put to the test, resulting in a safe journey by the President to France and return.

Before and since 1919, Presidents of the United States have traveled hundreds of thousands of miles, every mile of which has been inspected by Secret Service agents before being traversed by the Chief Executive. In this work, the Service has always secured the most wholehearted cooperation from State and local law-enforcement agencies in carrying out its responsibility of guarding the President and his family. Even on his shortest trips the President is always accompanied by a well-trained group of Secret Service agents.

More than once Congress has called upon the Secret Service for assistance, notably in what is known as the Teapot Dome case. The discovery of this oil fraud was made by Congress. The investigating committee of the Senate conducted the inquiry, but much of the investigation through 2 years prior to the trial of the case was performed by the Secret Service under the direction of a special counsel, without any knowledge of its participation leaking to the public. Had it not been for a Secret Service agent who took the numbers of Liberty bonds in a New Mexico bank and mailed the list to himself at an address in a nearby city in order to prevent its recovery from him, the confessions of the conspirators would not have been secured. It took months of patient work on the part of Secret Service agents to trace these bonds from the time they left the Treasury Department until they reached the account of the Continental Trading Co. of New York and Canada, which evidence led to the collection of millions of dollars in income taxes from members of this syndicate.

While there are thousands of interesting cases in the files of the Secret Service, probably the most remarkable in the history of American law-enforcement agencies was "Count" Viktor Lustig, whose criminal career the Secret Service definitely ended in 1935. From 1907 until 1935, Lustig had thieved, embezzled, and operated confidence games and swindles in almost every State in the Union; at one time he was wanted by 42 different law-enforcement agencies, but managed to escape prosecution and conviction by every one. His mistake came when he decided that counterfeit money offered him greater rewards than his previously profitable confidence games. In association with William Watts, a photoengraver, Lustig produced more than a million dollars in counterfeit notes, and built up a distribution system which became the outstanding problem confronting the Secret Service investigators for more than a year.

Eventually, careful tracking located Lustig in New York City and Watts at the counterfeit plant in New Jersey, where a goodly portion of his counterfeit notes were seized before they could be placed in circulation. This man had been responsible for the suicide of victims of his confidence games, his criminal schemes caused the Secret Service to arrest and convict more than 400 passers of his worthless product, but finally, he was lodged in Alcatraz Prison, there to serve a sentence of 20 years.

The removal of Viktor Lustig, the master counterfeiter, immediately resulted in a great saving to the merchants and businessmen of our country; if he had not been caught at the time, his limitless ambition to flood this land with counterfeit currency would have succeeded.

Although Lustig was placed in prison some 3 years ago, the Secret Service is still engaged on cases growing out of his activities, and as late as April of this year, Frankie Parker, a well-known Chicago gangster, and accomplice of Lustig, was convicted for possession of $20,000 in counterfeit notes of the Lustig manufacture. These notes Parker had buried on a Chicago golf course. A secret map, the key to which was known only to a few people, after being decoded by the Secret Service, provided the information necessary for locating this cache of counterfeit notes. The seizure of these notes prevented their later appearance in the hands of passers and a consequent large loss to merchants.

A little-known but long-considered policy of the Secret Service has been its feeling that the protection of the currency of the United States is primarily a preventive job, and the agents strive very successfully to learn the intentions of counterfeiters long before their products are put into circulation. This policy was adopted early in the history of the organization, and to this day it is unchanged. It is only because of the never-ceasing preventive work of this Service that the currency we receive from day to day is genuine and not the product of an unconscionable counterfeiter. I have made inquiry and find that the chances of any citizen's receiving a counterfeit bill in a lifetime are exceedingly remote. This was not true during the Civil War, nor is it true today in many parts of the world, but it is true today in the United States.

Literally thousands of cases reflect the efficiency of the Service. Here is a typical one: In 1935 Peter Terhorst, an alien, was released from Lewisburg Penitentiary, where he had served a term for counterfeiting. He was deported, but

later smuggled himself into this country. In 1938 he renewed his counterfeiting activity, employing the most painstaking devices to conceal his operations, even from his closest associates. None of the criminals to whom he distributed the notes for sale even knew where he lived, and the plant which he had built was more thoroughly concealed than his home. His product was exceedingly deceptive, and passers experienced little difficulty in deceiving merchants and businessmen inclined to be careless in handling currency.

Before the circulation of Terhorst's notes had reached excessive amounts, agents of the Secret Service investigated and identified Terhorst as "the Dutchman," the successor of Watts, the partner of Viktor Lustig, the associate of criminal groups in New York, which made a business of handling not only counterfeit notes but were also engaged in other criminal activities. A printing establishment was bought by Terhorst, with the expectation that he would turn it into a fully-equipped counterfeiting plant; but before he could begin operations, Treasury agents raided the plant. He secured bail and failed to appear in court. Later, after several months of intensive investigation, he was again apprehended; his counterfeit plant, his plates, and all of his equipment were seized, together with $75,000 in cleverly executed counterfeit notes. Terhorst then made a confession involving his associates. He testified against them and the criminals who distributed his product. Within the last month all the members of the group were convicted.

Within the past 9 months, in New York City alone, substantial convictions and sentences have "salted away" more than 25 manufacturers and distributors of counterfeit money in the United States. With their elimination from the counterfeiting scene, the Secret Service can devote more time to its preventive campaign against counterfeit money.

Within recent weeks the State Department, in preparing for the reception of Their Royal Majesties the King and Queen of England, called upon the United States Secret Service for cooperation. The long record and successful experience of the organization in guarding the President of the United States had fully demonstrated that these agents were capable of handling the heavy responsibility involved in safeguarding the sovereigns of a friendly nation. The arrangements which were made by the State Department and the Secret Service for this historic visit began even before the King and Queen left England and continued until they had completed their tour of the United States and returned to Canada. The magnitude of this task was clearly demonstrated by the great throng gathered in Washington for that occasion. The enormous crowds which came to do honor to the royal visitors were orderly at all times. The United States Secret Service did not allow the protective work to become obtrusive, either to the people who had come to see the King and Queen or to the royal visitors themselves. After the successful completion of this assignment, it is worth while to note that the efforts of the Secret Service received high commendation from many sources. Chief Constable Canning, of Scotland Yard, who accompanied Their Majesties, wrote a letter on June 15 to Chief Frank J. Wilson, extending his congratulations "on the very efficient and effective manner in which the Secret Service protected Their Majesties during their visit to your country."

All these and other accomplishments of this Service are due to the high standards maintained and fine type of men employed. Applicants are subjected to rigid investigation. Those appointed must measure up to the highest qualifications and undergo long and arduous courses of training to fit them for their work.

The present Chief of the Secret Service, Mr. Wilson, has been a leading investigator for the Government for over 20 years. Prior to his present assignment he was with the Intelligence Unit of the Bureau of Internal Revenue, being the special assistant of Chief Elmer L. Irey in the investigation of the Linbergh kidnapping case, and also in the Al Capone case. It was the Intelligence Unit that insisted on recording the numbers of the ranson money as well as using gold certificates to enable easy identification.

Much credit for the organization's reputation today is due to the quality of leadership under Chief Wilson and Assistant Chief Joseph E. Murphy, men of long experience in law enforcement.

During the year just completed, the Secret Service established an all-time record for arrests and convictions, as well as for substantial reductions in the amount of losses to merchants through the acceptance of counterfeit money. This latter achievement has met with widespread applause from press and public alike.

The Service is not only concerned with the arrest of lawbreakers but has instituted studies in cooperation with the Bureau of Prisons, looking toward the rehabilitation of those unfortunates whom it has arrested and for whom there is hope of social redemption.

It works in close cooperation with the Royal Canadian Mounted Police and has furnished lecturers for their police schools. It works in close harmony with the banks of the Nation, seeking always to be helpful.

Quietly and efficiently, it goes about its daily business; a group of earnest, serious-minded men, patriotic and self-sacrificing, always keeping in mind two great objectives: The protection of the President and the safeguarding of the taxpayer's pocketbook.

The following supervising agents and agents in charge represented the field officers of the Secret Service at the annual conference at Washington, D. C., during the week of June 19:

District No. 1, Boston, Harry L. Barker, Alonzo H. Rice, Jr.

District No. 2, New York, James J. Maloney, John J. McGrath.

District No. 3, Philadelphia, William A. Landvoigt.

District No. 4, Newark, Fred W. Gruber.

District No. 5, Baltimore, Harry Cooper.

District No. 6, Atlanta, John C. Marsh.

District No. 7, Louisville, Alonzo A. Andrews.

District No. 8, Detroit, George F. Boos, Frank L. Holliday.

District No. 9, Chicago, Thomas J. Callaghan.

District No. 10, Houston, Forrest V. Sorrels.

District No. 11, Kansas City, William H. Davenport.

District No. 12, St. Paul, Charles Mazey.

District No. 13, Denver, Rowland K. Goddard.

District No. 14, San Francisco, Thomas B. Foster, Arthur F. Grube.

District No. 15, Seattle, William R. Jarrell.

District No. 16, White House detail, Edmund W. Starling.

The conference was addressed by officials of the Treasury Department and of other departments: Hon. Henry Morgenthau, Jr., Secretary; Hon. Stephen Gibbons, Assistant Secretary; Hon. Herbert Gaston, Assistant Secretary; Edward H. Foley, General Counsel; W. A. Julian, Treasurer; Elmer L. Irey, coordinator of Treasury Department enforcement agencies; James V. Bennett, Director of Bureau of Prisons; Alvin W. Hall, Director, Bureau of Engraving and Printing; William S. Broughton, Commissioner of Public Debt; Nellie Tayloe Ross, Director of the Mint; Dr. Carlton Simon, New York City; Thomas E. Darnall, Assistant General Counsel, Farm Credit Administration; David A. Holmes, Director of Finance, Works Progress Administration.

An important feature in the schedule of the Secret Service for the next fiscal year will be the extension of the educational program in the detection of counterfeit money which was started 1 year ago. This program will be intensified through the use of sound motion pictures. During the past year the educational program resulted in a marked decrease in the losses to the public through the acceptance of counterfeit money, and the broadened program is expected to bring forth still better results.

The United States Secret Service deserves the thanks and congratulations of the people of the country for the record it has established during the three-quarters of a century it has been in existence.

Attitude of the United States in the Orient

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, June 23 (legislative day of Thursday, June 22), 1939

ARTICLE BY JOHN T. FLYNN

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by John T. Flynn entitled "United States Should Steer Clear of China Row."

Many agree with Mr. Flynn's contentions. They do not feel that we should be a cat's-paw for the English Foreign Office. Behind most of the foreign concessions of the Far East is profit. They want our soldiers and our sailors to protect that profitable trade. We should steer clear of the row.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of June 23, 1939]

UNITED STATES SHOULD STEER CLEAR OF CHINA ROW

(By John T. Flynn)

NEW YORK.—What is going on now in and around Tientsin is a good example of how the thinking of a whole people can, by a series of easily accepted but false assumptions, get badly mixed up.

America is devoted to democracy. Therefore, what Hitler is doing in Germany and to peoples on the rim of the German lands excites the hatred of Americans. The same thing is true of Italy. fascism means the suppression of democracy among Italians. But also Italy engages in a war of conquest and ruthless invasion of the rights of Ethiopia. And Americans, the supporters of democracy, do not like it.

In the same way what Japan is doing in China arouses the indignation of Americans. But in the course of her campaign in China, Japan gets around to Tientsin. And there she runs into the British. But what are the British doing in Tientsin? Are they there as purely foreign residents peacefully trading with China? Of course they are not. It is the largest commercial city of northern China.

FORCED CONCESSIONS

In 1860 and thereafter, by a series of what are euphemistically called "treaties," the Chinese conceded certain rights to various foreign nations, chiefly Britain, France, Germany, Russia, Belgium, in Tientsin. These concessions were made in much the same manner as Albania recently made "concessions" to Italy. The foreign powers, chiefly Britain, have established themselves in China with arrogance and with no more right to be there than Japan.

On several occasions the Chinese have not behaved to the satisfaction of these foreign concessionaires. Once some Chinese made some unfortunate remarks about certain French nuns and they were promptly treated to a barbarous massacre—nothing else. Japan hardly has to her credit anything less reprehensible in China.

But now Japan seeks an excuse to oust the British from their ill-gotten position in Tientsin. Well, one may take sides in this any way he will. But what has this quarrel between England and Japan as to which one will remain perched upon China's property got to do with democracy?

CHINA HATES THEM

China has hated the foreign concessions for years. They were regarded as invasions of her sovereignty long before Japan began shooting up the Chinese. This is a battle between two imperialist powers as to which one will exploit China.

If one believes in imperialism one may have his favorite imperial power and root for it when it clashes with another. But the question of democracy does not seem to be involved in such a fight. Therefore, upon whatever pretext the American State Department gets itself involved in this fight, it cannot claim to be fighting the battle of democracy. And as for our own interests, it is hardly necessary to add that we are not among the foreign powers with concessions in Tientsin.

Not a Moratorium But a Period of Grace

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, today I introduced a bill to extend the time 90 days for doing the assessment work required annually by law on unpatented mining claims. Since it became evident that we could expect no moratorium on mining-claim assessment work this year, and since the time is up within a week, I felt that a few days' grace should be afforded the thousands of claim holders, many of whom have not done their work and some of whom may not be able to start their work by the 1st of July. I have attempted lately to notify my own constituents that there would very probably be no moratorium afforded at the last minute this year, as was done last year, and I have warned them not to expect such last-minute relief. However, in view of the fact that many of these men are out in the mountains of the West more or less out of touch with the press and other means of communication, I fear that there may be some who have not been adequately warned.

Assuming that it is wise national policy to bring to an end now the granting of an annual moratorium on mining-claim assessment work, after we have passed such moratorium bills for the past 7 years, it still seems reasonable that we should not change this plan too suddenly. For that reason, I feel that we can justly afford to extend a few days of grace for the protection of those who have their savings already invested and who have held claims and done a great deal of work on them through many years. I am told that during the World War an annual moratorium was granted and that it was rather difficult, then, as now, to end the granting of such relief, but that when it was done the claim holders were given a short period beyond the stated time in which to do this work or give up their claims. My bill, introduced today, aims to show that same leniency this summer for hard-pressed claim owners.

WESTERNERS APPROVE EXTENSION

At a meeting of western Congressmen, held this morning, I brought up this matter and several others for their consideration. Some Congressmen were present who had been very much opposed to granting a moratorium again this year but these same men were favorable to granting a short additional period in which the work might be done. In fact, I was authorized by unanimous vote of the western Congressmen present to introduce a bill granting a short extension of time for such work. On my own responsibility I extended the time in the bill from July 1 to October 1.

While discussing the matter some weeks ago with my colleagues who did not favor granting the moratorium again this year, it was said that claim owners who had something worth while but who had not done their work by July 1 would not necessarily lose their claims, as such claims could be immediately relocated. That may be true in certain cases, but I have letters from claim owners who are not only hard pressed financially but who are hundreds of miles from their claims. I cannot resist the belief that to shut them off on the 1st of July with no other safety for them excepting to relocate their claims would mean a loss to many deserving persons. According to my correspondence some of these claim holders are elderly people who have held claims not only for the last 7 years without work but two or three times 7 years with a great deal of work and outlay. To such holders the short period of grace extended may mean the saving of their claims.

SAME AMOUNT OF WORK REQUIRED

Certainly I do not want by this attempt to hold up mining development by moratorium provisions. One reason for insisting on ending the moratorium was to open up thereby for those who would really do some work a great deal of land held by those who had never done any assessment work during the past 7 years of moratoria. The enactment of my bill with its period of grace will not prevent such a result.

The press carried a report sometime ago from Secretary Ickes to the effect that mining claim owners must finish their assessment work by July 1, 1939, or get off their claims. I have talked with several men from the mining region who are lawyers and who declare that such is not the law. It is stated by these lawyers that if the claim holder begins his work by 12 o'clock noon July 1 and continues the work with due diligence until it is completed, the law is satisfied. I would not say what the law is but that is what I am told.

If we are unable to get the measure through by June 30, granting a short period of grace which my bill proposes, I do hope that claim holders who have not done their work as yet will be able to save their valuable property either by relocating the claims or by beginning the assessment work in a legally effective manner before the expiration of the time. I also sincerely hope that my colleagues will recognize the justice of this legislation granting a short period of grace and that the measure will be put through without delay. However, the uncertainty of getting this bill through within a week, if at all, is such that no claim holder should put off beginning his assessment work meanwhile.

The 4–H Clubs

EXTENSION OF REMARKS
OF
HON. EDWARD W. CREAL
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 23, 1939

Mr. CREAL. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to call attention to the recent national meeting of the 4–H clubs at their convention in Washington.

No finer class of boys and girls exists in America than the members of the 4–H clubs. These young people who will be the homemakers of tomorrow will never give their Government any cause for alarm or be disloyal to the Government.

Only Members of Congress who have been reared on a farm, or who are thoroughly familiar with rural life, can properly appreciate these young folks and their work.

The Government is spending millions of public funds today in soil-erosion prevention, reforestation, conservation of water resources, eradication of insect pests, and the restoration of wildlife reservations. A large part of the present condition making these expenditures necessary is due to the fact that lack of foresight on the part of our forefathers made these conditions. I do not believe in the old adage "Where ignorance is bliss 'tis folly to be wise."

Knowledge is power and everyone in any occupation should endeavor to learn more of that occupation. These boys and girls have open, inquiring minds as to what is the best way to the job.

There are no losers in the prize-winning contest, for every boy and girl who earnestly participated in this work has been made stronger by the effort, regardless of where the blue ribbon was pinned.

Youth is ambitious, restless, and energetic, and the attention given to their projects in this work fixes a goal to work toward and is good mental discipline.

What they learn will be forever retained; it will be passed down to generations yet unborn, as well as be contagious to their neighbor observers.

Nearly 40,000,000 people, or one-third of the entire population of the United States, is engaged in agriculture or some branch of it.

The 4–H club members of America will represent the progress of the farm and home of tomorrow.

While reared in a rural community and having voted for each and every piece of legislation beneficial to the farm people, I wish there was something which might be done which would further the work of this particular organization in its great and enduring work.

And as they adjourn their national meeting in the Nation's Capital I take pleasure in calling attention to their presence and to the great uplifting work being done by that organization that will mean so much to farm life in America.

Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. CLYDE H. SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 23, 1939

Mr. SMITH of Maine. Mr. Speaker, not wanting to inject politics in the hearing now held by Elmer F. Andrews for wages for textile cotton workers, I wish to express my views on this subject:

Keenly realizing that it is facts rather than speeches that are desired on this occasion, will simply try to make some observations that came to my attention while our Labor Committee was trying to create the Fair Labor Standards Act.

President Roosevelt, about 3 years ago, asked the Congress for a wage and hour bill that would provide laboring men and women a living wage.

This progressive effort involved the increasing and leveling of wages by eliminating chiseling in business and selfish sectional interests. It was a big proposition for Congress when considering the diversified conditions throughout the Nation.

But it was accomplished. Already reports show human encouragement and business improvement. Likely, impartial, nonpolitical administration of Elmer F. Andrews is responsible in part for its success.

Of course, there will be repercussions from those who want to continue with unfair tactics, a condition that has seriously affected friendly relations between employee and employer, mitigating against cooperation and development.

It was necessary to begin with a low-minimum wage in order that employers could have a chance to adapt themselves to higher wages and less hours of work without interfering with their business.

Proposals to bring about this dream were offered by way of Black and Connery bills which were debated, discussed, dissected for weeks and weeks, and finally defeated by a small majority. This disappointment was in consequence of the fact that wages and hours of work were based on living and manufacturing costs existing in various sections of the country.

At this point it was my pleasure to become a member of a subcommittee, appointed to create another bill. For months and months hearings were held, evidence sought, facts determined, trying to be fair to all interests.

In due time recommendations were presented to Congress known as the Norton bill. The Rules Committee, however, refused to release the report for congressional consideration, thus making it necessary to obtain a petition of 218 names which was secured in record time. After due consideration the proposed legislation was passed by the House and Senate by overwhelming majorities.

The wage and hour bill has been in operation about 8 months, and, generally speaking, has given satisfaction.

If the President was justified in his demands for a fairer work day;

If members of the Labor Committee were justified in reporting the measure to Congress;

If Congress was justified in passing the Fair Labor Standards Act;

If Mr. Roosevelt was justified in signing the bill;

Surely, certainly, our Administrator would be justified in establishing a 32½-cents-per-hour wage for cotton-textile workers. This position can be definitely demonstrated by asking one single question, to wit:

Can the average-sized American family—whether in the North, South, East, or West—occupy a respectable home with some modern conveniences, enjoy nourishing food, proper clothing, medical attention, educate the children, and save a little something for old age with $13.65 per week? It is this very amount that is being contested today to determine whether manufacturers can pay this wage.

I defy, I challenge any man to present a Budget that will provide the normal, natural requirements referred to for the salary indicated. This cannot be done. Thus there is no rhyme or reason for setting up a minimum wage scale for less than 40 cents per hour as enacted into this bill.

Furthermore, I would have to be shown the way before admitting that there should be a varying wage and work hours in any section of the Nation, regardless of amount paid to employees.

It was claimed at Labor Committee hearing that certain States were handicapped by excessive freight rates. Charts, diagrams, and figures were offered to collaborate such contentions.

After studying, very carefully, these claims, my opinion is that the difference is so unimportant that it cannot be applied to a yard of cloth or a pair of shoes. It is generally conceded that if such barriers do exist the Government, now studying this matter, will give relief.

Other States complained about higher factory rents, hydroelectric power rates, more overhead expense, which, in my opinion, far transcends the claims for extra transportation costs.

Yet, wanting to be eminently fair in my discussion of this proposition, I would suggest that a disinterested committee make a thorough investigation of all manufacturing costs in each part of the country, and that differentials be applied wherever handicaps exist.

This brings us to the fly in the ointment—lower wages, more hours—existing in some sections of the Nation that naturally compromise working conditions and lower standards of living throughout the country, many times employers prospering by human privations.

Again I suggest, in the same spirit of fairness, that when underpaid sections accord the same advantages, privileges, opportunities to their employees that are enjoyed by their fellow workers in other parts of the Nation I will vote for working differentials, if they then exist, because there could be an economic issue involved that cannot and should not be disregarded.

Under present conditions I still believe that laboring men and women, wherever located, regardless of color, creed, or race, need and deserve more than 32½ cents per hour, if they are to enjoy those inalienable rights of comfort and happiness unhampered by dependency.

Administrative Law Bill

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

ADDRESS BY HON. FRANCIS E. WALTER, OF PENNSYLVANIA, JUNE 22, 1939

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. FRANCIS E. WALTER before the Philadelphia Bar Association at its annual meeting June 22, 1939, at Philadelphia, Pa.:

The Logan-Walter administrative law bill, now pending in the Congress (S. 915 and H. R. 6324), has been unanimously reported by the Senate Judiciary Committee, with recommendation that it become law; by the subcommittee of the House Judiciary Committee; and has been approved to date by the board of governors and house of delegates of the American Bar Association; by the State Bar Associations of California, Colorado, Illinois, Kansas, Nebraska, Ohio, and Oregon; and by the city bar associations of Boston, Chicago (in principle), Cleveland, Dallas, Phoenix, St. Louis, and this bar association of Philadelphia; by the committee on administrative law of the National Association of Women Lawyers; and by various associations and organizations of businessmen and laborers. The fact that this bill to date has received such Nation-wide approval by legal, business, and labor groups would seem to be sufficient to demonstrate that throughout the Nation there is a tremendous amount of sentiment for the proposed legislation.

Now just what is this need? It will be remembered that in Cohen against Virginia, Chief Justice Marshall stated it as the universal opinion that no suit could be maintained against the United States without its consent and except for a statute in 1824, which gave consent to the district court in the Territory of Arkansas to entertain suits against the United States by reason of French and Spanish land grants in that part of the Louisiana Territory—shortly thereafter extended to the district court in the Florida Territory—no general statutory consent was given by the Congress for suits against the United States until 1855. In the latter year the Congress established the Court of Claims, but it was more of a commission, without authority to enter final judgments against the United States, until 1863, and even under the amendment the judgments of the Court of Claims today must be certified to the Congress for an appropriation before they may be paid—except in internal-revenue cases.

During the long period extending from the establishment of our present system of government in 1789, to 1887, with the two minor exceptions I have mentioned, there was no right to sue the United States. However, during this period of approximately a century the courts worked out, on the basis of their general jurisdiction, adequate practice and procedure for the complete review of the principal administrative decisions of Federal agencies. The courts held throughout this long period that they had jurisdiction to entertain suits against Federal officials who illegally seized private vessels on the high seas; who illegally held possession of private property, such as the Arlington Estate; who had erroneously and illegally collected internal revenue or customs taxes; who had illegally seized private property of a decedent, claiming priority for the debts of the United States; and who refused to perform their ministerial duties—though the jurisdiction in the latter class of cases was limited to the courts of the District of Columbia which possessed, and now possess, in addition to their statutory jurisdiction, a common-law jurisdiction derived from Maryland which, as you know, once included the District of Columbia.

By such procedure arbitrary and capricious, as well as erroneous and illegal, administrative decisions were brought under the complete review of the courts—both on the law and the facts. Generally the facts were tried before a jury. When in the Arlington Estate case Mr. Justice Miller answered the contentions of Government counsel that such judicial reviews of administrative decisions in suits against officers of the Federal Government unduly interfered with the administration of the law, by pointing out in the course of the opinion that without such reviews the administration of government could and might develop into tyranny.

The Court knew whereof it spoke. In the earlier Milligan case, Mr. Justice Davis wrote the opinion striking down an administrative board, established without warrant of law, which tried, convicted, and sentenced to death a civilian residing in Indiana—far behind the military lines—for an alleged military offense, and it is not without significance that before that case reached the Supreme Court the alleged conspirators in the murder of President Lincoln were tried by such a military board, convicted, and hung. What happened once in the history of this Nation can happen again—just as it has happened in other places in the world. But you may inquire why it is that if the courts for a period of approximately a century reviewed administrative decisions on the basis of both the law and the facts, they do not today review such decisions on the basis of the law and the facts, and if they do not, why the necessity that they should do so in appropriate cases.

The answer to these questions is most interesting. As you know, only the Supreme Court of the United States had part of its jurisdiction defined in the Constitution and was established by name in the Constitution itself. All the appellate jurisdiction of the Supreme Court of the United States and all the jurisdiction conferred on that Court, and all the jurisdiction which is not named in the Constitution are of statutory origin, and as the Congress gives it in this respect the Congress may likewise take it away. Further, the circuit courts of appeals and the district courts are created and exist by virtue of statutes, and their jurisdiction is wholly statutory, to be exercised in accordance with the practice and procedure which may be prescribed for them. The result of

this is that at one time in the history of the Federal Government—when party feelings ran high—the Congress repealed the appellate jurisdiction of the Supreme Court as to certain classes of cases, one of which was then pending before the Court. Upon repeal of the statute, the Supreme Court dismissed that case, and there was no judicial remedy provided for the review of administrative despotism practiced in the Southern States under reconstruction and enforced at the point of the Federal bayonet.

This lesson was not lost on minority groups representing special interests when the complexity of the business and economic life of America became such, with the turn of the century, that Federal regulation and control had to be extended to many activities. The statute creating the administrative agencies, with the turn of the present century, did, in fact, provide in most instances for judicial review of administrative decisions. However, unlike the statute of 1851, creating the California Land Commission, which gave the courts full and complete jurisdiction to review—upon the administrative record—the law and the facts involved in each and every case, these statutes after 1900, creating Federal administrative agencies, sought to, and did, restrict the scope of judicial review. The courts were not given jurisdiction under such statutes to review the administrative decisions as these same courts had reviewed administrative decisions from 1789 to 1900, or as was provided in the act of 1851 for review of the decisions of the California Land Commission, and the Congress having spoken, the courts were no longer at liberty to develop their general jurisdiction in this respect.

On the contrary, all the statutes creating the new Federal administrative agencies—relating to regulatory and control matters in economic and social affairs of the people—provided in some instances that the decision of the administrative agency on the facts should be final and conclusive; in other instances that these administrative findings of fact should be final and conclusive if supported by evidence; and in a few instances that they should be final and conclusive if supported by substantial evidence. There was no uniformity of the scope of judicial review under the statutes creating these administrative agencies and little or no provision was made in any of the statutes as to the practice and procedure which should be followed by the agencies in conducting hearings and deciding controversies; that is, no uniform or any other procedure was required to be followed by such agencies in the exercise of their quasi-judicial duties and none of them was required to issue regulations interpreting the details of the statutes they were required to administer. The fact of the matter is that during the period when most of these agencies were being created the attention of the Congress appears to have been directed to the formulation of statutes, which would control the governed, and little or no attention was given to the setting up of machinery in the statutes so that the governors should be required to control themselves.

It is trite to state to a body such as this that the Constitution of the United States made a tripartite division of governmenal power—with the legislative power in Congress; the executive, including the administrative power, in the Executive; and the judicial power in the courts. Of necessity, the Congress must impose a certain measure of legislative, executive, and judicial powers on the administrative officers and agencies of the Federal Government in administering the law, but it was never intended by the proponents of such legislation that these administrative agencies should exercise the legislative, executive, and judicial power free of all restraint and regardless of the terms of the Constitution and constitutional limitations. It is no secret today that many of these administrative agencies believe—and they practice the belief—that they are above the law and that they consciously and deliberately disregard both the terms of the Constitution and the statutes under which they operate. Any extension or even continuation of such unlimited power in the hands of administrative officials must mean the end of constitutional rights and liberties in America.

With at least 1,200,000 officers and employees in the administrative branch of the Government, many of them spending public money appropriated for relief, for instance, to influence elections and retain or place in office persons believed to be favorable to their interests; with the unlimited power to reward or punish constituents of recalcitrant Members of the Congress; with power to make war, through hundreds of thousands of avenues, upon the courts; and with nothing to control them except their own selfish interests and the interests of the special groups, neither Presidents nor the Congresses can exercise any freedom of action when confronted by their united opposition.

I do not claim that my bill is a panacea for all ills which inflict the body politic, but I do claim—and I believe that it has been amply demonstrated—that the bill will return to the courts that degree of jurisdiction which they exercised from 1789 to 1900 over many classes of controversies between administrative officers and individuals and which they now exercise as to the older activities of Government except where their jurisdiction in that respect has been constricted as in the reviews of the Board of Tax Appeals, for instance. That is to say, my bill will permit the courts, in their discretion, to review the facts of all administrative decisions of all the agencies covered by the bill in the same manner and to the same extent that the appellate courts have long reviewed the decisions of equity and admiralty judges.

I appreciate that there is abroad in the country in some circles the belief that we have entirely too many administrative agencies of Government and that we should abolish them, thereby returning to the simple days of the past. In my judgment, such belief cannot be placed in practice because of political and practical reasons. These agencies have been created under both Democratic and Republican administrations, and it would be politically impossible to secure the repeal of the statutes creating them. The courts could not carry the burden of applying the law with private individuals doing the enforcement because the courts would be overwhelmed. I need do no more in this connection than to cite your attention to the state of the court dockets during the prohibition era and to remind you that these cases arose in the operation of but one bureau of one department of the Government with complete court enforcement. If you multiply that situation by more than 100 and consider that the Treasury Department decided approximately 603,000 cases, while all of the courts during a corresponding period decided only 141,000, you will have some appreciation of the tremendous volume of administrative decisions being ground out every day by approximately 100 administrative agencies of Government.

Furthermore, people of ordinary means and the poorer people are not able to take the burden of enforcing many of these regulatory and control statutes which adversely affect them. This is not mere theory, but is a fact amply proven by the history of both England and the United States. In my judgment, these agencies are here to stay, and therefore we must so streamline them that they can be compelled to dispose of the great bulk of controversies arising in the administration of the statutes entrusted to them expeditiously, and dispose of such controversies in a fair and reasonable manner and in accordance with the Constitution and the several statutes. The balance of such controversies—involving serious and hotly contested questions—should be brought—in the discretion of the citizens—before the United States circuit courts of appeals with such jurisdiction in the courts that they will give the administrative record the same searching examination and determination in their discretions that the courts have long given to equity and admiralty cases.

As a matter of fact, under such a procedure I honestly believe that there will be comparatively few cases which will have to go to the courts. The administrative agencies can, and doubtless will, determine the cases in a fair and reasonable manner and in accordance with the law if they know that their decisions may be subjected to judicial review—a review so complete that the entire matter may be searched and determined if counsel can show that there has been a miscarriage of justice.

Gentlemen, I could speak on this subject the entire afternoon, but that is unnecessary. There is much in print concerning the bill and much will be in print concerning it. I ask you to study the issue submitted, whether pro or con, and that you believe me when I tell you that we are spending every ounce of energy we have to the solution of this problem without fear for any political party or for any social, economic, labor, or other groups in the United States. It is our determination that the administrative procedure and judicial review shall be such that the rights and liberties of the people shall be protected and at the same time that the laws of the United States shall be administered without any unnecessary delay in doing so. There is no intention on the part of any one connected with this matter to "hamstring" the administration of the law by any administrative agency. If any law cannot be administered without running afoul of the Constitution of the United States that law is an illegal one and should not be administered, or if any administrative action is contrary to the Constitution and statutes authorizing such act, then the act is an illegal one and the avenues to the courts must be reopened to the end that administrative absolutism may not draw within its maw the rights and liberties, including the property of the American people, whether rich or poor, weak or powerful—as has been done in other countries and even in our own country in a few instances during temporary aberrations of the governing minds.

Shall We Go Totalitarian?

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, June 23 (legislative day of Thursday, June 22), 1939

EDITORIAL FROM WALL STREET JOURNAL

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Wall

Street Journal of the issue of June 23, 1939, under the heading "Shall We Go Totalitarian?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Wall Street Journal of June 23, 1939]

SHALL WE GO TOTALITARIAN?

President Roosevelt, in his letter to leaders in Congress, proposes to substitute State capitalism for the historic American free economy. He makes no pretense that this is "emergency" action—as, of course, it could not be—but frankly concedes that this "self-liquidating program" would represent a permanent policy under which the Federal Government would pour billions of public funds into enterprises which, throughout the country's history, have been the fields for private individual effort.

The President assumes that predetermined limits would be set within which these Government undertakings would be confined and that they would be in no way competitive with private enterprise. Both assumptions are false. No government which has embarked itself on state socialism has ever been able to go only just so far and there stop. Always the necessity has arisen for more and more far-reaching controls. If we should begin with a blueprint calling for only $3,000,000,000, the completion of the outlined structure, or the exhaustion of the sum authorized short of completion, will raise the insistent cry and create the seemingly logical case for doubling or trebling the ultimate expenditure.

Again, it is wholly contrary to the fact to say that these projects would not compete with private enterprise. Four of the six categories the President vaguely describes could not do otherwise than compete with or displace private enterprise. Some of the projects cannot be self-liquidating unless that term is given a new and more convenient definition. But there is no question but that the execution of such a program would enormously increase the power of the Central Government to order the existence of every community, every occupational group, and ultimately of every individual in the land.

President Roosevelt has often been accused—falsely accused, this newspaper has believed—of desiring to fasten upon the United States some degree or other of "totalitarianism," or even dictatorship. Whether he realizes it or not, he has now proposed that Congress take a long stride toward an absolutist state.

Not only do we believe that this proposal is unsound statesmanship, but we believe that it is equally bad from the standpoint of practical economics. One of its most discouraging features is that an administration in power for more than 6 years has produced, in its search for methods to combat long-continued unemployment, only another—and this time shopworn—white rabbit.

The basic idea antedates the New Deal itself. But year after year it has been examined and reexamined and then largely rejected on the grounds that there simply is no vast available outlet for public funds in projects which are truly self-liquidating and truly noncompetitive with private industry. Governments, generally speaking, do not perform functions and cannot discover functions which, on the ordinary standards of business, will pay for themselves in cash, and still avoid the actual fields of business.

On the other hand, the Roosevelt administration apparently fails to understand that the principle of self-liquidation which it seeks to apply to a field where it is generally inapplicable is the very principle which, if applied where it belongs, makes the American economic system work.

The self-liquidating projects which this country needs today—and simply must have if it is to attain sound recovery—are the self-liquidating projects of private enterprise. And the administration, instead of adding another to its series of stop-gaps, should above all else be seeking to remedy the difficulties which obstruct the flow of private funds into the all-important field of private investment.

Furthermore, it is a significant fact that the self-liquidating projects of private business—the self-liquidating projects which we believe to be the only sure answer to the question of unemployment—can to some degree turn out to be non-self-liquidating in actual practice, and the country can stand the result. It is not one of the cardinal rules of free private enterprise that every new venture must turn out successfully. But the Nation certainly cannot look forward with the same equanimity to unexpected but inevitable failures in the realm of public lending.

Government, or Government-guaranteed, securities must be paid, both interest and principal, in full or the very basis of the national economy crumbles. For the Government does not have the privilege—so indispensable though frequently painful in the realm of private enterprise—of sloughing off obligations which, in the very nature of things, cannot be carried.

In other words, the loans to finance projects outlined by the Chief Executive yesterday will have to be liquidated whether or not they prove in practice to fall within the category (regarded, somehow, as being almost magical) of self-liquidation.

The Wall Street Journal does not believe that the system of free private enterprise can be floated off the rocks of depression on a flood of Government credit no matter what new and obscure forms that Government credit may take.

We cannot believe that Congress will be either disposed or permitted to take this long step toward absolutism, now or ever.

The W. P. A. Appropriation Bill—The American Tragedy of 1939—A Death Sentence for a People's Art—A Blow at Plebeian Culture—A Move Toward Reaction

---

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, June 16, 1939

Mr. COFFEE of Washington. Mr. Speaker, it was with great reluctance that I finally concluded to vote for this bill. It is so circumscribed with restrictions, limitations, thou-shalt-nots, that it well nigh strait jackets the W. P. A. for purposes of practical and efficient operation.

The Nation, in its issue of June 10, 1939, says of the bill:

A House appropriations subcommittee has drafted an ominous plan for scuttling the W. P. A. which reactionaries hope to force through in the remaining weeks of Congress. The plan calls for the abolition of prevailing wages on W. P. A. projects in favor of a "security wage" well below present standards. An effort will be made to eliminate the highly useful arts projects altogether and to curtail other white-collar operations. No surer formula for plunging the country back into depression has been devised.

With the foregoing sentiment I am in hearty accord. The editorial in the famous liberal weekly was written prior to the debate upon the bill in Congress, but the gloomy prognostication made by the editor has come to pass.

The spectacle of today's 14-hour session will long linger in my memory. I thought of the Bourbons of France prior to 1789. I wondered what would happen to the hundreds of thousands of heads of families who by this bill are mercilessly added to the rows of poverty-stricken who now are knocking at the doors of relief depots for assistance. Not so long ago our President pledged to the people that this administration would not let the people down. I exonerate the President from responsibility for this measure.

Mr. Speaker, this legislation is a diabolically ingenious congeries of cleverly devised decrees and ultimata designed to tighten regulations about the W. P. A. to the point that a man is held up to the country as a suspect or guilty of reprehensible conduct if he accepts employment in that agency. Let me epitomize a few of the features of the bill to which I take decided exception:

First. The proposal to slice off $125,000,000 of the already inadequate appropriation and transfer it to P. W. A. This cute little proposition reduces further the amount for employment of the needy to such an extent that 154,000 bread winners are denied employment for a whole year. Yet the P. W. A. provision is so small, relatively, that it will obviate the possibility of P. W. A. itself functioning upon an efficient scale.

Second. The drastic reduction of $42,000,000 proposed in the National Youth Administration is a bitter assault upon the younger group of unemployed, whose morale and welfare are indispensable to the preservation of our Nation. While this section was improved somewhat by a compromise amendment that added some $17,000,000 to the amount designated in the bill, there yet remains a paucity of funds for reasonable expansion of this admirable agency and its laudable program.

Third. Even though that section of the bill ordaining a limit to W. P. A. construction of $25,000 per unit was changed on amendment to double that amount, the effect of the provision, even as amended, is to penalize municipalities in favor of rural areas, and to make impractical and unjustifiable many proposed construction enterprises. More than 50 percent of the W. P. A. construction of the past would have been interdicted by this provision. We are thus specifying a return to the period and method of leaf-raking and synthetic work captiously referred to as boondoggling by noisome critics.

Fourth. Even the majority leader took the floor to address himself as opposed to the committee's proposal of the three-man administrative board. This proposition goes directly contrary to the trend of the reorganization bills providing for the replacement of cumbersome boards and commissions by individual administrators. It is patent that this provision was intended to be a rebuke for Col. F. C. Harrington because the colonel had exhibited a breadth of view and a tolerant attitude which, to me, was highly praiseworthy, but which to the majority of the committee was apparently deserving of censure. I honor Colonel Harrington for his warmth of heart and for his unwillingness to condemn those who are the victims of social and economic injustices in our country.

Fifth. The proposal to eliminate all Federal projects provided in the committee's bill is an assault upon white-collar projects, evidently motivated by the committee's criticism of a few isolated individuals in these projects who have made questionable remarks or conducted themselves in foolish ways. Immediately the impression was given out to the press that the theater, music, arts, and writers projects were saturated with communism; that "red" Russia dominated the W. P. A.; that bomb throwers and destroyers of government were characteristic of all these agencies. Did the committee want to find these things out? Did they enter the investigation with the idea in mind that such was the case? Did they cherish a conviction beforehand as to these projects? The so-called investigation carried on by the committee bore the earmarks of a proceeding requiring that the person examined must prove himself innocent and the project under fire must demonstrate its purity. Disgruntled former employees were given wide latitude in denouncing erstwhile coworkers. Credence was attached to opinion evidence. The project or individual so condemned was denied the opportunity of refutation in the same forum. I insist that these white-collar projects have been among the greatest contributions of the W. P. A.; they have brought into being a people's culture and a people's art. We have lagged behind Europe and South America in this respect and these projects were bringing us to the attention of intellectuals abroad. I denounce the elimination of the theater project and the virtual sentence of death directed at the other white-collar projects because of the limitations as to sponsorship insisted upon in this bill.

Sixth. One of the most inexcusable provisions of the bill is the 60-day starvation period. Under this bill the head of a family who has been on the rolls for 18 months is, ipso facto, guilty of some kind of crime and must be laid off for 60 days, after which it is supposed, if he again proves his need, he may theoretically enter upon the rolls. The House modified this by exempting veterans and citizens over 45 from this harsh treatment. Yet the inhumane and heartless principles remain in the measure. This is a purge of the needy because they have been unemployed by private corporations for too long a period. It is callous, uncivilized, and outrageous thus to throw hundreds of thousands unwanted and forsaken into the streets with no hope of employment during the 60-day period. There is little prospect of the restoration to the W. P. A. rolls of those so dismissed. Evidently the subcommittee assumes that because of the 18 months W. P. A. work these men would be able to save up enough money from the handsome wages they have enjoyed to tide them over a considerable rainy day.

Seventh. The political provisions in the bill deny the W. P. A. worker the opportunity to exercise his prerogative of citizenship. If he holds a supervisory position in any capacity he must resign if he runs for any kind of political office, no matter how insignificant, even though the position sought is a nonsalaried one. He is likewise prohibited from serving as a campaign manager for a private citizen seeking a similar elective office.

The committee conducted a form of hearing which it permitted to be called an investigation. These hearings were marked by testimony of individuals and observations by committeemen to the effect that the Federal theater projects were a failure, were Communist-controlled, and were for the most part disgraceful. A devastating answer to that charge was sent to all Members of Congress by the foremost experts in the Nation on the subject of the drama—the dramatic critics of the New York Times, The New Republic, Forum magazine, The Nation, Life, Vogue, the Brooklyn Eagle, New York Daily News, New Yorker, New York World-Telegram, Cue magazine, the Catholic World, and many others. These critics declared their enthusiastic approval of the theater projects. If the committee had sincerely desired to ascertain the truth, why did not they summon the dramatic critics who were in the best position to discuss the matter? The Philadelphia Record in a recent editorial publishes a few pungent sentences which I quote:

It is up to the Senate to stand fast against this deliberate stampede, to rewrite the W. P. A. bill so that it makes sense.

Is it too much to ask for a decent, thoughtful, human approach to the lives of 2,500,000 families?

The summary W. P. A. rules adopted by the House affect these lives more intimately than almost any other legislation conceivable. They enter the home to distort and tangle the most intimate of family affairs; they affect every meal, every hour, every action. Is it irritation at having this responsibility that has made some of the Representatives so unthinkingly bitter toward the unemployed?

The House measure calls for forced retirement of all W. P. A. workers of 18 months' standing, except war veterans and heads of families over 45 years of age; it snatches $125,000,000 from the scanty $1,477,000,000 Works Progress Administration and limits Public Works Administration to that sum; it limits works-progress projects to a cost of $50,000 and Public Works Administration projects to a cost of $500,000, and is thus a sectional measure deliberately loaded for the South and against the more costly big-city projects; it abolishes the Federal theater project; it makes the Federal art project dependent on local support.

The inevitable effect of the bill will be to increase the local home relief burden. In most cities there are no funds to meet this increase.

Worse, the bill will frighten every W. P. A. worker, every marginal worker in private industry to whom W. P. A. has been the "ace in the hole," every industrialist who has looked to both W P. A. and P. W. A. as a source of business.

The stimulating effects of the spending program are psychologically reversed and canceled. By arbitrary and capricious regulation, the House makes sure that the money spent will be wasted instead of used.

Let the Senate throw the bill into conference with an amendment providing $300,000,000 for W. P. A. for the next 2 months, under present rules and regulations, during which time the Woodrum measure could be rewritten.

Let the Senate thereby halt the stampede and the fake relief crisis.

Let us not decide the most important Federal question of our day in the spirit of a post-midnight poker game.

Mr. Speaker, this bill is a modern tragedy. It provides for a return to apple-selling days. It is a repudiation of the New Deal. Its passage is made possible by a coalition of conservative Democrats and almost unanimous Republican support. I predict that misery and want, distress, and demoralization will be its sequel.

We have again flouted the unemployed. We have economized at the expense of those who suffer and are inarticulate. We have red baited. The House has been riotous and hilarious while the membership steam-rollered its way through the measure. The longer the House was kept in session, the less likelihood there was for patient consideration of salutary amendments which would have improved the bill.

So, I reiterate, it was with profound regret that I reluctantly cast my vote in favor of the measure, not because I approve of much of it, but because it was this bill or nothing—because a half a loaf is preferable to no bread.

W. P. A. Writers' Project—Workers Alliance—Shades of Burns, Carlyle, Thomas Chatterton, and Dr. Johnson

---

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

Mr. ALLEN of Pennsylvania. Mr. Speaker, out of the babel of tongues which befuddled the convention of the

Workers Alliance in Washington several weeks ago there emanated the following questionable observation:

The W. P. A. Writers' Project should be a continuing Government function to take care of novelists who can have published only one book every couple of years.

Page Margaret Mitchell. It has been at least 2 years since she wrote Gone With the Wind.

The above was spoken by one Emmett Gowen, an obscure newspaperman and inconspicuous author. Mr. Gowen's proposal would add to Uncle Sam's onerous burdens the subsidization of third-rate authors and the rearing of their anemic literary offspring. The taxpayers who refuse to patronize these literary hacks voluntarily will be obliged to support them by means of Government subsidy. Let us all become authors. In return for penning a few bad lines the United States Government will succor us. We will have to be cautious, however. If perchance our work should develop a favorable type, a private publisher might discover us and Uncle Sam's munificence would be withdrawn. We must preserve mediocrity in return for security. And then what? The dark age of literature lies before us.

Subsidization is the inevitable forerunner of regimentation and control. When a government through its bounty invades the field of literature, authors will not write what they feel or think, or what the Muse within them may inspire. Their work invariably will be composed to tickle the fancy of some appointed bureaucrat. Those who bestow the bounty will sit in the judgment seat. Real artists would prefer the chains of poverty to this sycophancy.

The fact that Gowen and his sheep would sponsor such a declaration clearly indicates that they are not artists in the true sense but mendicants prostrating themselves at the door of the Federal Treasury. No literary masterpiece will ever burgeon from such barren ground as this.

Isaac Disraeli, in his Essay on the Literary Character, writes as follows:

Poverty is a state not so fatal to genius, as it is usually conceived to be. We shall find that it has been sometimes voluntarily chosen and that to connect too closely great fortune with great genius creates one of those powerful but unholy alliances where the one party must necessarily act contrary to the interests of the other. Poverty is a relative quality, like cold and heat, which are but the increase or the diminution in our own sensations. There is a poverty neither vulgar nor terrifying, asking no favors, and on no terms receiving any; a poverty which annihilates its ideal evils; and, becoming even a source of pride, will confer independence, that first step to genius. The emolument will produce the industry which furnishes works for popular demand; but it is only the principle of honor which can produce the lasting works of genius.

Gibbon once observed of himself, "Perhaps the golden mediocrity of my fortune has contributed to fortify my application."

Even a literary tyro must realize that great masterpieces are the result of the authors' craving for literary expression. The craving springs from the free, unfettered mind. The mere emolument of security would be no inducement to creative authorship. On the contrary, it would probably arrest initiative and smother latent genius. A task writer never built a literary monument.

Out of the fertile soil of poverty and struggle grew the Scotch ballads of Robert Burns. In extreme discomfort and in penurious circumstances the great Carlyle wrote Sartor Resartus. Edgar Allan Poe, indigent throughout the greater part of his life, wrote his best works when his financial condition was most straitened. The Gold Bug and The Raven were the results. Samuel Johnson learned in suffering what he taught in song:

Slow but surely rises worth, by poverty depressed.

The great heights attained by these authors were the direct result of their victory over adversity and heartbreaking disappointments. No dole was offered to stultify their genius, nor did they seek it. I dare say that if any of the aforementioned masters had sought refuge on a writers' project their names would have become mere numbers among the musty records of some ancient bureau.

Unquestionably there are many in America who share Mr. Gowen's views. They flock to the wailing wall begging for the chance to sell out for a mess of pottage known as security. Our German brethren did that, and they got Hitler! We have seen from the experience of other peoples and other nations that governments cannot legislate away the natural impediments of life. Progress is preceded by difficulties. Nature planned it that way. Nature never intended that able-bodied men should be nursed from the bottle of doles and subsidies. Nature does grant to men, however, the right to earn a living and the opportunity to take care of themselves. It is on this latter fact our Government and our people should concentrate their attention today.

Peaceable Solution of International Problems

EXTENSION OF REMARKS

OF

HON. OSCAR YOUNGDAHL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

EDITORIAL FROM THE MINNEAPOLIS TRIBUNE

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of June 20, 1939:

[From the Minneapolis Tribune of June 20, 1939]

IT SHOULD BE POSSIBLE

Despite some renewal of tension both in Europe and the Orient, there are occasional promising indications that nations in disagreement can gather peaceably about the council table to discuss mutual problems. The Manchester (England) Guardian found one recently, rather dramatic in some of its particulars. Officers of the armies of Britain, France, and Germany sat around a table in London. There was no point in dispute among them. Rather, they were solemnly agreed. They were attending the fourth meeting of the Anglo-German-French Committee of the Imperial War Graves Commission. Under an agreement made in 1936, each country now exercises the right to maintain and inspect the resting places of its dead when found inside another's frontiers.

A significant remark was made by the German military representative at this last meeting. It was Vice Admiral Von Trotha, and he told his French and British colleagues: "In this work we have achieved a comradeship which, while deeply respecting each nation's military virtue and will to live, yet realizes that the nations are knit together by unbreakable bonds."

Where sources of international friction are continually emphasized, it is of decided interest to hear a military man talking about the "unbreakable bonds" which knit nations together. Of course, Vice Admiral Von Trotha was speaking primarily of the graves of fallen warriors. The dead of each nation formed the tie he had in mind. He did not forget to make reservations in his statement. He acknowledged mutual respect for "military virtue" and the "will to live." But there is a fundamental importance in the paradox of comradeship which he describes.

The comradeship is an affecting one, attained over the graves of those who fell as each other's victims. It could prompt a great many conclusions, including some which would emphasize the fact that the men in those graves really had no quarrel one with the other. An outstanding conclusion, however, should be this: If wartime enemies can find a bond of comradeship about the graves of their fallen, there should be genuine hope for the peaceable solution of other international problems about the council table.

Four Months Under the British Trade Agreement

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

Mr. REED of New York. Mr. Speaker, the trade agreement between the United States and the United Kingdom was signed November 11, 1938, and became effective on January 1, 1939. This agreement is the most all-inclusive one

thus far negotiated by the State Department, and, because of its importance, it is well to examine trade between the two countries for the first 4 months of the agreement.

In an article in the New York Times, of June 11, 1939, Mr. Charles Egan presents certain figures showing the position of trade under the agreement. It is necessary, however, to examine the data a little more closely in order to ascertain the real significance of the agreement.

In general, the agreement thus far has tended to favor the United Kingdom. United States imports from the United Kingdom have increased from $34,865,000 in the first 4 months of 1938 to $45,869,000 in the first 4 months of 1939, or by 31.6 percent. United States exports, however, have decreased from $189,794,000 to $157,325,000 over the same period, or by 17.1 percent—figures are from the New York Times of June 11, 1939.

Sharpest criticism of the treaty comes from the wool-goods interest, with dinnerware producers a close second.

Same source.

Wool-goods imports have increased from 1,876,958 yards to 3,853,298 yards, while exports of cutlery, hardware, and so forth, from the United Kingdom to the United States have increased from £67,635 to £89,549—accounts relating to trade and navigation of the United Kingdom, April 1939. Over this same period, total British exports of cutlery declined from £3,031,447 to £2,896,531—same. Thus, two of Britain's most important industries have shown substantial gains as a direct result of the agreement. The position of the United States will be examined in relation to a few of the more important concessions received.

The most-talked-of concession received by the United States is that on wheat on which the duty of 6 cents a bushel was removed and wheat placed on the free list. In a press release of November 11, 1938, the State Department predicted that "the granting of duty-free treatment for wheat should prove of marked value to American wheat growers." At first glance, this prediction seems justified, as American exports of wheat for the first 4 months of 1939 increased by 1,724,916 hundredweights—112 pounds—over the corresponding period in 1938. To attribute this increase to the trade agreement is, however, rather farfetched. From August 1938 to April 1939 the United States has subsidized the export of over 21,000,000 bushels of wheat to the United Kingdom. Obviously the reduced duty had nothing to do with England's acceptance or rejection of our subsidized wheat. The duty-free status does, however, have the effect of reducing the subsidy by 6 cents, but this can hardly be called a "normal" trade gain. The State Department, in a further comment on this concession, said:

A duty of this size applicable to wheat from some countries and not others often is sufficient to divert the trade. (Press release, November 11, 1938.)

Removal of the duty has tended to rectify the former diversion of trade, but unfortunately not in the direction of the United States. Under the extension of most-favored-nation treatment, the benefits of this concession were granted to all major wheat-producing countries. Thus, we find that British wheat imports from France increased from 6 hundredweights in the first 4 months of 1938 to 2,158,873 hundredweights in the first 4 months of 1939, while imports from Rumania increased from 26,413 hundredweights to 5,102,180 over the same period.

Imports of wheat by the United Kingdom

[In hundredweights=112 pounds]

	Total	United States	France	Rumania	All other countries
4 months ending April 1938	28,761,471	6,656,108	8	26,413	22,078,944
4 months ending April 1939	37,321,139	8,381,024	2,158,873	5,102,180	21,679,062
Percent change	+29.8	+25.9	+35,981,116.7	+19,216.9	−1.8

Source: Accounts relating to trade and navigation of the United Kingdom, April 1939.

The case of raw cotton is somewhat different. Our exports of short-staple cotton declined from 2,763,651 centals—100 pounds—for the first 4 months of 1938 to 774,714 centals for the first 4 months of 1939, a decrease of 1,988,937 centals. In explanation of this, Mr. Egan points out:

War uncertainties are blamed by foreign traders for the sharp drop in sales of raw cotton to England in the first 4 months of this year. (New York Times, June 11, 1939.)

A closer examination of the available figures indicates, however, that uncertainties in the United States are the prime cause for this tremendous drop. Total imports of raw cotton by the United Kingdom declined from 4,104,377 centals for the first 4 months of 1938 to 2,215,974 centals for the first 4 months of 1939, a decrease of 1,888,403 centals. When compared with the decline in imports from the United States, it is found that the United Kingdom has actually increased its imports from other countries by 100,534 centals.

That this situation exists is not surprising. The United States, through price-pegging operations, now holds approximately 11,500,000 bales of cotton. What to do with this huge surplus has brought forth many schemes, the most prominent being the export-subsidy plan. Thus, in spite of the necessity for large cotton reserves in case of war, England has been buying only for her immediate needs and will continue to do so until our surplus-disposal plan is definitely decided upon. In addition, the threat present in this carry-over has had a very depressing influence on world-cotton prices. This has accentuated the spread between the United States pegged price and the world price and is a further trade-diverting factor.

The State Department had high hopes that the reduction from 10 percent ad valorem to 4½ ad valorem in the duty on softwoods would result in increased exports of this product to the United Kingdom. It was pointed out by many, however, that Canadian softwoods still enjoyed duty-free status and that the 4½-percent preference precluded any marked rise. Four months under the agreement has substantiated this. For while British imports from all countries increased from 204,421 standards—1,980 feet board measure—in the first 4 months of 1938 to 231,587 standards in the first 4 months of 1939, or by 13.3 percent, imports from the United States declined from 13,583 standards to 10,074 standards, or by 25.8 percent, over the same period. Imports from Canada over the same period increased from 62,599 standards to 93,599 standards, or by 49.5 percent.

The State Department should not be overly criticized for its wishful thinking, but it should be criticized for making provisions for further concessions to Canadian softwoods on this basis. In the first agreement concluded with Canada the duty and the revenue tax on softwoods were reduced by the full statutory limit of 50 percent. In spite of the hardship to the American lumber industry, the charges were bound against increase in the new agreement. In addition, the quota on Douglas fir and hemlock was removed and provision was made for further concessions, pending action by Congress.

Because of the triangular nature of the Canadian and British agreements, American concessions to Canada were granted in exchange for British concessions to America. So far as has been shown, the British concessions have meant little to American lumbermen. The American concessions to Canada, however, have proven extremely beneficial to Canadian lumbermen. United States imports of softwoods from Canada increased from 127,531,000 board feet in the first 4 months of 1938 to 173,789,000 board feet in the first 4 months of 1939, or by 36.3 percent—office records, Forestry Division, United States Department of Commerce. Thus, once more we see the State Department willing to give more than it receives at the expense of American industry.

In conclusion, trade between the United States and the United Kingdom, after 4 months under the agreement, indicates that the United Kingdom is the principal beneficiary of the agreement. While trade over such a short period is not conclusive evidence, the statistics point to a continuation of this trend.

The Mississippi Becomes of Age

EXTENSION OF REMARKS

OF

HON. WILLIAM S. JACOBSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

ADDRESS BY H. W. SEAMAN, OF CLINTON, IOWA

Mr. JACOBSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following address delivered by Mr. H. W. Seaman, of Clinton, Iowa, on the occasion of the dedication of lock and dam No. 13, located on the Mississippi River at that city on June 18, 1939:

Completion of lock and dam 13 forges one more link in a chain of lakes that enables this marvelously fertile producing region to function economically for the Nation's welfare. The entire valley and this north-central section in particular is now, as never before, a going concern.

To capitalize upon these new-found facilities we must use them to the fullest extent. Never has any similar project met up with such an instantly favorable response. Cheap water transportation for the movement of bulk commodities provides a firm foundation for the prosperity of any section, region, or nation, and large-scale barge transportation such as we now enjoy forecloses all doubts as to the wisdom of Congress in authorizing the project and following through with funds for its completion. It is a peacetime blessing and a wartime necessity.

BETTER FARM CROPS

It will restore our idle acres to full-time production by marketing their surplus products abroad. The world is hungry. Teeming millions are starving for lack of food. By making commercial fertilizers and other farm requirements cheaper, it will not only increase our crop yields two for one, but will reduce the costs of living on the farm, so that by the sheer force of lower costs of production, coupled with lower costs of transportation to and from tidewater, our farmers can profitably undersell their less-favored competitors.

Riverside elevators at rail-crossing points will clean, grade, and insure their grains and provide the farmer with negotiable bonded warehouse receipts that can either be sold or that can be borrowed against at a very low rate of interest.

This plan far outweighs the storage of surplus grains on the farm; it makes the farmer independent.

Meat-packing establishments soon can place their freshly killed products into mechanically cooled barges and take them leisurely downstream, maturing them en route, and land them shipside to any refrigerated ocean vessel, or, later on, if, as and when the Florida canal is completed, take them all the way through protected channels to New York, Philadelphia, or other east coast consuming markets, at less cost and in better condition than by rail. Barges can be back loaded; the yellow meat cars never are. It is the return of these cars empty that eats into the farmers' profits.

MOVE RAW MATERIALS

The harnessed Mississippi system can now transport from their source of origin a great preponderance of the Nation's worth-while raw materials—its food staples; its cotton and wool; its iron ore, coal, oil, and gasoline, together with its copper, lead, zinc, and sulphur—a battery of human necessities such as are nowhere else produced under one flag.

It is a staggering comment to say that, by and large, the big volume of these key raw materials, especially foodstuffs and iron ore, all come from farms and mines directly tributary to our upper river. Until now this area has been denied water transportation to make those raw materials accessible for conversion purposes into finished products for domestic use or world export.

CLINTON TO BENEFIT

A sharp upswing in industrial employment is due for this section. The program of plant enlargement, recently announced by the Clinton Co., will soon be beyond the blueprint stage. The Continental Grain Co. is eagerly awaiting the construction of its elevator here, to be ready to move the fall crop. This will bring a daily visitation of farmers' trucks, and the resultant cash disbursements will find their way into local trade channels. The construction of our city docks will not only furnish needed local employment, but will appreciably lower our living costs and soon start Clinton on its road to back-country distribution of merchandise. This will stimulate the location here of distributing houses in no small way. Operation of the du Pont plant in the near future is a certainty.

The North Western before long will emerge from bankruptcy as an integral part of the Union Pacific system, which now virtually controls its operation. When the Union Pacific does get into action as a real instead of a paper owner of the North Western, then the Chicago shops will be moved back to Clinton.

The New York Central, North Western, Union Pacific, and Illinois Central roads are all controlled by one and the same interest, and they will soon consolidate into one system.

Clinton then will become a great division and shop point on the world's greatest railroad—the first transcontinental system in the United States.

SHADOW OF WAR

A big Government hold-over elevator, a string of riverside packing plants, and various other industrial establishments are bound to materialize. They belong here. When all or a goodly portion of these activities are in motion then things will hum in Clinton as never before. They are in the offing right now.

Because of war complications our Government is already moving into this deep interior its supply depots and munition plants. A vast number of industrial plants now concentrated along the Atlantic seaboard for the same reasons will move into our safety zone. It only remains for us to get our fair share of that migration.

Substantially all of Clinton's river frontage is already taken up. Beaver Island is a safety valve for future industrial expansion, either Government or private airport use, or for big-scale steel or manufacturing plants. It has 2,200 acres, and is more than twice the size of Arsenal Island. Surrounded as it is by navigable waters, it constitutes a remarkable location for future development.

CLINTON'S FUTURE

Clinton's geographical location, together with its unexcelled transportation facilities, by rail, water, and highway, gives it a preferred opportunity. Good city salesmanship will bring its reward in a big way.

Clinton can soon become the largest city on the upper river between Minneapolis and St. Louis. It now possesses all those advantages, geographical and otherwise, which it takes to make an industrial hub, and a great market town.

It will require a lot of hard work to realize upon such an objective, but I have faith that we have the talent to put it over. The Three Musketeers told the story when they adopted as their slogan "One for all and all for one." In other words, we must have unqualified support to the battle cry of "Let's put Clinton over."

AN EVEN BREAK

This is not mere crystal gazing. These are all plain deductions, mere matters of cause and effect. Do we accept the challenge? We do, and I am sanguine that a good harvest will be our reward. And it will all be due to the 9-foot channel development.

All we ask out here is an even break—an opportunity to grow. We claim the American right to utilize here in Iowa our unrivaled raw materials, by transforming them into useful articles of commerce. We want and soon will produce steel from our northern iron ore, flour from our wheat, sugar, starch, and alcohol from our corn; beef and pork from our cattle and hogs—in short, we claim the right, without Eastern interference, to enter not only our domestic but overseas markets with both raw and finished products from this incomparably black-soil region of Iowa and other valley States, as well as with the products of our mines. All this is no idle declaration. It is our bill of rights and if our brain and brawn are put to work we will, before long, realize upon these aspirations. The completed channel on the Mississippi provides us with a direct tidewater connection, through the New Orleans gateway.

AN AMERICAN AXIS

These are neither idle boasts nor unfounded prophecies. They are more than possibilities—they are probabilities—all grounded upon good business policy.

Nowadays we hear a great deal about the Berlin-Rome-Tokio axis. The United States is keenly interested in all that. Because it occupies the center of that ring, a strengthened, smoothly running axis is formed by the broad Mississippi, the keel of our ship of state. The Mississippi Basin is also physically the core of America. It holds the seeds—Nature's requirements for the future vitality of the Nation. This valley produces a great surplus of foodstuffs—plenty for us and plenty for export. Food is what Germany, Italy, and Japan lack. The Rock Island Arsenal and the Savanna Ordnance Depot, on either side of lock 13, are the main repositories of our war materials.

DEBT OF GRATITUDE

It is a trite saying that no army can fight on an empty stomach. When war does come, and it looks imminent, we cannot stay neutral. We will be traitors to humanity if we fail to send ample supplies of both food and munitions to our friends and deny them to our enemies.

Barges will transport these essentials to the Gulf of Mexico for overseas shipment. The Gulf is our one safe ocean front. It is the forebay of the Panama Canal, and the Gulf and the Caribbean are its vigilant outposts.

We owe a debt of everlasting gratitude to the stanch supporters of our waterway in and out of Congress that have made these works possible; to our honored President, Franklin D. Roosevelt, who, like all of his predecessors, so willingly signed our various waterways bills; and to the Secretary of War and his corps of Army engineers and their assistants, who have designed and built these enduring monuments.

This lock and its sister locks up and down the river are things of beauty as well as usefulness.

CHRISTENS LAKE CLINTON

But unlike Aphrodite, the Greek goddess of beauty, who sprang fully armed from the foam of the sea, such beautiful works of art as this were not just wafted here, fully fabricated, upon a mythical magic carpet and dropped into place. Their conception has grown step by step from crude beginnings, as steel, cement, and other structural materials have from time to time become the tools of our hydraulic engineers.

And now, Mr. Chairman and officers of the Engineer Corps, I assume the privilege as the godfather of this infant enterprise to christen the wide expanse of water impounded behind dam 13 as Lake Clinton.

May the commerce that moves over its broad expanse ever continue to increase and to add to this community and to the valley of which it is a part, a full measure of new power and the enjoyment of a prosperity that has long been deferred.

Reciprocal Trade Treaties

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

LETTER FROM MILLARD D. BROWN, PRESIDENT, CONTINENTAL MILLS, INC.

Mr. DITTER. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a letter to the Honorable Cordell Hull, Secretary of State, dated June 3, 1939, from Millard D. Brown, president, Continental Mills, Inc., Philadelphia, Pa., setting forth information with regard to reciprocal trade treaties.

I am making this request because Secretary Hull's letter to the Continental Mills, Inc., was placed in the RECORD and I would like to have the answer afforded that privilege as well.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CONTINENTAL MILLS, INC.,
Philadelphia, June 3, 1939.

Hon. CORDELL HULL,
Secretary of State, Washington, D. C.

MY DEAR MR. SECRETARY: Your letter of May 15 was received and studied with real interest. I thank you for such a clear statement of your position. There is no doubt in my mind as to the honesty or sincerity of your desire to aid the economic position of our people.

Unfortunately, however, your letter shows an erroneous conception of the factors affecting foreign trade, and a fallacious approach to reciprocal treaties, if we are to preserve our standards of living. In addition to that, I take exception to the accuracy of many of the statistics quoted by you and your interpretation of their meaning.

No inconsiderable degree of our difference of opinion arises from the fact that you have what seems to us an entirely wrong approach to the reciprocal agreements. I believe that all foreign trade and tariff policies should be based on what we need to acquire, rather than what we wish to sell. Under such a basis, we would approach the subject of what is desirable and necessary to import as the first and important consideration. Our second consideration, then, is how can we obtain these imports through agreements and gain exports by supplying other countries with the things they need and desire? This method of approach is just the opposite of your procedure, and would not be a detriment to our domestic economy.

Mr. Howard, of the National Foreign Trade Council, Inc., shows a far clearer grasp of the situation. Speaking at the World's Fair on May 25, he said: "Expansion of our exports must wait upon and can only be a byproduct of a great increase in production of goods and services for domestic purposes." We believe that Mr. Howard is right and we cannot help feeling that you have the cart before the horse.

I have been quite interested in your remarks on the Hawley-Smoot Act. It would seem that you are indicating that the depression starting in 1929 was caused by the Tariff Act of 1930. It is easy to assign the cause of the depression following 1929 to the Hawley-Smoot Act. To do so, however, is to admit to a very sketchy knowledge of the principles of world trade and of historical fact. Means of financing international trade broke down before what you call "trade barriers" were raised in 1929 and subsequently. The erection of these so-called trade barriers was in great measure a defense against the loss of gold—which was then still a medium of exchange. When many factors contribute to a result, it is difficult to assign proper values to each, but certainly there is no justification for your reference to "a general tariff policy (meaning the Hawley-Smoot Act) which destroyed a large part of our foreign trade." You must know that it was inevitable that that trade would decline drastically and it would have done so if no changes whatever had been made in the tariff rates in 1930.

It is possible to suggest numerous causes for that decline which are not even remotely connected with the tariff. In any event, it is hardly consistent to lay the blame for the depression of the 1930's on the Hawley-Smoot Act and thereby seek to justify reductions in the tariff rates which in three-fourths of the cases go below the rates in effect before the Hawley-Smoot Act was enacted. It is our opinion (and we admit that it is difficult to urge its soundness as it is to prove its error) that the experience of the 1920's and 1930's indicates that foreign trade is the result rather than the cause of satisfactory business in this country.

Your treaties with France and Belgium have had some very serious results to several industries in the United States. The treaty with the United Kingdom, however, is by far the most important one, because such a great quantity of our foreign trade is with England and her possessions. You indicate its importance when you make the statement that you have obtained specific concessions on American exports to them which amounted in volume to $875,000,000 in 1936.

We were amazed that you would permit a statement of that kind to go out over your signature. Apparently you made a clerical error, since your press release of November 17, 1938, gave the figure of $675,000,000 rather than $875,000,000. Even the figure of $675,000,000 was by no means what you said it was. That figure does not represent the amount of our exports of so-called concession items, as you claim, but it represents our exports of such items plus our imports of items with which the treaty concerned itself. Taking out the import figure, the total is reduced in round numbers to $326,000,000. Even this figure does not give the real picture, since there is included approximately $268,000,000 of items on which no concessions were granted, but on which the United Kingdom agreed to make no further increases. This reduces the figure to around $54,000,000. Thus, the statement should have been, "We obtained specific concessions on American products, exports of which to the United Kingdom, Newfoundland, and British colonies in 1936 amounted to $54,000,000"—not $875,000,000 as you claim in your letter. That you should make such an assertion and then accuse us of making "misleading claims and inferences" seems extraordinary.

Also, as an argument for your reciprocal treaties, you quote an increase in 1937–38 of 61 percent in exports to trade-agreement countries, and a 37-percent increase in exports to nonagreement countries. We cannot check these figures. I think there must be some mistake, and believe some of these figures refer to imports rather than exports. In the first place, comparison of the increases for the individual countries comprising the agreement and nonagreement groups shows that the increases in exports to many nonagreement countries exceed or equal those of the agreement countries. But there is a more fundamental defect in the figures. They include all exports to agreement countries which, in large measure, are made up of items receiving no more favorable tariff treatment after than before the agreements. For example, in the case of Sweden, the American Tariff League has determined that of a total increase in exports from 1935 to 1937 amounting to $26,000,000 or 69 percent, commodities granted reduction in duty accounted for less than $400,000, representing an increase of only 22 percent.

The second respect in which your figures give a distorted picture is in their inclusion of the exports of war materials to trade-agreement countries. You certainly cannot claim that the trade-agreements program, which you maintain is a powerful factor in promoting world peace, is to be credited with increasing our export of instruments of war. Yet, in effect, that is exactly the claim which your use of figures does make. It has, we believe, been established that except for certain shipments to Japan, most of our export of war materials has been to trade-agreement countries.

A third correction of the figures has to be made because of the fact that a by no means inconsiderable volume of exports listed as going to trade-agreement countries did not, in fact, go there at all. As illustrative of this may be mentioned large quantities of equipment for which licenses for export to Spain could not be secured, and which, therefore, were shipped to France and included in the figures of exports to that country. We cannot believe that these facts are unknown to the State Department.

Referring again to the treaty with the United Kingdom, it is interesting to compare the concessions given by the United Kingdom to us, and the concessions which we in turn gave them:

	United Kingdom gave us	We gave United Kingdom
Rates reduced	156	444
Rates bound	127	63
Rates bound free	25	60
Rates Empire preference	4	0

Equally interesting is a comparison of reductions of duties given by each:

United Kingdom reduced to us	Percent	We gave United Kingdom
		Rates
6 rates	100	0
9 rates	50	121
6 rates	40–49	68
15 rates	30–39	92
98 rates	20–29	74
7 rates	10–19	45
0 rates	(1)	10
15 rates	(2)	34
Total (156 rates)		444

[1] Below 10 percent. [2] Indeterminate.

This comparison needs no further comment.

You call my attention to the fact that the wool textile industry is better now than in 1938. We all admit that. Business in all lines is generally better than it was last year. However, reciprocal treaties are no more responsible for that than they are for the weather. Domestic business is never static. It rises and falls from time to time I have watched this happen over 40 years, and it is generally the wool textile industry that feels the upturn first, and it also generally feels the recession first

How long we can continue at our present level of operations is problematical. The percentage of rise in imports is very significant, and indicates much greater volume of low-priced competition as the months go by.

This rising tide of imports of wool textiles closely follows the history of the increase of imports of laces following the reciprocal treaty with France. The lace industry has made protest after protest to the Committee for Reciprocity Information, without result. Their mills are practically at a standstill; their employees are on the street. Are the 165,000 employees of the wool textile industry going to suffer the same way?

The great volume of imports which affects our wool textile mills comes in under paragraphs 1107, 1108, and 1109 of the Tariff Act. In these paragraphs you have reduced 10 rates of duty, varying from 11 percent to over 40 percent. Nine of these rates have been reduced below the rates contained in the Tariff Act of 1922.

When one realizes that in England textile operatives, on 48 hours per week, work for less than half of the pay American workers get for a 40-hour week, the outlook seems very gloomy for our American workers.

At the same time our imports from England and France are mounting; the English manufacturers are complaining of all-wool fabrics from Italy being sold in England at much less than they can make them. Under your favored-nation treatment our concessions in duties to the United Kingdom are also extended to Italy and all other nations excepting Germany. Italian wages are less than one-fifth of ours. How long can we expect to be free from Italian competition? Under the Tariff Act of 1922 Italy exported quantities of woolen goods to the United States. Under the 1930 Tariff Act these imports stopped. You have in most instances now cut the present protection to American workers below the 1922 levels.

Japan also gets the same concessions as the United Kingdom. Japanese wages are less than one-tenth those in the United States. Before her involvement in China, Japan was selling worsted yarns and certain fine worsted cloths in the United States, under the 1930 tariff rates, at 10 to 20 percent less than the cost in the United States. Now, when many of our duties are below those of the 1922 act, what are we going to face when Japan again enters the export market? Can our workers exist on the wages we can pay to meet such competition?

Less than one-fifteenth of our total production goes into foreign trade. Ninety-three percent of our income is produced by sales to our own people. Our consumers' market is the largest in the world, and the envy of every other nation. Each one of these nations wants to get in here on favorable terms, to take a piece of that market away from our farms and our factories. Are we, as in the old fable of the dog and the bone, going to continue our endeavor to grab foreign markets, only to find that we have lost them, and ruined our home market as well?

In 1933 we had 11,000,000 unemployed; in 1939 we have ten and a half million unemployed. In 1933 our National Government cost us $3,000,000,000; in 1939 our National Government expenses have risen to $9,000,000,000. Our national debt, in the meantime, has risen from twenty billion to forty billions dollars. The reciprocal trade agreements program does not appear to have made the contribution to recovery so confidently predicted for it when its passage was urged on the Congress.

It is not surprising that we failed to consult you before our statements were published. Our industry did consult you before hearings on the negotiations with the United Kingdom were instituted and requested that the duty on the raw material which we use be considered before or simultaneously with consideration of the duty on goods made therefrom. The request was ignored. Those of us who have attended various hearings have not been able to escape the impression that they were largely perfunctory and matters of form—an impression which has been strengthened by reports from countries with which you have been negotiating.

I appreciate your invitation to discuss these matters with you and would be glad to do so if you feel that there is any possibility of a revision of the treaty in the event we can convince you that our industry stands to be seriously damaged by these new rates. In view of your admission that you desire and expect larger imports of woolens, we are not sure we have any common meeting ground. If your program could have a beneficent effect upon all domestic industry, so that all workers buy more woolens (which we sincerely doubt), why is it not reasonable to expect that their new purchases would be of foreign woolens rather than domestic ones, now that the rates have been lowered?

Yours very truly,

MILLARD D. BROWN.

Let's Think

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

ARTICLE BY THORWALD SIEGFRIED

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I am pleased to include the following challenging article by Mr. Thorwald Siegfried, of Los Angeles, Calif.:

LET'S THINK

(By Thorwald Siegfried)

Most people can keep their attention on one subject for a few minutes at a time. They often fail to do that. That is why so much foolishness passes for wisdom.

Mr. Smith uses a dollar's worth of labor and material in making a pair of shoes. With another dollar's worth of work and lumber Mr. Cox makes a chair. They are neighbors. They swap shoes for chairs, and later do the same with other neighbors for cloth, food, iron, and other goods and work. Such barter can be used only in a limited way.

When Smith and Cox are not neighbors, indeed do not know one another, they must use money for the exchange. How much money is needed to enable Smith to buy the chair made by Cox, and Cox to buy Smith's shoes? Well, prior to 1909 bankers thought it was a good idea for producers to have some money of their own tied up in their deals, and so they never advanced credit for the full amount of their costs. For the sake of the illustration we may assume that they advanced 50 percent. Then Smith would have 50 cents and Cox would have 50 cents. Neither could bid $1 for the other's goods. Prices would fall and fewer goods would be made because producers could not get back their costs from the market. The market can deliver only those dollars that are paid into it.

The poverty, unemployment, debt, foreclosures, and misery of such panics as that of 1893 arose from the lack of sufficient cash or credit, like that just described. Klondike gold relieved it somewhat after 1897.

These days if Smith and Cox were good talkers they might both persuade their bankers that their products would sell for $2 each, although costing but $1 each. The banker might say to each of them: "If you will get me a trade acceptance or installment contract signed by the other man, we will accept it for 'deposit' as $2 so you can check on it." Except for a little interest to the bank, Smith could pay $2 for the chair and Cox $2 for the shoes. Prices would have doubled, but that would follow into a completed exchange only while all the money was issued to the producers and spent by them for goods.

It is generally not the worker, not the manufacturer if he is a small one, not the corner grocery keeper, who has the line of talk that gets the excess credit issued to him. Green paper for stocks and bonds, even Government bonds, national advertising programs, long-time contracts for rents and insurance and royalties—these take the place of the simple case involving Smith and Cox. They all represent the amount above the costs of production for which people think goods can be sold. The people who do that sort of thinking are, first, the promoters; second, the bankers who say "yes." When they say "yes," monetizing something more than costs, they do not say it to Smith or Cox. They still get their $1 each for their costs and somebody else gets the extra $2. Let us call him Mr. Peters.

Peters has $2 and wants a chair. He did not have to work for the $2, but got it with talk, hopes, blue sky, and arithmetic of the sort in which 1 plus 1 makes 4. As between Peters and Smith bidding for Cox's chair, Smith can only bid $1, unless he bids $2 and pays $1 out of the future.

Peters, however, can say, "I'll take it for $2, and here's your money." So prices double as they did when Smith and Cox each had $2 instead of $1; but Smith cannot buy chairs at $2 when he

only has $1, and Cox cannot buy shoes at $2 when he has only $1. Peters is one, where Smith and Cox are two, so Peters will be filled up with chairs and shoes and such things long before Smith and Cox would be, even if they had the money to buy. The sale of their product to Peters will cease, because he will not spend his money for goods he does not need. They cannot buy from one another, because the excess credit went to Peters. The issue of free money to a nonproducer for nonproduction has blocked exchange. Exchange can take place only where values, utility, human desires meet in a condition of free equality. The factor that decides the matter of equality is whether all money or credit was issued to all persons on identical conditions.

The poverty, unemployment, debt, foreclosures, and misery of the panics of 1929, 1937, and the predicted panic of 1940 spring from excess cash and credit, issued for expected profits, most of which were impossible of realization at any time. The economic house is too drafty for habitation, whether the wind blows in at the front door or at the back. Both must be closed. The misery of 1893 was more tolerable than that of 1939, because people did not know definitely, as we do now, that the issue of money and credit for something, or for nothing, decides whether we eat or starve. In their ignorance, banks have gone back further than 1893; where we supposed that they financed 50 percent of production costs for Smith and Cox, they now do almost no financing of industry. Only promoters like Peters, some of them with manufacturing as a side line, get recognition at the banks; and bondholders, of course.

When the Federal Reserve Act was passed in 1913 it was entitled "An act * * * to afford means of rediscounting commercial paper * * *." Banks have little or no commercial paper; almost none is discounted or rediscounted. That is why Smith and Cox cannot sell their products and are idle, and why they will remain so until the costs of production and distribution are again turned into check money, dollar for dollar, and no more. One dollar too little hurts somebody a dollar's worth; one dollar too much hurts everybody many dollars' worth.

While we have been thinking of these simple things, other ideas have tried to thrust themselves upon us, to divert attention. Each of them must be held in abeyance until the subject in hand is clarified and understood. After that, each of these others must be given the same rigorous treatment, one at a time.

Providence Naval Officer Perhaps Anticipated Bell

EXTENSION OF REMARKS

OF

HON. CHARLES F. RISK

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

ARTICLE BY HERBERT E. SLAYTON

Mr. RISK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an article written by Herbert E. Slayton and appearing in the Providence Journal on Sunday, last, telling the story of the late Hugh F. Finn, lieutenant, United States Navy, who died March 11, 1930. It portrays a life of honorable service in the Navy and a noble attempt during his last few years, despite his terrible suffering, to make one last contribution to his comrades in service.

[From the Providence Journal of June 18, 1939]

PROVIDENCE NAVAL OFFICER PERHAPS ANTICIPATED BELL—DEVICE THAT RESCUED SEAMEN FROM THE "SQUALUS" HAS CLOSE SIMILARITY TO APPARATUS ENVISIONED BY LIEUTENANT FINN SOON AFTER "S-4" TRAGEDY

(By Herbert E. Slayton)

Comparing the rescue of 33 seamen from the sunken American submarine *Squalus* with the rescue of but 4 men from the British submarine *Thetis*, 130,000,000 Americans assuage their grief for those who perished with the thought that the American Navy, put to the test in such a way, has again demonstrated its leadership.

To Mrs. Hugh F. Finn, of Brooklyn, N. Y., native of Rhode Island, comes added gratification, however, in the belief that her husband, the late Lt. Hugh F. Finn, United States Navy, formerly of Providence, perhaps was in a measure responsible for the saving of the 33 Americans, his former companions in service, through plans he devised and charted while he was mortally ill. In the files of the Washington Patent Office are documents that may prove her belief to be well founded.

The 33 men were rescued from the *Squalus* with a diving bell, or "escape chamber." On May 2, 1928, Lieutenant Finn applied for a patent on an apparatus similar in appearance and operation to that chamber, after offering it to the Navy. A certificate of patent was granted in 1931, after Lieutenant Finn's death, to Mrs. Finn as administratrix of his estate. A renewal, good for 17 years, was granted the following year.

"But it is not of the patent I am thinking," said Mrs. Finn while in Providence the other day. "It is to gain proper recognition of the last service my husband performed for the Navy, in which he saw long service and rose from the enlisted ranks to become a commissioned officer. Perhaps I'd better tell the whole story.

MECHANICAL INCLINATIONS

"My husband enlisted in the Navy in 1909, from Pennsylvania, his home State. Others say he was a 'mechanical genius,' and this his superiors in the service soon recognized. He was assigned to the machinists' department, and there won rapid promotions.

"He became known as an expert on turbine engines. When the turbines on the battleship *North Dakota* 'froze' and could not be started, civilian experts were called, at costs of $100 per day each and expenses. After they had given up, Mr. Finn and two enlisted helpers repaired the engines and got them going again.

"He was detailed to the Carnegie Institute in Pittsburgh as an instructor in turbine work and taught officers far superior to him in rank. He also was sent to the General Electric plant in Schenectady for special work. He saw service in the Far East, including the Philippine Insurrection, in Samoa, and in other places. In the World War he was assigned to transport service, as a lieutenant.

"Afflicted with cancer in 1917, Lieutenant Finn spent 8 years in hospitals before he finally came back home to die. During all this time I had worked to support myself and to aid him. Each night when I returned home I brought him the day's local newspapers.

"One night in 1927 I brought him a paper announcing the sinking of the submarine *S-4* off Provincetown. The story sent him into a high state of excitement. 'Maybe I know some of those poor fellows,' said he. 'What if I or my brothers (he had two brothers in service) had been aboard her? There ought to be some way of saving men trapped like that.'

HIS LAST CONTRIBUTION

"It was all he talked about for the next 2 or 3 days, and he wanted all the papers he could get to read what was being done to raise the sunken sub. One day he asked me to bring him a pencil and some large sheets of paper. 'I've got an idea,' said he. 'I want to see how it works out.'

"Two or three days later he showed me drawings of his proposed 'diving bell' and tried to explain to me how it would work. I couldn't understand it, but others whom I called in said it seemed to be a very feasible proposition. 'I'll offer it to the Navy,' said Lieutenant Finn, 'as perhaps my last contribution to the service. I know it will work.'

"The Navy Department kept the drawings and explanations a long time, but finally sent them back with a letter of thanks and the statement that it did not see fit to use them. Lieutenant Finn then filed an application for a patent. While action on this was pending, he died March 11, 1930. The original patent was granted May 5, 1931."

The Patent Office certificate describes the invention as a "submergible apparatus." It states that it is designed "for use in rescue work; for example, for rescuing the members of a crew of a sunken or disabled and submerged vessel, such for example as a submarine, and including means for coupling the apparatus to the vessel, and to place the room or compartment of said apparatus in communication with one or more rooms or compartments of the submerged vessel, to enable the crew of the vessel to pass from the submerged vessel into said apparatus for transmission to the surface of the body of water or to the salvaging ship or vessel."

The application and certificate also describe how the escape chamber was to be clamped to the surface of a sunken submarine and how water taken into the chamber, to cause it to sink, was to be blown out with compressed air, through valves to be controlled by those operating the device. In contour, the device pictured by Lieutenant Finn in his application for patent also closely resembles photographs of the escape chamber used in the rescues from the *Squalus*.

Mrs. Finn says, "If you had seen him wearing out his failing strength by working on his plans, and had heard him repeatedly affirm that his plan would work and that any other such device must follow the same principle, you could understand my present feelings and desire to have him get due recognition."

Mrs. Finn was born in Rhode Island. Her brother, Sidney G. Stamp, Jr., has long been a resident of Riverside, and she has other relatives here. In 1918 she and Lieutenant Finn, then in active service, had a home in Providence. They also lived in Newport for a time.

Bill to Hereafter Prevent Branch Banks Being Established

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

Mr. PATMAN. Mr. Speaker, Monday I expect to introduce a bill to restrict the establishment of branch banks or offices

by financial institutions chartered or insured under the laws of the United States. This bill defines "financial institutions" as follows:

The term "financial institution" shall include national banks, State banks, savings banks, trust companies, Federal savings and loan associations, savings and loan associations, building and loan associations, homestead associations, cooperative banks, Federal credit unions, or any institution doing a banking, savings, trust, savings and loan, or building and loan business.

The term "branch office" is defined as follows:

The term "branch office" shall include any additional office, branch bank, branch agency, branch place of business, or any place for the making of loans, or any place for the paying in or taking out of money.

Section 2 of the bill provides—

No financial institution chartered by or pursuant to any law enacted by Congress and no financial institution whose shares, accounts, investments, or deposits are insured to any extent by the United States or any agency or instrumentality thereof shall hereafter establish any branch office: *Provided, however,* That any State financial institution converting into a Federal financial institution may continue to operate any branch office maintained by it prior to conversion: *Provided further,* That where a financial institution, existing at the date of enactment of this act, which is lawfully maintaining any branch office or branch offices existing at the date of enactment of this act shall reorganize or be reorganized, whether by incorporation of a new financial institution or otherwise, or shall merge or consolidate with another financial institution or financial institutions, the reorganized, merged, or consolidated financial institution may continue to maintain and operate such branches.

The remaining section provides a penalty for a violation of the act.

Before the Federal Deposit Insurance Corporation was established there was no effective way for the Federal Government to prevent branch banking by State banks. Now, however, practically all State banks are members of the Federal Deposit Insurance Corporation, and to that extent are subject to Federal jurisdiction. Before the Federal Deposit Insurance Corporation was established, representatives of the national banks insisted that they should have a right to establish branch banks in States where State laws permitted State banks to have branch banks. The argument was a persuasive one, because at that time the Federal Government could not restrain the State banks, and the only way to eliminate this seemingly unequal situation between the two banking set-ups—State and Federal—was to allow the national banks to establish such branches in the same way and manner that State laws permitted State banks to establish them.

Since we now have an effective way of dealing with the problem of branch banks, it occurs to me that we should freeze them where they are and not permit any more to be established. The bill I have introduced is intended to accomplish that end.

It is my belief that we should encourage local ownership of banking institutions. In other words, the local bank should be owned and conducted by local people. It is reasonable to suppose that many sound loans are refused by representatives of an absentee-owned bank, since the directors in the distant city cannot view the situation as the man on the ground sees it.

They Would Fix the Medical Profession

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

EXCERPTS FROM THE BOOK ENTITLED "MEDICAL MUSSOLINI"

Mr. HOFFMAN. Mr. Speaker, the effort of the present administration to regiment labor and agriculture is well known, but the public has something else to learn when they hear of the plans of the yearling professors and screw dealers to socialize some of our best-established professions.

In this connection I desire to put in the RECORD extracts from an amazing book called Medical Mussolini, which has just come to my attention. It seems to put the finger on just what is wrong with the healing sciences, not the least item of which is Federal interference and a recent attempt to socialize the medical profession.

I quote from pages 115 and 116:

The Nation is now suffering an experiment in planned economy for agriculture. Labor is being regimented by the National Labor Relations Board. A $1,000,000 study of monopoly is under way, and the Department of Justice has "cracked down" on organized medicine and insurance companies. Whether the professions are to be socialized and the industries regimented is yet to be determined.

We do know positively that the yearling professors in Washington have set up, in their own minds at least, the machinery to regulate and proscribe everything in America. About all they want Congress to do is to set up a bureau of appropriations and a commissarriat for taxation. They will complete the job. The possibility of Congress failing to lay sufficient taxes to bankrupt the Nation into submission doesn't bother them in the least. Ways and means are something they can't be worried about, especially when they might disturb the greatest dream since Alice in Wonderland laid down and went to sleep.

In Italy Benito Mussolini's flair for showmanship created the "black shirts." Later in Germany Adolf Hitler aped the duce and dressed his regiments in brown shirts. A couple of would-be American Hitlers have tried to build up mushroom organizations of silver shirts and khaki shirts, but dictatorial methods do not go in the United States.

Now the new dealers—sometimes called "screw dealers" by the irreverent and "parlor pinks" by the more conservative—hope to regiment red-blooded Americans in pink—just pale vestee pink—a pastel shade. What about it?

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 19, 1939

Mr. BUCK. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following address by Hon. James A. Farley at a luncheon in Sacramento, Calif., on May 19, 1939:

Ladies and gentlemen, I am happy to be with you at this luncheon, because it gives me the dual pleasure of meeting new acquaintances and greeting old friends. Meeting people is a favorite diversion of mine, and nowhere do I find it more enjoyable than I do in this empire State of the great far West. In fact, having sampled your hospitality on prior occasions, I have come to the conclusion that the only product which can rival California climate is California courtesy.

This meeting has another distinctive quality about it that gives it a unique appeal. My fellow guests, I am told, are not all of one political persuasion, but constitute a happy blending of business, professional, civic, and political interests. In other words, this is a field that requires diversified cultivation rather than a generous application of undiluted party doctrine. In these brief remarks I shall try to bear that fact in mind.

I feel somewhat reassured by the presence here of your good Governor, Culbert L. Olsen, who carried the party banner to victory with conspicuous success in last fall's election. For many years now I have had the opportunity to observe his gradual and persistent rise to a place of prominence in the public affairs of this State. Governor Olsen's career is a splendid example of the fact that courage, tenacity, and integrity are given a high value by the electorate in its choice of public officials. He did not select the easy way in his rise to the top. Through long years of effort, very often marked by defeat of the cause in which he so passionately believed, Culbert Olsen remained steadfast to the basic tenets of his political creed. He never wavered because the road was rough and weary. Instead of yielding and giving ground he waited patiently until public opinion and his own beliefs had reached a common meeting ground.

I know that our Republican friends at this gathering will show a spirit of forbearance for a moment while I express the satisfaction experienced last fall by Democrats throughout the Nation when

word was flashed that California at last had elected a Democratic Governor. Forty years is a long time to wait—even in politics—but when victory is achieved after that lapse of time, it becomes all the sweeter. In the spirit of good fellowship, let me add that I hope our Republican brethren will be equally patient in their quest for victory in the field of national politics.

I know that Culbert Olsen possesses the qualities to make him an excellent Governor, and it is my sincere belief that the people of this State will never regret their course in electing him to the highest place they can bestow. It is a pleasure for me—here in the capital city—to wish him a prosperous and successful tenure of office.

While partisanship is bred deep in my bones, I am conscious of the truth that the two-party system of government is one of the real blessings of American democracy. It is a blessing because the biparty system is founded on division of opinion, and where there is no difference of opinion, then popular government is nothing more than a myth and a sham. The mistaken notion that the key to successful government lies in the will of an all-powerful ruler may take root in other lands, but it will never be accepted here, and it will never be accepted in any land the citizens of which have once tasted the joy of free living.

The administration at Washington was reelected to power by a margin of victory seldom equaled in a land where elections are determined at the ballot box and not on the field of battle. This wave of popular sentiment was reflected alike in the total vote cast and in the electoral votes of the various tSates. Yet no one assumed that because the majority had expressed its will in such positive manner the minority was to be crushed and its rights trampled upon. Quite the contrary. In keeping with a fine old American tradition, the minority became even more vocal than it was before the election and the chorus of criticism directed against the administration at Washington swelled to new proportions; and, regardless of whether we think this criticism is justified or unjustified, every citizen of the United States is proud of the fact that not a single effort has been made to abridge the basic rights of free speech, free assemblage, or freedom of the press. That is the American way, and it will continue to be the American way, no matter which of the two great political parties happens to be in control of the Federal Government. Neither the Roosevelt administration, nor any other administration, should be afraid of criticism. The opposition party has a definite function to point out mistakes and lapses, and whenever this type of vigorous and alert opposition is lacking, the government in authority is soon headed for decay. The surest way to court defeat is to listen to only one side of the story.

I think you will agree that those who dislike the course pursued by the Roosevelt administration have done a thorough job of making known their dissatisfaction to the general public. Certainly they have not lacked a forum for the spoken word or a press for the printed word. They dislike what President Roosevelt is attempting to do and very often they give the impression that they would still be unhappy, no matter what he did. In fact, I fear that frequently they become so furious that they lose their sense of humor—and that is always something to be regretted. I am reminded of a cartoon that appeared recently in a humorous publication. A wife walked into the breakfast room to find her husband slumped over the table gazing at the morning paper with an air of frenzied anger. Realizing the cause of his discomfort even without asking, she inquired, "Well, what has he done now?"

Being somewhat politically minded myself, and in view of the fact that the opposition has done very well in stating its case, I feel this is an appropriate occasion for me to say a few kind words for President Roosevelt. Let me hasten to add that it is not my purpose to do this in the spirit of partisan controversy. Rather, I should like to point out in a general way the problems which he has faced and the methods he has pursued in seeking to find a workable solution.

In the first place, it should be borne in mind that this is a period of change and adjustment all over the world. Every government on earth has been compelled to grapple with new and perplexing conditions brought about by changes in the social and economic order. A few nations have made this adjustment in a fairly successful manner, while others have toppled over into a state of affairs that can only be described as worse than the condition from which they tried to escape. The United States has not escaped from this general state of unsettlement. The need for revision was more than apparent when President Roosevelt assumed office about 6 years ago. The force of events had already demonstrated that to continue along the old road without making repairs was to risk the possibility of a permanent break-down.

President Roosevelt had to act, and he had to act quickly. The major task confronting him was to restore the economic security of millions of citizens who had been brought to the verge of destitution and poverty as a result of forces beyond their control. He had to revive business and rescue agriculture. He had to reopen the channels of trade and he had to find some means of giving a living to the army of unemployed. But, most of all, he had to restore the faith of the American people in the democratic form of government. If some of you here think that the picture is exaggerated, let me remind you that just before President Roosevelt assumed office a distinguished Senator stated publicly on the floor of the Senate that a dictator might be needed to restore the Nation to normal prosperity.

It is only human for individuals to dislike change, especially when it involves making personal sacrifices for the general welfare. I do not mean to imply that those who oppose President Roosevelt are moved solely by motives of selfishness or by lack of sincerity. Yet it is well to ponder on this fact: The major reforms of the Roosevelt administration were enacted during the first term of the Chief Executive. The American people had a chance to pass judgment on these enactments and they gave their endorsement by an overwhelming majority. Surely, in a democratic government, a program of legislation endorsed by the mass of voters cannot be wholly wrong. What better proof can we have of the need for new principles and new policies than this approval of the general electorate.

Uncle Sam was a very sick patient back in 1932. His illness was caused by deep-seated maladjustments in the economic order. Now if you were ill, which kind of physician would you prefer—a doctor who told you not to worry that everything would be all right? Or a doctor who had the good sense to diagnose the illness correctly and the courage to prescribe the proper course of treatment? The truth is that if President Roosevelt had lacked the courage to do what had to be done the task would have been turned over to someone else in 1936, because the job simply had to be done.

It is pleasant to recall that the people of the far West realized what the Chief Executive was trying to do and gave him their support in splendid fashion. You people are progressively minded; you are not afraid of change simply because it is change; you knew that the government which fails to protect the fundamental interests of all the people is no government at all.

A single objective has been the underlying factor in every step taken by President Roosevelt in his efforts to readjust the social and economic machinery of the American Nation. Despite the flimsy objections raised to many of his proposals, he has not tried to benefit one class of citizens at the expense of the other. On the contrary, he has tried to bring about a balanced economy, in which all shall have their just share, because no other kind of economy should be tolerated in this country. When the President seeks to raise the buying power of agriculture, he is not seeking to rob the consumer, but to better the condition of both. When he seeks to abolish sweat conditions and starvation wages, he is not seeking to destroy the basic rights of employers.

The administration has been called upon constantly to defend its policies and purposes. Now, in the spirit of fairness, I should like to ask a few questions of those who are dissatisfied with the administration efforts. What measure would they like to have repealed?

Would they repeal the banking laws under which there are scarcely any failures and go back to the old laws of the Hoover regime when banks crashed by the thousands, sweeping away the savings of the people?

Would they repeal the reforms of the stock market under which the investor knows what he is buying and go back to the old system of unregulated speculation?

Would they wipe out the Tennessee Valley project, which has given new life to a vast empire, and turn the Nation's heritage over to the exploitation of a powerful few?

Would they repeal the Wagner Act for collective bargaining and make human labor a mere commodity again?

We have set up a system which has saved hundreds of thousands of home owners of eviction and hundreds of thousands of farm homesteads from foreclosure; would they tear these down?

We have written the Social Security Act, the most humane and civilized piece of legislation in our history; would they wipe it out?

These things may be improved upon as experience dictates, but never will they be repealed. History will record that no administration since the time of Washington has been more conspicuous for constructive achievement for the good of man.

The question has been asked, What has the administration and its supporters in mind? What do we want? Let me emphasize the objectives of the administration in a few sentences.

We certainly want business to make a reasonable profit on its investments, because capital takes the risk.

We want labor to secure a wage that is sufficient to bring a sense of dignity and security and to have working conditions commensurate with the dignity of toil, for capital without labor would be as barren as money on a desert isle.

We want the farmers to reap rewards from their toil sufficient to lift or keep the mortgage from the farm and enough besides to leave a balance in the bank.

We want the banks to thrive and to use their hoarded gold to meet the needs of constructive industry and safely to finance the building of people's homes.

We want business to boom—but we want all America in on the business.

We want the aged worker free from the haunting fear of a twilight of misery and poverty, and the widowed mother to have a chance to rear her children at home, and the crippled child to have a chance to support himself in self-respecting toil. We want a reasonable provision to tide the worker over the occasional periods of unemployment—and these are the reasons we have written into the statutes the Social Security Act, which is the "emancipation proclamation" of the masses.

We want a free press, freedom of speech, and the right to worship God according to the dictates of conscience.

These, in brief, are the objectives of the Roosevelt administration. To those who like to say that the ultimate goal is still far from being realized, I should like to point out that under President Roosevelt the United States has gone further along that road than any other nation on earth. He has laid the groundwork and brought about necessary reforms which will endure as long as the United States endures.

I do not wish to suggest that the political foes of President Roosevelt should forego their constitutional right to protest and to op-

pose, but I do wish to emphasize that in this period of international unrest and uncertainty the basic need now is for national unity.

In view of the perilous conditions throughout the world, the time has come for all Americans to work together as Americans and to end the internal feuds that rest on nothing more substantial than spites and prejudice and foolish hates. We have seen too many unseemly hates, and our great American family has engaged too bitterly in family feuds that only tend to threaten the existence of the common heritage of the fathers.

Let the Amercan people lay aside all backbiting and bickering and let us present a united democracy as an example to the world. Liberty and freedom can never be extinguished while the torchlight of Jeffersonian democracy is held aloft by the citizens of this Republic.

Let us cherish the great heritage that has come down to us from worthy leaders of the past and let us hand down to our children the blessings and benefits of a united national family. Let us persevere with a common determination that no matter what befalls in less fortunate lands we will make the American family, as Jefferson had planned, the most united, the most contented, the most tolerant, the most prosperous in all the world.

That was the dream of the mighty men who founded the American Republic.

That is the ambition of Roosevelt.

And that must be the common vision and the common aspiration of us all.

Tribute Levying by Means of the N. L. R. A. and Through the Activities of the N. L. R. B.

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

Mr. HOFFMAN. Mr. Speaker, here are one or two instances of some of the things that are happening because the N. L. R. A. is unamended, because of the manner in which it is being administered by the N. L. R. B.

I quote an editorial from the June 22, 1939, issue of the Somerset (Pa.) Daily American:

BATTLEGROUND

It appears that the Public Works Administration in Washington has decided to make a Somerset County relief project a battleground between the American Federation of Labor and the Congress of Industrial Organizations.

High hopes are entertained that it may change its intentions.

When the American Federation of Labor decided to monopolize the jobs on the Pennsylvania Turnpike the State employment service refused to supply labor from relief rolls and the unemployed workers of Somerset County were at the mercy of the federation racketeers, who demanded $15 initiation fees and from $1.50 up per month as dues from all who expected to obtain jobs.

The Somerset County workers rebelled. They halted work on the jobs already in progress and drove the American Federation of Labor representatives out of the county. They formed their own organization, because the Wagner Act made such action necessary. They incorporated as a labor organization. They signed contracts with two construction contractors.

Now comes the word from Washington that P. W. A. will not recognize Somerset County Independent Construction Workers' Association as a bona fide labor organization.

The Pennsylvania Turnpike Commission has recognized the Somerset County Workers' Union, but the P. W. A. will not.

Meanwhile the Congress of Industrial Workers has not been idle. It has thrown a group of its organizers into Somerset County. Meetings held Sunday afternoon and Tuesday night indicated the extent of their achievements. At both meetings, United Mine Workers (C. I. O.) from the northern end of the county were in evidence both as to numbers and vocally. But for its incorporation, the Somerset County Union would have been swept into C. I. O. at either of these meetings.

The primary issue remains as it was 2 months ago:

Shall workers on relief jobs be required to yield to the blackmail of labor racketeers?

The Congress of Industrial Organization has offered cheaper rates than the American Federation of Labor, but experiences of our mine workers warn of higher dues and assessments in the future.

Between five and six thousand Somerset County workers have signed up with S. C. I. C. W. A., not because they believe that relief workers should be required to join a labor union but because the Wagner Act leaves them no freedom in the matter, and they prefer an association of their own to one managed from a distant point.

The American Federation of Labor has assailed the Somerset County workers in the courts. The Somerset County equity court and the Federal district court in Pittsburgh have denied it injunctions against the Somerset County workers' union.

The Congress of Industrial Organizations has been more subtle. Its agents have wormed their way into the very heart of the independent organization.

The Battles of Concord and Lexington and Bunker Hill opened the Revolutionary War, but there came a time when the French were called in, much to the disgust of many patriots. The sentiment prevailed in New England that it would be better to lose the war for freedom to the British than to win it with the aid of the French.

The workers of Somerset County feel about the conflict between A. F. of L. and C. I. O. that they would sooner lose their own controversy than pull hot chestnuts out of the fire for either union.

The Government at Washington has raised its hands against Somerset County workers. It maintains the infamous Wagner Act on its statute books. It licenses the great labor unions to prey upon the jobless workers. It denies Somerset County workers the rights which the Wagner Act was presumed to grant them.

Of the five or six thousand members of the S. C. I. C. W. A. not more than 500 attended either meeting held this week at which time a proposal to affiliate with C. I. O. was an issue. This is a token by which it is estimated that not more than one-fourth of the members of the independent union would go into C. I. O. if the proposal to affiliate were to be approved.

The issue raised in Somerset County is Nation-wide. There is a strong sentiment throughout the Republic that relief workers should not be required to pay tribute to labor unions, yet many of those who thus hold are willing that the impositions of labor unions shall be permitted to bar willing workers from jobs in private industry.

The Wagner Act seems to have definitely denied the American wage earner the right to sell his labor in the highest market as a free man. It requires that he shall obtain a license from John L. Lewis or William Green before he may earn his bread by the sweat of his face even on relief projects.

The Wagner Act goes further.

In the event of the inability of either A. F. L. or C. I. O. to find sufficent prey in Somerset County to man the jobs, the threat to Somerset County is that it will be overrun by transient workers who lack the responsibilities of homes and families, brought in by either A. F. L. or C. I. O.

The battle for liberty begun by Somerset County workers has fed the ambitions of the organizers. They care nothing for the people of Somerset County. They want the income that 6,000 construction workers might supply them.

The joy inspired by the coming of the turnpike has been curdled by the vinegar poured upon it by those in authority.

I now read a letter received from the president of the California Gas & Electric Employees Union, Inc., of Sacramento, Calif.:

JUNE 20, 1939.

Hon. CLARE E. HOFFMAN,
United States Representative from Michigan,
House of Representatives Office Building, Washington, D. C.

HONORABLE SIR: On behalf of the thousands of members of the California Gas & Electric Employees Union embracing a majority of 12,500 employees of the Pacific Gas & Electric Co., which serves a territory larger than the whole of New England, we call your attention to the fact that after waiting over a year and a half for certification as bargaining agent by the National Labor Relations Board, last week's Labor Board decision nullifying our election furnishes complete confirmation of statements in the Senate that the Board invariably refuses to certify an independent union and shapes its findings to that end.

Last week's decision reaffirms rulings that the California Gas & Electric Employees Union is a labor organization within the meaning of the Wagner Act. Thus, again, the gossip that ours is a union fomented, dominated, and financed by our employer is refuted. Yet the decision treats such hearsay as evidence, with strong indications that it influenced the findings.

In setting aside the overwhelming vote of the December 1937 election in which we defeated the C. I. O. union, the Board said that the company "interfered with, restrained, and coerced its employees in the exercise of the right to self-organization, to form, join, or assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in concerted activities for the purpose of collective bargaining and other mutual aid and protection as guaranteed in section 7 of the act."

The shoe is on the other foot. The record should read that the N. L. R. B. is guilty of doing these very things. Its conclusions are based on every conceivable form of inadmissible evidence, including hearsay, unsupported, trivial, frivolous, irrelevant, and immaterial, to say nothing of incompetence. The only evidence perceptible in the decision is the evidence of the Board's bias against independent unions and its prejudice in favor of the C. I. O. It even goes so far as to denounce union organization activities on company premises. This is a complete about face on the Board's decision in *Protective Motor Co.* (1 N. L. R. B. 639): "So long as efficiency is unimpaired, to discuss union problems on the company's premises, and in an orderly manner to urge nonunion men to join, is wholly permissible. It follows from the premise that the employer is under a duty not to interfere with the self-organization of his men; that he may not try to protect his nonunion labor from the persuasions of the union employees. To this principle the act recognizes no exception based upon allegations of friendship or supposedly fortunate conditions of employment."

You will find in the decision that pages 23 to 27, inclusive, covering "events during May, June, and July 1937" (the organizational period of our union), are devoted to so-called evidence regarding ordinary organization activities. This "evidence" is so far-fetched

that any court would rule it out without hesitancy. Largely these pages disclose our exercise of the right to organize under the Wagner Act. At variance with the facts is the statement on page 6—re hearing before Examiner Lindsay at San Francisco—that "full opportunity to be heard, to examine and cross-examine witnesses, and introduce evidence bearing on the issue was afforded all parties."

The right to cross-examine was denied repeatedly and arbitrarily. The decision admits that "no claim was ever made of irregularity at the polls." Also, nowhere in the record was there any evidence or claim that the alleged coercion and intimidation had influenced a single vote, yet logic shows that hundreds of votes would have had to be so influenced to give us our majority of 3,550 votes to the C. I. O.'s 2,250.

We cite some examples of the testimony upon which the Labor Board nullified its own election. Page 21, a witness said another employee "as much as said 'he felt they could not hope to gather much from belonging to the C. I. O.'" Page 22, "Burkhead, a general line foreman in San Jose, told one Adams, an employee under his supervision, that he believed the employees of the San Jose division would be doing the wrong thing in affiliating with the C. I. O." In spite of the fact that Burkhead had no power to hire or discharge, the Labor Board said, "We find the company by the above activities has interfered with, restrained, and coerced its employees in the right guaranteed them in section 7 of the act."

On page 23 (during our organization period), "R. P. Mace, an employee and one of the incorporators of the California union, traveled to various places and urged employees to organize locals." Again the Board holds this to be an unfair labor practice.
